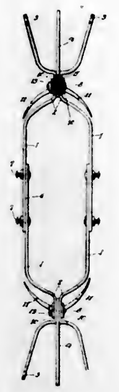
portion on said shaft, a block disposed around the oppositely threaded portion, and link connections between the block and the collar, said shaft adapted to be rotated, whereby the collar and the finger bars are moved with respect to the body portion.

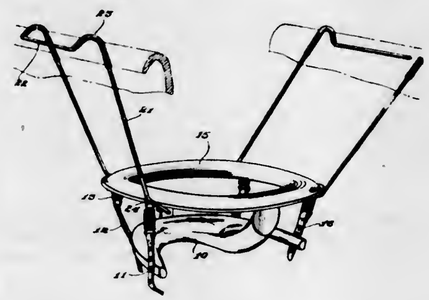
1,428,036. FEED MECHANISM FOR WOODWORKING MACHINES. ALBERT A. JOHNSON, Mount Holly, N. J. Filed May 23, 1921. Serial No. 471,881. 4 Claims. (Cl. 144—242.)

1. A feed mechanism for a work piece of the type described comprising a feed bar, means for reciprocating said bar, a pin in said bar, and means for reciprocating said pin in timed relation to the movement of the feed bar to shift the pin into feeding position with relation to the work piece on the forward movement of the bar and to retract the pin out of the line of movement of the work piece on the return movement of the bar.



1,428,037. ROPE CLIP. JOHN KNIGHT, Bound Brook, N. J. Filed Mar. 30, 1921. Serial No. 456,920. 9 Claims. (Cl. 24—125.)

4. A rope clip embodying a tubular sleeve provided with a cylindrical exterior and having a fixed interior diameter substantially equal to the diameter of a rope adapted to be received therein, and means extending diametrically through the sleeve at different points in its circumference and into the rope, said means being substantially flush with the exterior surface of the sleeve and so formed interiorly of said sleeve as to expand the rope into tight frictional engagement with the interior of the sleeve to hold the sleeve on the rope, leaving the exterior of the sleeve unencumbered.

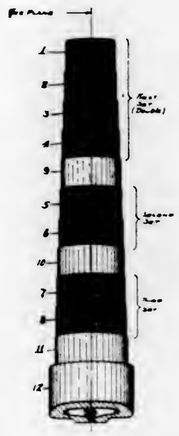


1,428,038. ANIMAL POKE. GEORGE W. KNOX, Oklahoma, Okla. Filed Aug. 24, 1921. Serial No. 494,869. 1 Claim. (Cl. 119—138.)

An animal poke comprising upper and lower yoke members, each consisting of a pair of flat-sided straps sharply offset between their ends and permanently united at the offset portions, the opposite terminals of the yoke members being fastened together whereby to secure the members about the neck of an animal, and the outer extremities of the straps being sharply divergent, a bar secured between the offset portions of a pair of straps and projecting therefrom midway the outer diverging terminals of

the straps and in the plane of the same whereby said terminals and the bar will constitute a wide wire-engaging member, a fork spanning and secured to the offset portions of the straps, and prongs projecting rearwardly from said fork.

1,428,039. CONVERTIBLE SEAT FOR CHILDREN. ELIZABETH A. KRATZ, Johnstown, N. Y. Filed Sept. 26, 1921. Serial No. 503,167. 2 Claims. (Cl. 155—36.5.)

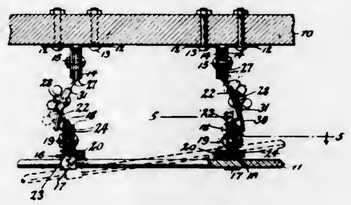


1. In a bathing seat for a child, a seat member, a guard and flexible means on the under side of said guard to which said seat member is attached, a plurality of L-shaped brackets on the under side of said guard arranged in pairs near its edge and provided with horizontal apertures, flexibly connected rods constituting hooks adapted to engage with parallel rail members, the free ends of said hooks being provided with nicked opposing fingers adapted to engage with the horizontal apertures in said brackets, the flexible connection of said hooks tending to draw said fingers together.

1,428,040. TIRE AND METHOD OF MAKING SAME. GEORGE D. KRATZ, Akron, Ohio, assignor to The Falls Rubber Company, Cuyahoga Falls, Ohio, a Corporation of Ohio. Filed May 26, 1919. Serial No. 299,875. 7 Claims. (Cl. 154—14.)

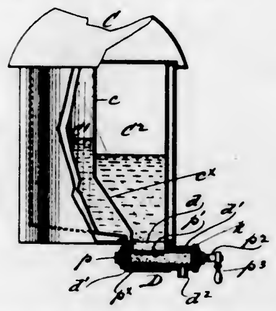
5. In a method of making tires of the character described, the steps which consist in applying circumferen-

tially to a suitable mandrel a strip of fabric cut on the bias first along the median line of such strip and then retarding one edge only of such strip so as to modify the



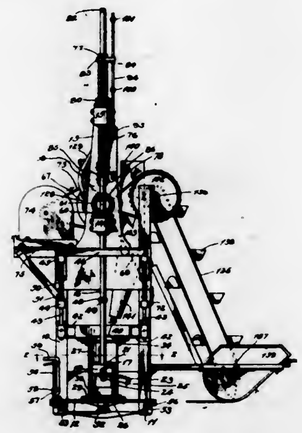
angularity of the component warp-threads therein relatively to the plane of such mandrel before fully applying such strip.

1,428,041. PROCESS FOR THE SEPARATION AND RECOVERY OF METALS FROM METAL ALLOYS. GUILLAUME JUSTINE KROLL, Luxemburg, Luxemburg. Filed Sept. 21, 1920. Serial No. 411,751. 13 Claims. (Cl. 75—1.)



1. The method of separating and recovering metallic constituents from metal alloys (including impure metals), which comprises introducing an alkali-earth metal (including magnesium) into said metal alloys, forming thereby a compound of the alkali-earth metal with the metallic constituents to be separated, this compound having a different melting point from and a specific gravity not more than that of the main metal, and eliminating this compound from the remaining part of the metal alloy under treatment.

1,428,042. MOUNTING FOR SUPPORTING MIRRORS. WILLIAM LA HODNY, Buffalo, N. Y. Filed May 1, 1920. Serial No. 378,166. Renewed May 23, 1922. Serial No. 563,122. 6 Claims. (Cl. 45—97.)

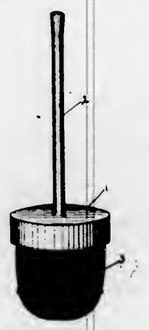


2. A mounting for supporting a mirror comprising two adjusting arms arranged transversely side by side, and each composed of front and rear sections, the opposing ends of which overlap and are curved while the respective front and rear extremities of the same are arranged transversely, means for clamping the overlapping parts of each arm together, and means for pivotally connecting the front and rear ends of said arms to a mirror and a support, respectively.

1,428,043. DISPENSING MEANS FOR BEVERAGES CONTAINING CHOCOLATE, COCOA, ETC. HARRY C. LYONS, New York, N. Y. Filed Dec. 16, 1921. Serial No. 522,779. 2 Claims. (Cl. 221—96.)

1. In liquid dispensing apparatus of the character designated, the combination of a container formed with two compartments, one for the fluid vehicle constituents of the beverage and one for the cacao constituent of the beverage, and a dispensing faucet connected with said container and formed with a rotatable valve plug having a measuring chamber with a discharge port and also with an inlet on one and the same side, the latter communicatable with the discharge port of the cacao compartment, and on the other side with an inlet port communicatable with the discharge port of the fluid vehicle constituent compartment, for the purpose described.

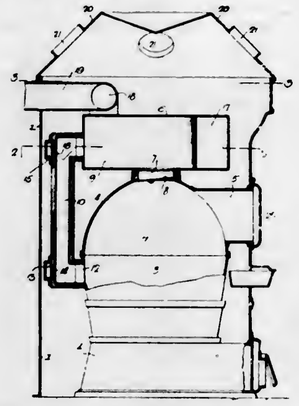
1,428,044. CONCRETE-PIPE MACHINE. GEORGE C. MARTIN, Los Angeles, Calif. Filed Aug. 5, 1916, Serial No. 113,360. Renewed July 31, 1920. Serial No. 400,525. 11 Claims. (Cl. 25—30.)



3. A cement pipe machine comprising a rotary trowelling head, a shaft for rotating the same, an actuating shaft adapted to rotate said trowel carrying shaft continuously, a counter shaft parallel to said actuating shaft, gearing for imparting movement to said counter shaft in one direction, gearing for imparting movement to said counter shaft in the other direction, clutches for controlling the direction in which the counter shaft shall be rotated through said trains of gearing, and means operated by the said counter shaft for reciprocating the trowel carrying shaft.

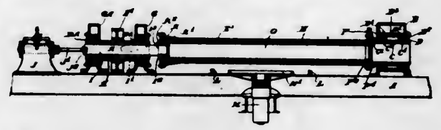
1,428,045. SIGNAL DEVICE. JOHN M. MELE, East Haven, Conn. Filed Nov. 28, 1921. Serial No. 518,293. 1 Claim. (Cl. 116—43.)

In mechanism of the character described; a case substantially cylindrical in cross-section, open at both ends and one side; a cap at each end of said case separably secured thereto and forming a closure therefor, one of said caps having a laterally projecting collar near the center thereof; a display case within the aforesaid case having openings therethrough upon two sides thereof and journaled at one end upon said collar; a stop collar connected with the opposite end of said display case; means for supporting said case at the collar end that projects therethrough and through one of the said caps; a transparent plate covering each of the openings in said display case, one of said plates having letters or figures thereon; a socket threaded into the said collar upon said cap having a part thereon projecting into the display case and another part projecting outside of said collar; a lamp adjustably connected with that portion of the socket within said display case; a plug adjustably connected with that portion of the socket outside of said cap; a spring fixed to said stop collar at one end and to a part fixed in the adjacent cap at the other end; and a fixed part in said latter cap projecting into the path of movement of said stop collar and when engaged by stop shoulders thereon, said display case is limited in its movement in both directions.



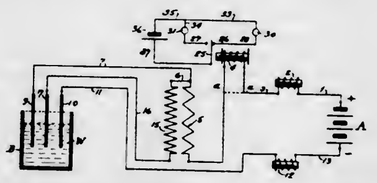
1,428,046. COFFEE-MAKING DEVICE. HUGO MOCK, New York, N. Y. Filed Jan. 6, 1922. Serial No. 527,479. 6 Claims. (Cl. 53—3.)

1. In a coffee making device, a bag of textile fabric, the texture of said bag permitting the ready passage of coffee extract therethrough but not permitting the passage of pulverized coffee, a rigid closure for the top of said bag and a handle attached to said closure and means attached to said bag for expanding the same.



1,428,047. HOT-AIR FURNACE. ABRAM C. MOTT, Jr., Philadelphia, Pa., assignor to Abram Cox Stove Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 1, 1921. Serial No. 519,093. 5 Claims. (Cl. 126—102.)

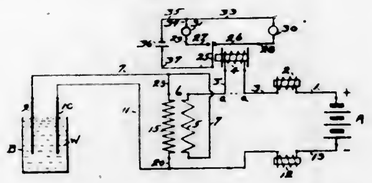
1. The combination in a hot air furnace of a casing, a fire box and dome therein forming a primary combustion chamber, a radiator above the dome and within the casing, a secondary combustion chamber within the casing communicating with the primary combustion chamber at



its lower end and with the radiator at its upper end, and an air passage communicating with the secondary combustion chamber and extending outside of the casing.

1,428,048. CENTRIFUGAL CASTING MACHINE. WALTER S. MYERS, Darby, Pa., assignor to United States Cast Iron Pipe & Foundry Company, Burlington, N. J., a Corporation of New Jersey. Filed Nov. 1, 1918. Serial No. 260,645. 4 Claims. (Cl. 22—65.)

2. In a centrifugal casting machine the combination with rotatable elements adapted to engage the opposite ends of a pipe mold, means for adjusting said elements toward and away from one another to grip and release a mold inserted between them, supports along which a mold may be moved toward and away from said rotatable elements and mechanism for raising and lowering a mold from said supports into alignment with said mechanism.



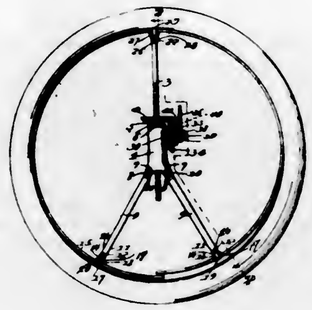
1,428,049. ELECTROLYTIC APPARATUS AND METHOD OF DEPOLARIZING THE SAME. WALTER D. NICKUM, Glendale, Calif. Original application filed Sept. 16, 1919, Serial No. 254,345. Divided and this application filed Feb. 8, 1919, Serial No. 275,860. Renewed Nov. 5, 1921. Serial No. 513,210. 5 Claims. (Cl. 204—1.)

1. In an electrical apparatus comprising a circuit including a source of direct current electrodes in contact with an electrolyte, means for maintaining the current effectiveness of such circuit, consisting of a transformer

having a low tension primary coil in series with and energized by said circuit and a high tension coil in electric connection with said electrodes in such manner as to cause reduction of polarization between the electrodes when the current in the primary coil is reduced by such polarization.

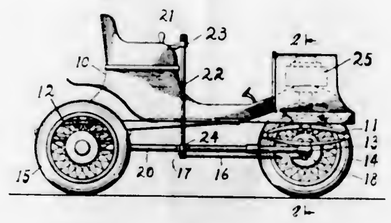
1,428,050. ELECTROLYTIC APPARATUS AND METHOD OF DEPOLARIZING THE SAME. WALTER DANIEL NICKUM, Glendale, Calif. Filed Apr. 21, 1920, Serial No. 375,502. Renewed Nov. 5, 1921. Serial No. 513,211. 9 Claims. (Cl. 204—1.)

1. In an electrical depolarizing apparatus comprising a circuit including a source of direct current and electrodes in contact with an electrolyte, means for maintaining the current effectiveness of said circuit consisting of a transformer having a low tension primary winding in series with and energized by said circuit, and a high tension secondary winding in electrical connection with said electrodes and inductively related to said primary winding in such a manner as to cause a reduction of polarization between said electrodes and said electrolyte when the current in the primary winding is varied by said polarization.



1,428,051. UNCOUPLING DEVICE. CHARLES W. NICHOLAS, Tarentum, Pa., assignor to Walter P. Murphy, Chicago, Ill. Filed Sept. 9, 1920. Serial No. 409,169. 2 Claims. (Cl. 213—59.)

1. In a release rigging for car couplers, an operating lever comprising a rotatable bar mounted upon the end of the car and extending from side to side thereof, integral handles depending from each end of the lever and an integral crank extending centrally from the lever substantially at right angles to the handles formed by bending the rod back upon itself and leaving an eye in the outer bend, and a rigid link passing through the eye of the crank having an open hook at its lower end adapted to engage the lock pin of the coupler and a stop on its upper end adapted normally to prevent disengagement from the crank, and a clip having a tongue entering the eye of the crank and side members adapted to engage the portions of the rod where they contact at the rear of the eye, said clip acting as a bearing for the link in the eye and as a binding member to prevent the portions of the rod from spreading at the rear of the eye.

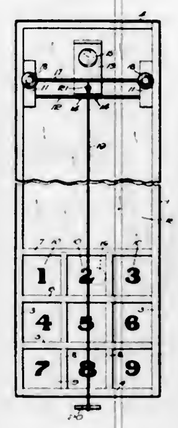


1,428,052. RIM EXPANDING AND CONTRACTING TOOL. WALTER SANDERS NORDEN, Big Rock, Tenn. Filed June 1, 1921. Serial No. 474,065. 1 Claim. (Cl. 157—1.)

In a rim expanding and contracting tool, a body, means at one end adapted for detachable connection with the separable end portions of the rim, a screw extending rotatably through the body, means at the outer end of the screw adapted for connection with the rim substantially opposite the connections of the first means, a bevel gear axially aligned with the body and rotatably connected to the other end thereof and being threaded to the screw, a stub shaft mounted on the side of the

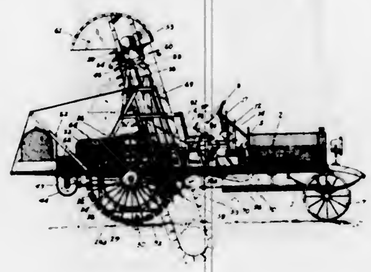
body, a bevel gear on the stub shaft meshing with the first gear, a lever mounted on the stub shaft and having double throw connections with the second bevel gear for rotating it in either direction, whereby the first bevel gear may feed the screw in either direction of the body for expanding and contracting the rim, said stub shaft being detachable from the body, whereby the second bevel gear and its cooperating parts may be detached as a whole from the body.

1,428,053. MOTOR VEHICLE. ALDEN E. OSBORN, New York, N. Y. Filed July 26, 1920. Serial No. 399,107. 12 Claims. (Cl. 180—26.)



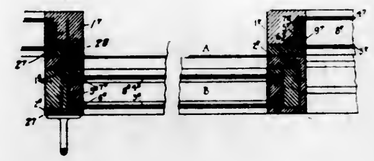
1. In a motor vehicle the combination of a traction wheel, a support for said wheel about which said wheel can rotate, an axle on which said support is pivotally mounted, a spring mounted on said axle, a substantially vertical power transmitting shaft supported by said spring, and means for transmitting motion between said power transmitting shaft and said wheel independently of the angle which said wheel may assume through the turning of said support on said pivotal mounting.

1,428,054. GAME. GEORGE S. PARKER, Salem, Mass. Filed Apr. 12, 1921. Serial No. 460,836. 13 Claims. (Cl. 46—59.)



1. A game apparatus comprising as a unitary structure a receiving pocket formation, a pivoted member to

receive a ball or missile upon its upper face and a pulling device attached to the pivoted member and adapted

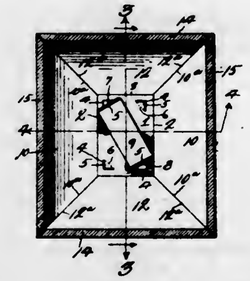


to swing the latter, thereby to project the ball or missile upwardly and forwardly through space toward or into a pocket.

1,428,055. DITCHING MACHINE. MAX PAUL, Stockton, Calif. Filed Apr. 26, 1920. Serial No. 376,465. 11 Claims. (Cl. 37—24.)

11. A ditching machine including a main frame, a rigid digger frame mounted therein and arranged for vertical movement, sprocket wheels at both ends of the digger frame and carrying an endless digger structure, a shaft extending between the sprockets and operatively connected therewith to drive the same, a power driven shaft operatively connected with the first named shaft, the axial lines of said shafts intersecting each other, radius rods mounted on the main frame and connected to the lower ends of the digger frame, whereby such end would normally describe an arc when moved downwardly, grooved guides facing each other on opposite sides of the digger frame and projecting upwardly from the main frame, and rollers carried by the digger frame and riding in the grooves, the latter being shaped to allow movement of the digger frame in a substantially straight vertical path without throwing strain on the shafts at their point of intersection.

1,428,056. TRANSPARENT INSULATION. EMILE JOSEPH PEGLER, New York, N. Y. Filed Feb. 4, 1921. Serial No. 442,476. 7 Claims. (Cl. 20—56.5.)

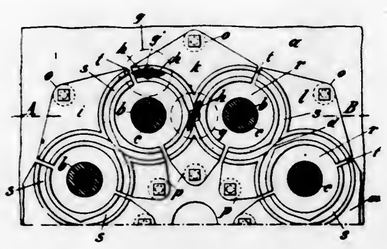


1. Heat insulating means comprising a transparent glass container and a permanently transparent liquid therein having greater heat-transfer-resisting properties than water.

1,428,057. PRODUCTION OF LOW-CARBON FERRO ALLOYS. NAPOLEON PETINOT, New York, N. Y. Filed Sept. 26, 1919. Serial No. 326,605. 7 Claims. (Cl. 204—63.)

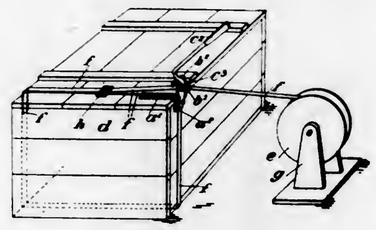
7 The process of producing a low carbon ferro-chromium and mixing it with a quantity of chromite ore which contains oxygen in excess of the amount required to combine with the carbon of the alloy and then charging this mixture into an electric furnace and then melting the same in the presence of an acid lining.

1,428,058. DISPLAY DEVICE. EDMUND M. PITTS, Philadelphia, Pa. Filed Sept. 21, 1921. Serial No. 502,277. 6 Claims. (Cl. 211—24.)



1. A display device formed from a sheet of material, means carried by said sheet of material whereby an article may be attached thereto, said sheet of material being adapted to be affixed to a supporting element to cover different areas thereof and to support articles of different size between the sheet of material and the supporting element.

1,428,059. BRAIDING MACHINE. PAUL RASCHE, U-Barmen, Germany, assignor to Friedrich Klewinghaus, Barmen, Germany. Filed Mar. 25, 1922. Serial No. 546,905. 4 Claims. (Cl. 96—8.)

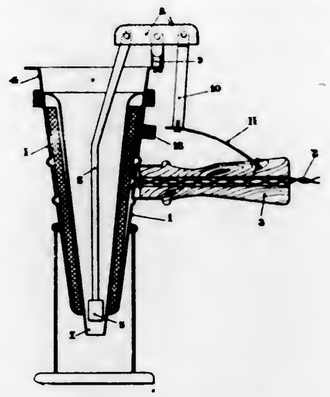


1. In a braiding-machine, in combination, a base-plate, stationary axles arranged in circular fashion on the latter, rotary bosses on said axles, spur-wheels—one at the lower end of each boss—in gear with each other, horn-gears at the upper ends of said bosses, a fixed race-plate arranged between said spur-wheels and horn-gears and consisting of a plurality of separate similar segments of annealed cast-iron forming a continuous race

of circular race portions and located to leave a free space around each boss and a small gap between their

adjacent lateral portions, and distance-bolts to detachably attach said segments to said base-plate, substantially as and for the purpose set forth.

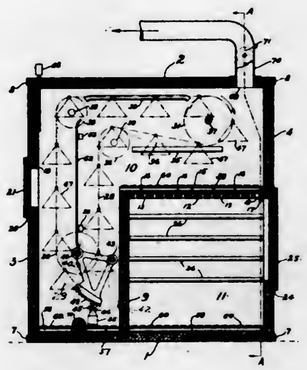
1,428,060. DEVICE FOR TENSIONING THE IRON BANDS OF BOXES. FRIEDRICH CARL REINBOTH, Berlin, Germany. Filed Dec. 1, 1920. Serial No. 427,644. 4 Claims. (Cl. 254—79.)



1. In an implement for banding cases with strap iron, the combination of an angular base plate to seat on the corner of a case and a rocking member pivoted to said plate, including a gripping element; of a readily removable hand lever having pivots at each side thereof seated in the rocking member the end of said lever co-operating with said gripping element to grip the strap between them with increasing pressure as the lever is pulled.

1,428,061. MANUFACTURE OF IRON AND STEEL. THOMAS ROUSE, Stamford Hill, England. Filed Nov. 23, 1920. Serial No. 426,061. 10 Claims. (Cl. 204—63.)

1. A method of obtaining iron and steel from iron containing material, which comprises melting the material with a ferro-boro-silicate mixture containing approximately 3% to 4% ferric oxide and 5% to 8% calcined borax to 100% silicate.

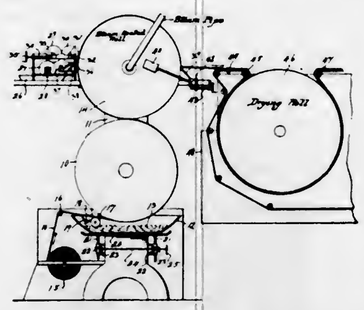


1,428,062. ELECTRIC DISTRIBUTOR FOR SEALING WAX. HENRY SANGLIER, Paris, France. Filed Dec. 23, 1920. Serial No. 432,772. 5 Claims. (Cl. 219—21.)

1. A device for applying sealing wax comprising a crucible for the reception of sealing wax, electric means for heating said crucible, and means at the upper end of said crucible for cooling the fused sealing wax rising to the

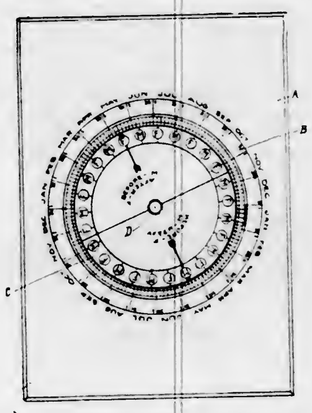
top of the crucible and thus preventing the overflow thereof.

1,428,063. BAKER'S OVEN. WILLIAM F. SCHALLER, San Francisco, Calif., assignor of one-half to Elizabeth Schaller, San Francisco, Calif. Filed Nov. 27, 1920. Serial No. 426,855. 5 Claims. (Cl. 107—57.)



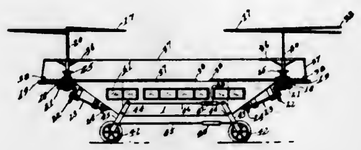
1. In a traveling chain oven, an insulated baking chamber apbstantially in the form of an inverted L, in combination with an auxiliary oven beneath the upper protruding leg of the oven, and independently controlled heating elements in the baking chamber and the auxiliary oven, and variable regulating means whereby the heat from the baking chamber may be admitted to the auxiliary oven in any desired amount.

1,428,064. COATED TISSUE PAPER AND METHOD OF AND MEANS FOR COATING IT. FRANK M. SCHULER, Roselle Park, N. J., assignor to Albert E. Dubey, Brooklyn, N. Y. Filed Dec. 6, 1920. Serial No. 428,814. 20 Claims. (Cl. 91—70.)



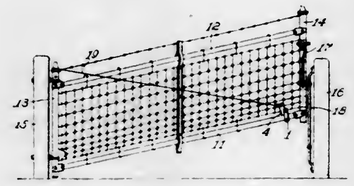
1. As an article of manufacture, tissue paper of a single thickness having one face of a different color from the opposite face.

4. A method of coating the surfaces of tissue paper which consists in applying to one face of the paper a solution of color and a colloidal sizing, and immediately setting the coating by the application of heat thereto.



19. Means for coating tissue paper with color comprising two rolls, one of said rolls being heated, the sheet of paper passing over said rolls, means for applying color to one face of the sheet of paper before it passes onto one of said rolls, and means for applying color to the opposite side of the paper while the paper is passing over the heated roll.

1,428,065. SEX CALCULATOR. HUBERT ROYDS TIDSWELL, Winnington, England. Filed Mar. 30, 1920. Serial No. 369,927. 3 Claims. (Cl. 235—67.)

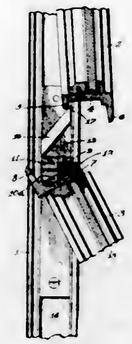


1. In a device of the kind described, the combination of a graduated surface divided into main divisions marked to represent months of the year and further subdivided to represent portions of said months, said main divisions covering a period of at least one year, a second graduated member movably mounted with relation to and supported by the graduated surface, said graduated member being divided into a number of main division according to the number of ovulation periods occurring in the period of at least one year, each main division of the movable member being marked to represent male and female sexes, an indicator associated with said graduated surface and graduated movable member by means of which a chosen subdivision on the movable member may be brought to register with a subdivision on the graduated surface to enable a chosen date on the graduated surface to indicate by means of said indicator one of the alternately marked divisions on the movable member.

1,428,066. FLYING MACHINE. THEODORE VAN VOORST, Touchet, Wash. Filed July 5, 1921. Serial No. 482,635. 4 Claims. (Cl. 244—19.)

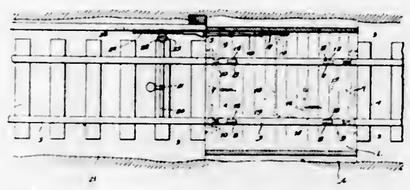
1. In a flying machine, the combination of a housing, a self regulating operating mechanism consisting of a movable motor and a differential mechanism contained within said housing, universally mounted propellers operable by means of said mechanism, and means for changing the angle of inclination of said propellers, and a resilient landing means operably attached to said housing.

1,428,067. ADJUSTING DEVICE FOR FLEXIBLE GATES. WALTER K. VOORHEES, Cedar Falls, Iowa, assignor to Standard Manufacturing Company, Cedar Falls, Iowa, a Corporation of Iowa. Filed Apr. 8, 1921. Serial No. 459,533. 2 Claims. (Cl. 39—80.)



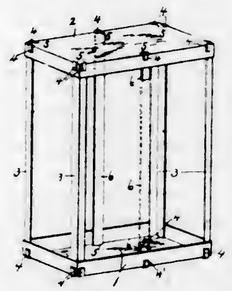
1. The combination with a flexible gate having spaced vertically-disposed stiles and spaced cylindrical beams pivotally connected therebetween, of a U-shaped clamping element slidably mounted on one beam, with its spaced members projecting thereabove, another U-shaped flat bar clamping element with upwardly arched middle part to loosely fit upon said beam, the members of the second-mentioned clamping element being positioned between the upper parts of the first-mentioned clamping element and pivotally connected forward of their middles to and between the said members of the first-mentioned clamping element, and like non-extensible flexible connections each connected diagonally across the gate between an end of one stile and the member of the second-mentioned clamping element on the same side to exercise equal tractions when the gravity of the gate is imposed upon the first-mentioned clamping element to cause the second-mentioned clamping element to tilt, locking said beam between the clamping elements frictionally and releasably.

1,428,068. WINDOW CONSTRUCTION. THOMAS E. WALKER, Detroit, Mich., assignor to Crittal Casement Window Co., Detroit, Mich., a Corporation of Michigan. Filed Apr. 25, 1921. Serial No. 464,303. 11 Claims. (Cl. 20—42.)



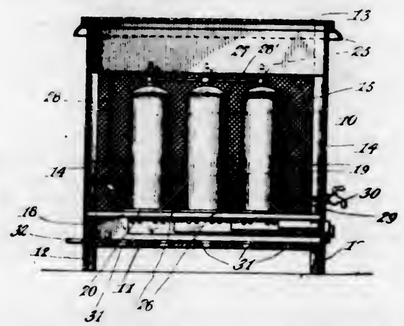
1. In a window, wherein upper and lower sashes are disconnected and independently tiltable and the lower sash holds the upper sash closed when said sashes are in

alinement, the combination of a member adapted to support the lower sash, and means carried by said member



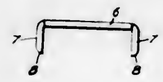
adapted to contact with the upper sash to cause the upper sash to aline with the lower sash so as to be held closed thereby.

1,428,069. TRACK BRAKE FOR MINE CARS. JAMES F. YECKEL, Lawrence, Pa.; Wilma B. Yeckel administratrix of said James F. Yeckel, deceased. Filed Mar. 20, 1920. Serial No. 367,564. 3 Claims. (Cl. 187—97.)



1. Car braking means for mine cages comprising a pair of shafts journaled in the bottom of the cage, a pair of arms on each shaft, horns having tubular parts receiving said arms and parts projecting through the floor of the cage, each of said parts having a straight edge and a beveled edge, springs on the arms for holding the horns in their outer position and means for rocking the shafts to retract the horns below the floor of the cage.

1,428,070. KNOCKDOWN CRATE. CHARLES W. YOUNG, Syracuse, N. Y. Filed Apr. 15, 1920. Serial No. 374,122. 2 Claims. (Cl. 220—4.)

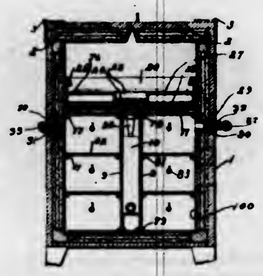


2. A knock-down crate comprising rectangular marginally flanged sheet metal plates of substantially the same size, each corner of each plate being provided with a pair of slots extending along and in close proximity to the inner faces of the flanges of adjacent sides of the plate at an angle to each other, sheet metal corner posts of angular cross section, each having its opposite ends seated against the inner faces of the flanges of the corresponding corners and provided with a pair of bendable tongues passed through the adjacent slots and overturned upon the outer faces of the adjacent flanges.

1,428,071. ELECTRIC HEATER. PIERRE JOSEPH HENRI BERNARD, Montreal, Quebec, Canada. Filed Dec. 9, 1920. Serial No. 429,453. 4 Claims. (Cl. 219—38.)

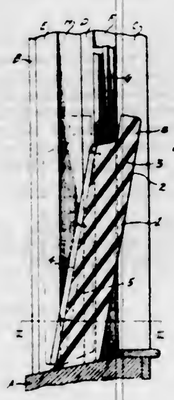
4. In a heater such as described, a plurality of reticulated side and end walls, a base upon which said walls are mounted, a cover secured to said walls, a support mounted upon the base, a plurality of electric heating elements mounted upon the support, casings for said elements, water jackets surrounding said casings, nipples connecting said water jackets, a tank, a pipe connecting the tank and one of said water jackets, an outlet pipe leading from one of said water jackets, vent openings for said water jackets, said base having openings therein, means for controlling said openings, and means for operatively wiring the heating elements, and a switch for controlling said elements.

1,428,072. SOLE PROTECTOR. WILLIAM H. BETTS, St. Louis, Mo., assignor to Betts Sole Protector Company, St. Louis, Mo., a Corporation of Missouri. Filed May 8, 1920. Serial No. 379,754. 2 Claims. (Cl. 36—74.)



1. A sole protector comprising a relatively thin and flat combined driving head and wear plate and a pair of prongs formed integral with the ends of said plate, said prongs being parallel before being driven and of uniform thickness and widths and being of the same thickness as the driving head, and each prong having its opposing faces parallel and each prong being provided on its lower outer edge with a curved face which in conjunction with the straight inner face forms a driving point, and to cause the prongs to curve inwardly toward each other, the curvature of the edge substantially corresponding with the arc of a circle whose radius is equal to the thickness of the prong.

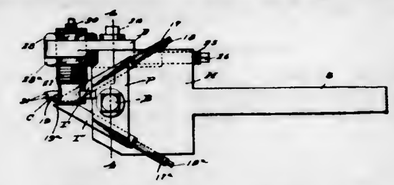
1,428,073. REFRIGERATOR. LIBBIE BORDEN, Spokane, Wash. Filed June 28, 1920. Serial No. 392,457. 1 Claim. (Cl. 62—56.)



A refrigerator comprising a casing; a filter pan located in the casing and inclined with respect to the horizontal;

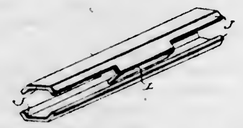
a tank located in the casing below the filter pan and having an outlet; a partition in the filter pan and defining compartments, one of which is filled with filtering material, the other of which is located at the lowermost portion of the filter pan; means for establishing com-

munication between the last specified compartment and the tank; and an ice pan supported in the casing above the filter pan, the ice pan being provided at a point remote from said means with a perforated depression discharging into the filtering material.



1,428,074. WINDOW VENTILATOR. CHARLES C. BRABANT, Detroit, Mich. Filed Aug. 26, 1921. Serial No. 495,581. 8 Claims. (Cl. 98—31.)

7. A window ventilator comprising separate end members, a series of panels detachably engaged at their ends with the end members for spacing said members apart when in operative position within a window frame, and triangular blocks upon the outer sides of the end members to engage within ways on a window frame and permit a lateral movement of the upper ends of the end members and form stops to limit such lateral movement, the upper ends of said end members being notched to receive a window sash and the upper of said panels being arranged to extend adjacent said sash and inwardly and upwardly beyond the lower edge of the sash.



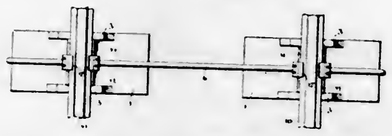
1,428,075. THREAD-CUTTING TOOL AND HOLDER THEREFOR. DAVID BRECKENRIDGE, Victoria, British Columbia, Canada. Filed Jan. 24, 1921. Serial No. 439,577. 6 Claims. (Cl. 29—97.)

1. In combination, a pair of cutting tools having tapered cutting edges, means for sustaining the cutting edges in adjusted position, a chasing tool, and means

for adjustably supporting the chasing tool in working relation with respect to the pair of cutting tools.

1,428,076. PENCIL HOLDER. HARRY ADAM CLARK, Detroit, Mich. Filed Feb. 15, 1921. Serial No. 445,103. 2 Claims. (Cl. 287—108.)

1. A holder for pencils, comprising a single sheet of resilient material bent longitudinally to form a pencil receiving channel, and one of the free longitudinal edges of the sheet having formed therewith a lip adapted to be bent inwardly to be disposed within the channel so that the same will define or limit the extent to which a pencil may be inserted in either end of the channel.



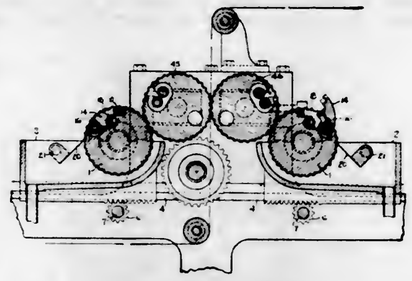
1,428,077. PENCIL. HARRY ADAM CLARK, Detroit, Mich. Filed June 30, 1921. Serial No. 481,720. 2 Claims. (Cl. 120—10.)

1. A pencil comprising a body composed of companion members so formed as to provide a lead receiving channel, slots communicating with the channel, and notches adjacent the slots, said members being secured together so that the lead receiving channel is normally expanded to allow of an adjustment of the lead within the channel, means for contracting the members to effect a constriction of the channel, and means movable within said channel and said slots for projecting and limiting the inward movement of the lead within the channel, said last means comprising a bar slidable within the channel, a

shank within one of the slots and projecting from the side of the body, lugs formed on the shank, and a spring embracing the bar and normally urging the shank so that said lugs will be disposed within said notches.

1,428,078. RAILWAY TIE AND FASTENER. HARRY ADAM CLARK, Detroit, Mich. Filed Jan. 14, 1922. Serial No. 529,186. 10 Claims. (Cl. 238—51.)

2. A railway tie and fastener comprising a pair of wear resisting rigid blocks spaced apart, a tie bar engaging with said blocks at the remote ends thereof for maintaining said blocks in spaced apart end to end alignment and for holding said blocks against spreading, each of said blocks being formed with integral upstanding projections extending longitudinally thereof adjacent to its opposite side edges, and means arranged upon the blocks between said projections and opposite sides of said tie bar for holding the latter against movement transversely of the block, said last named means being adapted to provide a bearing for a rail.

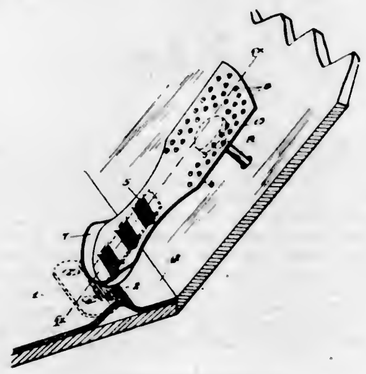


1,428,079. PEN. THAD CLARK, Americus, Ga. Filed Sept. 20, 1921. Serial No. 501,896. 2 Claims. (Cl. 120—47.)

1. A fountain pen comprising a tubular body, a plug secured in one end thereof, a pen point carried by the plug, a port in said plug, a hollow tubular piston movable within the tubular body, a port at each end thereof, manually operated means for closing the port at one end of the piston, automatically operated means for closing the port at the opposite end of said piston and means for automatically closing the port in the tubular body when the pen is in a vertical position and automatically opening said port when the pen is in an inclined position.

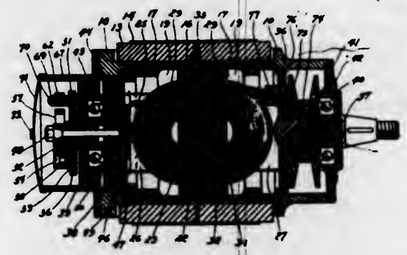
1,428,080. PRINTING PRESS. ELLIS W. COOPER, New York, N. Y. Filed Dec. 20, 1919. Serial No. 346,203. 17 Claims. (Cl. 101—154.)

1. A rotary intaglio printing press including in combination a cylinder having a recess therein arranged longitudinally thereof and at a slight angle to the elements of the surface of the cylinder, a thin, flexible intaglio plate stretched about said cylinder with its straight edges inclined at substantially the same angle to its curved edges as said slot makes with the cylinder heads, and means in



the recess for holding said inclined edges of the flexible intaglio plate and means for stretching the plate circumferentially about the cylinder.

1,428,081. RIFLE. JOHANN FUCHS, Appenzell, Switzerland. Filed Apr. 19, 1921. Serial No. 462,624. 3 Claims. (Cl. 42—1.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. A rifle comprising a barrel, a protecting sleeve spaced from and surrounding the barrel and secured thereto at its rear end and forming with the latter an annular intermediate free space extending substantially the length of the barrel, whereby when the rifle is supported, for firing, the barrel will not be subjected to a radial pressure, a sight on the barrel in front of the sleeve, and a sight located adjacent the rear end of the latter.

1,428,082. DETACHABLE PEDAL FOR ACCELERATORS. JOSEPH P. GAMMON, Rochester, N. Y. Filed July 18, 1921. Serial No. 485,693. 2 Claims. (Cl. 74—81.)

1. In a detachable pedal, the combination of a floor plate having a tongue mounted to swing thereon, a foot plate having cleats stamped thereon forming a socket for said tongue by which said foot plate is adapted to swing on said floor plate.

1,428,083. MAGNETO. HARRY FOREST GEIST, Hartsville, S. C. Filed Oct. 30, 1920. Serial No. 420,776. 8 Claims. (Cl. 171—209.)

1. In a wound armature type magneto, the combination of a revoluble armature and windings with a field structure comprising a frame, field magnets and pole shoes, said pole shoes being substantially a hollowed square in shape to reduce the central magnetic areas presented for co-operation with said armature.

1,428,084. CLEANER FOR AND METHOD OF CLEANING METALS. JAMES H. GRAVELL, Elkins Park, Pa. Filed June 4, 1921. Serial No. 475,166. 14 Claims. (Cl. 148—8.)

1. A cleaner for metals consisting of clay and a compatible metal etching acid.

7. A cleaner for metals consisting of colloidal clay a compatible metal etching acid, water, a filler, acetone, and an alcohol of higher boiling point than ethyl alcohol.

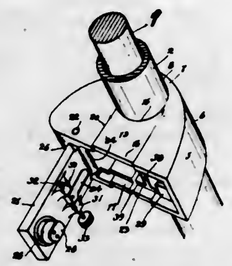
1,428,085. COMPOSITION FOR AND METHOD OF PREVENTING METAL FROM RUSTING. JAMES H. GRAVELL, Elkins Park, Pa. Filed June 4, 1921. Serial No. 475,167. 8 Claims. (Cl. 134—39.)

6. A rust preventive coating for metals comprising an admixture of castor oil, ethyl alcohol, and an alcohol boiling at a higher temperature than ethyl alcohol.

1,428,086. PAINT FOR AND METHOD OF PREVENTING HEATED SURFACES FROM RUSTING. JAMES H. GRAVELL, Elkins Park, Pa. Filed June 4, 1921. Serial No. 475,168. 7 Claims. (Cl. 194—44.)

1. A paint for preventing heated metal surfaces from rusting of which one ingredient is a thermally decomposable phosphate in sufficient quantity more than 15% by weight to liberate enough phosphoric acid to form with the metal a substantial coating of phosphoric salts of the metal.

1,428,087. RUST-RESISTING STEEL AND METHOD OF PRODUCING SAME. JAMES H. GRAVELL, Elkins Park, Pa. Filed June 22, 1921. Serial No. 479,683. 7 Claims. (Cl. 148—6.)



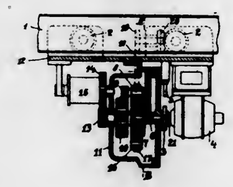
6. A new article of manufacture consisting of a body of steel having a pressed-in surface of phosphate.

1,428,088. SOLDERING SOLUTION. JAMES H. GRAVELL, Elkins Park, Pa. Filed Dec. 20, 1921. Serial No. 523,765. 6 Claims. (Cl. 148—26.)

4. A soldering solution comprising zinc chloride, ammonium chloride and fusel oil.

1,428,089. AUTOMOBILE LOCK. WILLIAM THOMAS HALL, Winnipeg, Manitoba, Canada. Filed May 9, 1921. Serial No. 467,970. 7 Claims. (Cl. 70—90.)

7. The combination with the steering column and the post of an automobile, said column and post having openings therein adapted to be brought into registration in the turning of the post, of a two-part clamping member attached to the column, a foldable locking pin carried

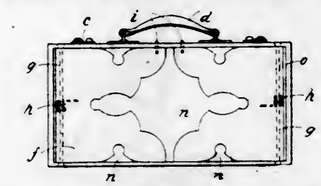


by the clamping member and adapted to enter the registering openings of the post and column and means preventing removal of the locking pin.

1,428,090. TURNTABLE. MAURICE L. HOEFFKEN, Belleville, Ill. Filed May 8, 1922. Serial No. 559,291. 7 Claims. (Cl. 104—44.)

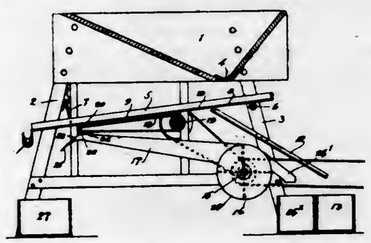
5. A turntable provided with a base, a frame revolubly mounted on said base, an axle supported by said frame, a pair of tracks tiltably mounted on the axle, structural members connecting the tracks on opposite sides of the axle, and truss members extending from one of said members to the other and passing over the axle.

1,428,091. CRAB. ALEXANDER HOFFMANN, Berlin-Reinickendorf, and BERNHARD BOMBORN, Berlin, Germany; said Hoffmann assignor to said Bomborn. Filed June 29, 1920. Serial No. 392,826. 6 Claims. (Cl. 212—131.)



1. A load lifting and traversing device comprising in combination, a motor, a winch, a traversing wheel, a planet wheel gear, comprising a planet wheel carrier and a planet wheel, inserted between said motor and said winch and traversing wheel, a driving wheel for said planet gear disposed coaxially with said planet gear and means for separately locking said planet wheel carrier and said winch, respectively.

1,428,092. HANDBOX. TETSUO HONMA, London, England. Filed Apr. 28, 1921. Serial No. 465,215. 6 Claims. (Cl. 190—11.)

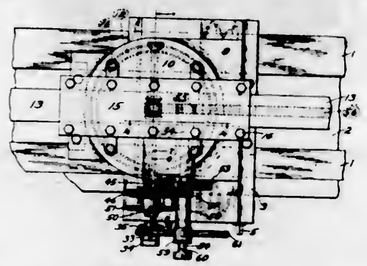


1. In a handbox of the character described, hinged flaps fitted in one side of the box so as to be flush and

continuous throughout the entire extent of the bottom with adjacent surfaces when closed and so that they can

be turned out to serve as legs for converting the box into a stool or a table, substantially as set forth.

1,428,093. GRAIN-CLEANING MACHINE. FRANCIS WILLIAM HUMPHRIES and LORNE EDWIN MACKENZIE, Carman, Manitoba, Canada. Filed July 12, 1921. Serial No. 484,261. 4 Claims. (Cl. 130—17.)

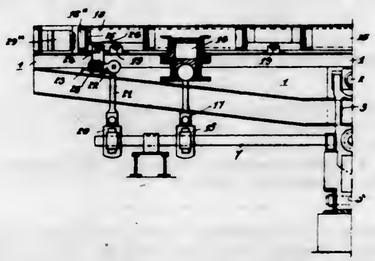


4. In a grain cleaning machine the combination with an endless grain conveyor of a suction flue presenting an inlet disposed beneath the discharge end of the conveyor, and a scraper carried by the flue adjacent said inlet and engaging the conveyor.

1,428,094. SLIP SOCKET. ELMOND C. IMMEL, Leeray, Tex. Filed July 6, 1921. Serial No. 482,656. 3 Claims. (Cl. 294—102.)

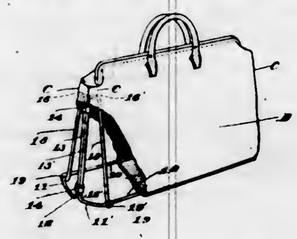
1. A slip socket of the character described comprising a body member, a spring disposed in said body member, a supporting member carried by the spring, a cap engaged with the supporting member, said cap having an opening in its central portion and slots communicating with said opening, and chuck jaws including shanks, said shanks being disposed in the slots of the cap, said chuck jaws and shanks being secured and urged toward one end of the body member through the cooperation of the holding member and the cap.

1,428,095. TAPER-BORING MECHANISM FOR LATHES. ARTHUR H. INGLE, Rochester, N. Y. Filed Mar. 6, 1917. Serial No. 152,897. Renewed Jan. 28, 1922. Serial No. 532,495. 18 Claims. (Cl. 82—12.)



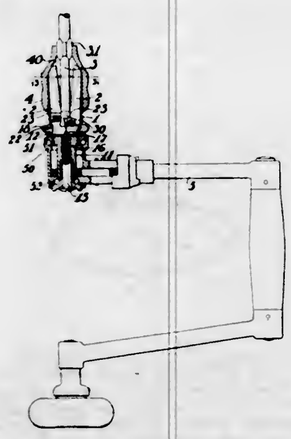
1. Boring mechanism for lathes, comprising horizontal lathe bed ways, a support fitted for movement thereon, a boring bar of substantial length slidably fitted in said support for a substantial range of endwise sliding operative movement and mounted also for swiveling adjustment, said boring bar formed to carry a tool at its forward end and movable to project a substantial distance from said support whereby it is adapted to bore an elongated passage in a work piece, and means for transmitting endwise operative movement to said boring bar from the lengthwise extending feed shaft of the lathe throughout the range of swiveling adjustment of the boring bar.

1,428,096. CAPSULING OF CORKED BOTTLE MOUTHS AND A COMPOSITION OF MATTER USABLE THEREFOR. SAMUEL JOSEPH INGRAM, Sydney, New South Wales, Australia. Filed Mar. 22, 1921. Serial No. 454,438. 4 Claims. (Cl. 134—1.)



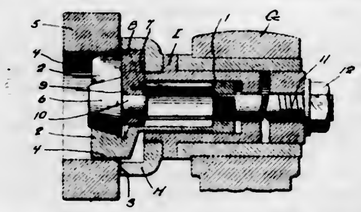
4. A liquid capsuling composition, comprising one ounce of Glauber's salt, one pound of sugar, one pound of gelatine, one pound of talc, one-half pound of wetted whiting, and two pints of water.

1,428,097. MOLDING AND/OR COMPACTING PLASTIC, FLUID, POWDERED, GRANULAR, OR THE LIKE SUBSTANCES. PETER BURD JAGGER, London, England. Filed Feb. 25, 1921. Serial No. 447,862. 18 Claims. (Cl. 25—41.)



1. In a shaking or vibratory machine of the kind described for molding and/or compacting plastic, or fluid, or powdered, granular or the like substances, a main vibratory support, means for imparting movement to said support, a platform on said support, said platform having an independent horizontal vibratory movement on said support, and means for imparting positive and controlled horizontal vibratory movement to the said platform relatively to the support and while vibrating therewith.

1,428,098. END SUPPORT FOR TRAVELING BAGS. WILLIAM JAMES, Boston, Mass. Filed Jan. 31, 1922. Serial No. 532,995. 5 Claims. (Cl. 190—49.)

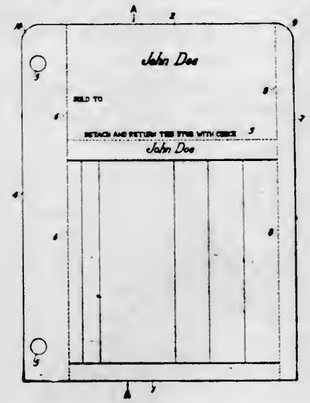


1. In combination with a bag comprising a bottom, sides and ends normally disposed in a perpendicular position; a bag support comprising a base, perpendicular supports formed on either end thereof, a horizontal top disposed at approximately ninety degrees to the long dimension of said base, and formed from said perpendicular supports, a strut formed from said top extending down at an angle to connect with sides of said base, hinges binding said perpendicular supports together.

1,428,099. BRACE AND BIT THEREFOR. JOHN V. JANIN, Seattle, Wash. Filed Aug. 5, 1920. Serial No. 401,458. 4 Claims. (Cl. 279—36.)

1. A bit holder for braces having two clamping levers pivoted at their inner ends and provided upon their opposed faces adjacent their pivoted ends with flat bit holding surfaces, and a sleeve embracing and adjustable lengthwise of said levers and having cam surfaces engageable with the ends of the clamping levers opposite to their pivots, said sleeve having at its outer end and spaced from said bit-holding surfaces of the clamping levers, surfaces adapted for supporting engagement with the bits placed therein.

1,428,100. INTERNAL CHUCK. JOHN O. KAHL, Philadelphia, Pa. Filed May 28, 1919. Serial No. 300,321. 3 Claims. (Cl. 279—51.)



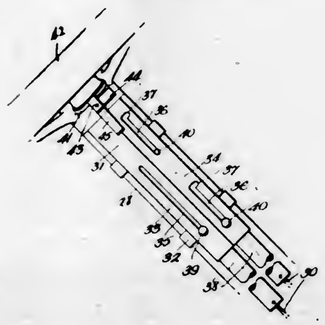
1. An internal spring collet comprising a plurality of spring jaws having a tendency to non-gripping position, a cone device stationary between said jaws, means providing a truing surface surrounding said jaws, and means operable to move the jaws relative to said cone device in a manner to spread the jaws into engagement with the work and for moving the work into engagement with said truing surface.

1,428,101. FASTENER AND METHOD OF MAKING THE SAME. WOLF KAHN, Newark, N. J. Filed Feb. 2, 1920. Serial No. 355,600. 6 Claims. (Cl. 24—101.)

6. A fastener of the class described including a substantially straight twisted wire shank having a pair of wire loops at each end thereof, the loops of each of said pairs extending in opposite directions at an angle to said shank to form fastener terminals at opposite ends thereof.

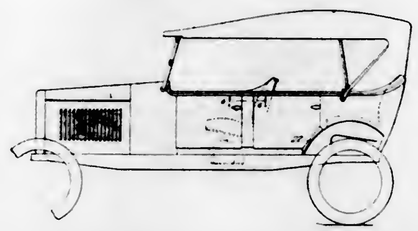
1,428,102. INVOICE SHEET. WILLIAM ASHLEY KELLY, Jersey City, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 24, 1920. Serial No. 432,949. 3 Claims. (Cl. 281—43.)

1. For use in a typewriting machine, an entry-sheet having rounded right and left upper corners and comprising a body part for having successive entries typed thereon, a lateral filing marginal part at one side of the body part and detachably connected therewith along a weakened line of detachment providing for easy detachment of the filing



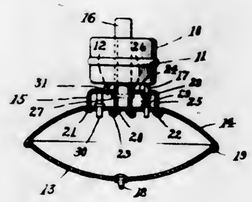
marginal part from the body part when the entries on the body part are complete, and a lateral extension projecting from the other side of the body part and detachably connected therewith along a weakened line of detachment providing for easy detachment of said lateral extension from the body part when the entries on the body part are complete, one of said upper rounded corners of the entry-sheet being carried by the filing marginal part, and the other upper rounded corner of the entry-sheet being carried by said lateral extension, whereby said round corners will facilitate the repeated insertion of the entry-sheet in the typewriting machine, and also whereby the upper end of the body part will be left in symmetrical shape with square right and left upper corners after the detachment therefrom of said filing marginal part and said lateral extension.

1,428,103. LIGHTING SYSTEM FOR CINEMATOGRAPHS. AUGUST KÖHLER, Jena, Germany, assignor to the Firm Carl Zeiss, Jena, Germany. Filed Aug. 13, 1921. Serial No. 492,127. 1 Claim. (Cl. 88—24.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



In a lighting system for cinemtographs having a projecting system which consists of a plurality of objectives disposed side by side, a source of light, a condenser system, a collective lens system, lying approximately at the locus of the image of the source of light formed by the said condenser system, a film-window and an auxiliary condenser system disposed behind the said collective lens system immediately adjacent to the said film-window, the said collective system imaging the exit pupil of the condenser system approximately in the plane of the film-window, the said auxiliary condenser system consisting of two parts, the front part being a collective lens, the front focal point of which lies at the locus of the said collective system, whilst the hinder part consists of a plurality of collective lenses equal in number to the projection objectives, each of which lenses is adapted to image in the entrance pupil of the appertaining projection objective the image of the said source of light formed by the said condenser system.

1,428,104. SIGNAL FOR AUTOMOBILES. WILLIAM H. KROLL, Bowler, Wis. Filed Oct. 11, 1920. Serial No. 416,036. 1 Claim. (Cl. 116—36.)

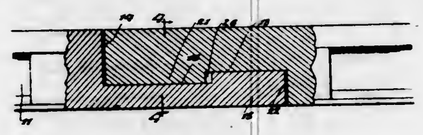


An actuating device for an automobile indicating member, comprising a pair of sleeves having slots of different length therein, one of said sleeves having its slots provided at their upper ends with bayonet slots whereby the actuating member is held in operative position, an operating member slidably mounted in each and having a part engaging its respective slot, and means to release the actuating member.

1,428,105. AUTOMOBILE BODY STRUCTURE. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 19, 1920. Serial No. 352,277. 18 Claims. (Cl. 296—28.)

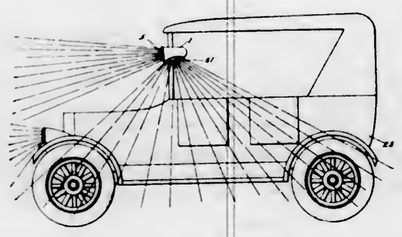
1. In an automobile body structure, a body frame including longitudinally extending body sills, a tonneau panel connected at its lower edge to said body sills and provided with inwardly extending depressions in the side portions thereof to form wheel housings, in combination with reinforcing members connected to said body sills and having vertically extending portions to which the forward vertical edges of the tonneau panel are connected, said reinforcing members having portions inwardly depressed to conform to the wheel housing depressions of the tonneau panel.

1,428,106. TOY TOP. FRANK L. LINDSTROM, Bridgeport, Conn. Filed Nov. 5, 1920. Serial No. 422,012. 7 Claims. (Cl. 46—32.)



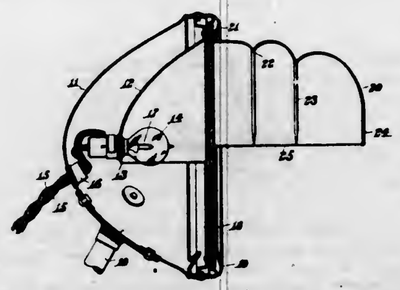
1. A top body including a lower section having a centrally positioned spindle, an upper section secured thereto and having a pair of centrally positioned, concentrically arranged annular grooves provided with perforations, a cap and a stem adapted to seat in said grooves, respectively, and lugs carried by said cap and stem adapted to pass through said perforations and to be bent down against said upper section.

1,428,107. RAIL JOINT. HERBERT L. LYLE, Brookville, Pa. Filed Nov. 17, 1921. Serial No. 515,828. 7 Claims. (Cl. 238—235.)



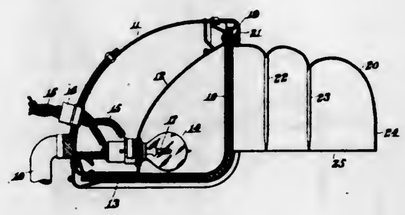
1. In a rail joint, a rail end having an overlapping top portion and another rail end having a corresponding

overlapping bottom portion, a pair of fish plates integral with each of said rail ends and extending part way



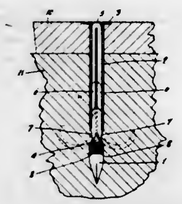
along said overlapping portions and adapted to embrace the corresponding web of the opposing overlapping portion.

1,428,108. SPOTLIGHT FOR AUTOMOBILES. CHARLES A. MADDUX, Portland, Oreg. Filed July 19, 1921. Serial No. 485,905. 4 Claims. (Cl. 240—7.)



1. The combination with means of support, of an automobile side lamp comprising a casing provided with openings on front and side, respectively, and means of lighting the same from within, the said side opening being a narrow elongated slot-like aperture, and a cooperating reflector for said side opening adapted to distribute rays of light spreading longitudinally of said aperture but restricted to a flat beam tranversely of said aperture, substantially as and for the purpose set forth.

1,428,109. HEADLIGHT. CHARLES GILBERT MELANSON, Lynn, Mass. Filed Aug. 16, 1921. Serial No. 492,806. 6 Claims. (Cl. 240—41.)

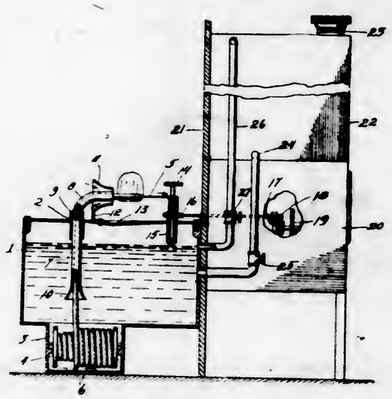


1. The combination with a casing, a lamp therein; a reflector within said casing extending over the upper interior wall thereof and terminating at a point adjacent the bottom of said lamp; and a visor in front of said reflecting surface and having a plurality of concaved depressions in the rear face thereof each provided with a mirrored surface adapted to deflect certain of the lamp rays rearwardly against said reflector.

1,428,110. HEADLIGHT. CHARLES GILBERT MELANSON, Lynn, Mass. Filed Aug. 16, 1921. Serial No. 492,807. 4 Claims. (Cl. 240—41.)

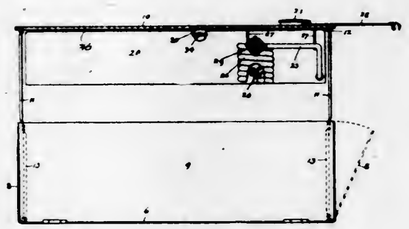
1. The combination with a casing open at the front and bottom, a reflector within said casing having a horizontal rearward extension; a lamp socket supported by said reflector and parallel to said extension; a lamp in said socket; an angular lens supported by said casing and closing the front and bottom thereof, the bottom portion of said lens being closely adjacent said lamp; and a vizor in front of said lens, the lower edge of which is in alinement with the axis of said lamp.

1,428,111. NAIL FOR PACKING CASES AND THE LIKE. FRANK MOLESWORTH, Auckland, New Zealand. Filed Sept. 16, 1920. Serial No. 410,601. 1 Claim. (Cl. 85—23.)



A non-removable nail comprising a hollow tubular member having a head at its upper end and a pair of diametrically opposite holes at its lower end; a solid piercing member separate from said hollow member and reduced at its upper end to fit and be secured to the hollow member, said reduced portion of the solid piercing member having a pair of cam surfaces one for each hole, said piercing member having a sharpened point at its other end; and an anchoring member mounted within said hollow member and having, split legs one in contact with each of said cam surfaces, said cam surface causing the legs to move outwardly when the anchoring member is given an independent driving movement.

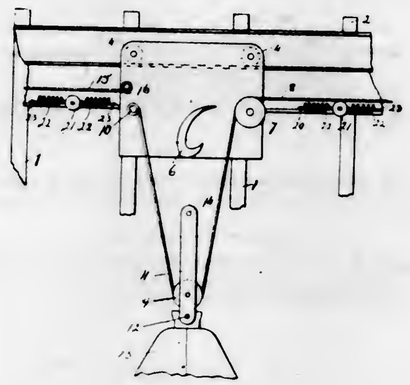
1,428,112. HORIZONTAL-WICK BURNER. BERNARD MULLER-THYM, Kansas City, Mo. Filed June 8, 1920. Serial No. 387,867. 6 Claims. (Cl. 67—36.)



1. A burner comprising an oil receptacle, a reel, a flexible wick extending through the oil in the receptacle

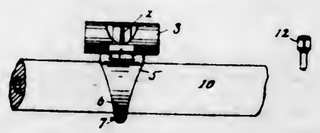
from the reel, a wick guide for the oil saturated wick and winding drum spaced horizontally apart, and means

for confining the burning zone of the wick to a point between the drum and said oil receptacle.



1,428,113. FOLDABLE STOVE. DAREL NEAL, Redondo Beach, Calif. Filed Nov. 6, 1920. Serial No. 422,304. 5 Claims. (Cl. 126—38.)

1. In a collapsible stove, a base having a rigid and a hinged end wall and hinged side walls, arms hinged at their lower ends to said base in spaced relation, a stove plate, a heating element carried by said plate, legs hinged to said plate and hingedly connected to the upper ends of said arms, and means for releasably holding the said arms and legs in alinement, said stove plate adapted to rest on the free edge of said walls when in collapsed position.

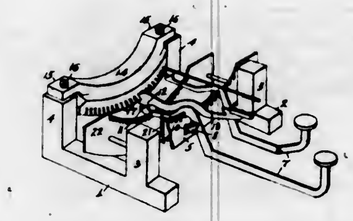


1,428,114. DREDGING-HOIST TROLLEY. JOSEPH PRANA, Philadelphia, Pa. Filed July 21, 1919. Serial No. 312,418. 4 Claims. (Cl. 212—102.)

1. In an apparatus of the character described a trolley, means for supporting said trolley, a hanger pivoted to the dredge, a cable so attached to the trolley as to have a loop formed therein, a shive wheel journalled in the hanger, over which the loop in said cable runs, a stationary supporting cam carried by the trolley, and means for causing said hanger to so enter into engagement with

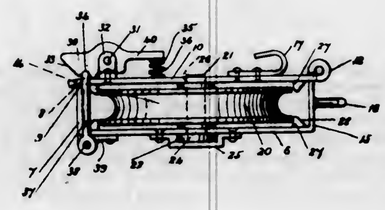
the surfaces of said supporting cam as to be locked thereon and unlocked therefrom.

1,428,115. SIGHT FOR FIREARMS. ARTHUR PERRIN, Brookline, Mass. Filed Apr. 26, 1921. Serial No. 464,511. 3 Claims. (Cl. 33—50.)



1. A foresight for firearms and the like comprising in combination with the barrel and with a suitable rear sight, a convex lens and holder therefor mounted on said barrel and adapted to be moved lengthwise thereof for adjustment of distance from said rear sight.

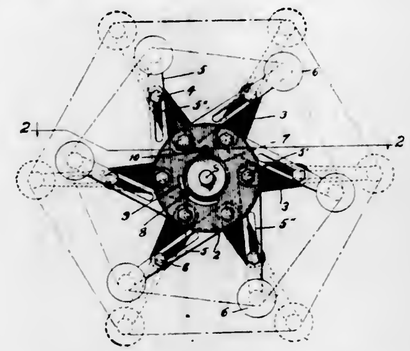
1,428,116. FENDER ATTACHMENT FOR AUTOMOBILES OR OTHER VEHICLES. WILLIAM H. RAPEPORT, Philadelphia, Pa. Filed July 30, 1921. Serial No. 488,666. 5 Claims. (Cl. 293—55.)



2. In a fender attachment for a vehicle, a fender, an arm adapted to carry the same, means for connecting said arm with a frame member of the vehicle, said member being formed of sections, a headed device adapted to connect firmly said sections, a plate-like member interposed between said arm and frame member formed with a channel closed upon all sides to receive and house the head of said device and remove it from contact with said arm the head of said device abutting against the bottom wall of said channel, and means for clamping said arms and plate-like member to said frame member of the vehicle.

1,428,117. TYPE-BAR KEY-LEVER MECHANISM. LYMAN R. ROBERTS, Rutherford, N. J., assignor to L. R. Roberts Typewriter Company, Stamford, Conn., a Corporation of Delaware. Filed Aug. 7, 1917. Serial No. 184,850. 3 Claims. (Cl. 197—22.)

1. In a typewriter, and in combination a relatively stationary frame having supporting uprights, a readily removable type bar segment in which the type bars are pivotally mounted, hung between the supporting uprights and having supporting projections which cooperate with the supporting uprights, and operating members for the type bars separate therefrom and normally engaging the same from below, whereby the type bars are freely separable from their respective operating members when the segment is removed.

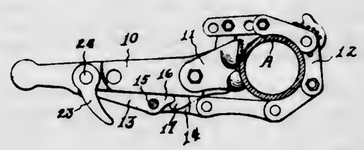


1,428,118. SNATCH BLOCK. RAY ROBESON and JOHN LEE, Withee, Wis. Filed Sept. 6, 1921. Serial No. 498,608. 3 Claims. (Cl. 254—193.)

1. In a snatch block, a stationary side plate provided with end plates arranged at an angle to it and having also an anchoring device at one end, a movable side plate hinged to one end plate adjacent to the said anchoring device and having at its free end portion means for engaging with the other end plate, and a bail pivoted to the stationary side plate adjacent to the last said end plate and adapted to overlap the free end portion of the hinged side plate and lock it in its closed position when turned crosswise of the said side plates.

1,428,119. YARN REEL. CHARLES E. ROGERS, New London, Conn. Filed Oct. 11, 1921. Serial No. 507,072 5 Claims. (Cl. 242—113.)

1. In a yarn reel, a shaft, a disk fixed on the shaft and having radial arms, bolts carried by the arms, a disk rotatable on the shaft, arms pivoted at their inner ends to the rotatable disk and having spools on their outer ends and having slots receiving the respective bolts, a coil spring between the disks secured at one end to the fixed disk and adjustably secured at its opposite end



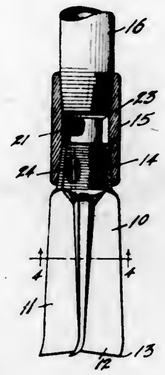
to the rotatable disk, a stop on the fixed disk, and a latch carried by the rotatable disk and engaging the stop.

1,428,120. COMPOUND FOR HARDENING COMMON ROSIN AND METHOD OF USING SAME. WILLIAM HENRY SCHEEL, Mount Vernon, N. Y. Filed Mar. 25, 1922. Serial No. 546,932. 3 Claims. (Cl. 134—26.)

1. A composition of matter consisting of common rosin and coral lime, in the proportion of approximately one per cent of the latter.

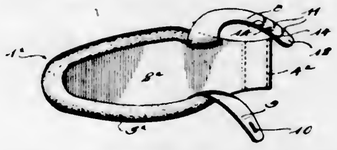
3. The method which consists in compounding coral lime with common rosin in fusion, for the purpose of hardening the rosin first, and then diluting the said rosin compound, while in fusion, with an adequate liquid solvent, to the proper consistency of a rosin varnish.

1,428,121. RELEASING DEVICE FOR PIPE WRENCHES. NELSON K. SMITH, Dallas, Tex. Filed Sept. 30, 1921. Serial No. 504,454. 6 Claims. (Cl. 81—68.)



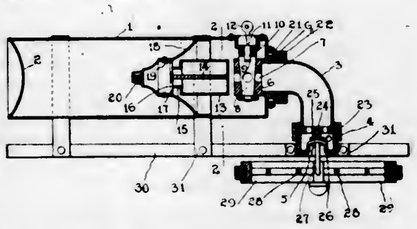
1. The combination with the handle lever, jaw, and chain of a pipe wrench, of a release lever pivotally connected with the end of the chain and free from the handle lever, a lug on the pivoted end of the release lever adapted to engage the handle lever and fulcrum thereon for drawing the chain taut about an article, and a keeper pivoted on the handle lever and snugly engaging on the outer end of the release lever.

1,428,122. WELL-DRILLING BIT. PRIMUS W. SMITH, Junction City, Tex., assignor of one-eighth to John J. Bookhout and James R. Bookhout, both of Dallas County, Tex. Filed June 20, 1921. Serial No. 478,779. 5 Claims. (Cl. 255—61.)



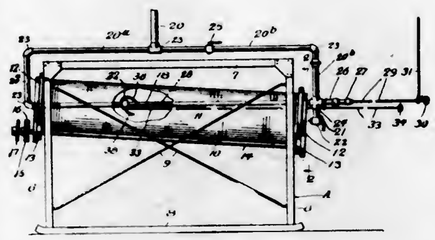
1. In a deep well drilling bit, a plurality of elongated blades, each having its inner vertical edge extending from end to end and contacting with the inner vertical

edges of the other blades along the vertical axis of the drill, each blade projecting radially from the center of the drill and having a radial cutter at its lower edge



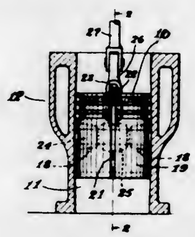
extending from the lower end of its inner vertical edge, a segmental head sector at the upper end of each blade, said sectors uniting in a cylindrical head, and means for fastening the sectors together.

1,428,123. SHOE SANDAL SOLE. JOSEPH P. STEELE, Chicago, Ill. Filed Mar 24, 1921 Serial No. 455,129. 2 Claims. (Cl. 36—63.)



1. An article of the class described comprising a sandal overshoe provided on the outer face of its bottom with a transverse open-ended pocket, and a one-piece flat spring removably arranged in said pocket and having its ends projected beyond the open ends of the latter, said ends of the spring being bent upon themselves and rolled to form yieldable jaws, designed to grip the shoe sole to retain the protector in place.

1,428,124. ALARM. FRANK C. STINZING, New York, N. Y. Filed May 4, 1921. Serial No. 466,778. 2 Claims. (Cl. 116—33.)

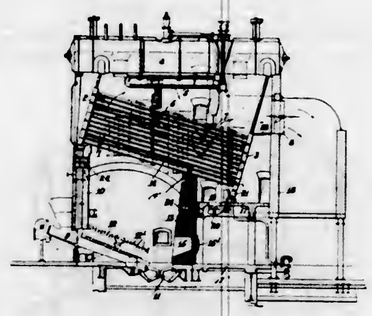


1. An alarm for indicating the unauthorized moving of a motor vehicle comprising a compressed air supply, a controlling valve therefor, a whistle, pressure release means, and fixed means co-acting with a traction wheel of the motor vehicle to actuate the pressure release means, for sounding the whistle.

1,428,125. VEGETABLE-WASHING MACHINE. WADE L. STREET, Chicago, Ill., assignor to The T. A. Snider Preserve Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 10, 1922. Serial No. 550,990. 4 Claims. (Cl. 146—14.)

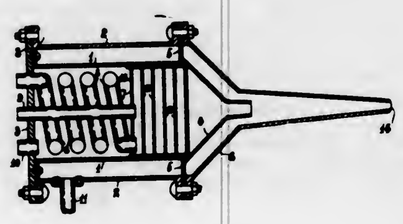
2. In a vegetable washer embodying a rotatory cylindrical screen and a perforated water spray pipe, a collar rotatively and slidably mounted on said spray pipe, a pipe cleaning implement secured to said collar, and an actuating rod to which said collar is attached.

1,428,126. EXPANDIBLE LAP. ROBERT S. TAYLOR, Seattle, Wash. Filed Apr. 14, 1921. Serial No. 461,406. 1 Claim. (Cl. 51—206.)



An expanding lap comprising a hollow cylindrical body having a concentrically disposed hole formed in the end wall thereof and a longitudinally and diametrically disposed slit formed in the side and end walls thereof, said end wall having a threaded tapered hole formed therein in alignment with the diametral position of said slit and at a point adjacent the outer end thereof, and an expanding plug adapted to be threadably engaged in said tapered hole.

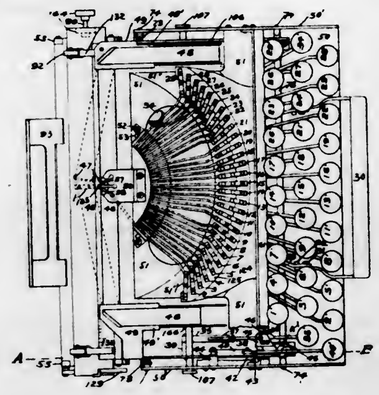
1,428,127. REENFORCED COMPOSITE BUILDING BLOCK. UNO E. TUOMI, Dallas, Tex. Filed Apr. 10, 1922. Serial No. 551,019. 3 Claims. (Cl. 72—44.)



1. A building block, a pair of substantially parallel slabs spaced apart, and bonding elements embedded in and connecting said slabs, each of said elements being bent upon itself to form a loop and a pair of intersecting bonding arms terminating in elongated substantially right angle extensions, the extensions of each element being disposed longitudinally within the slabs and received by the loop of the other element.

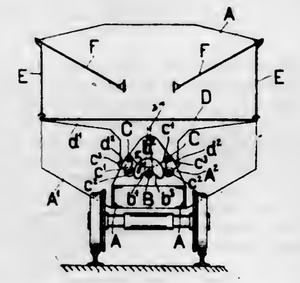
1,428,128. BOILER FURNACE. BENJAMIN F. WOOD, Maplewood, N. J., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed May 28, 1917. Serial No. 171,403. 4 Claims. (Cl. 110—98.)

4. A steam boiler furnace comprising a stoker, an air supply duct for delivering air in close proximity to the inner face of the furnace side walls, a bridge wall at the rear of the combustion chamber and openings in said wall for the purpose described.



1,428,129. BURNER. JOHN WILLIAM BLACKBURN BALFOUR, London, England. Filed May 4, 1920. Serial No. 378,719. 2 Claims. (Cl. 158—74.)

1. In a fuel burner, a pair of cylinders one within the other, an end plate closing one end of said cylinders, a pair of funnel-shaped caps one inside the other closing the opposite end of said burner and forming a burner nozzle, the inner cylinder being divided transversely into two compartments by a suitable partition having an aperture therein, means for admitting fuel extending through said end plate and terminating in one of said compartments, means for admitting preheated air extending through said end plate and terminating in the other of said compartments, means for admitting steam into the space formed between said cylinders, and baffle plates having apertures therein in the first-mentioned compartment.

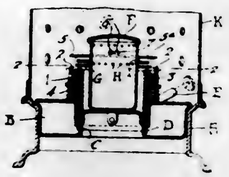


1,428,130. TYPEWRITER. CHARLES W. BARNABY, New York, N. Y. Filed Aug. 3, 1916. Serial No. 112,951. 59 Claims. (Cl. 197—26.)

1. In a typewriter, stepped rows of keys, a platen lying below and substantially tangent to the horizontal plane of the top row of keys, type-bars connected to said keys and operating on said platen, and a paper rack pivoted

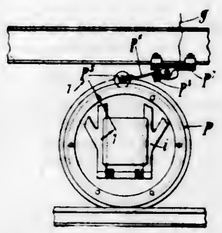
on an axis below said plane and movable on said axis into folded position below said plane.

1,428,131. SELF-DISCHARGING CAR. KARL BARTH, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Jan. 14, 1921. Serial No. 437,324. 3 Claims. (Cl. 105—260.)



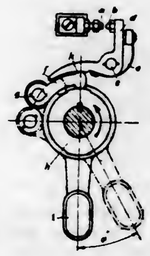
1. A self-discharging receptacle, comprising a bottom member revolubly mounted with respect to a longitudinal axis of said receptacle, a plurality of supporting crank members cooperating with said bottom member, a central cam device selectively locking said bottom supporting crank members in place, said cam device automatically releasing one of said supporting cam members from supporting engagement with said bottom member on the discharging action of said receptacle on a predetermined motion of said cam, and means on said cam device for returning said released crank member to supporting engagement with said bottom member on the return of said bottom member to the filling position of said receptacle.

1,428,132. SAFETY DEVICE FOR OIL HEATERS AND LAMPS. WILLIAM K. BASSFORD, Metuchen, N. J. Filed Oct. 15, 1921. Serial No. 507,860. 12 Claims. (Cl. 67—77.)



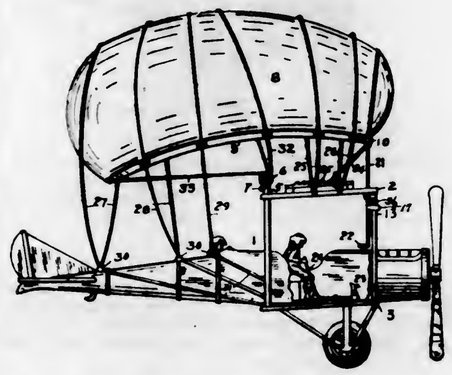
1. The combination with a liquid fuel heater or lamp, of an extinguishing member, means for actuating said extinguishing member to extinguish the flame of the heater, means for holding said extinguishing member normally in inoperative position against the action of said actuating

means, and means including a fusible element for connecting said holding means to the extinguishing member so that when the heater reaches a predetermined tempera-



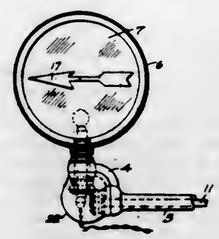
ture said fusible element will melt and release said extinguishing member from said holding means to permit said actuating means to move said extinguishing member to extinguish the flame.

1,428,133. CURRENT COLLECTOR FOR RAILWAY VEHICLES. RENÉ BIENVENÜE and JOSEPH BIENVENÜE. Paris, France. Filed Apr. 15, 1920. Serial No. 374,098. 3 Claims. (Cl. 191—1.)



1. A current collector for railway vehicles, comprising: a rotary shoe secured on a carrying wheel of any vehicle and constituted by a metal ring mounted on the side of the wheel, this ring being insulated from the wheel by a sheet of insulating material and attached to the wheel by insulated fastening means—a device adapted to transmit within the vehicle the current collected by the ring, this device being constituted by a roller running in a groove provided on the periphery of the ring and secured by a spring to the frame of the vehicle by means of an insulated securing device.

1,428,134. ELECTRIC IGNITION APPARATUS. FREDERIC BILLON, Solothurn, Switzerland. Filed July 8, 1918. Serial No. 243,893. 7 Claims. (Cl. 200—19.)



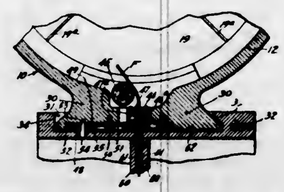
1. In apparatus for varying the point of ignition in stationary coil electric ignition apparatus comprising in combination a make and break contact device with a spring controlled bell crank pivoted lever, a cam with projections thereon attached to the axle of the induction magnet, a hand operated circular member in an axial line with the said cam and having an extension lever and a projection, and a curved intermediate member carried by said projection, such curved member having a projection on each face thereof, one of the last named projections engaging the cam and the other projection of the curved member engaging said bell crank lever.

1,428,135. SAFETY DEVICE FOR AEROPLANES. JOHN W. BIROSH, Brownsville, Pa. Filed Oct. 25, 1920. Serial No. 419,264. 2 Claims. (Cl. 244—21.)

1. In a safety device for aeroplanes a normally collapsed sustaining element adapted to be arranged at the top of the body of the plane, cables for coupling said element with the body of the plane, a normally locked retaining element for maintaining said sustaining element collapsed until released and including a longitudinal rod connected to the sustaining element and further including a series of vertically movable and counter-weighted rods depending from the longitudinal rod whereby the latter is moved upwardly by the vertical rods when the retaining element is released, and means for releasing one of the vertical rods to cause the release of the retaining element.

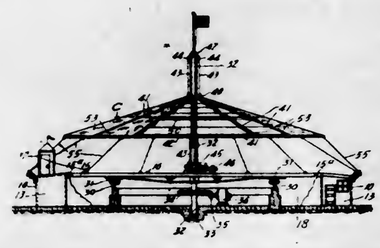
1,428,136. AUTOMOBILE SIGNAL. CLARENCE E. BLINN and GEORGE W. CHRISTIE, Vancouver, Wash. Filed Feb. 17, 1920, Serial No. 359,400. Renewed Apr. 18, 1922. Serial No. 555,225. 1 Claim. (Cl. 116—46.)

In a vehicle singal, a hollow arm adapted to be projected horizontally from a vehicle, a bracket extending upward and outward from the end of said arm, said bracket having a bearing in its outer extremity with a vertical axis, a target having indicia upon opposite faces thereof to indicate right and left turns respectively, a hollow stem depending from said target and journaled in said bearing, means for rotating said target comprising a gear on said hollow stem, and a rod extending through



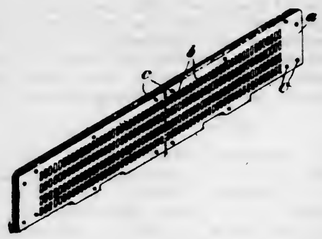
the hollow arm carrying a member intermeshing with said gear, a housing inclosing said gear and said means for rotating the target, said housing fitting against said bracket, said housing having a hole perpendicularly beneath the axis of the hollow stem, and conductor wires extending therethrough.

1,428,137. MULTIPLE-CUTTER DRILL BIT. JOHN J. BOOKHOUT and JAMES R. BOOKHOUT, Dallas, Tex. Filed Aug. 1, 1921. Serial No. 489,076. 7 Claims. (Cl. 255—61.)



1. A well drilling bit comprising a plurality of blade sections, each including a vertical and radial blade having a cutter at its lower end and a shouldered head sector at its upper end, one of said sectors having a socket and an adjacent sector having a lug engaging in said socket, and means for fastening the sectors together.

1,428,138. MAGAZINE AND MAGAZINE ATTACHMENT FOR KINETOGRAPHS. LLOYD BROWN, Los Angeles, Calif., assignor to Silent Drama Syndicate, a trusteeship, Lloyd Brown and Alexander Graydon, trustees. Filed Jan. 20, 1920. Serial No. 352,765. 11 Claims. (Cl. 88—17.)

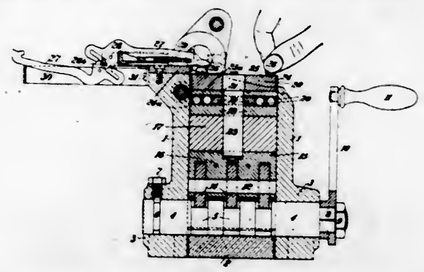


1. The combination of a kinetograph case having a magazine seat with a film passage therethrough, a film magazine having a film passage to register with the passage in said seat, a sliding member housed between said magazine and case and forming a movable wall for said magazine film passage, means automatically to slide said member when said case and magazine are assembled and the film passages brought into registry, and means for fastening said magazine and case in assembled position.

1,428,139. PICTURE STUDIO. LLOYD BROWN, Los Angeles, Calif., assignor to Silent Drama Syndicate, a trusteeship, Lloyd Brown and Alexander Graydon, trustees. Filed Jan. 20, 1920. Serial No. 352,766. 19 Claims. (Cl. 20—1.)

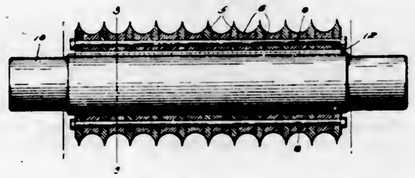
1. In a picture studio construction, the combination of an elevated rotatable stage, a stationary roofed and chambered structure surrounding said rotatable stage with its roof surface forming a stationary floor substantially level therewith, and an inclined approach leading to said stationary floor and stage.

1,428,140. TABULATOR BAR OF TYPEWRITER TABULATORS. THEODOR EUGEN BÜSCHMANN, Chemnitz-Kappel, Germany, assignor to Wanderer-Werke vorm. Winklhofer & Jaenicke Aktiengesellschaft, Schonau b. Chemnitz, Germany. Filed Mar. 23, 1921. Serial No. 454,943. 1 Claim. (Cl. 197—177.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



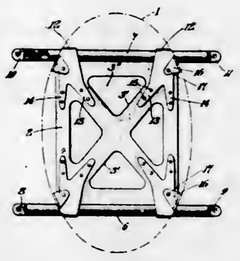
An improved tabulator bar for the tabulator of a typewriter, characterized by the feature that the improved bar is composed of a number of metal strips placed over or against one another and fastened rigidly together by means of screws or rivets, said strips being formed with accurately superposed slots for the engagement of the tabulator stops.

1,428,141. METHOD AND APPARATUS FOR FIXING SLOT-BACK TYPES UPON THE TYPE LEVERS OF TYPEWRITERS. THEODOR EUGEN BÜSCHMANN, Chemnitz-Kappel, Germany, assignor to Wanderer-Werke vorm. Winklhofer & Jaenicke Aktiengesellschaft, Schonau b. Chemnitz, Germany. Filed Mar. 23, 1921. Serial No. 454,944. 3 Claims. (Cl. 29—84.)



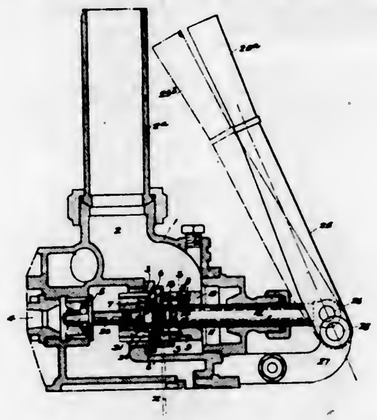
1. For fixing slot-back types upon the type levers of typewriters, the combination of a supporting matrix having recesses engraved to correspond to the type characters, means for moving the said matrix under a type lever so as to bring the respective type opposite the said type lever,

means for setting the type lever with its centre of oscillation at the proper distance from the type, means for holding the type lever firmly in position and means for



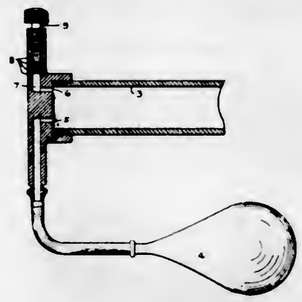
causing relative movement of the type and type lever for forcing the type on to the type lever until the correct height has been attained, as set forth.

1,428,142. ROLL FOR ROLLING MILLS. FERDINAND MORA CANDA, New York, N. Y. Filed Dec. 17, 1920. Serial No. 431,465. 2 Claims. (Cl. 80—58.)



1. A grooved rolling mill roll, comprising a plurality of disks detachably secured together, certain of said disks being formed of a hard grade of steel and having a centrally disposed peripheral rib forming by converging surfaces, the inner edges of which merge into the curved faces of adjacent disks of tougher metal.

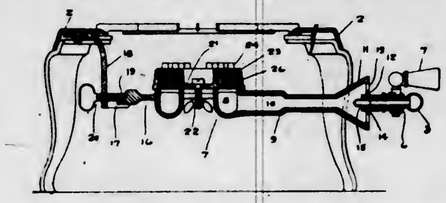
1,428,143. FUSELAGE CONSTRUCTION FOR AEROPLANES. JOSEPH L. CATO, Elmhurst, N. Y., assignor to L-W-F Engineering Company Inc., College Point, Long Island, N. Y., a Corporation of Michigan. Filed Nov. 7, 1919. Serial No. 336,288. 12 Claims. (Cl. 244—31.)



1. In combination, a fuselage, a transverse strengthening plate therein, means for attaching the pate to the fuselage without the necessity of having the shape of the plate conform to the shape of the fuselage comprising a transverse bracing bar and means for securing the plate to the bar.

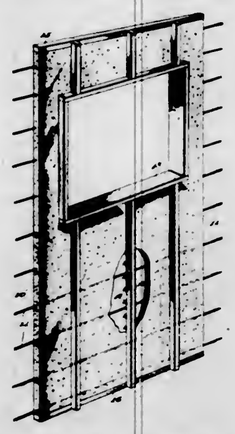
1,428,144. FORCER STEAM VALVE. ELMER O. COREY, Norwood, Ohio. Filed May 19, 1920. Serial No. 382,501. 5 Claims. (Cl. 251—159.)

1. A valve having a cylindrical hub extending from one side thereof, a valve stem provided with an annularly groved end engaged into the hub of said valve, a divided collar having a plurality of internal annular ribs adapted to be alternately engaged into the groove of said stem for extensibly connecting the stem to the valve, and a nut engaged about the valve stem and threaded into said valve hub for confining the divided collar within the valve hub and thereby removably connecting the stem to the valve.



1,428,145. AIR-CHECK DEVICE. FREDERIC E. CHEESMAN, Brooklyn, N. Y. Filed Oct. 23, 1919. Serial No. 332,591. 1 Claim. (Cl. 251—34.)

In an air check device of the class described, an outlet for the air comprising an internally threaded tube provided with a series of holes in one side and a screw adapted to traverse said tube, said holes extending in the direction of the axis of said tube and increasing in diameter in the direction of the head of said screw.

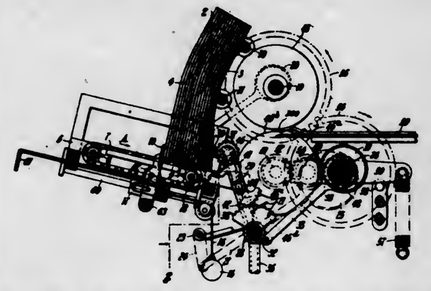


1,428,146. STOVE BURNER. CLAUD J. CLEFTON, Owatonna, Minn., assignor, by direct and mesne assignments, to The Clefton Company, Owatonna, Minn., a Corporation of Minnesota. Filed May 31, 1921. Serial No. 473,711. 5 Claims. (Cl. 158—99.)

2. A gas burner comprising a base having a mixing chamber, a cap seated on said base and provided with an annular portion having a series of perforations in its upper wall and a gas spreading device mounted within said annular portion above said base and comprising a flat metallic band rolled to form a series of convolutions, one within the other, said band having projections or

teats pressed therefrom for separating the convolutions one from the other and providing narrow annular passages between them through which the gas is compelled to pass to reach said perforations.

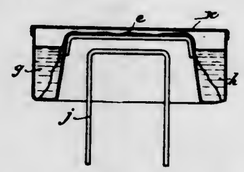
1,428,147. UNIT SLAB FOR BUILDING WALLS. BENJAMIN FRANKLIN DAVIS, Miami, Fla. Filed Apr. 28, 1920. Serial No. 377,226. 1 Claim. (Cl. 72—40.)



A unit slab for building walls, formed of concrete and having furring strips embedded from top to bottom therein and extending inwardly beyond the inner face thereof, and reinforcements including bars embedded therein at right angles to the furring strips and projecting at their outer ends beyond the side edges of the slab.

1,428,148. LUBRICATING EMULSION. JUDSON A. DE CEW, Mount Vernon, N. Y. Filed Apr. 18, 1919. Serial No. 291,030. Renewed Jan. 26, 1922. Serial No. 532,037. 5 Claims. (Cl. 87—9.)

1. A lubricating dilute emulsion of a water insoluble solid and water insoluble liquid particles dispersed in an aqueous medium the solid particles, being enclosed by the liquid particles.



1,428,149. SHEET-FEEDING MECHANISM. FRANK DE MINICO, New York, N. Y., assignor to Pollard-Alling Manufacturing Company, New York, N. Y., a Corporation of New York. Filed Aug. 30, 1921. Serial No. 496,940. 7 Claims. (Cl. 271—28.)

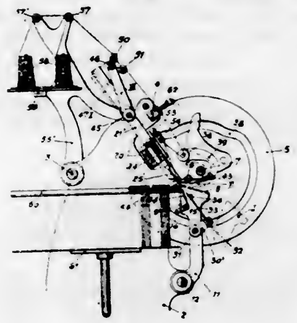
1. In sheet feeding mechanism the combination of a pair of rails for supporting a stack of sheets on edge, the delivery ends of said rails being inclined upwardly for sustaining each sheet as delivered, oscillating means for intermittently supporting the lower front portion of said stack, a pusher slidably mounted for engagement with

the lower portion of the rear of the stack, and means for urging said pusher to engage said stack, said pusher being pivotally mounted for folding to below said rails.

1,428,150. VAPORIZING DEVICE FOR HEATING APPARATUS. ERNEST DELÉAMONT, Marseille, France. Filed Sept. 11, 1920. Serial No. 409,620. 2 Claims. (Cl. 237—78.)

2. A humidifier, comprising a pair of liquid-containing troughs connected together in spaced, relation and adapted to straddle a source of heat so as to be disposed at opposite sides thereof, the inner side walls of the troughs and the connections between said troughs conjointly defining a heating chamber which is open at top and bottom; imperforate liquid-absorbing material extending across the top of said chamber to form a roof for confining and retaining the heat in the chamber and having the opposite side portions thereof immersed in the liquid in said troughs; and a cover embodying imperforate side portions immediately overlying said troughs and a perforated central portion immediately overlying said roof.

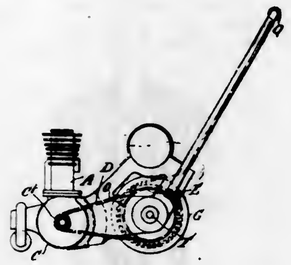
1,428,151. COSTUME, GARMENT, OR LIKE WEARING APPAREL FOR BATHING, SWIMMING, OR LIFE SAVING. JAMES STANLEY DREW, Perth, Western Australia, Australia. Filed Sept. 20, 1919. Serial No. 325,144. 2 Claims. (Cl. 9—20.)



1. A garment of the character described, having an inflatable buoyant system comprising a single continuous

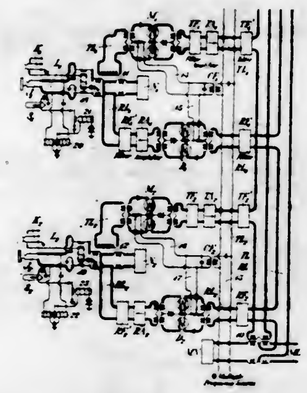
endless tubular air chamber depending from the shoulders to the waist line and passing round the garment in a serpentine manner with no two parts thereof overlapping such tubular air chamber being positively attached to the garment.

1,428,152. STOVING PAINT FOR VEHICLES. HENRY JOHN DYKMAN, Johannesburg, Transvaal, South Africa. Filed Dec. 1, 1919. Serial No. 341,630. 4 Claims. (Cl. 134—51.)



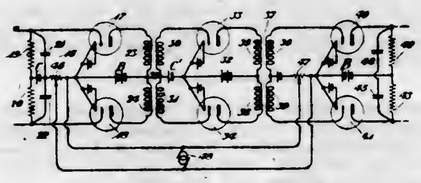
4. As a new article of manufacture a stoving paint including as ingredients, varnish, gold size, linseed oil, kerosene, and hydraulic cement.

1,428,153. BOOK-SEWING MACHINE. LOUIS EGGER, Sumiswald, Switzerland. Filed Dec. 21, 1921. Serial No. 523,988. 2 Claims. (Cl. 112—21.)



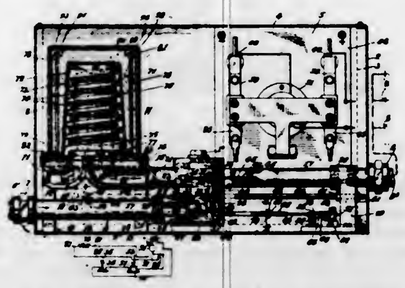
1. In a book sewing machine of the character set forth, an oscillating stripper-off 39 including a rock shaft 38 and means for operating said stripper-off, comprising a cam disc 6 presenting a cam groove 42, and a link 40, one end of which is fulcrumed on said stripper-off and whose other roller end 41 engages in said cam groove 42, and said rock shaft 38 serving also as thread guide in combination with a stationary thread brake 62 and a reciprocable thread tensioning spring 54.

1,428,154. MOTOR MOWER. JAMES EDGAR ELDRIDGE, WILLIAM BOWER BURGESS, CHARLES EDWARD BURGESS, and CLAUD NEVILLE ASHBEE, Brentwood, England. Filed Mar. 20, 1922. Serial No. 545,306. 5 Claims. (Cl. 56—26.)



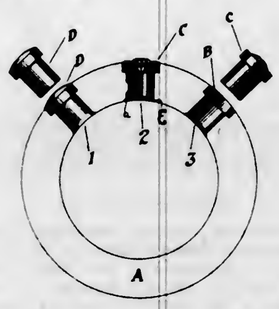
1. In a mower, the combination of a cutting cylinder having a shaft, a motor whose shaft is coaxial with that of the cutting cylinder and constitutes an extension thereof, and means for driving the cutting cylinder shaft from the motor shaft.

1,428,155. MEANS FOR SIGNALING OVER MULTIPLEX TRANSMISSION CHANNELS. LLOYD ESPENSCHIED, Hollis, and HERMAN A. AFFEL, Brooklyn, N. Y., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed July 29, 1919. Serial No. 313,993. 12 Claims. (Cl. 179—15.)



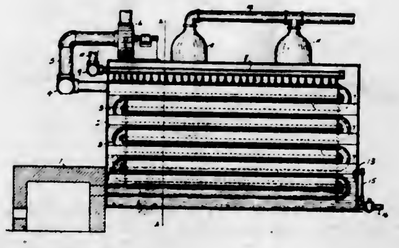
1. In a signaling system, a circuit for the transmission of high frequency carrier currents, a circuit for the transmission of low frequency currents such as telephone currents, a two-way connection between said circuits comprising two paths, one for transmission in one direction and the other for transmission in the opposite direction, a modulating repeater in one of said paths, a demodulating repeater in the other path, means to supply carrier current for said modulating and demodulating repeaters, means whereby telephone currents may be transmitted from said second mentioned circuit over one of said paths to said modulating repeater, means whereby ringing current may be transmitted over said path to said modulating repeater, said modulating repeater functioning to supply to said first mentioned circuit carrier currents modulated in accordance with said telephone or ringing currents, and means to transmit carrier currents modulated in accordance with telephone or ringing currents from said first mentioned circuit to said demodulating repeater, said repeater functioning in response thereto to supply to said second mentioned circuit the telephone or ringing currents in accordance with which said carrier currents were modulated.

1,428,156. LOW-FREQUENCY AMPLIFIER. LLOYD ESPENSCHIED, Hollis, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 26, 1919. Serial No. 326,526. 3 Claims. (Cl. 178—63.)



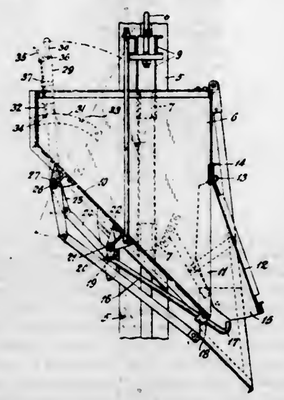
1. An amplifying circuit for signalling currents comprising a modulating device connected to the incoming circuit, an amplifier having its input circuit operatively related to the output circuit of said modulating device, a demodulating device having its input circuit operatively related to the output circuit of said amplifier, and its output circuit connected to the outgoing line, and a source of alternating current of a frequency suitable for amplification in said amplifying device, connected to the input circuit of the modulating device, and to the output circuit of the demodulating device.

1,428,157. ELECTRIC WATER HEATER. ALEXANDER FISHER, New York, N. Y., assignor to Fisher Patents Co. Inc., a Corporation of New York. Filed Mar. 22, 1922. Serial No. 545,713. 12 Claims. (Cl. 219—39.)



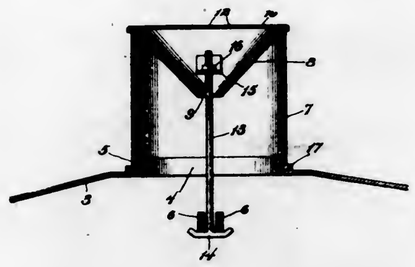
1. A water heating unit comprising a hydraulically operated member directly subjected to the pressure of the water in a main pipe, an electric heat-producing member in the path of water flow, an electric switch member for controlling the circuit to said heat-producing member, and a mechanical connection between said hydraulically operated member and said switch to cause the latter to be closed automatically upon displacement of the former, a single casing enclosing all of said elements, hydraulic connecting elements through said casing for establishing connection between the water mains and the heater unit, and electric connections extending through the casing for establishing circuit between the electric mains and the heater, whereby said unit may be installed at any point between the mains and the outlets to heat water for delivery at any of said outlets, the opening of any outlet effecting the flow of water for actuating the motive element to close the switch.

1,428,158. ARTICLE OF JEWELRY. WALTER J. FUERMANN, Bradford, Pa. Filed Mar. 24, 1921. Serial No. 455,353. 4 Claims. (Cl. 63—151.)



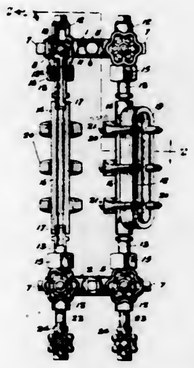
1. A finger-ring, comprising an annulus of metal provided along its periphery with a series of spaced apertures extending completely therethrough said apertures being each provided with a shoulder portion, a plurality of plugs having closed ends snugly fitted in certain of said apertures and a jewel setting, having an open lower end and a precious stone mounted at its upper end, snugly fitted and securely held in another of said apertures.

1,428,159. OIL-TOPPING PLANT. BENJAMIN GALLSWORTHY, Port Arthur, Tex. Filed July 14, 1919. Serial No. 310,533. 1 Claim. (Cl. 196—8.)



A device of the character described, including a receptacle, a furnace arranged adjacent thereto, an outlet manifold, flue pipes connected at one end directly into said furnace and arranged in vertical coils, in said receptacle and their other ends terminating in said manifold, oil inlet pipes arranged above the respective coils and whose undersides are provided with perforations through which crude oil may be discharged onto the respective coils, downwardly converging baffles arranged on opposite sides of each of the respective turns of the coils and having their lower edges spaced apart throughout their length, and provided to direct the oil passing over each turn down onto the turn underneath, and an outlet leading from the receptacle above the lower coils.

1,428,160. HOISTING APPARATUS. HOWARD S. GARDNER, East Orange, N. J. Original application filed Mar. 23, 1918, Serial No. 224,177, now Patent No. 1,365,979, dated Jan. 18, 1921. Divided and this application filed Dec. 22, 1920. Serial No. 432,446. 4 Claims. (Cl. 214—119.)

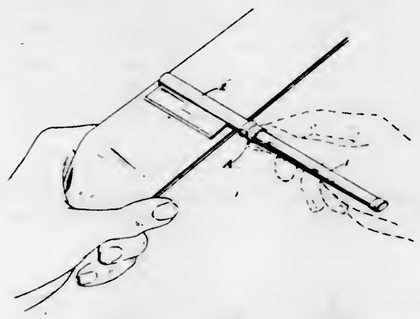


1. In a hoisting apparatus, a bucket having an exit opening, a pivoted door for said opening, a hooked bolt slidably mounted on said bucket and arranged to project over an edge of said door for locking the latter in its closed position and means for actuating said bolt to and from an operative position.

1,428,161. RADIATOR CAP. JOHN H. GOSNELL, Whitewright, Tex. Filed Apr. 30, 1921. Serial No. 465,781. 2 Claims. (Cl. 220—86.)

1. The combination with a radiator casing having an opening therein and spaced bars within the radiator below said opening, of a hollow metallic body disposed upon said casing and closing said opening, a funnel member disposed within said body, a bracket carried by said member, a bolt adjustably carried by said bracket and extending downwardly therethrough, a T-head on the lower end of said bolt adapted to engage with the bars of said radiator, and a foraminous cover upon the upper end of said body.

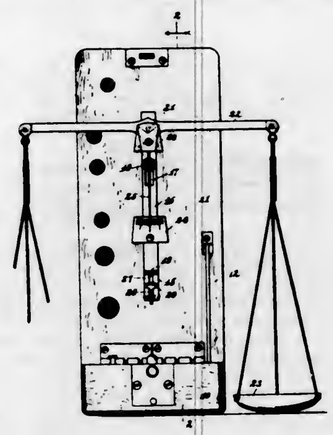
1,428,162. WATER-LEVEL GAUGE. JOHN W. GRANTLAND, Cincinnati, Ohio. Filed Apr. 24, 1920. Serial No. 376,495. 1 Claim. (Cl. 73—34.)



In a device of the class described, a pair of water level gauges arranged side by side, each gauge comprising a casing, providing a longitudinal sight chamber and sight opening, a glass plate providing a closure for the casing opening, means for clamping the glass plate to the casing, said casing having nipples at its opposite ends, a tubular extension connecting with the casing upper nipple, and a tubular extension connecting with the casing lower nipple, T-shaped manifolds for respectively connecting the opposite ends of said water gauges and supporting the gauges side by side, each manifold at its opposite ends and forward side provided with a hollow valve body portion in communication with the conduit of the manifold, and each valve body portion provided with oppositely disposed nipple extensions at opposite sides of the body portion and transverse to the manifolds, one thereof connecting with a respective tubular extension of one of said gauges, pipe union coupling means for securing a tubular extension to a respective manifold nipple extension, and the parts providing a pivot for swinging the gauge, and a valve for each valve body of said manifolds.

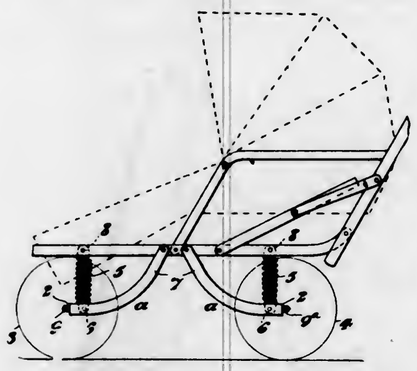
1,428,163. LAUNCHING AND LANDING OF AEROPLANES. JAMES B. HARRISS, Newark, N. J. Filed June 23, 1917. Serial No. 176,476. 26 Claims. (Cl. 244—2.)

1. In apparatus for launching aeroplanes or the like of the pontoon type from predetermined stations, a plane runway including a pair of substantially parallel track members; each member comprising a pair of track elements, and rotatable members carried by the pontoon structure and movable with the plane, each rotatable member co-operating with a pair of track elements throughout the length of the latter in the direction of plane launching movement to control the direction of plane movement while being launched.



1,428,164. RAZOR-BLADE HOLDER AND STROPPING DEVICE. HARRY O. HASTINGS, San Francisco, Calif. Filed Dec. 9, 1920. Serial No. 429,430. 4 Claims. (Cl. 51—218.)

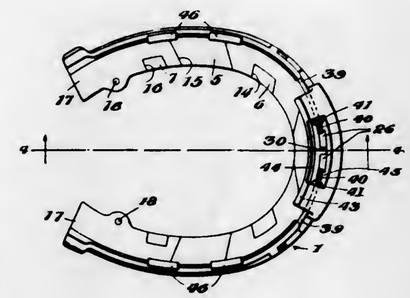
1. In a razor blade holder and stropping device, a pair of spring jaws for receiving and clamping the blade, and an abrasive carried by said jaws for deposit on the razor strop.



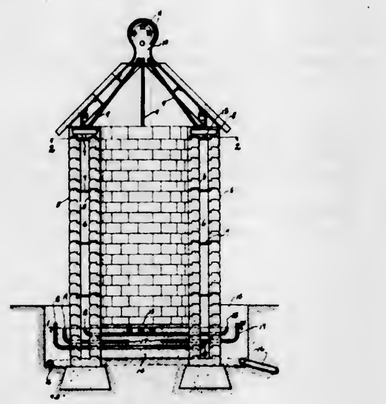
1,428,165. SCALES. CHARLES HAUSMANN, Jersey City, N. J., assignor to Herman Kohlbusch, Sr., Inc., Jersey City, N. J., a Corporation of New Jersey. Filed Mar. 31, 1921. Serial No. 457,496. 6 Claims. (Cl. 265—54.)

1. A scales of the character described comprising a base plate, a bracket having an aperture extending therethrough, a fulcrum support rod having a slot therein and extending through the aperture in said bracket, a retaining member carried by said base plate and passing through the slot in said fulcrum support, holding the same in position and limiting the movement thereof, a raising lever pivotally carried by said bracket and adapted to engage

the protruding end of said fulcrum support and raise and lower the same; and a scales beam and pans carried by said fulcrum support.



1,428,166. SPRING SUSPENSION MECHANISM FOR VEHICLES. FREDERICK HAGGER HEADLEY, Birmingham, England. Filed June 1, 1922. Serial No. 565,216. 1 Claim. (Cl. 267—5.)



In a vehicle, a chassis, front and rear axles, U-members having transverse portions secured to the axles and having end portions which form radius arms arranged longitudinally of the vehicle, the radius arms of the front members extending rearwardly and being pivotally mounted on the chassis, and those of the rear member extending forwardly and being pivotally mounted on the chassis cross bars on the U-members, and springs between the said cross bars and the chassis.

1,428,167. HORSESHOE. MICHAEL HERGER, Tonopah, Nev. Filed Oct. 1, 1921. Serial No. 504,701. 14 Claims. (Cl. 168—19.)

1. A device of the class described, including a horseshoe, side hoof-clamping sections pivotally connected at one end to the horseshoe and slidably interlocked with the same, a coupling member connecting the other ends of the clamping sections, and fastening means securing the coupling member to the said sections for retaining the latter in position with relation to the horseshoe.

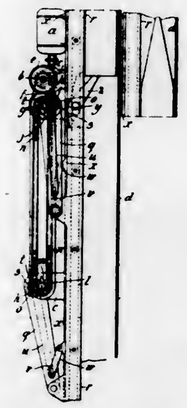
1,428,168. SILO. EMERY C. HODGES, Joliet, Ill. Filed Sept. 7, 1920. Serial No. 408,472. 11 Claims. (Cl. 72—6.)

2. A silo comprising double side walls; a porous filler surrounding the lower portion of said side walls; and means for connecting said filler with the space between said side walls for inducing a circulation of air therethrough, substantially as described.

1,428,169. ROOFING STRIP. FREDERICK LAIST and LABAN ELLSWORTH JONES, Anaconda, Mont., assignors to Anaconda Copper Mining Company, a Corporation of Montana. Filed Oct. 21, 1921. Serial No. 509,286. 2 Claims. (Cl. 108—17.)

1. A metallic roofing strip having at its upper end a portion extending downwardly in substantially parallel spaced relation to the body of the strip to provide a clearance, then outwardly substantially at right angle to the

body of the main body, then upwardly and inwardly to points lying in the plane of the strip slightly above the

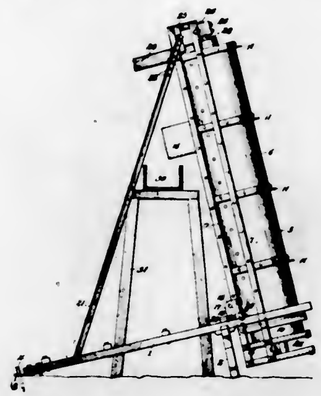


upper edge of the main body portion and then upwardly substantially in the plane of the main body portion.

1,428,170. PROCESS FOR COLORING METALLIC COPPER. FREDERICK LAIST, FREDERICK F. FRICK, ERNEST KLEPETKO, and LYNDALL P. DAVIDSON, Anaconda, Mont., assignors to Anaconda Copper Mining Company, Anaconda, Mont., a Corporation of Montana. Filed Nov. 29, 1921. Serial No. 518,647. 24 Claims. (Cl. 148—6.)

1. In a process of producing a colored coating on cupriferous bodies including copper, the step which consists in subjecting a body to the action of a substantially concentrated aqueous solution of a copper salt.

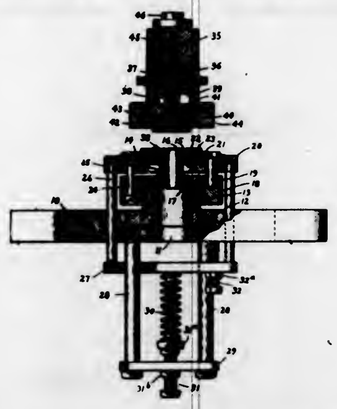
1,428,171. MEANS FOR ACTUATING AMMUNITION HOISTS. HUGH WARREN LEE and JOHN WINDLOW SWINDALE, Newcastle-upon-Tyne, England, assignors to Sir W. G. Armstrong, Whitworth and Company, Limited, Newcastle-upon-Tyne, England. Filed Apr. 19, 1922. Serial No. 555,637. 5 Claims. (Cl. 89—46.)



5. An ammunition hoist, a slider in the hoist, a lifting arm pivoted to the slider, sprocket wheels, two endless chains on the sprocket wheels, means for driving the sprocket wheels, a bar coupled to the chains, a rod connecting the bar to the slider, a second rod adapted to rock the lifting arm, a cam mounted on the bar, a third rod actuated by the cam and having one end sliding in a slot in the first rod and a link connecting this end to the second rod.

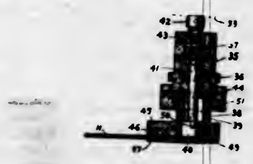
1,428,172. BINDING PLATE FOR OFFICE LETTER FILES AND THE LIKE. FREDERICK LE ROY-TRACY, Sydney, New South Wales, Australia. Filed Mar. 26, 1919. Serial No. 285,395. 1 Claim. (Cl. 24—153.)

A binding device comprising a backing having a pair of flexible prongs extending therefrom and adapted to pass through the papers to be bound, a plate having a pair of apertures provided with parallel side walls, the side walls of one aperture being arranged in alignment with the side walls of the other aperture and said prongs extending through said apertures, a tongue arranged between one of said apertures and one end of the plate and including a vertical wall in alignment with one of the walls of the last mentioned aperture and a horizontal portion extending toward one edge of the plate, and a second tongue arranged between the first mentioned tongue and one end of said plate and having a vertical wall in alignment with the opposite wall of the last mentioned aperture, said second tongue also having a horizontal portion extending in a direction opposite to the horizontal portion of the first mentioned tongue, one of said prongs extending between the horizontal portions of said tongues and said plate and being engaged on opposite sides at spaced points by the vertical portions of said tongues.



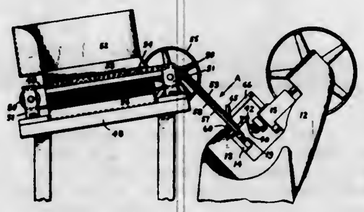
1,428,173. ROTARY PUMP. GEORGE LOBB, Selma, Calif. Filed Oct. 9, 1920. Serial No. 415,787. 4 Claims. (Cl. 103—89.)

1. A pump for irrigation and other purposes, comprising a pump barrel of noncircular cross section, with an intake end of cylindrical form, rotatable water impelling means in the cylindrical end, and closures disposed along the non-circular portion of the pump barrel for providing outlets for the pumped water at different levels.



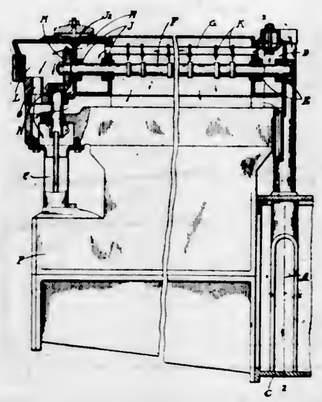
1,428,174. DIE STRUCTURE. JOHN A. LUTHER, Schenectady, N. Y. Filed Apr. 22, 1920. Serial No. 375,833. 11 Claims. (Cl. 164—32.)

1. A die member comprising a holder, and a plurality of separate concentric parts carried thereby, said parts being dimensioned and fitted together at their outer ends with a ground fit so they serve to support one another in



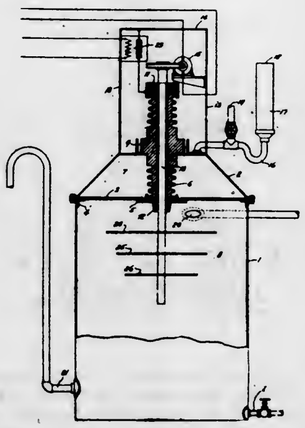
concentric relation at their outer ends whereby the inner ends need not be accurately dimensioned and fitted.

1,428,175. PUNCH PRESS. JOHN A. LUTHER, Schenectady, N. Y. Filed May 1, 1920. Serial No. 378,313. 7 Claims. (Cl. 29—1.)



1. In combination, a stationary die structure adapted to receive a piece to be worked upon, said piece having upwardly facing edges, a movable die structure having a die member, and supporting means forming a part of said movable die structure for carrying a piece of material from which a part is to be cut by said die member and deposited between said upwardly facing edges.

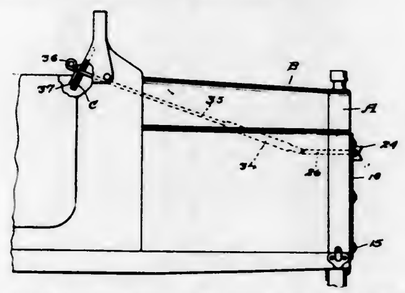
1,428,176. PUNCH PRESS. JOHN A. LUTHER, Schenectady, N. Y. Filed May 1, 1920. Serial No. 378,314. 12 Claims. (Cl. 29—1.)



1. In combination, a stationary die structure, a movable die structure adapted to move into engagement with the stationary die structure to perform an operation on a device, yieldable catch fingers carried by the movable die structure for catching the device operated on and carrying it away with it, and means for automatically releasing the catch fingers.

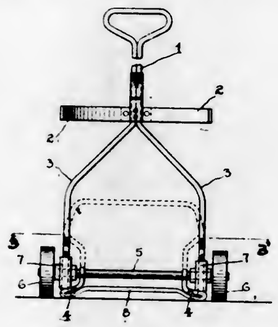
1,428,177. LUBRICATION SYSTEM OF INTERNAL-COMBUSTION ENGINES. FREDERICK WILLIAM MEAD, Solihull, England. Filed May 13, 1922. Serial No. 560,630. 2 Claims. (Cl. 123—90.)

1. In an internal combustion engine, the combination of valves in the cylinder head, a camshaft, a bearing for one end of said camshaft, a chamber enclosing said bearing, means for supplying oil to said chamber, a second bearing at the other end of said camshaft, a second chamber enclosing said second bearing, an overflow pipe from said first chamber adapted to conduct oil to said second chamber, outlets in said pipe adapted to feed oil on to said cams, a split obstruction in each of said outlets, gearing for driving said camshaft, a chamber enclosing said gearing, an overflow pipe from said second chamber to second chamber enclosing said gearing, substantially as set forth.



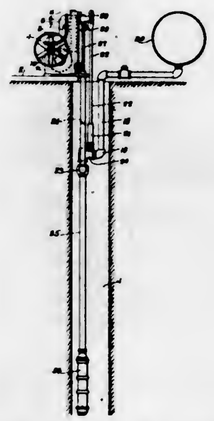
1,428,178. DEHYDRATOR. WYNN MEREDITH, Alameda, Calif., assignor to Petroleum Rectifying Company, San Francisco, Calif., a Corporation of California. Filed Oct. 28, 1920. Serial No. 420,244. 10 Claims. (Cl. 204—24.)

1. In dehydration apparatus for an emulsion a chamber and an electrode disposed therein and extending through a dielectric diaphragm, said diaphragm extending across said chamber and dividing it into a compartment



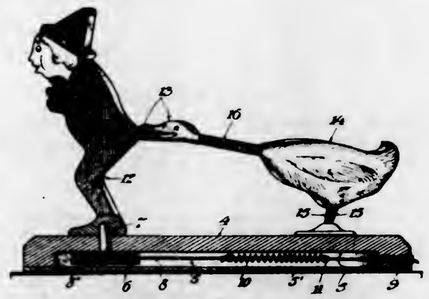
within which the electrode is adapted to discharge, and a second compartment adjacent to the said electrode whereby a body of relatively quiescent oil may be retained between proximate portions of the electrodes to effect further insulation thereof.

1,428,179. RADIATOR PROTECTOR. ARTHUR E. MOOD, Wichita, Kans. Filed Mar. 26, 1921. Serial No. 455,917. 2 Claims. (Cl. 257—132.)



1. A radiator protector for automobiles comprising a plate member formed with series of openings, a disk member journaled upon the back of said plate and provided with openings adapted to register with said first named openings, said disk having its periphery formed as a segmental gear, a pinion journaled upon said plate and meshing with said gear, a support for the pinion passing through the plate and formed at the front thereof with an operating head, the rear end of the support being slotted and threaded, a rod having a cross member engaged within said slot and having the ends of the cross member laterally bent and extending into holes in the pinion, a nut threaded upon the support and engaging said cross member, and a telescopic operating member flexibly connected with said rod and extending through the dash of the automobile.

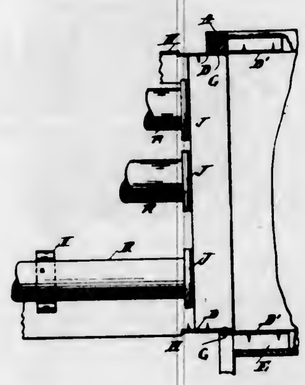
1,428,180. PORTAGE DEVICE. GEORGE MORE, Brooklyn, N. Y., assignor to More Handy Truck Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Mar. 3, 1922. Serial No. 540,778. 3 Claims. (Cl. 280—57.)



1. In a portage device having a frame, fittings carried thereby, a wheel axle engaging the fittings and provided with wheels, and means extended forwardly from the frame for supporting an ash can, barrel or the like, the combination of a foot-piece oscillably mounted on the axle, intermediate the fittings to swing forwardly into engagement with the supporting means for the purpose of supporting a trunk, box or the like, and to swing rearwardly against the frame when not in use.

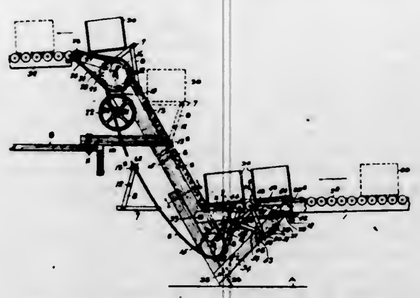
1,428,181. PUMP. PHILIP A. MYERS, Ashland, Ohio, assignor to The F. E. Myers and Brother Company, Ashland, Ohio, a Corporation of Ohio. Filed June 15, 1921. Serial No. 477,815. 4 Claims. (Cl. 103—6.)

1. In a pumping apparatus, the combination with a power head including a casing in which the power mechanism is housed, of a mounting head detachably secured to a vertical face of said casing, a drop pipe secured to the mounting head and a lower cylinder, an upper cylinder all supported by such drop pipe and an air cylinder, a piston rod common to the lower and upper water cylinders and another piston rod for the air cylinder, and a connection between said piston rods and an operating extension of the power mechanism.



1,428,182. FIGURE TOY. PETER S. H. NEWELL, Leonia, N. J., assignor to The Diamond Products Corporation, Wilmington, Del., a Corporation of Delaware. Filed Oct. 14, 1920. Serial No. 416,839. 8 Claims. (Cl. 46—40.)

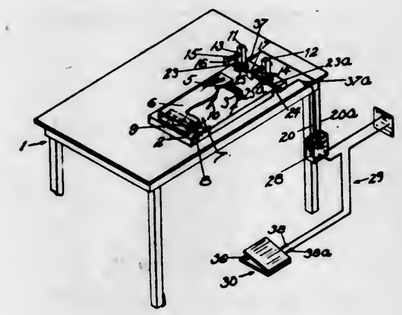
1. A toy comprising a base, a figure element, upstanding resilient means supporting said element above the base, and comprising tightly coiled springs which normally sustain said element in upright position and yet permit its universal movement, oscillatory actuating means supported by the base, and operative connection between the said actuating means and the figure element.



1,428,183. CABINET FOR MUSIC ROLLS. FRANK PERME, Sr., Cleveland, Ohio. Filed Feb. 4, 1921. Serial No. 442,391. 1 Claim. (Cl. 211—16.)

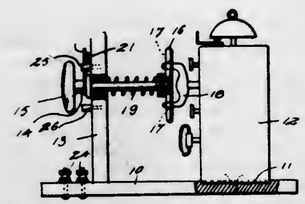
In a cabinet for music rolls, in combination, a casing, vertical panels transversely slidable therein, the upper and lower walls of said cabinet provided with transverse grooves, blocks slidable in said grooves, hinge leaves connecting said blocks respectively to said panels, said panels comprising each a thin central portion and thicker stiles, so that music rolls provided with flanges may engage said stiles and be retained from longitudinal move-

ment thereby, said panels constructed and arranged to swing free of said grooves when drawn out of said case, but to enter said grooves when pushed into the case, and means for detachably securing said rolls to the vertical faces of said panels, said securing means serving also to compress the rolls and maintain them in a closely wound condition.



1,428,184. APPARATUS FOR HANDLING AND DELIVERING BOXES OR PACKAGES FROM ONE ELEVATION TO ANOTHER. WILLIAM G. PRICE, Yakima, Wash. Filed June 23, 1919. Serial No. 306,239. 11 Claims. (Cl. 198—154.)

1. A conveyer comprising an inclined endless carrier, article supports mounted to move with the said carrier and adapted to rise above the top of the said carrier while passing the upper end thereof, and braces connected to said support for maintaining the loads carried by said supports substantially level while passing above the upper end of the said carrier.

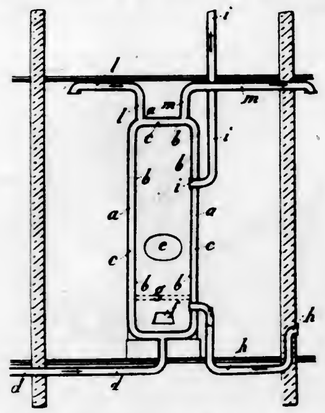


1,428,185. DEVICE FOR EMBEDDING WIRES IN FUSIBLE SHEETS. RICHARD B. REED, Jr., Orange, Calif. Filed May 18, 1921. Serial No. 470,548. 9 Claims. (Cl. 18—1.)

1. A device for embedding wires strung in a frame, in wax, comprising a base; rollers rotatably mounted thereon; a block having a recess in its lower side, and adapted to receive said rollers, the relation of said rollers in said recess being such as to afford limited movement of said block relative to the base; contacts adjacent one

end of the path of movement of the block adapted to contact with said wire so as to pass a current of electricity therethrough; said contacts being slidably mounted and spring pressed whereby the contacts adjust themselves to irregularities of said frame.

1,428,186. ELECTRIC SWITCH. JOSEPH M. RONALTER, Stafford Springs, Conn. Filed Oct. 7, 1920. Serial No. 415,282. 3 Claims. (Cl. 200—36.)

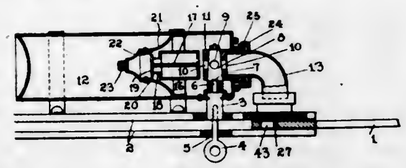


1. An electric switch apparatus including a switch device having a clutch, and an alarm clock, means to urge the clutch into engagement with the spindle of said alarm clock, and means to mount the clock against displacement under urgency of said first mentioned means.

1,428,187. HEATING PLANT FOR HOUSES AND BUILDINGS IN GENERAL. GIUSEPPE SCAPIN, Abano, Italy. Filed Mar. 12, 1921. Serial No. 451,738. 1 Claim. (Cl. 126—67.)

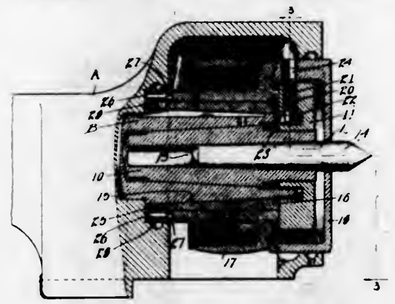
A hot air stove of double wall structure, the respective walls of the body of the stove being arranged in spaced relation to provide an air chamber extending throughout the top, bottom and sides thereof, a fire grate supported in the stove, a combustion chamber, an ash pit, a plurality of warm air conducting tubes communicating with the air space at the extreme top of the stove body and having downwardly directed discharge ends adapted for location in rooms to be heated for directing the incoming warm air downwardly therein, an air supply tube having its inlet end arranged externally of the building structure to receive fresh atmospheric air and having its discharge end connected with the air space centrally of the bottom

of the stove body to insure equal distribution of the rising annular column of air within the air chamber, an



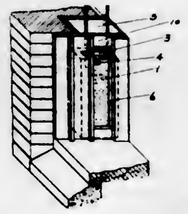
air conducting tube communicating with the interior of the stove body below the grate and a flue communicating with the fire chamber.

1,428,188. HOLDER FOR PENCILS AND ERASERS. JAMES EDWARD SMOOT, Concord, N. C. Filed Jan. 16, 1920. Serial No. 351,968. 1 Claim. (Cl. 120—19.)



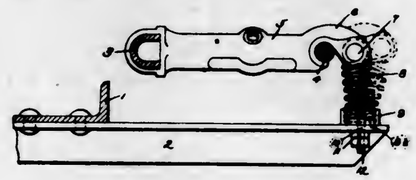
A device of the class described comprising a tubular sleeve having a single longitudinal slot extended the full length of the sleeve through both ends of the sleeve, the provision of a single slot serving to increase the strength of the sleeve and reducing the number of edges which might fray a garment pocket; and an ejector slidable on the sleeve, the ejector being fashioned from a single strip of material disposed in annular form, the strip being provided with an inwardly projecting finger movable in the slot and extending into the sleeve, the strip having free terminals which extend transversely of the sleeve into end contact at a point diametrically opposite to the slot, thereby to restrain the sleeve from spreading at the slot and to reduce the number of edges which might fray a garment pocket.

1,428,189. ALARM-WHISTLE MEANS FOR CLOSURE DEVICES. FRANK C. STINZING, Long Island City, N. Y. Filed Mar. 11, 1922. Serial No. 542,923. 3 Claims. (Cl. 116—85.)



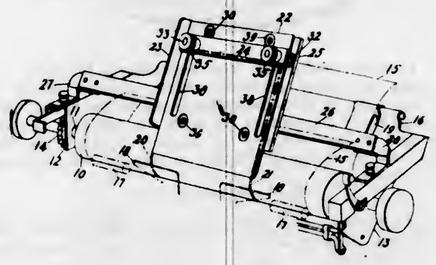
3. The combination, with a closure member, of a whistle, fluid pressure means for sounding the whistle, an oscillable valve having a stem extended in the path of the closure member, in opening, to actuate the valve for pressure release, and spring-return means subject to the influence of the sounding pressure to lock the valve in its pressure releasing position.

1,428,190. HEADSTOCK FOR LATHES. PAUL STONER, Waynesboro, Pa., assignor to Landis Tool Company, Waynesboro, Pa., a Corporation of Pennsylvania. Filed Nov. 18, 1920. Serial No. 424,903. 16 Claims. (Cl. 82—28.)



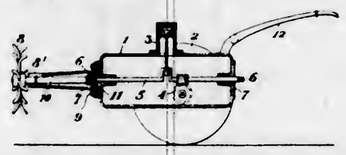
1. In combination a work-holding center, a spindle therefor, a stationary bearing having an inner bearing surface in contact with the spindle, a rotary device concentric with the spindle and means located forwardly of said bearing surface for connecting the spindle to either said stationary bearing or said rotary device, substantially as set forth.

1,428,191. WINDOW WEIGHT. CHARLES E. STRATING, Chicago, Ill. Filed July 24, 1920. Serial No. 398,739. 2 Claims. (Cl. 16—219.)



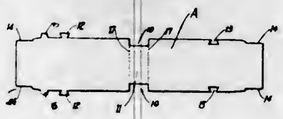
1. In combination with window sashes and a sash plate; a flexible cable connecting said sashes; a concrete weight provided with a removable pulley mounted on said cable; and an opening in said sash plate affording ready access to said weight for removal of said pulley to renew said cable, substantially as described.

1,428,192. COMBINED RELEASE AND SUPPORT FOR BRAKE BEAMS. GEORGE N. VAN SWERINGEN, Chicago, Ill., assignor to Chicago Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 11, 1921. Serial No. 491,533. 7 Claims. (Cl. 188—213.)



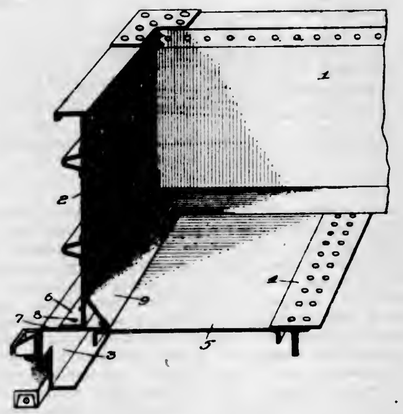
4. The combination of a brake beam, a safety bar member, and a combined support and release connected to said parts.

1,428,193. TYPEWRITING MACHINE. EDWARD THOMAS, New York, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 15, 1919. Serial No. 317,635. 16 Claims. (Cl. 197—127.)



1. In a typewriting machine, the combination with a revoluble platen and a paper-table upon which a sheet is adapted to be adjusted, of a clip overhanging said table, and a spring device normally lifting said table against said clip, but adapted to permit the table to be depressed from the clip to enable the work-sheet to be adjusted beneath the clip and to be seized against the clip by the upspringing of the table.

1,428,194. SELF-PROPELLED AGRICULTURAL IMPLEMENT FOR CULTIVATING, MOWING, GRINDING, AND THE LIKE. KONRAD VON MEYENBURG, Basel, Switzerland. Filed Sept. 1, 1921. Serial No. 497,776. 2 Claims. (Cl. 180—53.)

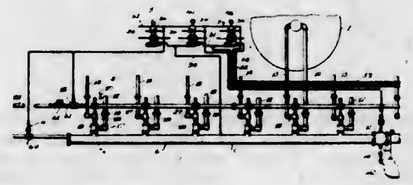


1. In a self propelled agricultural implement, a carriage comprising a hollow carriage body, a driving motor on said carriage, a tool support-casing, a tool thereon, a tool actuating gear within said tool support-casing, a motor driven gear within said hollow carriage body for driving the carriage and the tool from the motor, means to allow raising or lowering of the tool and coupling means for rigidly and detachably connecting said tool support-casing and the tool actuating gear therein, respectively, with the said carriage body and the motor driven gear therein, substantially as and for the purpose described.

1,428,195. METAL BOX. JOHN C. WAHL and PETER G. JACOBSON, Chicago, Ill., assignors to The Wahl Company, Chicago, Ill., a Corporation of Delaware. Filed Dec. 9, 1921. Serial No. 521,086. 3 Claims. (Cl. 113—116.)

1. The method of forming a sheet-metal box, comprising, stamping a blank with engagement members, receiving notches and binding lugs therein, then striking a substantial portion of the blank at either side at right-angles thereto, to form the sides of the blank, then bending the blank medially upon two parallel lines to form a bottom portion, and finally clamping the opposed sections together with the engageemnt members fitting into the receiving notches, and the binding lugs lying within the box.

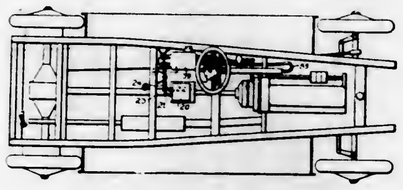
1,428,196. CAR. ROBERT R. WEAVER, Chicago, Ill., assignor to General American Tank Car Corporation, Chicago, Ill., a Corporation of West Virginia. Filed Feb. 27, 1922. Serial No. 539,438. 11 Claims. (Cl. 105—244.)



1. A car having an open bottom and a door cooperating therewith, the car being formed with a combined end-sill and door-stop.

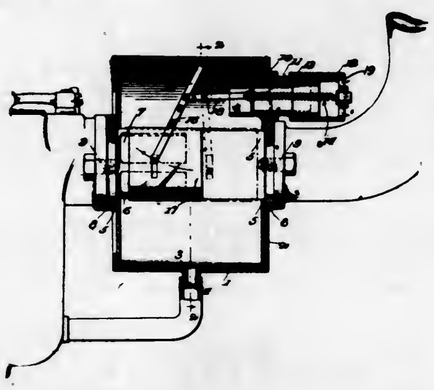
1,428,197. PROCESS OF CLEANING SULPHONIC ACID. ALBERT WOLFF, Hamburg, Germany, assignor, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed Apr. 20, 1916. Serial No. 92,523. 3 Claims. (Cl. 87—6.)

3. The process for removing inorganic salts from sulphonic acids obtained by the treatment of mineral oils with sulphuric acid, which comprises washing the salt-containing sulphonic acid with about 20%, based on the weight of sulphonic acids treated, of sulphuric acid of about 40% to 50% strength, at a temperature of about 140° F.



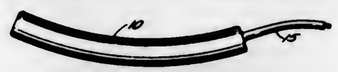
1,428,198. STEAM CIRCULATING AND REGENERATING SYSTEM. JOHN O. WOODSOME, Syracuse, N. Y., and JOHN H. SWAN, Chicago, Ill. Filed June 27, 1921. Serial No. 480,621. 4 Claims. (Cl. 34—48.)

1. In a paper making machine, the combination of a series of drying rolls, of means for supplying steam to said rolls, and differential pressure regulators for regulating the pressures of the steam in the different drying



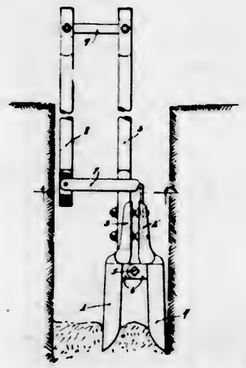
rolls, whereby predetermined pressure relations between the different rolls may be maintained, and a uniform rise or fall in pressure throughout the entire system is made possible.

1,428,199. AUTOMATIC CONTROL MECHANISM. GARRETT W. WOODWARD, Chicago, Ill., assignor to Woodward Automatic Control Corporation, Chicago, Ill., a Corporation of Illinois. Filed Feb. 4, 1921. Serial No. 442,424. 17 Claims. (Cl. 74—58.)



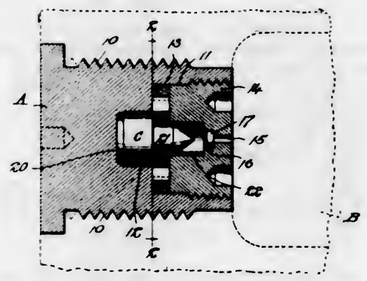
1. In a motor driven vehicle, a motor, a transmission having shiftable gears for providing a plurality of gear ratios, a clutch adapted to operatively connect said motor to said transmission, a member adapted to be operably connected to said motor, a series of plungers, each selectively movable to move said transmission gears into a predetermined gear ratio, a selector and means associated therewith operably connected to said member to selectively engage one of said plungers to move the transmission gears to one of said predetermined speeds and means operable by the motor for releasing said clutch before shifting said gears and for again engaging said clutch after said gears are shifted.

1,428,200. CARBURETOR. FRED D. ACKLEY, Kirkland, Wash. Filed Aug. 2, 1920. Serial No. 400,779. 2 Claims. (Cl. 123—117.)



1. A carburetor attachment comprising a casing arranged beyond and on the suction side of the carburetor, said casing having a fuel passage therethrough formed with openings, a sleeve valve slidably mounted on said passage and operative to control said openings, means mounted in the casing and arranged at one side of said passage and adapted to be operated in one direction by the suction of the engine, and a lever connection between said means and sleeve to operate the sleeve in accordance with the movement of the means.

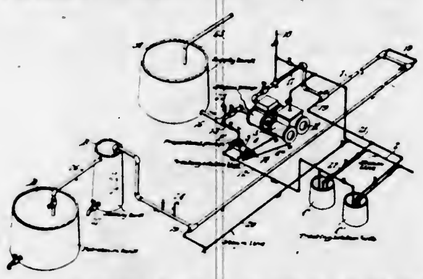
1,428,201. AIR AND STEAM BAG FOR VULCANIZERS. CHARLES G. ANDREWS, Denver, Colo. Filed Jan. 21, 1922. Serial No. 530,974. 5 Claims. (Cl. 18—45.)



1. An air and steam bag comprising a pressure container of rubber or other elastic material having a single layer of cords imbedded in the walls thereof, said cords being disposed at an angle to the axis and diameter of the container for the purpose set forth, and an expansible casing adapted to contain said pressure container.

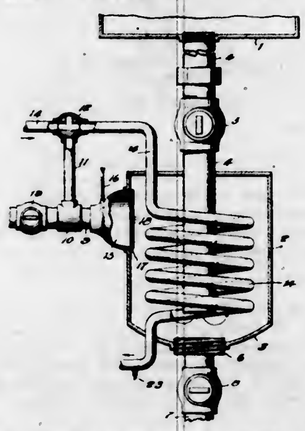
1,428,202. POSTHOLE DIGGER. MAXIMILLION M. ARNDT, Manitowoc, Wis. Filed Oct. 11, 1920. Serial No. 416,233. 1 Claim. (Cl. 55—11.)

A hole digger comprising a master handle having a scooping jaw extending from its lower end, a biting jaw pivotally associated with the scooping jaw, a transversely disposed short arm extending from the biting jaw and spaced above said pivotal point the same constituting a bell-crank lever associated with the biting jaw, and an actuating rod connected to the end of the arm and extending approximately parallel with the master handle.



1,428,203. FUSE. DORSEY FROST ASBURY, Washington, D. C. Filed Sept. 13, 1920. Serial No. 409,821. 13 Claims. (Cl. 102—39.)

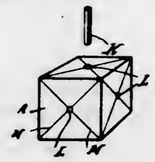
1. The combination with a projectile, of a fuse including elements normally held magnetically in one relation



to establish the unarmed status of the fuse and in another relation by centrifugal force incident to rotation of the projectile in flight to establish the armed status of the fuse.

1,428,204. APPARATUS FOR TREATING NATURAL EMULSIONS OF PETROLEUM. WILLIAM S. BARNICKEL, St. Louis, Mo. Filed Aug. 5, 1918. Serial No. 248,422. 1 Claim. (Cl. 196—1.)

An apparatus for treating oil mixtures of the character described, comprising a supply tank, a settling tank, a conduit leading from said supply tank, to said settling tank, a steam pump for drawing an oil mixture out of said supply tank and forcing it through said conduit, a treating solution tank, a proportional pump operated by said steam pump for drawing the treating solution from said tank and introducing it into the oil mixture before said mixture passes through the steam pump, means for agitating the treated mixture while it is flowing through said condnit, a steam pipe in said conduit for heating the treated mixture, and means for conducting the water of condensation from said steam pipe to a treating solution tank.

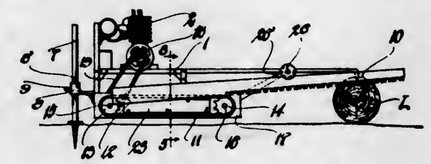


1,428,205. OIL TRAP AND HEATING DEVICE. PHILIP D. BARAY, Miami, Ariz. Filed Oct. 15, 1919. Serial No. 330,875. 9 Claims. (Cl. 210—167.)

2. In a fuel preheating device having a fuel trap, a heating coil in said trap, a fuel drain, a fuel inlet, and a fuel outlet, a by-pass connecting the fuel outlet with the heating coil.

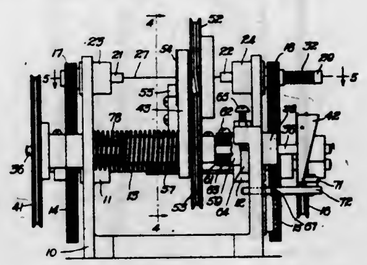
1,428,206. EDUCATIONAL DEVICE. JOHN W. BENTON, Harlowe, New South Wales, Australia. Filed Nov. 10, 1919. Serial No. 336,959. 9 Claims. (Cl. 35—2.)

4. A set of blocks for mathematical purposes, comprising a plurality of six-faced rectangular blocks all of which are equal as to the shape and size of opposite end faces thereof, one of said blocks being of unit length, and the



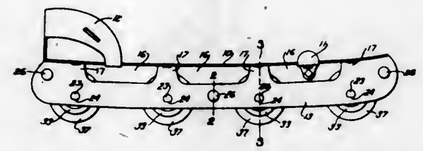
lengths of the remaining blocks increasing in arithmetical progression by said unit length.

1,428,207. FIRE-EXTINGUISHING COMPOSITION. ARTHUR BIDDLE, Trenton, N. J., assignor to United Products Corporation of America, a Corporation of Delaware. Filed July 7, 1920. Serial No. 394,453. 8 Claims. (Cl. 23—5.)



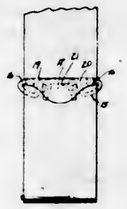
8. A fire extinguishing compound consisting of two solutions which when mixed produce a viscous foam non-supporting to combustion, one of said solutions comprising a "sulphite glutrin" having an acid reaction, and the other of said solutions being an alkaline solution, one of said solutions also containing a chemical for producing a non-combustible gas, and one of said solutions also containing a substance for increasing the viscosity thereof.

1,428,208. PORTABLE RECIPROCATING SAW MACHINE. ALEXANDER BILLS, Homestead, Oreg. Filed Feb. 19, 1920. Serial No. 359,867. 2 Claims. (Cl. 143—68.)



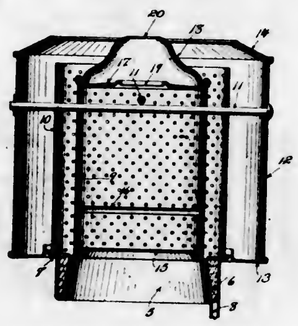
1. The combination with the supporting structure of a positively driven endless chain, sprockets for said chain and shafts for said sprockets, a reciprocable saw pivoted at one end to said chain, a saw guide arm on one of said shafts and a guide sheave engaging the back of the saw and journaled on the free end of said guide arm.

1,428,209. MECHANISM FOR LAPPING DIAMOND DIES. HARRY BLOUNT, Oak Park, Ill., assignor to Western Electric Company Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 6, 1920. Serial No. 371,713. 6 Claims. (Cl. 51—65.)



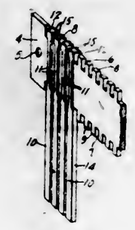
1. In a machine for lapping a wire drawing die, a rotatable die holder, a rotatable lapping member, and means for applying lateral pressure between the die and the lapping member.

1,428,210. ROLLER SKATE AND WHEEL THEREFOR. OTTO W. BOCHE, Bridgeport, Conn. Filed May 25, 1921. Serial No. 472,430. 4 Claims. (Cl. 46—51.)



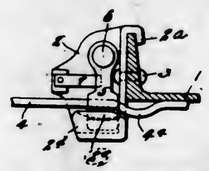
1. A roller skate comprising a foot plate, a pair of parallel, disconnected and spaced apart side plates extending downwardly at right-angles from adjacent the opposite edges of the foot plate for approximately the length of said skate, spaced apart means on each side plate detachably and separately connecting the same to said foot plate, said means in the instance of each side plate being arranged along the greater part of the length of said skate, means for insuring the positions of the side plates, axles fixed in and extending between said plates, and wheels on said axles.

1,428,211. BUCKLE. CHARLES E. BRADSHAW, Waterbury, Conn. Filed May 18, 1921. Serial No. 470,564. 2 Claims. (Cl. 24—191.)



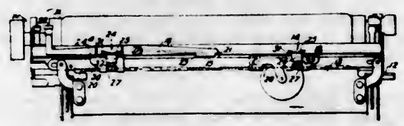
1. A buckle comprising a wire loop and a lever pivotally connected with the ends thereof, the loop flattened between its ends and formed with upwardly-extending bends forming flat bearing surfaces with which the lever coacts.

1,428,212. BURNER DRUM. JOHN S. BRENNAN, Milwaukee, Wis. Filed Dec. 3, 1919. Serial No. 342,166. 3 Claims. (Cl. 158—86.)



1. In a burner structure of the class described, in combination, a pair of upstanding concentric perforated tubes, a plate extending across the top of the inner tube, said plate being provided with a central aperture and a section of substantially frusto-conical shape having its base portion seated on the peripheral portion of the plate and having a central aperture slightly smaller than the aperture in the plate.

1,428,213. TYPEWRITING MACHINE. EDWARD A. BURNS, Hartford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 18, 1921. Serial No. 493,192. 5 Claims. (Cl. 197—98.)



1. A guiding comb for key-levers, comprising a flat supporting bar provided with openings, and individual comb teeth having a lever-guiding blade portion provided with turned-over edges to form smooth guiding surfaces and having an attaching portion provided with attaching tongues passing through said openings and turned-over or clenched to secure the teeth upon the bar.

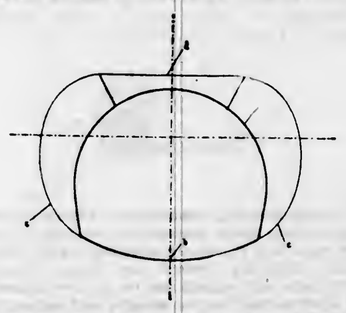
1,428,214. THIRD OR FOURTH POINT SUPPORT BRACKET FOR BRAKE RIGGING. EDWIN G. BUSSE and ARTHUR W. HAWKINS, Chicago, Ill., assignors to Chicago Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 12, 1921. Serial No. 491,799. 5 Claims. (Cl. 188—213.)

3. The combination with a part of a car truck, of a third or fourth point support detachably associated therewith, said support having a bend, a bracket mount on the car truck providing a seat for said support, and movable means on said bracket cooperating with the bend of said support to hold it in its seat.

1,428,215. TYPEWRITING MACHINE. GEORGE W. CAMPBELL, Hartford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Original application filed June 15, 1918, Serial No. 240,146. Divided and this application filed Sept. 9, 1920. Serial No. 409,076. 2 Claims. (Cl. 197—63.)

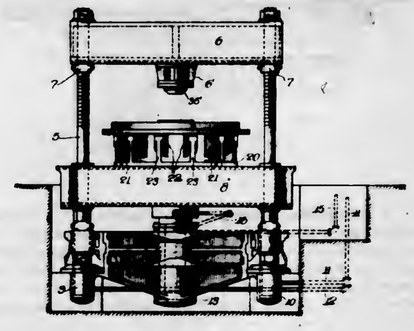
1. In a typewriting machine, the combination with a traveling carriage, of an adjustable sheet-metal marginal stop for limiting the movement of said carriage, said stop having a recess, a toothed bar around which said stop is bent and along which said stop is adjusted, a dog or pawl co-acting with the teeth of said bar for locking said marginal stop against displacement, a C-shaped slide working in said recess on said marginal stop, a finger-piece on said slide for actuating said pawl, said pawl being struck up from said slide, and a spring for holding said slide in effective position.

1,428,216. SCARECROW. SAMUEL H. CHASE, Madison, Wis. Filed Aug. 17, 1921. Serial No. 492,879. 7 Claims. (Cl. 46—40.)



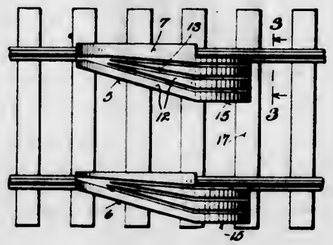
1. A scare-crow comprising a dummy-crow having a hinged wing and provided with means including a foot extension by which to swingingly and rotatably suspend it in place for use.

1,428,217. PROCESS FOR OBTAINING SUGARS FROM SUBSTANCES CONTAINING CELLULOSE. ALEXANDER CLASSEN, Aachen, Germany, assignor, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed June 21, 1919. Serial No. 305,942. 8 Claims. (Cl. 127—10.)



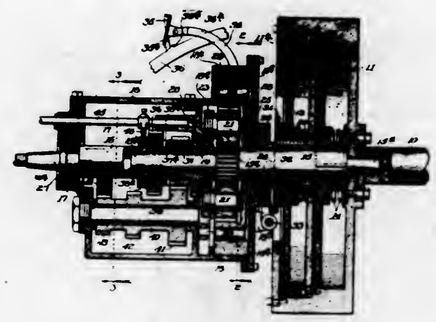
1. A process for converting cellulose-containing substances into sugar which consists in mixing about 1000 parts of cellulose-containing material with about 880 parts of water, about 10 parts hydrogen chloride, about 2 parts hydrogen sulphate, and 1 part sulphur dioxide, and then heating.

1,428,218. HULL CONSTRUCTION FOR SUBMARINE AND LIKE VESSELS. FERRUCCIO CORSUTTA, Trieste, Italy. Filed Jan. 10, 1921. Serial No. 436,348. 2 Claims. (Cl. 114—16.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. A hull construction for submarine and like vessels in which a transverse section of that part of the hull which resists the external pressure consist of two elastic arcs of different radii of curvature both concave towards the interior, and intersecting each other at two points substantially at the level of the bilge, the arc of greater radius forming the bottom and the arc of less radius the top and sides, of said section.

1,428,219. GEAR-MAKING MACHINE. JOHN F. CRAWFORD, Racine, Wis., assignor to J. I. Case Threshing Machine Company, Racine, Wis., a Corporation. Filed Mar. 14, 1921. Serial No. 452,309. 13 Claims. (Cl. 78—45.)



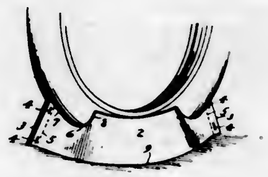
1. In a gear making machine, means upon which a gear blank is positioned, vertically swinging arms having toothed sections adapted to grip the periphery of said blanks, and means for contacting the opposite end of said blank, said elements when actuated pressing said blank into gear form.

1,428,220. RAIL FROG. GEORGE DELK, South Milwaukee, Wis., assignor of one-half to Emil F. Tschohl, South Milwaukee, Wis. Filed Mar. 7, 1922. Serial No. 541,661. 1 Claim. (Cl. 104—268.)

A railway frog comprising a series of laterally inclined track portions converging toward a single track portion adapted to be mounted upon a railway track, said single track portion having an inclined terminal portion and having an integral depending flange adapted to fit over the rail, said frog having a series of grooves formed between the successive track portions to guide the flange of the car wheel, whereby the flange of the car wheel is relieved of the supporting stresses and said stresses are borne by the tread portion of such wheels.

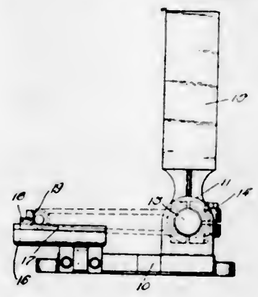
1,428,221. CLUTCH AND TRANSMISSION. JOSEPH DE MARTINO, Chicago, Ill., assignor to John H. Lee, trustee, Chicago, Ill. Filed Nov. 28, 1919. Serial No. 340,978. 3 Claims. (Cl. 74—58.)

1. A transmission comprising in combination, a driving member, an intermediate shaft and a propeller shaft in axial alignment, a sleeve upon said intermediate shaft, means to drive said intermediate shaft only or said intermediate shaft and sleeve in unison at will, sun and universe gears carried by said intermediate shaft and said sleeve respectively, a spider adapted to revolve upon the axis of said shafts, planet gears carried by said spider and meshing with said sun and universe gears, means to automatically lock said universe gear upon initial reverse movements, and means to drive said propeller shaft through said spider.



1,428,222. PUMP-CYLINDER HEAD. JOHN W. DREW, St. Louis, Mo., assignor to Moon Brothers Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Nov. 25, 1921. Serial No. 517,660. 5 Claims. (Cl. 230—27.)

1. A closure for pump cylinders comprising the combination of a cylinder and its piston, a flexible gasket arranged on said cylinder and having flaring walls for cooperating with the piston rod, a cap piece for holding said flexible gasket in position, and a floating washer arranged between the end of the cylinder and said flexible gasket, said washer being provided with a recess designed to accommodate the flaring flanges of the flexible member.

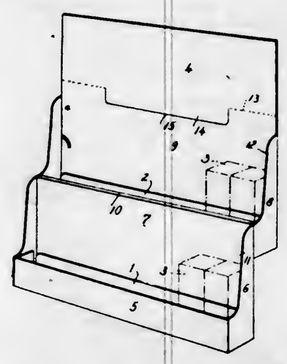


1,428,223. TIRE STAND. CLARENCE T. FAIRBANKS, Chicago, Ill. Filed Aug. 22, 1919. Serial No. 319,080. 7 Claims. (Cl. 211—24.)

2. In a supporting base for a ring-shaped article, the combination of a pair of elongated side members arranged side by side and joined together at their ends on upwardly converging lines, and adapted to be intermediately separated to afford a downwardly flared base, the lower edges of said members being extended downwardly

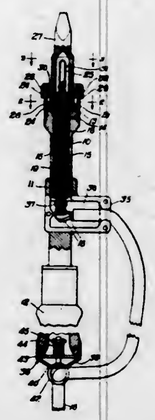
intermediate of their ends so as to lie in a common plane when the side members are expanded to support an article thereon.

1,428,224. ALIGNING JIG. WALTER A. FORBESS, Burlington, Wash., and CHESTER R. AMES, Sedro Woolley, Wash. Filed June 16, 1921. Serial No. 477,993. 2 Claims. (Cl. 33—180.)



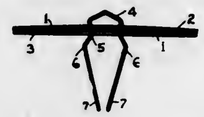
1. A piston rod testing device comprising a mandrel upon which a piston rod may be mounted, a pair of rigidly mounted spaced rails having coplanar surfaces substantially parallel to the axis of the mandrel and spaced therefrom whereby the surfaces of said rails are adapted to engage the wrist pin of a piston rod monuted on the mandrel, and a member slidable upon said rail and having a surface perpendicular to the plane of the surfaces of said rail, said member being likewise adapted to engage the wrist pin.

1,428,225. SHOCK ABSORBER. ROBERT S. FULTON, Philadelphia, Pa. Filed Apr. 12, 1921. Serial No. 460,694. 5 Claims. (Cl. 188—101.)



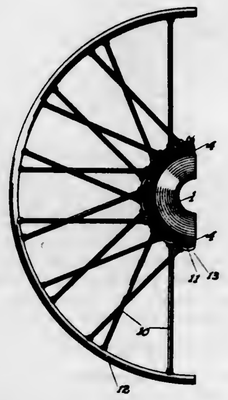
1. A shock absorber comprising a casing adapted to contain graphite under pressure, means for varying the pressure upon said graphite, a lever carried by the casing, a spindle projecting through the casing, a rotor so mounted upon said spindle as to revolve therewith, a second lever secured to the spindle, and means for attaching the outer ends of the levers to certain parts of a vehicle.

1,428,226. DISPLAY DEVICE. ALBERT J. GANZ, New York, N. Y., assignor to Elnson Litho, Incorporated, a Corporation of New York. Filed June 10, 1921. Serial No. 476,385. 4 Claims. (Cl. 206—44.)



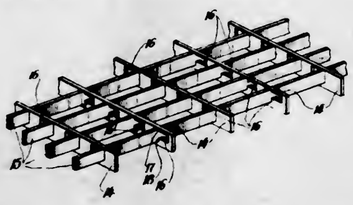
1. A display device comprising a pair of pockets one standing above and back of the other and hinged together so that one may be folded over the other to form a closed package for the contents, said device including a single sheet extending over the back, bottom and front wall of the upper pocket and the back of the lower pocket.

1,428,227. ELECTRIC SOLDERING IRON. JAMES T. GRIFFIN, Oak Park, WILLIAM A. TIMM, Berwyn, and ARTHUR E. SANTSCHI, Cicero, Ill., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 16, 1920. Serial No. 417,403. 4 Claims. (Cl. 219—26.)



1. An electric soldering iron comprising a supporting stem, a recessed tip with means formed thereon for securing it to said stem, an electrical heating element projecting into said tip, supporting means for said heating element positioned at the open end of said tip and adapted to be secured with said heating element against longitudinal movement within the stem when said tip is secured to said stem, and clamping means for securing said tip to said stem.

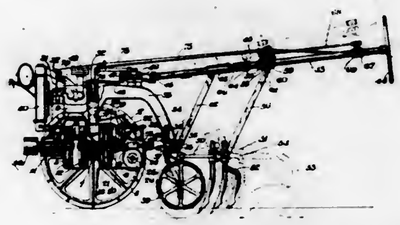
1,428,228. KITCHEN-SINK WATER-STOP PLUG. FLORENCE CRANE GROVER, Hollywood, Calif. Filed Mar. 29, 1922. Serial No. 547,650. 1 Claim. (Cl. 4—35.)



A plug stop comprising a metal disc and a second disc of cork secured together by means of a staple, the metal disc being flexed concavely, the shank of the staple being formed to act as a securing means to lock the plug stop in position over an outlet to be closed, whereby the second disc is wedged against the floor of the sink, the diameters of the discs being substantially equal to each other and greater than the diameter of the outlet to be closed.

1,428,229. VEHICLE WHEEL. JOSEPH J. HASKIN, Stockton, Calif. Filed June 9, 1920. Serial No. 387,548. 2 Claims. (Cl. 152—28.)

2. A resilient wheel comprising a rim, a hub, a plurality of flat spring members secured to and arranged about the hub lengthwise thereof and spaced therefrom at the ends, and a pair of spokes from each end of the spring member to the corresponding edges of the rim, said spokes spreading apart at an angle to each other and without crossing.



1,428,230. GRATING. WILLIAM H. HESS, Chicago, Ill. Filed Apr. 30, 1921. Serial No. 465,653. 9 Claims. (Cl. 189—82.)

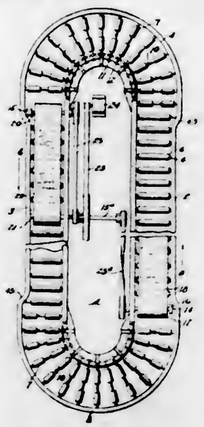
1. A grating formed of a plurality of series of bars extending in intersecting relation, the bars of one series containing apertures and the bars of the other of said

series extending through said apertures, said last-referred-to bars containing notches along one edge, said apertures being of such size and shape as to permit of the insertion therein of said notched bars and the rotation of the latter therein at said notched portions and the movement of said apertured bars lengthwise relative to each other after rotation of said notched bars, said apertured bars presenting portions which extend adjacent the opposite faces of said notched bars in the positioning of the bars as stated and resist lateral movement of said notched bars, said portions of some of said apertured bars being located at one side of said notched bars and said portions of the others of said bars being located at the opposite side of said notched bars.

1,428,231. GARDEN TRACTOR. REX P. HICKS, Milwaukee, Wis. Filed Apr. 10, 1920. Serial No. 372,912. 19 Claims. (Cl. 180—19.)

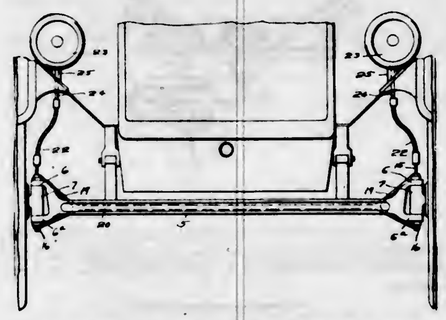
1. In a garden tractor, the combination of propelling mechanism, a draft beam pivotally connected to said mechanism for horizontal swinging movement with respect thereto, castor wheels supporting the free end of the beam, means for connecting implements with the beam, a vertically movable rotatable steering shaft extending to a position behind the implement and controlled by the operator following behind the tractor, and means for turning the beam relative to the propelling mechanism on the rotation of said shaft.

1,428,232. SHOE GUARD. JACOB HOLMEN, Racine, Wis. Filed Apr. 5, 1920. Serial No. 371,379. 1 Claim. (Cl. 36—72.)



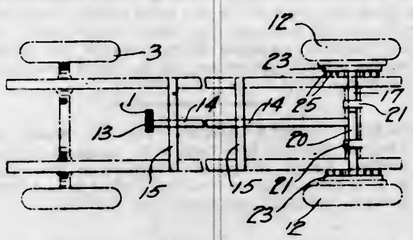
As a new article of manufacture, a protector stirrup for rubber footwear comprising a shank pad composed of tough pliable fibrous material for completely covering the instep, whereby slippage is resisted, the transverse edges of the pad being curved upwardly to form flanged elements for a reinforced seam, side straps having flared lower edges lapping the flanged element of the pad, on the inner sides thereof and extending in substantially vertical planes, a plurality of rivets securing the lower flared edges of the straps to the flanged elements of the pad, whereby a reinforced joint results conforming to the arch of a boot, and an ankle strap secured to the upper edges of the side straps on the inner sides thereof at a point substantially vertically above the front of the heel, said side straps being of gradually increasing width from said point of securement to said pad and exerting lifting tension on the front of said pad, the ankle strap and side strap being of thin pliable material, whereby the stirrup, as a whole, is compensated when fitted to a boot.

1,428,233. ELECTRIC SADIRON. JOHN A. HOWARD, Sr., West New Brighton, N. Y., assignor to Camward Engineering Co., Inc., a Corporation of New York. Filed June 4, 1920. Serial No. 386,437. 1 Claim. (Cl. 219—25.)



A sad iron comprising a shell, a plurality of rotary smoothing members journaled in the opposed sides of the shell and arranged to project a considerable distance below the lower edges of said sides, said shell being closed at the top to confine the heat, and completely open at the bottom for the purpose specified.

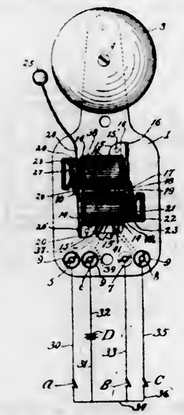
1,428,234. CONVEYER. FRANK J. HUEBSCH, San Francisco, Calif. Filed July 6, 1921. Serial No. 482,644. 10 Claims. (Cl. 198—181.)



6. A conveyer comprising a pair of substantially parallel track sections, curved track sections connecting their opposite ends and forming a continuous trackway, a plurality of rollers disposed between the parallel track sections, a plurality of differential rollers disposed between the curved track sections, a pair of conveyer belts supported by the rollers disposed between the parallel track sections, means for imparting a continuous or intermittent movement to said conveyer belts, a plurality of containers supported by the conveyer belts and the respective rollers, and a flexible belt connecting the containers.

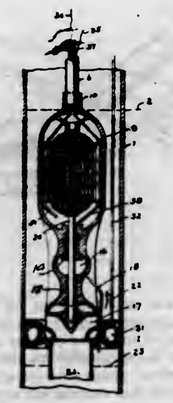
1,428,235. DIRIGIBLE, AUTOMATICALLY-OPERABLE HEADLIGHT FOR AUTOMOBILES. EDWARD S. JONES, Mobile, Ala., assignor of one-half to John M. Simpson, Mobile, Ala. Filed Dec. 16, 1921. Serial No. 522,876. 2 Claims. (Cl. 240—62.)

1. In combination with a steering knuckle of an automobile having an angular opening formed therethrough, of an axle having a forked end within which the said knuckle is received, a spindle bolt adapted to traverse the arms of said yoke and said knuckle, said spindle bolt having an angular portion engaging a correspondingly shaped opening in the knuckle and round portions engaged in the said arms of the yoke, crank arms upon the said bolt above and below the said yoke, a drag link having a forked end engaging with the said crank arms there being an angular portion upon the bolt above the uppermost of said crank arms, a sleeve having slidable engagement with said angular upper end of the bolt, a headlight mounted for turning movement and a connection between said sleeve and said headlight.



1,428,236. AUTOMOBILE LOCK. JONATHAN L. JONES, Akron, Ohio. Filed June 2, 1921. Serial No. 474,472. 2 Claims. (Cl. 188—81.)

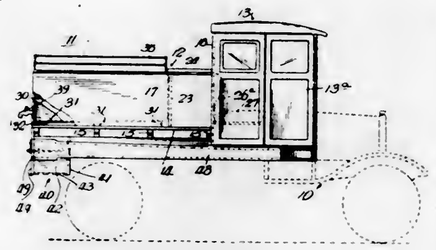
1. An automobile lock, comprising a casing on the dash of the automobile; a rack bar vertically and slidingly mounted therethrough; a lock in the casing adapted to engage the rack bar; a crank and pinion engaging said rack bar; a turn bar journaled longitudinally on the chassis under the car body; a pinion at each end of the turn bar, the forward pinion being in mesh with the lower end of the said rack bar; lock bars having racks on their inner ends in mesh with the rear pinion of the turn bar, one at the upper side and one at the lower side of the pinion, and slidingly mounted and extended laterally adjacent the rear wheels of the automobile; and means located on the wheels for engaging the outwardly thrust ends of the lock bars.



1,428,237. CALL BELL OR SIGNALING DEVICE. SAUL KATZ, Chicago, Ill. Filed May 24, 1919. Serial No. 299,558. 1 Claim. (Cl. 177—7.)

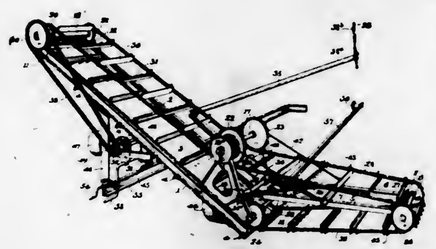
In a signaling device, the combination of a metallic base, a bell, a bell hammer, a bell hammer armature, a buzzer armature, a pair of separate electro-magnetic coils, a core encircled by one of said coils only and having an end of said core adjacent to the bell hammer armature, and acting to actuate said armature without actuating the buzzer armature when the said coil and core are energized, a second core encircled by the other one of said separate coils and having an end of said last mentioned core adjacent to the buzzer armature, and acting to actuate the same when said core is energized, three circuits each adapted to be connected with a source of electric supply, a circuit closer in each of said circuits, one of said circuits passing through one of said coils and acting to energize one of said cores only, namely the first mentioned core, for

actuating the bell hammer to produce a single stroke of the bell hammer, another of said circuits passing through said last mentioned coil and through an interrupter connected with the bell hammer armature, and acting to energize said core only, for producing a continuous series of successive strokes of the bell hammer armature without actuating the buzzer armature, and a third circuit passing through both of said coils and through an interrupter on the buzzer armature and acting to actuate the buzzer armature only, said buzzer armature and its interrupter being lighter and more easily operated than the bell hammer armature and its interrupter.



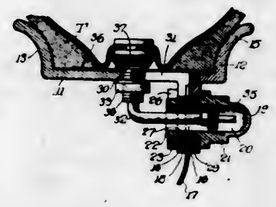
1,428,238. SUBMERSIBLE PUMP AND THE LIKE. JOHN B. KEATING, Piedmont, Calif. Filed Apr. 4, 1921. Serial No. 458,304. 7 Claims. (Cl. 103—87.)

4. In a vertical pumping unit, a motor and a gas tight casing inclosing said motor, a shaft driven by said motor



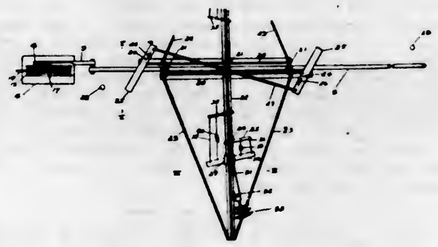
and passing through packing means in said casing and adapted to drive an impeller, a pipe passing through and terminating in the lower inside of said casing and an oil reservoir adapted to feed lubricant through said pipe, and means constructed and adapted to establish a gas pressure in said casing.

1,428,239. VEHICLE BODY. JAMES J. KELLY, Chicago, Ill., assignor to Thos. Cusack Company, Chicago, Ill., a Corporation of New Jersey. Filed Aug. 8, 1921. Serial No. 490,547. 5 Claims. (Cl. 296—24.)



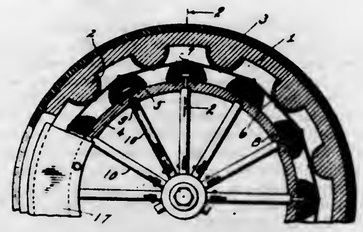
1. A vehicle body comprising a body box having upright, longitudinally extending walls, a cab at the front end of the body box having an upright rear wall, a crossboard in the body spaced from and parallel with the rear wall of the cab and dividing the body box into a front and rear compartment, a top wall for the front compartment, which compartment opens into the cab, and a tank removably mounted in the rear compartment.

1,428,240. LOADING APPARATUS. WALTER KEMMERER, Clinton, Wis. Filed Dec. 10, 1921. Serial No. 521,367. 14 Claims. (Cl. 198—11.)



4. Loading apparatus comprising an inclined elevator member, a boom member, guides on each of said members, an endless articulated conveyor passing about said guides, said boom member being pivoted to the elevator member to swing in a vertical plane in such a manner that the length and tension of the endless conveyor is not affected by such movement, and means for raising and lowering the boom at will comprising a manually operated clutch and brake member.

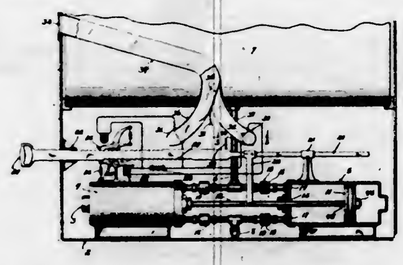
1,428,241. VEHICLE WHEEL. JOHN KERCHER, Chicago, Ill. Filed May 16, 1921. Serial No. 470,139. 11 Claims. Cl. 152—21.)



1. In a vehicle wheel, the combination of a rim, a disc extending inwardly from the rim, said disc having a slot permitting the removal of a valve casing from said rim and disc.

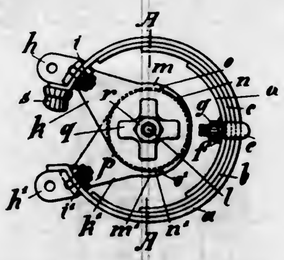
1,428,242. LAND-CARE MECHANISM. FRANKLIN H. KERR, Lucas, Ohio. Filed Sept. 14, 1920. Serial No. 410,318. 12 Claims. (Cl. 97—50.)

1. Land care mechanism including a drive device extending afield for travel in the line of its extent, an actuator transversely of said extent and travel of the device, and tools swingably connected to the actuator for shifting along the actuator transversely of the travel direction of the actuator.



1,428,243. VEHICLE WHEEL. JEAN U. KOMÉE and ASSAD M. MALLUK, New York, N. Y., assignors to International Patent Investment Corporation, New York, N. Y., a Corporation of Delaware. Filed June 7, 1922. Serial No. 566,512. 10 Claims. (Cl. 152—37.)

7. A vehicle wheel comprising a rigid outer rim, a plurality of projections extending inwardly therefrom, a rigid inner rim, a plurality of projections extending outwardly therefrom between said first named projections, each of said outwardly extending projections being loosely mounted on said inner rim, and having a substantially semicircular cross section and a length substantially equal to the width of said inner rim and having a collar on each



end thereof, a band of substantially inextensible material interposed between said inwardly and outwardly extending projections, means for holding said outwardly extending projections in position, and means for moving said outwardly extending projections radially to adjust the tension of said band, comprising a rod secured to each of said projections and extending inwardly inside the corresponding spoke of said wheel, said rod having rack teeth thereon adapted to be engaged by a pinion mounted on said spoke.

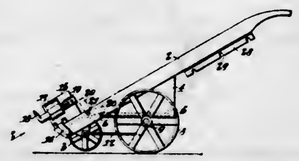
1,428,244. COIN-CONTROLLED LIQUID DISPENSER. EDWIN F. KROSS, Horicon, Wis. Filed June 2, 1921. Serial No. 474,362. 4 Claims. (Cl. 194—3.)

1. In a liquid dispensing device, a pair of opposed measuring cylinders, a piston reciprocable therein, locking means for normally locking said piston against movement in either direction, coin controlled means for releasing said locking means and means for rendering said locking means again operative after the piston has completed a predetermined operation.

1,428,245. ELASTIC CONNECTING SHACKLE FOR VEHICLES. ERNST KUHN, Effretikon, Switzerland. Filed June 27, 1921. Serial No. 480,867. 5 Claims. (Cl. 267—54.)

1. An improved elastic connecting shackle for vehicles for use in connection with the frame of the vehicle and with the suspension spring a circularly curved blade spring composed of several superposed steel blades, two levers one at each end of said spring, an axle arranged approximately at the center of said spring upon which the inner ends of said levers are pivoted and means upon said axle for softening by friction the vibrations of the spring.

1,428,246. PROCESS FOR PRODUCING SPUN MATERIAL RESEMBLING WOOL, COTTON, OR CHAPPE FROM VISCOSE SOLUTIONS. PAUL HERMANN MINCK, Petersdorf, Germany, assignor, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed May 16, 1919. Serial No. 297,712. 6 Claims. (Cl. 18—54.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

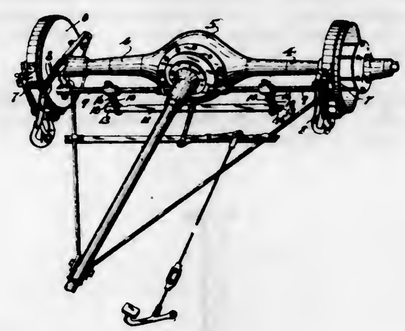


1. The process of producing wool-like threads from cellulose materials which comprises treating cellulose with a solution of caustic alkali sufficient to produce incomplete hydration without an excess of water, at a temperature not over 20° C., transforming the cellulose into xanthogenate by carbon bi-sulphide, dissolving the xanthogenate in an aqueous solution of caustic alkali of 3% to 5% and spinning the solution in a mineral acid bath.

1,428,247. COATED NAIL. DOUGLAS MORRIS, Cleveland, Ohio. Filed Feb. 23, 1922. Serial No. 538,526. 6 Claims. (Cl. 85—10.)

1. As a new article of manufacture a nail provided with a continuous depression intersecting its outer metallic surface, and provided with an outer coating of cement completely covering said outer surface and filling said depression.

1,428,248. WAREHOUSE TRUCK. ALFRED J. MORROW, Seattle, Wash. Filed Sept. 18, 1920. Serial No. 411,081. 6 Claims. (Cl. 214—65.5.)



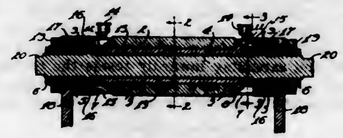
1. A warehouse truck, comprising in combination a handled frame mounted on wheels adjacent the handles, an arcuate member of sheet metal connected at each end to the side frames of the truck adjacent the wheels, toe members endwise movable adjacent each end of the arcuate member, and means limiting endwise outward movement of the toe members.

1,428,249. ANTICHATTERING COUPLING OR CONNECTION. MOSES MOSKOWITZ, Montclair, N. J. Filed Oct. 22, 1921. Serial No. 509,664. 6 Claims. (Cl. 188—205.)

3. In an automobile braking system, the combination with the rear wheel brake mechanisms of a transverse

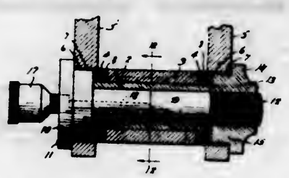
equalizer bar, actuating lever arms connected with said brake mechanisms, said actuating lever arms having

circular seats to receive the ends of said equalizer bar, and means holding the ends of said equalizer bar against chattering in said seats.



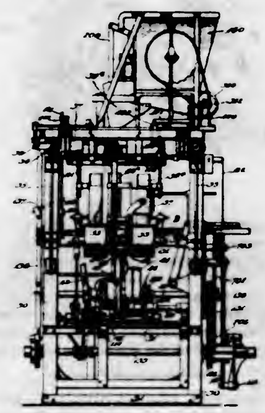
1,428,250. GARMENT SUPPORTER. EDWIN V. NORRIS, West Seneca, N. Y. Filed May 19, 1920. Serial No. 382,592. 8 Claims. (Cl. 24—87.)

4. In a device of the character described, the combination with an elastic strip or webbing, of a metallic fastener at each end of said strip comprising a flat body portion, a plurality of V-shaped prongs extending from one side of said body portion and having their points rebent and forced through the end of said elastic strip or webbing, said body portion having also a second series of V-shaped prongs whose pointed end portions lie in a plane substantially parallel with the surface of the body portion from which said prongs project.



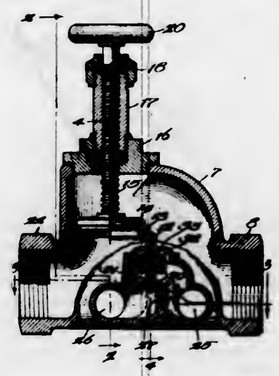
1,428,251. SELF-LUBRICATING BOLT. CHARLES H. ORTMAN, Cleveland, Ohio. Filed July 16, 1920. Serial No. 396,763. 10 Claims. (Cl. 64—27.)

1. In a device of the class described, the combination, with a bushing, of a bolt rotatably positioned therein, a bearing thimble fastened to each end of said bolt and each engaging an end of said bushing, a housing spaced from and surrounding a portion of each of said thimbles and forming a tight joint with the adjacent end of said bushing, a shackle journaled on each of said thimbles,



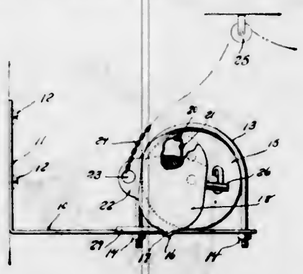
adjacent said housing, means for closing the outer portions of said housings, and means for supplying lubricant to the interior of said bushing.

1,428,252. SELF-LUBRICATING BOLT. CHARLES H. ORTMAN, Cleveland, Ohio. Filed Nov. 26, 1920. Serial No. 426,383. 3 Claims. (Cl. 267—59.)



1. In a shackle bolt, the combination with a bushing, of a bolt rotatably supported in said bushing, a collar located on said bolt adjacent the head thereof, a nut threaded on the opposite end of said bolt, a collar located adjacent said nut, a lubricating duct extending from the exterior of said device to the bearing surface of said bolt, and packing means adjacent each of said collars for preventing egress of said lubricant.

1,428,253. AUTOMATIC WEIGHING MACHINE. JACKSON G. PIESER, ARTHUR L. QUAST, and JOHN C. QUAST, Chicago, Ill.; said Arthur L. Quast and said John C. Quast assignors to said Pieser. Filed Nov. 13, 1920. Serial No. 423,879. 18 Claims. (Cl. 249—59.)

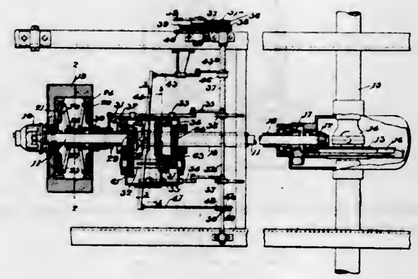


1. In a machine of the character set forth, a plurality of scales, each having a scale-pan adapted to contain a carton, storage reservoirs containing a supply of material, means for feeding material from the storage reservoirs to cartons standing on the scale-pans, means set in operation by the depression of each scale-pan for cutting off the feeding of material to the carton standing thereon, a mechanism for removing loaded cartons from the scale-pans and supplying empty cartons thereto, and means for setting said mechanism in operation by the depression of the last scale-pan.

1,428,254. COMPOUND VALVE. EDWARD P. RICH, Chicago, Ill. Original application filed Jan. 30, 1919, Serial No. 274,007. Divided and this application filed Mar. 20, 1920. Serial No. 367,549. 5 Claims. (Cl. 236—58.)

2. A device of the class described having a valve casing provided with a main shut off valve, a by-pass around said valve, an automatic valve in said by-pass, located at a point beneath the level of the main valve, and a thermosensitive element adapted to control said automatic valve, said thermosensitive element being located on the inlet side of the automatic valve.

1,428,255. ALARM CONTROL FOR DAMPERS. HARRY RIETVELD, Milwaukee, Wis. Filed Dec. 27, 1921. Serial No. 524,942. 3 Claims. (Cl. 161—8.)



1. The combination of an alarm clock, a support therefor, a weight, a projection thereon, a support for said projection said projection and said support having limited points of contact to permit said weight to move and fall from said support, and a lug on said weight contacting with the winding wing of the alarm of said clock for holding said weight in stable position until the alarm goes off and the wing rotates.

1,428,256. PROCESS OF MAKING COFFEE EXTRACT. LUIS ANGEL ROMERO, San Francisco, Calif. Filed Jan. 14, 1920. Serial No. 351,436. Renewed June 14, 1922. Serial No. 568,236. 2 Claims. (Cl. 99—11.)

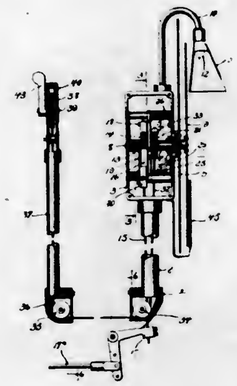
2. The process of manufacturing a coffee extract which consists in boiling pulverized coffee in water, filtering the solution thus obtained, mixing said solution with pulverized milk sugar and boiling the coffee solution and sugar until it assumes a paste-like consistency, then adding a quantity of the solution first obtained and again boiling the mixture until it assumes a paste-like consistency.

1,428,257. TRANSMISSION MECHANISM. JOHN ROTH, Richmond, Calif. Filed Nov. 2, 1921. Serial No. 512,251. 7 Claims. (Cl. 74—58.)

1. In a transmission mechanism, a drive shaft, a rear axle unit having a differential with a pair of master gears of different diameters, a first and a second propeller shaft each having a pinion in constant mesh with a different master gear, clutch means for connecting either of said propeller shafts to said drive shaft whereby two different direct driving connections may be established between the drive shaft and the rear axle, said second propeller shaft being formed in two sections, and a means whereby the speed of one of said sections may be reduced in relation to the speed of the other section.

1,428,258. WATERPROOFING COMPOSITION. OTTO RUFF, Breslau, Germany. Filed Nov. 25, 1921. Serial No. 517,954. 2 Claims. (Cl. 134—16.)

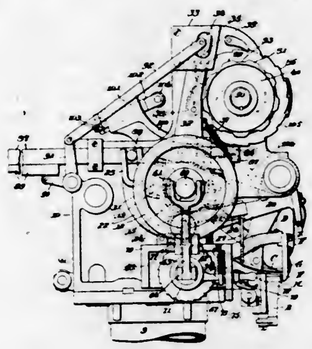
1. A waterproofing composition consisting of a colloidal solution prepared of zinc soap in ammoniacal water.



1,428,259. PROCESS FOR RENDERING CRUDE PHOSPHATES SOLUBLE. FRIEDRICH RÜSBERG, Mannheim, Germany, assignor to The Firm of Rhenania Verein Chemischer Fabriken Aktien-Gesellschaft, Zweigniederlassung Mannheim, Mannheim-Wohlgelegen, Germany, a Corporation of Germany. Filed Jan. 25, 1922. Serial No. 531,744. 10 Claims. (Cl. 71—7.)

3. An improved process for rendering crude phophates soluble, said process consisting in mixing the crude phosphate with an ammonium sulphate, adding continuously as much water to the mixture as is advisable to retain the powdery state of said mixture and acting on the wet mixture with gaseous hydrochloric acid.

1,428,260. AUTOMOBILE SIGNAL. JOHN M. SCHELLER, Milwaukee, Wis., assignor to Reliable Auto Signal Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed July 26, 1921. Serial No. 487,663. 4 Claims. (Cl. 116—51.)

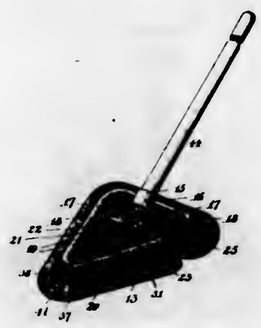


1. A signal device comprising a casing, a shaft journalled in said casing, a signal element on the shaft outwardly of the casing, a sleeve fitted over said shaft and

carrying a second signal element, sheaves mounted on said shaft and sleeve respectively, and cables trained over the

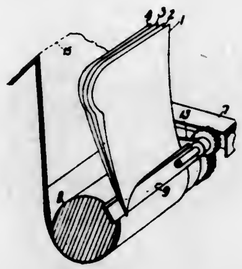
respective sheaves and connected thereto for oscillating the signal members to the desired position.

1,428,261. ROUNDING MACHINE. AUGUST R. SCHOENKY, Somerville, Mass., assignor to Reece Shoe Machinery Company, Boston, Mass., a Corporation of Maine. Filed Aug. 28, 1919. Serial No. 320,382. 2 Claims. (Cl. 12- 18.)



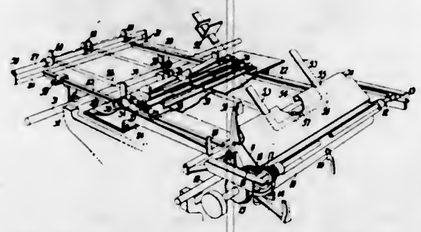
1. A shoe rounding machine comprising means for feeding the work, a trimming cutter and a guide against which the shoe contacts during operation, the elements, cutter and guide being relatively adjustable during operation to vary the width of the sole extension around the shoe, characterized by a controller, a pawl and ratchet for advancing the controller, a vibrating arm carrying the pawl, and connections actuated by the retraction of the guide for shifting the pawl carrying arm from the ratchet and thereby rendering the pawl inoperative.

1,428,262. METHOD OF WORKING ELECTRIC RESISTANCE WELDING MACHINES OPERATING WITH CONTINUOUS CURRENT. EDMUND SCHRÖDER, Berlin, Germany, assignor, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed Jan. 13, 1917. Serial No. 142,235. 5 Claims. (Cl. 219—10.)



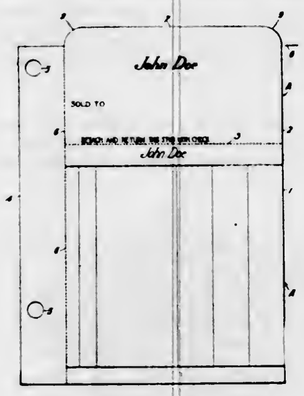
1. An electric resistance welding system utilizing continuous current, comprising an interrupter positioned directly between the source of electrical energy and the welding transformer, said interrupter being adapted to operate substantially without sparks.

1,428,263. POLISHING MOP. JOSEPH J. SHICKLUNA, Buffalo, N. Y., assignor to Buffalo Specialty Company, Buffalo, N. Y., a Corporation of New York. Filed Mar. 3, 1919. Serial No. 280,266. 5 Claims. (Cl. 15—229.)



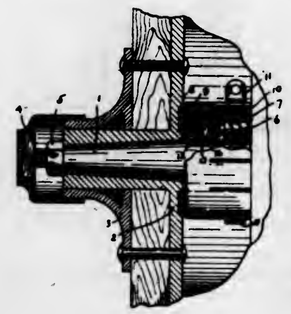
1. In a device of the kind described, a mop head formed of wire bent into loop shape with one end portion extending inwardly into the open space of said head and terminating therein and its other end terminating at a peripheral portion, a mopping element having a tubular portion fitting over said wire, and a fitting to which the inwardly extending end portion of the wire is secured.

1,428,264. WORK WEB FOR TYPEWRITERS. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 25, 1919. Serial No. 292,568. 3 Claims. (Cl. 281—2.)



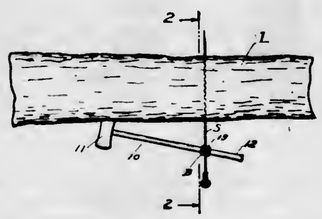
1. A printed form device to receive typewriting consisting of a multiplicity of separate plies which creep one relatively to another when passing around the cylindrical platen of a typewriting machine so that superposed forms on the different plies are moved out of register, said device having at intervals re-registering means, consisting of cross fold-lines of greater flexibility including all the plies at each group of cross fold-lines, so that the disarrangement of the register of the plies may be corrected by releasing the plies from the platen and tucking them together in the fold nearest the platen, and then restoring them to their extended condition, thereby restoring the register of the plies with one another.

1,428,265. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 11, 1919. Serial No. 316,544. 35 Claims. (Cl. 197—126.)



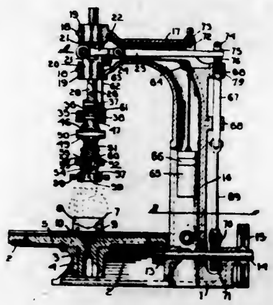
1. In a typewriting machine of the continuous billing or fan-fold type, in combination, a unitary or single-section rotative platen, carbon-holding bars for supporting carbon-sheets between the plies of fan-folded webs arranged side by side and thus fed to the platen, a carbon carriage movable toward and away from the platen at the introductory side thereof and provided at one side of the machine with a support for certain of said bars and provided at the other side of the machine with a support for others of said bars, said bars being of sufficient length to pass in relatively overlapping relation from one to another of said webs and between the plies thereof, and web-severing means at the rear of said bars for slitting said webs at their folds to provide for the passing of said bars from one to another of the initially fan-folded webs.

1,428,266. INVOICE SHEET. JESSE A. B. SMITH, Fairfield, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 18, 1920. Serial No. 417,655. 5 Claims. (Cl. 282—28.)



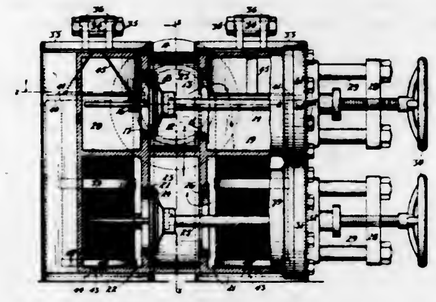
1. For use in a typewriting machine, an entry sheet comprising a body part, a lateral filing marginal part at one side of the body part and detachably connected therewith along a vertical weakened line of detachment, and an upper extension projecting from and extending along the full width of the upper end of the body part and terminating at said vertical weakened line of detachment to form a leading edge for the body part and having blunt right and left upper corners to be carried by and remain upon the upper end of the body part after the detachment therefrom of the lateral filing marginal part.

1,428,267. GREASE RETAINER AND DUST CAP. LLOYD A. T. SOLDANE and VERLE V. VAN NATTAN, San Francisco, Calif. Filed Jan. 24, 1922. Serial No. 531,388. 6 Claims. (Cl. 301—126.)



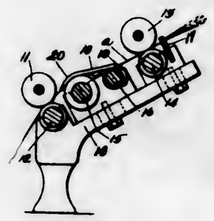
4. In combination with a wheel and axle of a vehicle, a cup shaped packing member formed to fit within a dust cap, a dust cap, an inner projecting collar formed within said member and concentric with the periphery thereof, clamp means to secure said dust cap on said cup member and to compress the latter against a relatively stationary part of a vehicle, a spring member constructed and adapted to normally compress said collar, and a bearing retainer ring adapted to cover said spring member, the inner edge of said collar representing a wiping edge making an acute angle with the axis of the cup member.

1,428,268. SAW SUPPORT AND GUIDE. DAVID W. SOLOMON, Redmond, Wash. Filed Feb. 12, 1921. Serial No. 444,603. 1 Claim. (Cl. 143—163.)



A saw guide and support, comprising a saddle-shaped block adapted to seat upon an axe handle, the convex surface of the block being provided with a saw-guiding groove arranged right angularly to the longitudinal axis of the block, said block being provided with cavities for a lubricant, and means to secure said block in place.

1,428,269. AUTOMATIC GRINDING MACHINE. LAWRENCE A. SORBY, Arlington, Mass. Filed Feb. 14, 1920. Serial No. 358,663. 19 Claims. (Cl. 51—28.)



1. A valve grinding machine comprising a support for a valve casing, and means for continuously rotating the same in one direction, a support for the valve and means for reciprocating the same in the direction of the axis of rotation whereby said combined rotary and reciprocating movements will effect a grinding movement between the walls of said valve and valve casing.

1,428,270. TWIN STRAINER. CARL F. BRAUN, San Francisco, Calif. Filed Mar. 13, 1919. Serial No. 282,259. 5 Claims. (Cl. 210—168.)

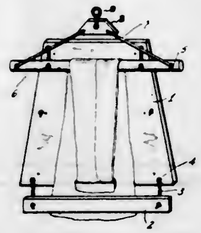
1. In a twin strainer, a pair of vertical screen housings, a pair of horizontal and superimposed valve housings formed on one side of the screen housings, each valve housing having a pair of passages extending therefrom, a passage of the upper valve housing communicating with the upper end of each screen housing and a passage of the lower valve housing communicating with the lower end of each screen housing, a screen member in each of said screen housings, an inlet connection for one of the valve housings and an outlet connection for the other valve housing, and a valve in each valve housing whereby the passages of each housing leading to the screen housings may be alternately closed or opened.

1,428,271. DRAWING MECHANISM. ARTHUR CECIL BUTLER, Boston, Mass. Filed Feb. 18, 1921. Serial No. 445,921. 9 Claims. (Cl. 19—130.)

1. A drawing mechanism comprising bottom rolls, and a gravity cap hung upon one of said rolls and resting loosely upon the other roll and under which the roving passes.

1,428,272. COATING COMPOSITION AND PROCESS OF PRODUCING THE SAME. WILLIAM A. COLLINGS, Kansas City, Mo. Filed Nov. 5, 1921. Serial No. 513,017. 14 Claims. (Cl. 134—44.)

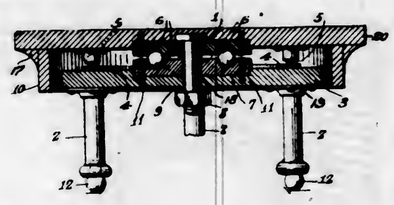
4. A material for protective paints comprising an oil jellied by incorporated water insoluble soap and containing incorporated fine cement.



11. The process of making protective coating materials which comprises jellying hot raw linseed oil by incorporating aluminum stearate, aging the jelly and admixing Portland cement with the jelly in sufficient proportion to make a stiff paste.

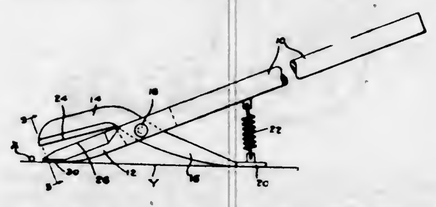
1,428,273. PAINT VEHICLE. WILLIAM A. COLLINGS, Kansas City, Mo. Filed Feb. 28, 1922. Serial No. 539,916. 10 Claims. (Cl. 134—56.)

5. The process of making an improved oil product useful as a vehicle for paint and varnish, which comprises distilling a mineral oil of high iodin number to free it of contained pitchy or waxy matter, and incorporating a water-insoluble metal soap therein.



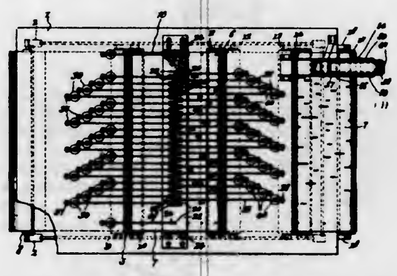
7. The process of making an improved oil product useful as a vehicle for paint and varnish, which comprises air blowing a petroleum distillate of high iodin number and incorporating a water-insoluble metal soap therein.

1,428,274. TROUSERS STRETCHER AND PRESSER. ISRAEL COSBE, Cleveland, Ohio. Filed May 11, 1921. Serial No. 468,737. 5 Claims. (Cl. 223—19.)



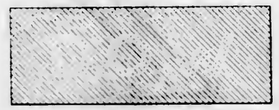
1. In a trousers stretcher and presser, in combination, a back member, cross pieces loosely carried at opposite ends thereof, and cable means secured to the said cross pieces and passing through the said back member and retaining both of the said cross pieces in clamping engagement with the back member.

1,428,275. KNOCKDOWN REVOLVING TABLE. GUST J. DAHL, Spuhn Island, Alaska. Filed Sept. 6, 1921. Serial No. 498,904. 1 Claim. (Cl. 45—26.)



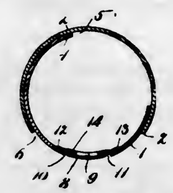
The combination of a revolving table comprising a main section having top and legs, a revolving section having a top, with downturned flanges at periphery thereof, a pivot pin connecting the centers of said sections, a ball bearing in two parts, one part attached to each section and surrounding said pivot pin, a circular track positioned near periphery and on the top of said main section, and balls mounted in bearings on the underside of the revolving top to roll on said track, all as substantially described.

1,428,276. WIRE-CUTTING IMPLEMENT. PAUL P. DANIELS, Minneapolis, Minn. Filed July 21, 1920. Serial No. 398,001. 1 Claim. (Cl. 30—17.)



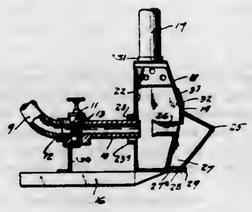
An implement for cutting wires which are embedded in cement comprising a long handle member, the forward portion of which is provided with a broad convex lower surface which extends to the extreme forward end and which merges into a substantially straight cutting edge at its upper surface, a short fulcrum member crossing said handle member and pivoted thereto adjacent the rear of said cutting edge, and a cooperating cutting edge on the forward portion of said fulcrum member.

1,428,277. MUSIC-ROLL PERFORATOR AND PRINTER. JOSEPH JOHN DAVILLA, New Orleans, La. Filed June 13, 1921. Serial No. 477,297. 4 Claims. (Cl. 164—113.)



1. A music roll perforator and printer comprising a table having slots therein with a portion forming an anvil between the slots, selectively-controlled punches above the anvil for perforating the web, means beneath the table for supporting the web and guiding it upon the upper surface of the anvil through one of the slots and subsequently downwardly through the other slot at the opposite side of the anvil, said table having a further slotted portion forming a platen, and means for guiding the web upon the platen, substantially as described.

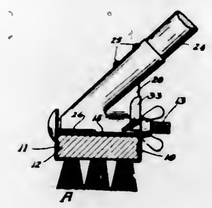
1,428,278. PROTECTIVE PRINTING. HERBERT H. DOW, Midland, Mich., assignor to The Dow Chemical Company. Filed Dec. 11, 1920. Serial No. 429,878. 4 Claims. (Cl. 283—8.)



1. A printed article having a figure or design impressed in different portions with inks having the same color to the naked eye but possessing different optical properties in another respect.

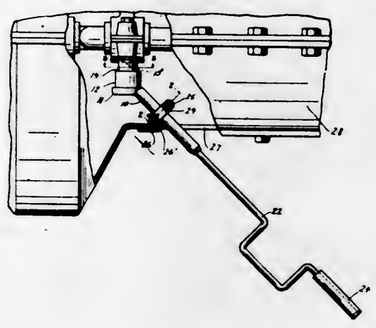
1,428,279. REMOVABLE LABEL FOR CARRIERS. CLIFFORD R. DUMBLE, Arlington, Mass., assignor, by mesne assignments, to The Lamson Company, Boston, Mass., a Corporation of Massachusetts. Filed June 7, 1921. Serial No. 475,588. 17 Claims. (Cl. 243—39.)

1. A carrier comprising relatively movable inner and outer casings having openings adapted to be moved into and out of alinement by the relative movement of the casings in opening and closing the carrier, and means whereby an indicator label may be removably secured to the wall of one of said casings.



1,428,280. BRANDING IRON. CHARLES F. FRAZIER, South Greenfield, Mo. Filed Dec. 14, 1921. Serial No. 522,332. 3 Claims. (Cl. 158—16.)

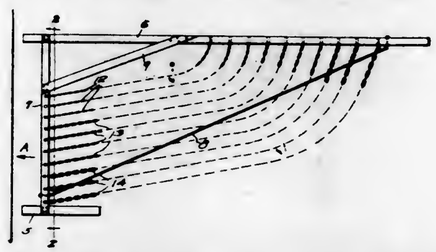
1. A branding iron of the character described comprising a reservoir, a handle member extending from one side of the reservoir, a brace projecting from the opposite side of the reservoir, a base member disposed beneath the reservoir, the opposite end of said handle being con-



nected to the base, a chamber engaged with the opposite end of the base and said brace member, a branding iron carried by said chamber, and a burner carried by the reservoir and connected to the base, said burner extending into the chamber for heating the branding iron.

1,428,281. BRUSH CLAMP. WALTER B. EAGAN, Chicago, Ill. Filed Jan. 18, 1922. Serial No. 530,109. 5 Claims. (Cl. 15—146.)

1. A brush holded comprising one piece clamping members; a socket formed on one of said members, there being upwardly extending reinforcing members for said socket; a handle mounted in said socket; a lateral support formed on one of said clamping members; and a member carried by said support and passing through the lower portion of said socket member for adjustably mounting said clamping members in clamping engagement with the back of a brush, substantially as described.



1,428,282. WRENCH. RUDOLPH L. GLABAZNYA, Chicago, Ill. Filed Aug. 18, 1921. Serial No. 493,433. 8 Claims. (Cl. 81—57.)

1. A wrench of the class described comprising a sleeve; a nut receiving socket mounted on said sleeve; an operating shaft journalled through said sleeve and operatively connected to said socket; an angular bearing member adjustably carried by said sleeve adapted to engage the edge of the opening of a crank shaft casing, substantially as described.

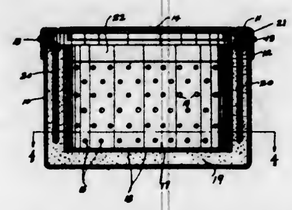
1,428,283. ROAD RAKING AND SWEEPING DEVICE. CHARLES A. GUNDERSON and RICHARD P. MASON, Escanaba, Mich. Filed Sept. 6, 1921. Serial No. 498,623. 3 Claims. (Cl. 37—5.)

1. A device of the character described comprising a frame having a longitudinally extending member and a transversely extending member the latter being at the front end of the frame, of a plurality of chains having

their ends attached to said members at spaced points in the length thereof and of such length as to describe a curve between said members.

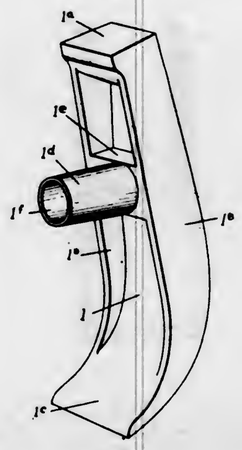
1,428,284. GRASS CUTTER. OSCAR J. HEIMANN, Urbana, Ohio. Filed Sept. 2, 1921. Serial No. 497,823. 5 Claims. (Cl. 56—246.)

1. In a machine of the character described, a ground wheel having a plurality of cams on the interior thereof, a support enclosing one side of said wheel, a bearing on said support for said wheel, a cam follower carried by said support co-operating with the cams of said wheel to impart a reciprocating movement to said follower, stationary and oscillating cutting members carried by said support, and a connection between said follower and said oscillating members.



1,428,285. HANDLE. FRED S. HERBERT, Colorado Springs, Colo. Filed Nov. 29, 1920. Serial No. 427,079. 5 Claims. (Cl. 224—25.)

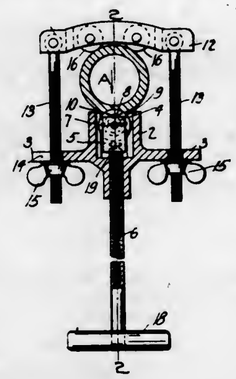
1. A handle of the character described comprising a plate having a hook member on one end thereof, fastening



means carried by the opposite end of the plate for securing said plate to the arm of a person and a hand grip carried by the plate between the fastening means and said hook member.

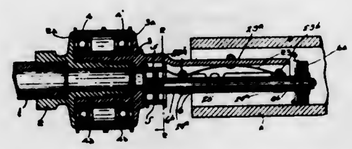
1,428,286. DUST-CLOTH CONTAINER. ANDREW HOLM, Chicago, Ill. Filed Sept. 23, 1920. Serial No. 412,320. 5 Claims. (Cl. 206—1.)

1. A container for a dust cloth or the like comprising a casing; a holder having perforations in its walls arranged in said casing in spaced relation with respect thereto; a quantity of absorbent material substantially filling the space between said parts and supporting said holder within said casing; and an open-ended tube extending down into said absorbent material for feeding oil thereto, substantially as described.



1,428,287. ADZ. FRED A. HOLMES, Belfast, Me. Filed Apr. 7, 1922. Serial No. 550,381. 1 Claim. (Cl. 145—2.)

A cooper's adz, comprising a body having a hammer head at one end and a curved cutting blade at its lower end, and flanges on each side connecting the head with the blade, the outer surfaces of said flanges being flush with the side edges of the body, a cross bar connecting the flanges adjacent the midpoint of said body having a socket to receive the handle, all formed integral, substantially as and for the purpose described.

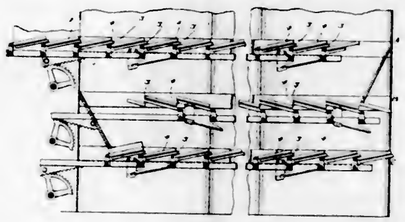


1,428,288. PIPE CUTTER. JAMES G. KEATLEY, Denver, Colo. Filed July 20, 1921. Serial No. 486,073. 4 Claims. (Cl. 81—191.)

1. A pipe cutter comprising a stock having a socket and a rigid pipe-seat at an end thereof, means connected with the stock to hold a pipe to the seat thereof, a grooved cutter-head slidably fitted in the socket of the

stock, a cutter wheel mounted in the groove of the head, and a feed screw working in the stock in connection with the cutter head.

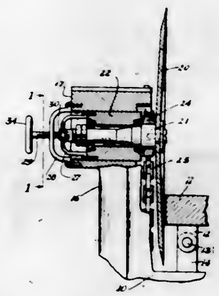
1,428,289. GRINDING ATTACHMENT. HORACE G. KENNEDY, Denver, Colo., assignor of one-half to John A. Hingley, Denver, Colo. Filed Sept. 18, 1919. Serial No. 324,437. 11 Claims. (Cl. 51—261.)



1. In mechanism for grinding internal surfaces, a rotatable support having a relatively immovable extension member substantially parallel with the axis of the support adapted to enter the bore of a hollow body, a grinding tool spindle adjustably carried by said extension member substantially parallel therewith, and means whereby said spindle may be adjusted with respect to said extension member in order to vary its eccentricity with respect to the axis of said extension member.

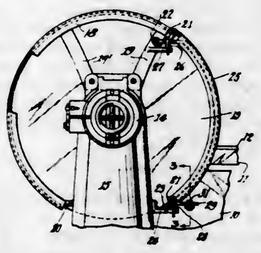
2. In grinding mechanism of the class described, a rotatable support, a grinding tool spindle carried by the support substantially parallel with the axis and rotatable independently of said support, means for adjusting the grinding tool spindle to vary the degree of eccentricity thereof with respect to the axis of said rotatable support, said means including a device constantly exerting a yielding force tending to move the grinding wheel spindle toward said axis and a device for positively moving said spindle away from said axis in opposition to the force of said yielding device.

1,428,290. DRIER FOR TEXTILE STOCK, ETC. MATHEW F. KEVLIN, Springfield, Vt. Filed June 21, 1920. Serial No. 390,415. 4 Claims. (Cl. 178—221.)



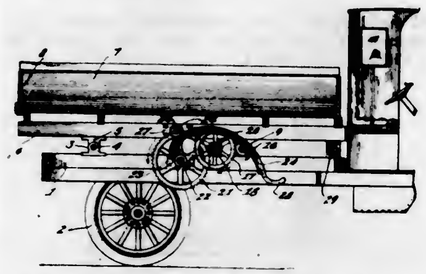
3. A drier, for loose stock, having a feeding and supporting platform comprising a plurality of fixed and movable shelves or tables, alternated, said shelves or tables each having mounted in connection therewith wiper-means for coaction with the next adjoining shelf or table, such wiper-means comprising an alined series of wiper-sections having wiping surfaces of flexible material,

springs which press the wiper-sections into contact with the surface which they wipe, and clips applied to a shelf or table, retaining the corresponding wiper-sections in



working connection therewith, and preventing accidental disconnection of the wiper-sections from the shelf or table when the latter is disassembled.

1,428,291. ADJUSTING MEANS FOR SLICING-MACHINE KNIVES. PATRICK J. LUCEY, Chicago, Ill. Filed Feb. 10, 1922. Serial No. 535,505. 18 Claims. (Cl. 17—24.)

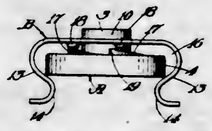


1. In combination with a slicing machine and a knife rotatably mounted thereon, means for adjusting said knife axially on said machine with minute accuracy.

1,428,292. KNIFE GUARD FOR SLICING MACHINES. PATRICK J. LUCEY, Chicago, Ill. Filed Feb. 17, 1922. Serial No. 537,297. 16 Claims. (Cl. 17—24.)

1. In a machine of the class described, having a rotatable knife, a knife guard laterally swingable over a peripheral portion of said knife, and means actuated by said machine for automatically operating said guard with said machine.

1,428,293. DUMP TRUCK. ROBERT MCELDOWNEY, Canton, Ohio, assignor to Michael H. McKenna, Cleveland, Ohio. Filed July 24, 1920. Serial No. 398,690. 1 Claim. (Cl. 298—19.)



In a truck, the combination of a frame, a body pivotally mounted near its rear end upon the frame, a roller upon the under side of the body forward of the pivotal point of the body, a rock shaft in the frame beneath and forward of the roller, a cam arm having a forwardly disposed arcuate portion for engagement with the roller and an inwardly disposed portion connected to the rock shaft and means for rocking said rock shaft to tilt the body upon its pivot.

1,428,294. STOVEPIPE THIMBLE. JAMES MORTIMER MEADE, Honeoye, N. Y. Filed Feb. 6, 1922. Serial No. 534,522. 9 Claims. (Cl. 126—3.)

6. In a stove pipe-thimble, telescoping sections, shells of heat insulating material associated with said sections, and collars carried by said sections.

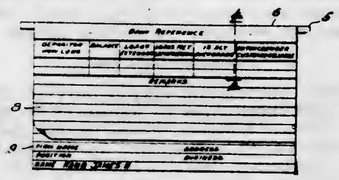
1,428,295. BOTTLE CLOSURE. FRANCIS H. MILLS, Boston, Mass. Filed Nov. 10, 1921. Serial No. 514,408. 6 Claims. (Cl. 215—65.)

1. A bottle closure having a cap member to go over the top of a bottle, and a clamping member rotatably mounted

on the upper side of the cap member and slightly movable axially with relation thereto, the clamping member being provided with means for engaging the beaded rim of a bottle, the proximate surfaces of the clamping member and the cap member being provided one with cam surfaces and the other with projections which engage said cam surfaces, whereby the rotation of the clamping member causes the said projections to ride up on the cam surfaces and tightly clamp the said cap to the top of the bottle.

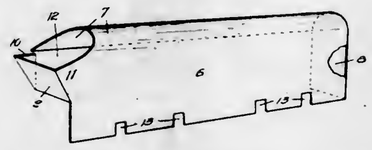
1,428,296. KNIFE. MAX NEFT, Seattle, Wash. Filed July 8, 1921. Serial No. 483,287. 3 Claims. (Cl. 30—10.)

1. A knife comprising a main casing plate and a complementary casing plate hinged thereto to swing in a plane at right angles to the plane of said plate, said complementary casing plate being shorter than said main casing plate, an auxiliary plate mounted on said main casing plate in alinement with said complementary casing plate, and adapted to form a continuation thereof when the casing plate is in closed position, said casing plates being provided with longitudinal flanges arranged on opposite sides and adapted to form the sides of the casing, a pivot pin extending through said auxiliary plate and said main casing plate, and a blade mounted on said pivot pin between said auxiliary plate and said main casing plate, said blade being adapted to swing in a plane parallel to the plane of the casing plate.



1,428,297. POURING DEVICE FOR BOTTLES AND THE LIKE. STEPHEN C. PRICE, Louisiana, Mo., assignor to Frank W. Buffum, Louisiana, Mo. Filed Oct. 17, 1921. Serial No. 508,213. 4 Claims. (Cl. 215—79.)

4. A pouring device for bottles and the like, comprising a discharge spout, a housing secured thereto, spring arms secured to the housing, said housing and arms adapted to embrace a bottle neck, and a vent pipe carried by said housing.



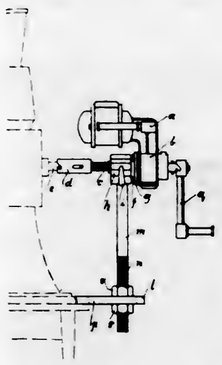
1,428,298. INDEX ELEMENT. JAMES H. RAND, North Tonawanda, N. Y. Filed June 11, 1921. Serial No. 476,732. 8 Claims. (Cl. 129—16.7.)

1. An index element comprising a relatively long and narrow, flat, supporting bar, and a sheet folded upon itself to form two leaves, one normally overlying the

other, the margin of the rear leaf adjacent said fold being secured to the flat face of the supporting bar.

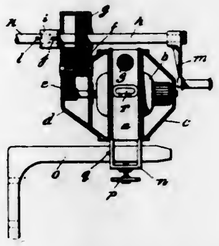
1,428,299. AUTOMOBILE BODY HEATER. HIRAM C. ROGERS, St. Louis, Mo. Filed Dec. 2, 1918. Serial No. 264,887. 1 Claim. (Cl. 237—12.3.)

In combination with an exhaust manifold of an internal combustion engine, a heater hood consisting of a metallic sheet forming an outer side wall terminating at its upper end in a curved top and at one end in a closed end wall for said hood, a portion of the forward end of said side wall terminating in a transversely disposed inclined breast plate, a portion of the free end thereof terminating in a rearwardly directed short wall piece to assist in forming a neck having a hot air discharge opening and the outer side wall of said hood having its lower edge provided with a plurality of cutaway portions to straddle and receive engine studs provided with securing nuts for supporting and locking the hood in position about the exhaust manifold.



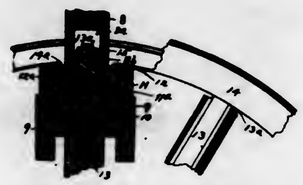
1,428,300. WELL PUMPING APPARATUS. CHARLES C. SCHARPENBERG, Bakersfield, Calif. Filed Apr. 1, 1922. Serial No. 548,817. 8 Claims. (Cl. 103—46.)

1. A pumping apparatus comprising a shell adapted for suspension within the fluid to be pumped; a reciprocative pump member within said shell; a conduit member into



which the pump member discharges; a reversing electric motor within the shell; and connections for driving the reciprocative pump member from the motor, consisting of a threaded shaft connected with the motor shaft, and a traveling nut connected with the pump plunger.

1,428,301. DEVICE FOR FIXING DRIVING ENGINES OR ELECTROMOTORS TO MACHINES TO BE DRIVEN. JOHANN SCHRÖDER, Bremen, Germany, assignor to Landwirtschaftlicke Maschinen-Gesellschaft, Hemelingen, near Bremen, Germany. Filed Jan. 26, 1920. Serial No. 354,295. 5 Claims. (Cl. 64—52.)

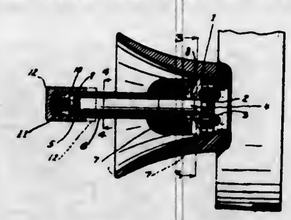


1. An improved device for fixing to the machine to be driven a driving engine or electromotor having a shafting, comprising in combination an extension of the casing of the driving engine or electromotor situated within the vertical plane of the driving shaft and serving as guiding device, a lateral bearing, and a guiding holder fixed to the machine to be driven adapted to receive the said extension of the casing to secure the shafts of the driving engine and of the machine to be driven in aligned position.

1,428,302. ELECTROMOTOR WITH CONNECTING GEAR. HEINRICH SCHRÖDER, Shedinghausen, Germany, assignor to Landwirtschaftliche Maschinen-Gesellschaft, Hemelingen, near Bremen, Germany. Filed Dec. 22, 1919. Serial No. 346,804. 2 Claims. (Cl. 74—7.)

1. An improved electromotor with connecting gear comprising in combination with the electromotor a driving shaft of the same, a coupling sleeve movably mounted upon the front end of said shaft, a bracket extending from the motor casing, an arm projecting from the machine to be driven adapted to receive the said bracket of the electromotor, a clamping screw in said bracket for fixing the motor upon said arm an abutment pin upon said arm of the machine to be driven for securing the proper position of the electromotor with regard to the machine and a pin projecting from the shaft of the driven machine adapted to engage with the said coupling sleeve substantially as described and shown.

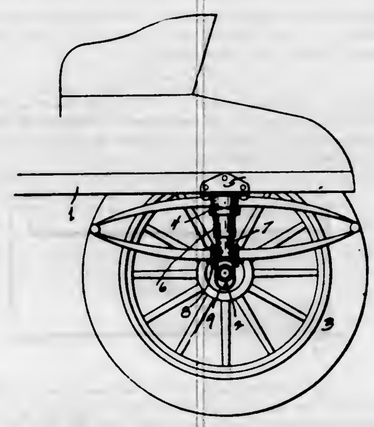
1,428,303. PRESS FOR SETTING METAL FELLY WHEELS. PETER C. SEEBERG, Clovis, Calif. Filed Aug. 22, 1921. Serial No. 494,128. 3 Claims. (Cl. 153—10.)



3. A tool for tightening the spokes of a wheel having metal rims and wooden spokes, said spokes being fitted in tubular projections formed on said rim, consisting of a die having an opening therethrough adapted to fit around the spoke where it enters the rim, and having said opening countersunk in the face of the die so that when assembled with the spoke an annular groove is formed within the face of the die around the spoke, said die being longitudinally halved, a press base adapted to hold the two parts of said die rigidly together, a tubular set adapted to encircle said tubular projection, and to engage said annular groove in the die, and means for forcing the set adjacent to the face of the die, substantially as described.

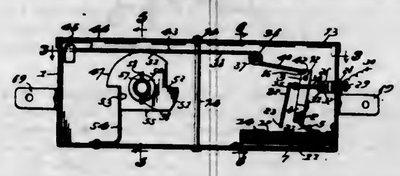
1,428,304. AUTOMATIC PISTOL. DONALD H. STEVENSON, Gardner, Mont. Filed Aug. 5, 1920. Serial No. 401,416. 11 Claims. (Cl. 42—4.)

1. In a fire-arm the combination with a slidable barrel and barrel extension, of a breech block within said barrel extension, ribs disposed on the inner faces of the side walls of the barrel extension and extending longitudinally thereof, the upper longitudinal edges of said ribs being inclined to the axis of the barrel, said inclined edges extending upward and rearward from the front ends of said ribs, the rear end of said breech block normally bearing against the forward ends of said ribs, and means operable at the end of the recoil movement of said barrel and barrel extension to tilt the rear end of said breech block upward, out of locking engagement with said ribs.



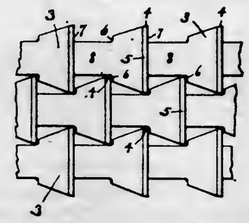
1,428,305. ATTACHMENT FOR TELEPHONE TRANSMITTERS. FRED SUTHERLAND, Chicago, Ill. Filed Aug. 3, 1921. Serial No. 489,437. 12 Claims. (Cl. 179—188.)

1. The combination of a telephone transmitter, and an elastic member smaller than the interior of said transmitter adapted to be thrust against the bottom of said transmitter to spread same so as to fill the space between



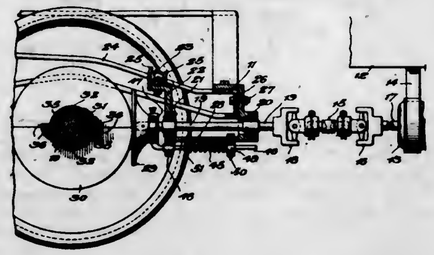
the walls thereof; and guide means in said transmitter slidably carrying said elastic member, substantially as described.

1,428,306. SHOCK ABSORBER. GEORGE H. TRIPPLEHORN, Highland Park, Mich. Filed Aug. 2, 1920. Serial No. 400,569. 6 Claims. (Cl. 267—28.)



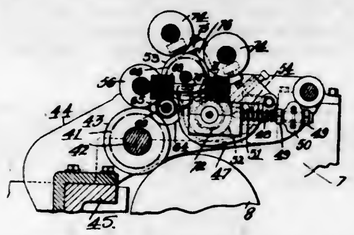
1. In a shock absorber for use between a vehicle frame and axle, a bracket secured to the vehicle frame, a cylindrical member formed integrally therewith and threaded on its inner face, a tubular member threaded therein and having an internal flange at its lower end, a tubular piston reciprocably mounted in the said tubular member and having an external flange at its upper end fitting the inner face of the said tubular member, a foot on the said piston adapted to be engaged by upward movement of the vehicle axle, a plunger within the cylindrical member, a compression spring between the tubular piston and plunger, and a strap secured to the plunger and extending about the vehicle axle.

1,428,307. AUTOMOBILE THEFT-PREVENTING DEVICE. LOUIS F. WESCHE, Webb, Iowa. Filed Aug. 24, 1921. Serial No. 495,055. 10 Claims. (Cl. 116—33.)



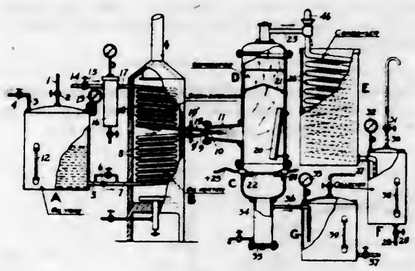
9. In a device for the purpose indicated, a casing, a plurality of alarm bombs including a series of percussion caps for exploding said bombs, a plurality of hammers, a plurality of vibrating members to hold the hammers set, whereby upon vibration of any one or more of said members, one or more of the hammers may release for firing one or more percussion caps, means for preventing the members from vibrating, said means comprising a plurality of rotatable discs having arcuate edges to engage and prevent the members from vibrating, said discs having flattened edges, means adapted to be rotated for rotating any one or a combination of said discs for exposing the flattened edges opposite one or a combination of said vibrating members, whereby said members are free to vibrate, to release one or a combination of hammers.

1,428,308. MILLING CUTTER. FREDERICK WIARD, Detroit, Mich., assignor to American Standard Tool Company, Detroit, Mich., a Corporation of Michigan. Filed June 4, 1921. Serial No. 475,014. 6 Claims. (Cl. 29—104.)



1. Milling cutters, each having side-cutting teeth, all of the same shape and size, and having the sides of the teeth back of their cutting edges so cut away as to permit the faces of the teeth of adjacent cutters to overlap circumferentially.

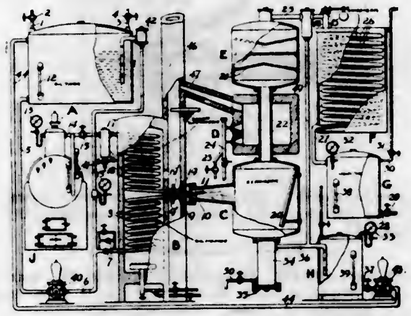
1,428,309. TRAIN-LIGHTING-GENERATOR DRIVE. DON C. WILSON, New York, N. Y. Filed Sept. 13, 1920. Serial No. 410,081. 12 Claims. (Cl. 105—17.)



1. Mechanism for driving a generator at constant speed from the axle of a truck including in combination, a split sleeve secured to the axle, a split disc slidable on said sleeve and rotatable therewith, a shaft disposed at right angles to the axis of the axle, two spaced bearings on the truck for said shaft, a disc on one end of the shaft having its face contacting the periphery of said split disc, a spring forcing said discs together, a shaft having universal joint connection at one end to the end of said first mentioned shaft and at its other end to the armature shaft of said generator, and speed responsive means for shifting the first mentioned disc across the face of the second to drive said shaft at a substantially constant speed.

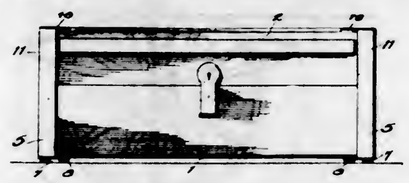
1,428,310. INKING DEVICE FOR LATE-NEWS AND OTHER PRINTING MACHINES. HENRY A. WISE WOOD, New York, N. Y., and JOHN A. ISBELL, Middletown, N. Y., assignors to Wood Newspaper Machinery Corporation, New York, N. Y., a Corporation of Virginia. Substitute for abandoned application Serial No. 42,483, filed July 29, 1915. This application filed Jan. 31, 1919, Serial No. 274,165. Renewed Feb. 3, 1922. Serial No. 533,962. 7 Claims. (Cl. 101—350.)

3. In a fudge device, the combination of a fudge cylinder, means for rotating it, an ink fountain having an inner pair of bearings for preventing the escape of ink, a fountain roll journalled in said bearings its end studs projecting beyond them, and additional bearings engaging said studs for supporting the weight of said roll.



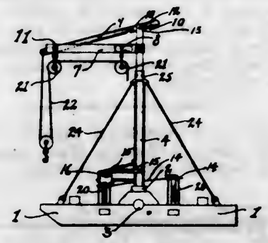
1,428,311. OIL-CONVERTING PROCESS FOR THE CONVERSION AND TRANSFORMATION OF OILS. JOSEPH H. ADAMS, Flatbush, N. Y., assignor to The Texas Company, Houston, Tex., a Corporation of Texas. Filed June 25, 1918. Serial No. 241,836. 9 Claims. (Cl. 196—25.)

8. A process of producing lower boiling hydrocarbons from higher boiling hydrocarbons that comprises spraying a mixture of hot oil and steam into a chamber, the steam being superheated to a temperatnre sufficient to crack the oil by its direct action as it is commingled therewith, separating out and collecting the heavy residue in the lower portion of the chamber, withdrawing the collected residue, and taking off and condensing the evolved vapors from the upper portion of the chamber.



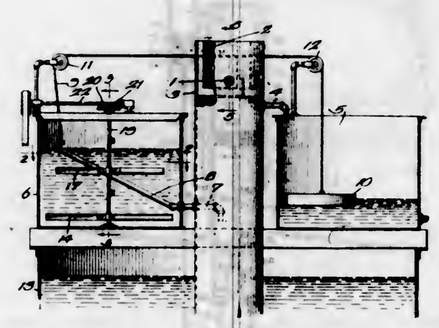
1,428,312. OIL-CONVERTING APPARATUS FOR THE CONVERSION AND TRANSFORMATION OF OILS. JOSEPH H. ADAMS, Flatbush, N. Y., assignor to The Texas Company, Houston, Tex., a Corporation of Texas. Filed June 25, 1918. Serial No. 241,837. 7 Claims. (Cl. 196—25.)

1. An oil converting apparatus comprising an expansion chamber having spaced chambers with a communicating passage, means for imparting heat to the communicating passage, a nozzle adapted to discharge into one of the chambers, an oil heating coil and a steam superheating coil connected to the nozzle, means for heating the coils so that the oil is vaporized and largely cracked by the direct action of the superheated steam as it is discharged from the nozzle into one of said chambers, a condenser in open



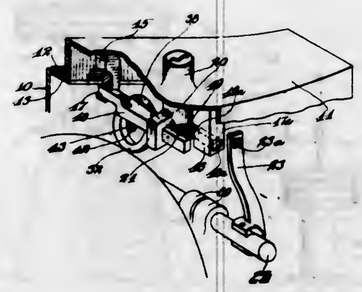
communication with the expansion chamber and means for maintaining super-atmospheric pressure through the expansion chamber and condenser.

1,428,313. TRUNK. ANTON WILLIAM BALDER, Pittsburg, Calif., assignor of one-fourth to Martin W. Dunn, Oakland, Calif. Filed Apr. 7, 1920. Serial No. 371,991. 2 Claims. (Cl. 190—19.)



1. A trunk having hinged to the bottom thereof legs for supporting the trunk in elevated position, said legs being of angular material and connected with the trunk to fold up and fit about the corners thereof to provide reinforcements for the said corners, the cover and legs having interengaging means for holding said legs in folded position.

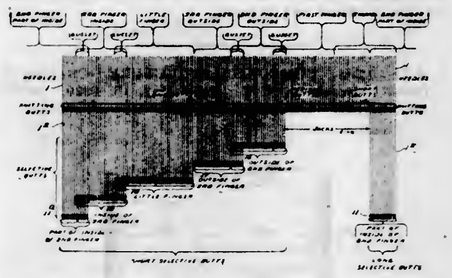
1,428,314. DERRICK. JOHN L. BARNES, Whigville, Ohio. Filed Aug. 24, 1921. Serial No. 494,796. 2 Claims. (Cl. 212—59.)



2. A swivel derrick, comprising a ground frame; a mast supported on the frame and adapted to rotate and to be raised vertically or lowered horizontally as desired; an adjustable arm at the upper end of the mast; a semi-circular track at the base of the mast; a roller traveling said track and connected with said mast; pulley and cable tackle arranged on the mast arm; and means for rotating the mast laterally.

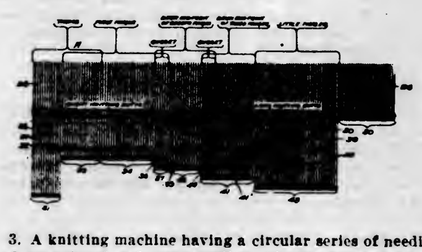
1,428,315. MIXING APPARATUS. KENT W. BARTLETT, Hammond, Ind. Filed Mar. 7, 1922. Serial No. 541,766. 8 Claims. (Cl. 259—23.)

1. Mixing apparatus including a tank; a revolving agitator within the tank; and an inclined pipe within the tank for conveying mixed material from the tank, this pipe intersecting the plane of rotation of the agitator and being bent where it intersects the plane of rotation of the revolving agitator to lie outside of the circuit of rotation of this agitator in the zone of rotation thereof.



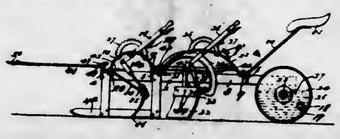
1,428,316. TRANSMISSION LOCK. ERNEST H. BAXTER, Chicago, Ill. Filed Apr. 30, 1920. Serial No. 377,883. 1 Claim. (Cl. 70—90.)

The combination with a clutch controlling shaft; of a radial arm fast on said shaft and having a transverse keeper aperture, a bolt slidably positioned transversely of the arm to enter the keeper aperture when the latter is in alinement with the bolt, and lock controlled means for actuating the bolt.



1,428,317. KNITTING MACHINE. GEORGE P. BOSWORTH, Central Falls, R. I., assignor to Hemphill Company, Pawtucket, R. I., a Corporation of Massachusetts. Filed May 8, 1918. Serial No. 233,301. 37 Claims. (Cl. 66—24.)

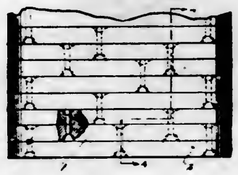
34. A knitting machine having a circular series of needles and a carrier therefor, knitting cams, selective means to render said needles divisible into groups for reciprocating work, non-knitting cams cooperating with said selective means to complete the segregation of said groups



and the restoration thereof, said non-knitting cams including a plural-needle-group-withdrawal cam or cams.

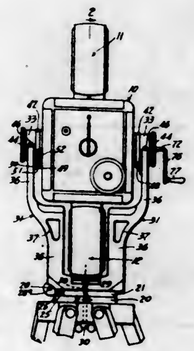
1,428,318. MECHANISM FOR KNITTING GLOVES. GEORGE P. BOSWORTH, Central Falls, R. I., assignor to Hemphill Company, Pawtucket, R. I., a Corporation of Massachusetts. Filed Nov. 20, 1918. Serial No. 263,284. 26 Claims. (Cl. 66—24.)

3. A knitting machine having a circular series of needles and a carrier therefor, a plurality of knitting cams, means to knit tubular fabric on said needles by one of said knitting cams and means for knitting in succession a plurality of selvaged strips as actual continuations of said tubular fabric and upon the respective knitting cams.



1,428,319. ROAD DRAG OR GRADING MACHINE. JOHN W. BRANNAN, Grand Island, Nebr. Filed Mar. 16, 1921. Serial No. 452,687. 2 Claims. (Cl. 37—5.)

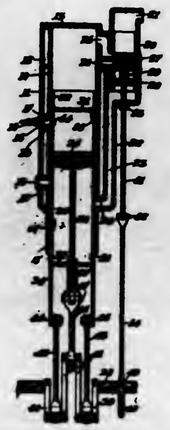
1. In a machine for the purpose indicated, a frame, a bar carrying a ground engaging implement, a plurality of bars hingedly connected to the frame forwardly of the implement carrying bar and being arcuate and terminating in forwardly extending parts at their rear ends, which are connected rigidly to the implement carrying bar, an elevated support on the frame, a lever operatively mounted upon the support and in turn linked to the implement carrying bar, whereby it may be raised and lowered to assist in regulating one end of the implement carrying bar relatively to the ground, means for holding the lever in different adjusted positions, a foot actuated bar pivoted to the frame forwardly of the implement carrying bar and having a link connection with the other end of the implements in the ground, the construction and arrangement



of the rigid connection between the implement carrying bar and the forwardly extending extremities of the arcuate bars being such as to vary the angle of the implements relatively to the ground when said implement carrying bar is raised and lowered.

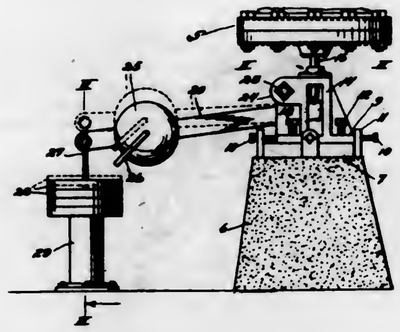
1,428,320. COMPOSITE STRUCTURE. CHARLES D. BROOKS, Brooklyn, N. Y. Filed Mar. 16, 1920. Serial No. 366,444. 3 Claims. (Cl. 217—4.)

1. In a device of the class described, a structure comprising a plurality of horizontally disposed sections, and a plurality of detachable devices of equal length for tying each abutting pair of sections together, some of said devices being staggered as regards the remainder, one pair of sections entirely enclosing therein tying devices, and one of said pair and an adjacent section forming another pair of sections entirely enclosing therein a staggered series of tying devices.



1,428,321. CONSTRUCTION FOR MOTION-PICTURE CAMERAS OR THE LIKE. LLOYD BROWN, Los Angeles, Calif., assignor to Silent Drama Syndicate, a Trusteeship. Lloyd Brown and Alexander Graydon, trustees. Filed Jan. 20, 1920. Serial No. 352,764. 9 Claims. (Cl. 88—17.)

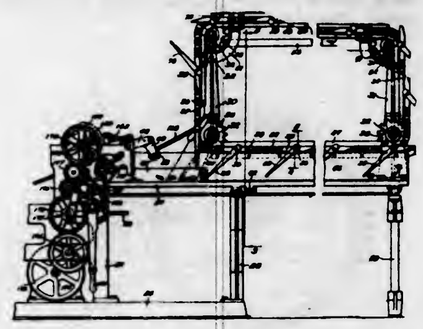
1. In motion picture apparatus, a case containing kinetograph mechanism, an exposure aperture in said case, and means supporting said case on a substantially horizontal axis passing through the case and substantially in line with the exposure aperture.



1,428,322. INTERNAL-COMBUSTION MOTOR. EVI W. CHRISTIE, Sewaren, N. J. Filed Jan. 6, 1921. Serial No. 435,348. 10 Claims. (Cl. 123—50.)

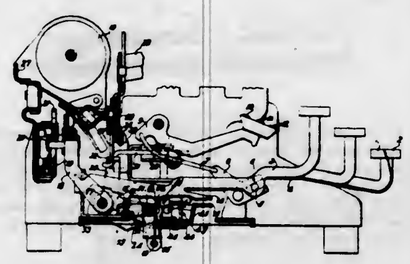
1. In an internal combustion motor, a cylinder, a piston operating in the cylinder, a second piston operating in the aforesaid piston, there being an air compression chamber between one end of the piston operating in the cylinder and one side of the said second piston operating in the aforesaid piston, and devices whereby atmospheric air is

admitted to the said air compression chamber and after being compressed by the action of the piston is admitted to a combustion chamber to scavenge the same.



1,428,323. COMPENSATING DEVICE FOR REACTION TUBES. CADET MANLEY COLVIN, Kansas City, Mo., assignor to C & C Developing Company, Kansas City, Mo., a Corporation of Arizona. Filed June 6, 1921. Serial No. 475,518. 15 Claims. (Cl. 204—31.)

1. A supporting structure comprising, in combination with a reaction tube, a movable supporting member adapted to maintain engagement with one end of said tube, and means associated with said member for causing it to exert a compensating supporting pressure upon the tube tending to oppose an increase in the length of the latter.

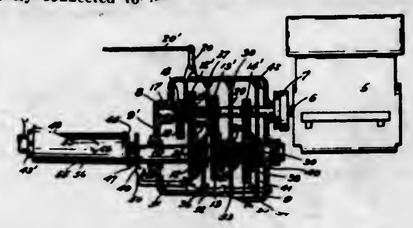


1,428,324. FEEDING MECHANISM. SIMON COOPER, Brooklyn, N. Y., assignor to Speedaumatic Company, a Corporation of Delaware. Filed June 29, 1920. Serial No. 392,759. 26 Claims. (Cl. 271—28.)

1. A machine of the character described comprising means for feeding articles, means for supplying a plurality of articles toward said feeding means, means for transferring forwardly said articles one by one to said

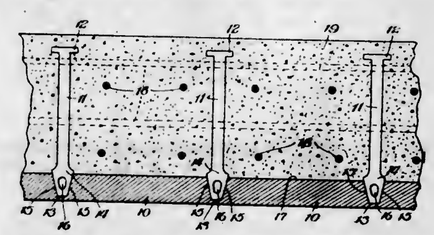
feeding means, and means for properly arranging in piles the supplied articles adjacent to said feeding means to be acted upon by said transferring means.

1,428,325. TYPEWRITING MACHINE. JOSHUA E. DAVIDSON, New York, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed July 6, 1921. Serial No. 482,715. 14 Claims. (Cl. 197—83.)



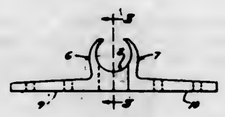
1. In a typewriting machine, the combination with a frame and a traveling carriage, of an escapement mechanism for letter-feeding the carriage, a universal bar for actuating the escapement mechanism, letter-feeding type-keys which actuate the universal bar a silent type-key which depresses said universal bar when operated, and means for holding said bar depressed to prevent actuation of said escapement mechanism, said means comprising a substantially horizontal, pivotally mounted lever, and means carried by said silent type-key for moving one end of said lever forwardly into locking engagement with the universal bar when the silent type-key has been operated to depress the universal bar.

1,428,326. CHANGE-SPEED GEARING. JOSEPH G. FAY, Seattle, Wash., assignor of eight per cent to John K. McDowell and eight per cent to Nemer F. Nahhas, both of Seattle, Wash. Filed Sept. 4, 1920. Serial No. 408,333. 3 Claims. (Cl. 74—59.)



1. The combination of a driving shaft, a driven shaft, a plurality of speed changing gears adapted to successively connect said shafts, a third shaft, a controller having two telescopic members respectively mounted upon the driven and third named shafts, said members

being provided with interfitting elements to afford relative rotary and axial movement thereto, springs operatively connected to [illegible] of the controller members, and

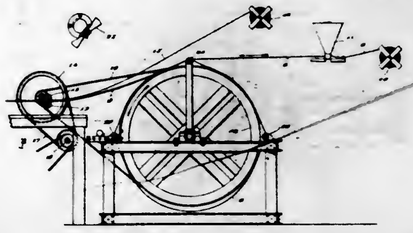


means cooperating with said springs and operatively connected with said gears to thereby regulate the speed of the driven shaft for driving said third shaft.

1,428,327. ANCHORING OR SECURING DEVICE. CHARLES G. GIROLAMI, Chicago, Ill. Filed May 9, 1921. Serial No. 467,966. 4 Claims. (Cl. 72—101.)

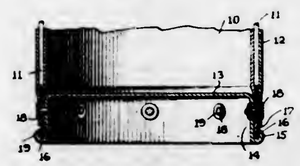
1. An anchoring device embodying a rigid body of a spike-like formation, there being an opening adjacent one end thereof and within the confines of the edges, the said end being adapted to be driven into a board or form to a depth that the said opening will extend into the board, the body of the said device being embedded in a concrete structure, the said end of the device with the opening therein protruding beyond the face of the said structure when the board is removed.

1,428,328. BRACKET FOR LUMBER ROLLERS. JOSEPH B. HAWKS, Los Angeles, Calif. Filed Apr. 27, 1920. Serial No. 377,009. 2 Claims. (Cl. 64—10.)



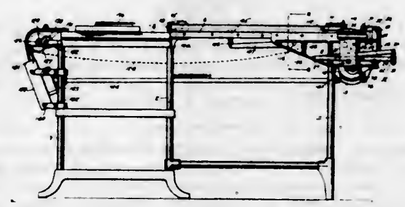
1. A split bracket bearing comprising sections having feet for securing the sections in position and hook like extensions overlapping along a line extending on either side of the axial vertical median plane so that the weight of the shaft will hold the sections in position.

1,428,329. DRYING AND FEEDING MECHANISM FOR PASTED STRIPS. ROBERT A. HENDRICKSON, Indianapolis, Ind., assignor to Indianapolis Saddlery Company, Indianapolis, Ind., a Corporation of Indiana. Filed July 24, 1920. Serial No. 398,666. 8 Claims. (Cl. 91—55.)



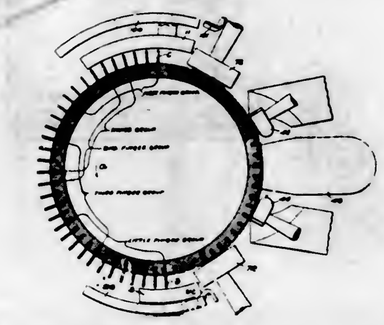
1. In a feeder paster for pasted strips, for combination with a paste-applying device for applying paste to the face of the strip, and a squeezer machine, a rotatable drum around which the strip passes helically after coming from the paste-applying device and from which the

strip passes to the squeezer machine, said drum being connected to said squeezer machine to operate in substantial synchronism therewith with respect to speed of



strip travel, and means for lifting the strip from the surface of the drum and moving it endwise of the drum at points in the helix which it forms around the drum.

1,428,330. BAG BOTTOM. HARRY E. INGRAM, Brooklyn, N. Y. Filed Apr. 28, 1921. Serial No. 465,086. 1 Claim. (Cl. 150—1.5.)

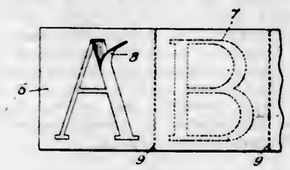


As an improved article of manufacture, a bag having a non-metallic body portion entirely closed on the sides and with longitudinal stay rods spaced apart and extending substantially to the bottom of the bag, a one-piece metallic bottom entering the lower end of the bag body and fitting snugly therein so as to form a raised closure of the lower end, the said bottom having an integral downturned flange forming its sides and its lower edge being turned up to engage the lower edge of the body, a stiffening ring enclosed in the turned up part of the bottom flange and disposed so that the lower edge of the body will come substantially into contact with the ring, and fastening devices extending through the flange of the bottom and through the body and stay rods.

1,428,331. MULTIPLE-WRITING MACHINE. FRANK AMOS JOHNSON, New Haven, Conn., assignor to Signature Company, New York, N. Y., a Corporation of New York. Filed Sept. 30, 1919. Serial No. 327,469. 15 Claims. (Cl. 271—16.)

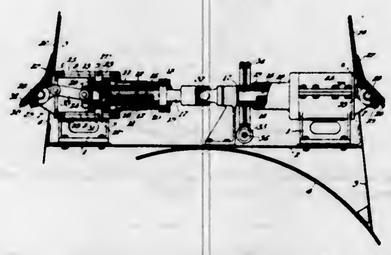
1. In a machine of the character described, the combination with means for supporting a plurality of piles of documents, and means operating on said piles for separating documents therefrom and arranging successive documents of each pile in different positions with respect to said pile.

1,428,332. GLOVE-KNITTING MACHINE. FRANK E. JONES, Pawtucket, R. I., assignor to Hemphill Company, Central Falls, R. I., a Corporation of Massachusetts. Filed Jan. 20, 1920. Serial No. 355,146. 38 Claims. (Cl. 66—24.)



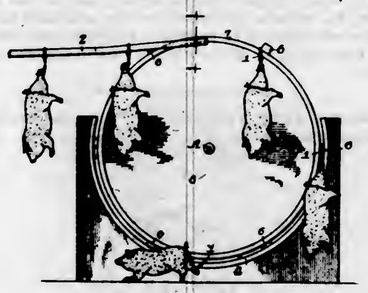
8. A knitting machine having means to effect the knitting of a parallel sided strip of fabric, and picker means to form selvages at opposite edges of said parallel sided strip.

1,428,333. FOUNTAIN PEN. DAVID B. KAUFMANN, Cincinnati, Ohio. Filed Oct. 24, 1921. Serial No. 510,039. 2 Claims. (Cl. 120—46.)



2. In a self-filling fountain-pen, a compression-lever and a hinging detent-ring for said compression-lever, the said detent-ring being composed of a single spiral or coil having extended overlapping opposite ends that are duly spaced from each other so that the spiral is less than a double coil but more than a single coil, substantially as herein shown and described.

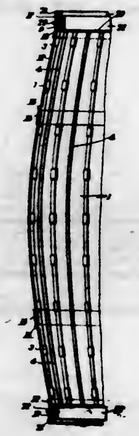
1,428,334. METHOD OF MAKING SIGNS. ALEXANDER M. KNAUBER, Oak Park, Ill., assignor to Chicago Electric Sign Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 28, 1919. Serial No. 320,398. 2 Claims. (Cl. 41—21.)



1. The method of making sign characters which comprises cementing a relatively opaque sheet of easily cut material to a strip of glass, arranging a series of master characters on the opaque sheet in proper spaced relation, cutting the opaque sheet in conformity with the master characters thereon, removing the portions of the opaque sheets segregated by the cuts, cutting narrow segregating strips in the opaque sheet between the characters, removing the strips of opaque material to uncover the glass, and separating the characters by cutting the glass in the uncovered strips.

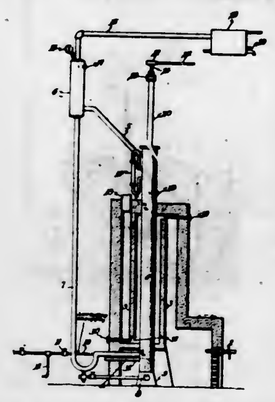
1,428,335. HYDROPLANE-OPERATING MECHANISM FOR SUBMARINE BOATS. JOHANNES F. W. KOLVIG, Bridgeport, Conn., assignor to The Lake Torpedo Boat Company, Bridgeport, Conn., a Corporation of Maine. Filed Jan. 12, 1922. Serial No. 528,691. 25 Claims. (Cl. 114—16.)

1. In a submarine boat, folding and tilting hydroplanes, and operating mechanism therefor, including a main member mounted to receive a reciprocating movement when extending or folding the hydroplanes, and a combined longitudinal and rotary movement when reaching the limit of its outward travel.



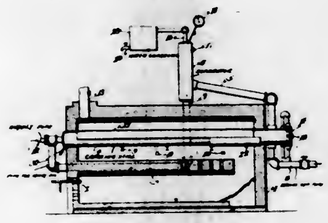
1,428,336. HOG HOIST. LOUIS A. KRAMER, Chicago, Ill. Filed Oct. 25, 1920. Serial No. 419,360. 9 Claims. (Cl. 17—30.)

1. For use with a hook attached to a hog, a hoisting member rotating in a substantially vertical plane, an elevated rail in front of the hoisting member and extending beyond the edge thereof, and a guide below the elevated rail and extending substantially concentric with the axis of the rotating hoisting member; the rotating hoisting member having a peripheral portion fast thereon and adapted to engage the said hook while the latter is hooked on the guide and to lift the hook off the guide and over the tip of the elevated rail.



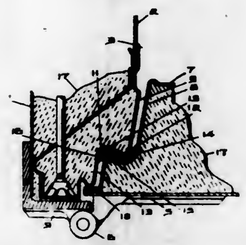
1,428,337. SHEET-METAL BARREL. JAMES W. MCNEIL, Newark, N. J. Filed Nov. 18, 1920. Serial No. 424,922. 7 Claims. (Cl. 220—60.)

1. A barrel comprising a plurality of sheet metal staves each provided with a pair of inwardly extending flanges along the side edges thereof and a plurality of locking members of channel form each of which embraces the abutting flanges on two adjacent staves, each of said locking members being provided with a plurality of openings spaced apart longitudinally of the member and the flanges



on the staves being provided with lugs extending through said openings and bent laterally.

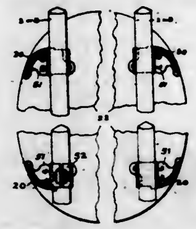
1,428,338. APPARATUS FOR CRACKING HYDROCARBON OILS. FREDERICK T. MANLEY, Houston, Tex., assignor to The Texas Company, New York, N. Y., a Corporation of Texas. Filed Oct. 10, 1917. Serial No. 195,774. 9 Claims. (Cl. 196—25.)



9. Apparatus for cracking hydrocarbon oils comprising a cracking still maintained under pressure, means for heating the still intermediate its ends to a cracking temperature, a pipe for supplying a stream of charging oil under pressure into the lower end of the still, means for receiving the evolved vapors and separating out the heavier constituents thereof, a return pipe directly connecting the separating means and said supply pipe for returning the condensate to the bottom of the still, and means for positively forcing the condensate into the charging oil traversing said supply pipe.

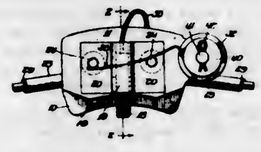
1,428,339. METHOD OF CRACKING HYDROCARBON OILS. FREDERICK T. MANLEY, Houston, Tex., assignor to The Texas Company, New York, N. Y., a Corporation of Texas. Filed Oct. 10, 1917. Serial No. 195,777. 11 Claims. (Cl. 196—25.)

1. The continuous process of cracking hydrocarbon oils of comparatively low boiling points which consists in bringing said oils in contact with a horizontally elongated body of higher boiling point hydrocarbon oil maintained at a temperature sufficient to cause vaporization and decomposition of said lower boiling oil, causing the vapors generated to pass along in contact with the elongated surface of said heated higher boiling point oil and preventing overheating of said vapors during said passage to maintain a substantially uniform temperature of sufficient intensity to continue the cracking of the vapors.



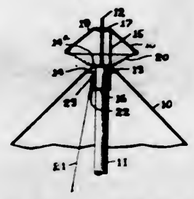
1,428,340. FIRE-RESISTING STRUCTURE. CHARLES F. MEILINK, Toledo, Ohio. Filed July 19, 1920. Serial No. 397,274. 6 Claims. (Cl. 109—2.)

1. A double walled housing provided with an opening, a rigid non-absorbent wall closure for the opening providing a joint, and a filler for the housing carrying moisture, releasable by heating for vapor escape into said joint, said housing having vent means from between the double walls into the joint for the passage of the vapor in its escape into the joint.



1,428,341. AIRPLANE FUSELAGE. MELVILLE W. MIX, Mishawaka, Ind. Filed Mar. 28, 1918. Serial No. 225,237. 9 Claims. (Cl. 244—30.)

1. In airplane structures, a composite fuselage comprising continuous longerons that approximate a quarter circle in cross section, stem and stern members to which the longerons are attached, suitable distancing members placed between the end members in any desired relation so as to

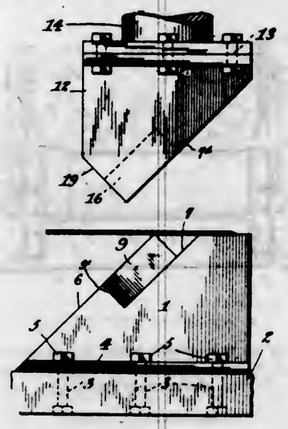


form a skeletonized interior, and a covering for the whole supported by the interior skeleton.

1,428,342. BRUSH MOUNTING. JOHN D. NIES, St. Charles, Ill., assignor to Kimble Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 27, 1921. Serial No. 464,844. 27 Claims. (Cl. 171—324.)

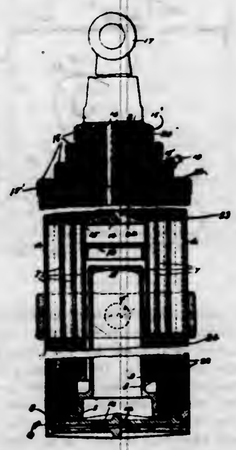
2. In a brush mounting, a supporting block, a brush, and a brush regulator bearing directly on one end of the brush, the surfaces of contact between said block and regulator being shaped to permit of selective engagement of one with the other in a number of distinct angular positions.

1,428,343. TENT VENTILATOR. WILLIAM THACKERAY RUNCIE, Maplewood, N. J. Filed Sept. 1, 1921. Serial No. 497,468. 3 Claims. (Cl. 135—14.)



1. A tent ventilator comprising a tent having an opening in the top, a pole for the tent having a reduced extension extending upward through the opening, a bracket having one end sliding on the body of the pole and the other end sliding on the reduced extension, a cap connected with the bracket and arranged above the tent top and shaped to fit over the opening in said top, flexible connections between the lower edge of the top and a fixed part of the structure to prevent the rotation and distortion of said cap, and means for raising and lowering the bracket and cap.

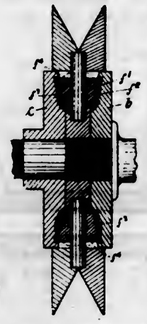
1,428,344. PUNCH AND DIE FOR ANGLE SMITH WORK. DANIEL SCOULER, Maisonneuve, Quebec, Canada. Filed Feb. 27, 1920. Serial No. 361,710. 10 Claims. (Cl. 153—21.)



1. A pair of dies comprising a male and a female die member, the face of one of said members being uniplanar

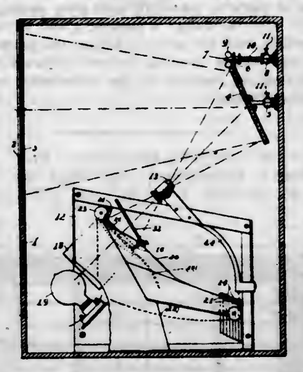
and inclined and having a projection thereon, the face of the other die being inclined to coact with the first named

face and having a recess formed therein for receiving the projection.



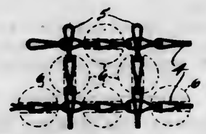
1,428,345. MECHANISM FOR COUNTERBALANCING PIVOTALLY-MOUNTED BODIES. EDWARD K. STANDISH, Stoughton, Mass. Filed May 22, 1920. Serial No. 383,588. 14 Claims. (Cl. 89—37.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

2. The combination of an oscillatable gun and means for aiding oscillatory movement thereof comprising an outer compressed air cylinder, telescoping compressed air cylinders nested within said outer cylinder and movable relative to each other and to said outer cylinder, and annular flanges on the inner ends of the cylinders, said flanges provided with apertures to permit the passage of pressure fluid therethrough.



1,428,346. CHANGE-SPEED AND CLUTCHING MECHANISM. CHARLES HENRY STRONG, London, England. Filed Oct. 31, 1919. Serial No. 334,801. 4 Claims. (Cl. 74—34.)

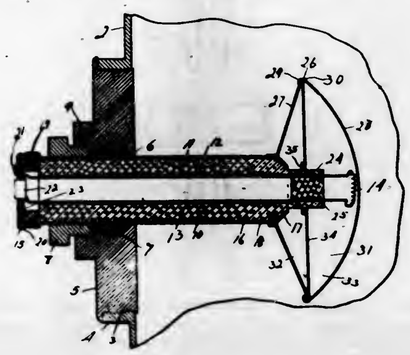
1. Change speed and clutching mechanism of the type in which differential gearing is emp'oyed, comprising in combination a driving shaft having fixed thereto a disc formed with an annular friction surface, a rotatable disc on said shaft also having an annular friction surface corresponding to the fixed disc, one half of a friction clutch fixed to said rotatable disc, a second half of a friction



clutch slidable but non-rotatable on said shaft, and a driven member formed of a series of members pivoted together having friction surfaces to form a chain belt and adapted to engage the friction surfaces of both the fixed disc and the rotatable disc, for the purposes set forth.

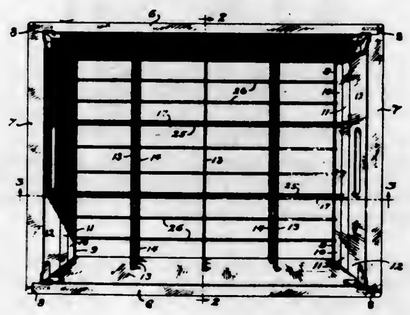
1,428,347. PICTURE-SLIDE-PROJECTION APPARATUS. EDWARD VAN ALTENA, New York, N. Y. Filed Aug. 26, 1919. Serial No. 320,062. 13 Claims. (Cl. 88—28.)

13. In a projection apparatus, a pivotally mounted shelf for supporting a slide in display position, guides for conducting slides away from display point, said shelf being adapted to straddle said guides.



1,428,348. ART OF STRINGING PEARLS AND THE LIKE. DAVID WEISS, New York, N. Y. Filed Mar. 16, 1921. Serial No. 452,735. 1 Claim. (Cl. 63—26.)

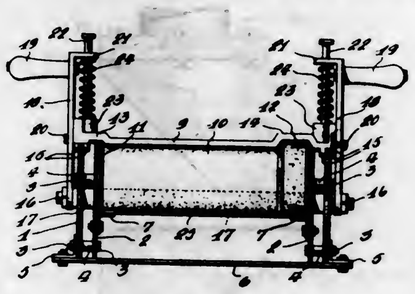
A plurality of chain members arranged in parallelism, each chain being made up of a plurality of normally inseparably connected elongated links, certain of said elongated links having a portion thereof wider than the adjacent elongated links, to provide stops, cross chains



passing through the links having the wide portions, and pearls carried by the links of the chain members which connect the links having the wide portion.

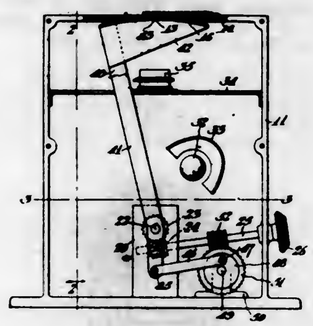
1,428,349. HEATING DEVICE. MARTIN J. WHELAN, Clifton Heights, Pa. Filed Feb. 17, 1922. Serial No. 537,215. 8 Claims. (Cl. 219—19.)

1. In a heating device the combination of a container having an access opening leading to the interior thereof, an interiorally threaded flange surrounding said opening, a plug having a bore therethrough of two different diameters, the larger diameter forming a chamber for the reception of packing material, said plug having threaded connection with the flange, a packing gland having threaded connection with the plug to set up the packing within the chamber, and a heating element connected with the plug and held in position by the compressed packing in the packing chamber.



1,428,350. BOTTLE-RETAINING BOX. MICHAEL ZIMMERMAN, Philadelphia, Pa. Filed Oct. 20, 1921. Serial No. 509,126. 8 Claims. (Cl. 217—20.)

1. A bottle crate having opposite walls with grooves having cavities extending into the walls, and rods provided with hooks seated in the grooves and cavities.

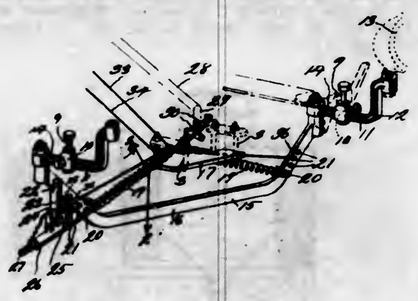


1,428,351. MACHINE FOR MAKING CEMENT ROOFING TILE. JESSE WILSON ALEXANDER, Birmingham, Ala. Filed Aug. 4, 1921. Serial No. 489,749. 8 Claims. (Cl. 25—43.)

1. A cement tile mould comprising a frame including track means, a palette board carried by said frame, carrier means movable transversely of the palette board, and a cement gauging and smoothing strip carried by said carrier and resting upon said track means and extending

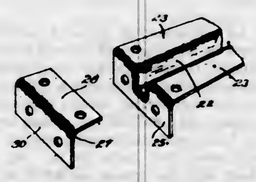
longitudinally of the palette board in spaced relation to the same and movable towards and away from the palette board while moving transversely thereof.

1,428,352. FILM-NUMBERING MACHINE. JOSEPH ALTSCHULER, Los Angeles, Calif., assignor to Keyograph Corporation, a Corporation of Delaware. Filed Apr. 28, 1917. Serial No. 165,211. 2 Claims. (Cl. 95—1.1.)



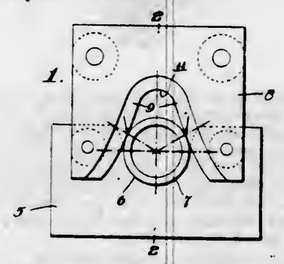
1. In a film numbering machine; a counter so arranged that it will display successive numbers; counter driving mechanism, means controlled by the length of the film passing through the machine for changing said numbers; a lamp so arranged as to illuminate the numbers of said counter; a lens system arranged to focus the image of said numbers on the edge of the film; and a shutter arranged to expose said film to said image during one of the stationary periods of said film.

1,428,353. DIRIGIBLE AUTO HEADLIGHT. CHRISTIAN FERDINAND ANDERSEN and JOHN RUSSELL MITCHELL, Jacksonville, Ill. Filed Nov. 25, 1921. Serial No. 517,641. 1 Claim. (Cl. 240—61.)



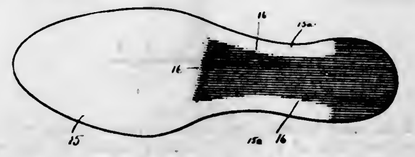
The combination with dirigible headlights carried by a motor vehicle, said headlights being mounted on a horizontally disposed pivoted bracket, a connecting rod connecting together said brackets whereby they will simultaneously move, springs having their inner ends anchored and their outer ends connected to the connecting rod, a sleeve pivotally connected to one end of the connecting rod, a rearwardly and inwardly extending rod disposed

in said sleeve, pins extending through said rod adjacent the ends of the sleeve and allowing loss play between



the rod and sleeve, the rear end of said rod being connected to the steering wheel mechanism.

1,428,354. CARLINE CONSTRUCTION. JOHN W. BERNBAUM, Chicago, Ill., assignor to Chicago-Cleveland Car Roofing Company, Chicago, Ill., a Corporation of Illinois. Filed June 1, 1920. Serial No. 385,459. 3 Claims. (Cl. 108—5.6.)

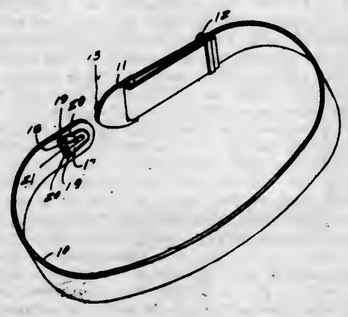


2. In a carline construction, the combination with the side plates of a car roof frame; of a carline embodying a single steel bar formed with a depending web of channel section, with lateral flanges bent outwardly from the top of the side members of said web, and with downturned flanges at the opposite ends of the carline; reinforcing members having portions overlying the end portions of the lateral flanges and engaging the outer faces of the down-turned flanges; and means for securing the down-turned flanges and the reinforcing members to the side plates; substantially as specified.

1,428,355. METHOD AND MEANS FOR TUBE CUTTING. ROSS EDWARD BRADLEY, Roland Park, Md. Filed July 8, 1920. Serial No. 394,641. 5 Claims. (Cl. 164—47.)

1. The method of cutting metal tubes which consists in supporting half of the tube circumference adjacent the plane of cut, and applying initial cutting pressure at separated points on the tube circumference near the plane of its horizontal diameter so as to secure a distributed cutting action resulting from component vertical and horizontal cutting actions, sufficiently balanced as not unduly to distort the circular cross-section of the tube.

1,428,356. VULCANIZED SOLE. MAX BROWN, Brookline, Mass. Filed Nov. 18, 1916, Serial No. 132,048. Renewed Feb. 7, 1922. Serial No. 534,813. 7 Claims. (Cl. 36—32.)



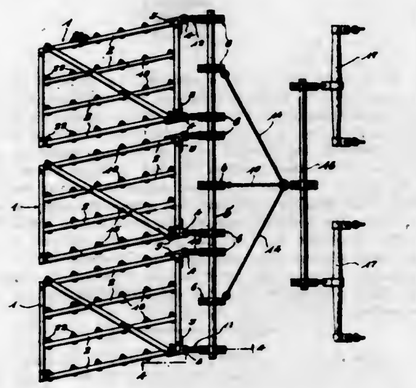
1. A sole for boots and shoes, composed of a single piece of material relatively compressible and soft at its forward portion and having a central shank portion relatively hard and stiff to constitute a shank reinforce.

1,428,357. PLIER JOINT CONSTRUCTION. FREDERICK H. BULLARD, Springfield, Mass. Filed Apr. 27, 1921. Serial No. 464,825. 2 Claims. (Cl. 294—43.)

1. A joint for pliers, comprising an integral bearing part on one of the plier members, the other member having an opening therethrough of different diameters, a rivet device fixedly secured to the integral bearing part of one of the members and formed with an integral enlarged part which enters that portion of said opening which is of the larger diameter, and said integral bearing part of the plier member entering the remaining part of said opening, the opposite ends of the rivet device being flush with the outer faces of the pliers and the end of the integral bearing part engaging the inner surface of the enlarged part of the rivet device, whereby the bearing surfaces are confined to the different diameters in said opening.

1,428,358. FASTENER. WALTER J. BURBERY, Los Angeles, Calif. Filed Sept. 20, 1919. Serial No. 325,055. 1 Claim. (Cl. 24—222.)

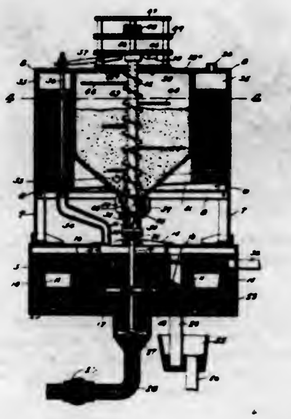
A separable fastener having a plate provided with a flange at one end and the side edges and turned over the plate leaving a slot and a recess to which the slot leads, a second plate, a shank extending from the second plate



to enter said slot, a head on the shank for disposition in the recess, the walls of said slot at the entrance thereof being flared to facilitate application of the shank, and the sides of said first section converging toward the closed end thereof.

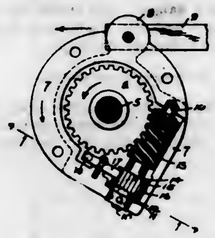
1,428,359. SAND MOLD AND APPARATUS FOR MAKING IT. ARNOLD CHRISTIANSON, Detroit, Mich. Filed Jan. 4, 1921. Serial No. 434,913. 3 Claims. (Cl. 22—157.)

2. In sand molding apparatus the combination with a cope and drag of a pair of parting boards for forming the adjacent faces of mold sections in the cope and drag, said boards being provided with indentations and projections for forming registering and interlocking indentations and projections in the adjacent faces of the mold sections, the boards being adapted to nest with each other when the same are abutted face to face, the faces of the parting boards which are adjacent when so assembled forming the parting faces of the mold cope and drag.



1,428,360. HARROW. DAVID M. CLEVENGER, Reeds, Mo. Filed Oct. 12, 1920. Serial No. 416,421. 2 Claims. (Cl. 55—84.)

1. In a harrow, the combination of a plurality of frames, all inclined in the same direction and including blade carrying bars; of angle members including eyes secured to the opposite forward corners of said frames, an evener bar, clamps carried thereby, flexible members connected to said clamps and the aforesaid eyes, and diverging draft connectors attached to said clamps.



2. In a harrow, the combination with a plurality of blade carrying frames; of attaching members secured to the opposite forward corners thereof; a relatively long cylindrical bar spaced from and extending transversely across the front of the frames; a plurality of clamps on said bar, each clamp being made up of two plates placed together and bent between their ends to form channels receiving said bar, and relatively long oppositely extending attaching ears on opposite sides of the channels, said ears being provided with a plurality of apertures, and retaining bolts passing through the apertures adjacent said bar; flexible connectors including clevises connected with said other apertures and connected to the aforesaid attaching members; and draft connecting means including members connected with some of the apertures of the clamps.

1,428,361. REFRIGERATING APPARATUS. WALLACE DAY and JOHN WALTER DAY, Maplewood, Mo., assignors of one-third to Milfred L. Greenstreet, Maplewood, Mo. Filed Feb. 23, 1921. Serial No. 447,125. 11 Claims. (Cl. 62—2.)

7. A tank for refrigerating systems comprising receptacles immersed in a refrigerant in said tank, containers in said receptacle, thermostatically controlled means for separately discharging a liquid and a chemical into said tank to form the refrigerant, means for mixing the refrigerant in said tank, said mixing means being operable in connection with said discharging means, a coil connected to said tank, vent cocks in the top and bottom stretches of said coil, and means operating in conjunction with said mixing means for forcing the refrigerant from said tank into said coil.

1,428,362. SHINGLE MACHINE SPUR ROLL RATCHET. AUGUST G. DEHLIN, Olympia, Wash., assignor of one-third to Ellin Nelson, Olympia, Wash. Filed Apr. 8, 1922. Serial No. 550,754. 5 Claims. (Cl. 74—53.)

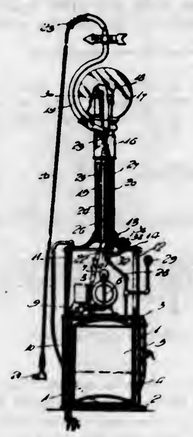
1. In apparatus of the class described, a spur roll; an actuated casing loosely mounted on said spur roll; a worm wheel fixed to said spur roll and within said casing; a worm mounted in said casing and in constant engagement with said worm wheel; and means permitting said worm to freely turn in the casing in one direction but preventing it from turning in the opposite direction, whereby the worm wheel is locked in the casing and the spur roll is turned by the casing.

1,428,363. INDICATING INSTRUMENT. WILLIAM D. DREISKE, Oak Park, Ill. Filed Nov. 11, 1918. Serial No. 262,064. 18 Claims. (Cl. 73—31.)

1. In an instrument of the class described, adapted to be controlled by instrumentalities which are subject

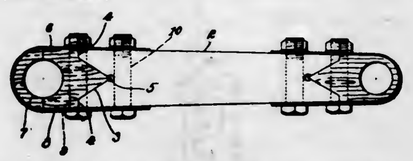
to varying conditions, the combination of a plurality of indicators having adjacent fixed paths of travel, so that the relative positions of the indicators are always apparent, means to provide a series of movable lines between

said paths of travel forming indicating positions along each fixed path and converging in one direction toward a common point, so that said lines have a constantly different angle from the first to the last.



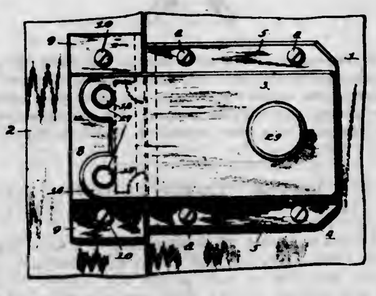
1,428,364. CREAM SEPARATOR. CARTER M. DYE, Christopher, Ill. Filed Aug. 20, 1921. Serial No. 494,827. 1 Claim. (Cl. 31—85.)

A device for separating cream from milk comprising a cylindrical container normally open at both ends, closures therefor, gaskets adapted to fit between the container and the closures, one closure containing a faucet, a cap and gasket adapted to be secured over the last mentioned closure whereby the container is rendered leak proof.



1,428,365. MOTOR-DRIVEN AUTOMATIC PRESSURE COIN-CONTROLLED AIR STATION. ARNO ARTHUR EWALD, Oakfield, Wis. Filed Mar. 7, 1921. Serial No. 450,286. 17 Claims. (Cl. 299—80.)

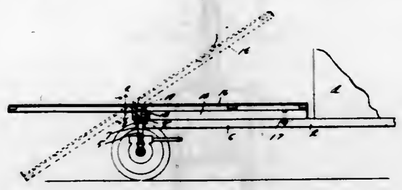
1. An air supply station comprising a movable member carrying an inflation hose, a self-closing valve for normally preventing passage of air through said hose, coin-controlled means for opening said valve, a latch cooperable with the valve for holding said valve open, and



means for automatically releasing said latch when said hose carrying member returns to its initial position after use of the hose.

1,428,366. CRANK ARM. CHARLES H. FISH, Rye, N. H. Filed Apr. 7, 1921. Serial No. 459,340. 9 Claims. (Cl. 287—93.)

9. A device of the character described comprising, in combination, a crank arm, a self-lubricating bearing block having interlocking connection with one end of said arm, a strap fitting around the outer end of said block, and means for securing the end portions of said strap to said arm.



1,428,367. JIMMY-PROOF LOCK. MORRIS FORLANDER, New York, N. Y. Filed Mar. 7, 1921. Serial No. 450,206. 2 Claims. (Cl. 70—14.)

2. The combination with a lock casing having a dovetailed lug projecting from its free end, of an extension plate on the front of said casing overlying said lug and projecting beyond the same, a keeper having a recess to be engaged by said lug when the lock casing is closed

upon the keeper, a bolt mounted in the casing to be projected into the keeper, there being openings in the portion of the extension plate which projects beyond the dove-tailed lug, and studs projecting from the keeper to engage said openings for the purpose specified.

1,428,368. AUTO DUMP BODY. HOMER G. FRAZIER, Lafayette, Ind. Filed June 22, 1920, Serial No. 390,833. Renewed Mar. 8, 1922. Serial No. 542,170. 3 Claims. (Cl. 298—17.)

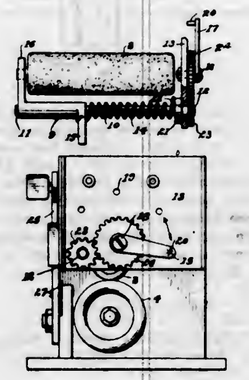
1. The combination with a vehicle frame, of a dump body therefor, said dump body comprising a body portion having downwardly extending blocks, said blocks being disposed on plates hingedly connected to plates carried by the frame and overlapped flanges carried by said plates and the hinged plates.

1,428,369. BOATSWAIN'S SEAT. PASQUALE GIANNONE, Philadelphia, Pa. Filed Oct. 2, 1920. Serial No. 414,194. 3 Claims. (Cl. 227—8.)

1. A suspension device for workmen comprising a pair of supporting straps, stirrups carried thereby, means for suspending the supporting straps, a hinged band carried by the straps and adapted to pass around the waist of the workman, and a seat depending from the band.

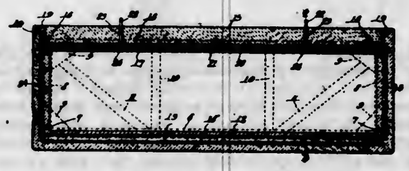
1,428,370. LADDER. CHARLES D. HARMON, Jacksonville, Ill. Filed Sept. 9, 1920. Serial No. 409,211. 1 Claim. (Cl. 228—23.)

In a portable ladder, the combination of a main ladder section, a base plate provided with a slot running in longitudinal direction of said section and secured to the upper end thereof, a head plate integral with and extending from the upper end of said base plate and secured over the upper end of said ladder section, there being registering recesses in the upper end of said ladder section and in the head and base plates, a second ladder section, a trough shaped bracket rigidly secured to and embracing the end and three sides of said second ladder section, a stud secured in said bracket and provided with an elongated head adapted normally to have sliding engagement under said base plate with the shank of the stud running in said slot, interengaging means on the ends of the ladder sections for preventing separation



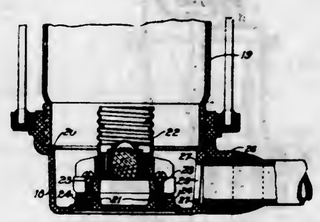
of the same in the normal operating position and comprising a toe on said bracket and a hook on said head plate, and a lug on said second section adapted to seat in said registering recesses in the extended position of the ladder sections, the narrow width of said stud head being slightly less than the width of said slot, whereby said head is adapted to slip through said slot when the ladder sections are in assembling position.

1,428,371. RATCHET WRENCH. JAMES L. HICKEY, Crane, and JOHN KRACHT, Milwaukee, Wis. Filed Apr. 24, 1920. Serial No. 376,255. 1 Claim. (Cl. 81—59.)



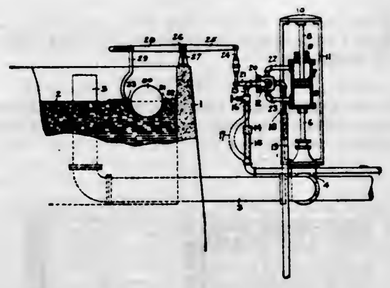
A wrench having a bifurcated shank, a pivotal head mounted in the bifurcation of said shank and provided with a nut seat, the head at the inner end being of arcuate shape and provided with ratchet teeth concentrically disposed with reference to the pivot of the head, a pawl disposed in said bifurcation below the head, a pivot pin spanning the bifurcation and pivotally supporting the pawl, the said pivot being disposed to one side of the axis of the shank, a leaf spring supported in the bifurcation and having a free end bearing against the pawl, the spring being supported on a pin spanning the bifurcation, a bearing pin disposed against the spring to maintain the latter in contact with the pawl, and an operating pin connected with the pawl and disposed transversely with relation to the shank and having its free end exteriorly exposed for the manual operation of the pawl in opposition to the pressure of the spring.

1,428,372. SPRING-REGULATING DEVICE FOR PRESSER ROLLERS. GREENE C. HOSCH, St. Louis, Mo., and ARCHIBALD C. OWEN, New York, N. Y., assignors to The Measuregraph Company, St. Louis, Mo., a Corporation. Filed June 24, 1920. Serial No. 391,353. 8 Claims. (Cl. 33—130.)



1. In a machine of the kind described, having a measuring roller, the combination of a main frame, a presser roller to co-operate with the measuring roller, a presser roller frame carrying the presser roller and movably supported in the main frame to enable the presser roller to move toward or from the measuring roller, a spring to actuate the presser roller frame, an adjusting member connected with the spring and mounted on the main frame, and means for holding the same fixed in different positions to regulate the tension of the spring.

1,428,373. BURIAL VAULT. CLARENCE HOWARD, Hutchinson, Kans. Filed June 7, 1921. Serial No. 475,815. 1 Claim. (Cl. 72—7.)

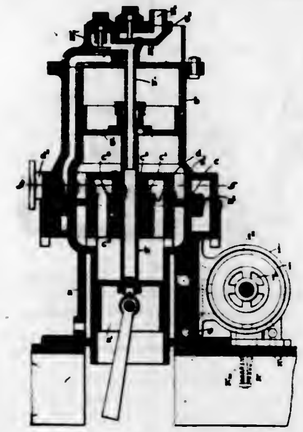


A vault comprising a rectangular frame including upper and lower pairs of angle irons, braces connecting the angle irons, a reticulated sheet surrounding the frame, a plastic body surrounding the reticulated sheet; a cover including a rectangular frame, a sheet of reticulated material stretched across the frame, a plastic body in which the last mentioned reticulated sheet is embedded, the frame resting in the upper angle irons, and a plastic bond securing the cover to the edges of the first mentioned body.

1,428,374. CORROSION-RESISTANT CONDUIT FITTING. ERNEST L. HUFF, Natrona, Pa. Filed Feb. 25, 1919. Serial No. 279,143. 12 Claims. (Cl. 247—15.)

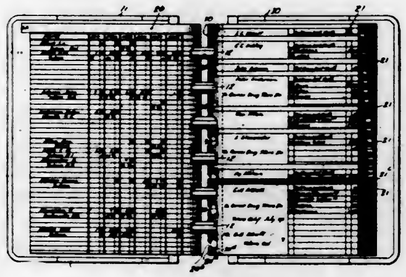
1. An electrical conduit fitting constituted largely of lead alloy having materially greater hardness than pure lead.

1,428,375. CONTROLLING DEVICE. CHARLES A. HUMPHREYS, Bluefield, W. Va. Filed July 5, 1918. Serial No. 243,335. 3 Claims. (Cl. 137—68.)



1. In a control device, the combination with apparatus to be controlled, of a movable cylinder, a stationary piston mounted in said cylinder, means for controlling the condition of the mechanism to be controlled, a connection between said cylinder and said controlling means, a movable member mounted in said mechanism to be controlled, a controlling valve for said cylinder and connections between said last movable member and said controlling valve whereby the movements of said cylinder may be controlled.

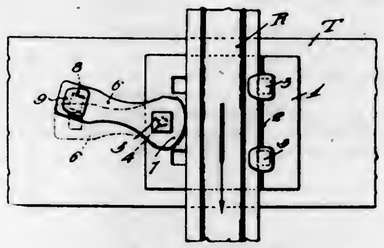
1,428,376. INTERNAL-COMBUSTION ENGINE. WILLIAM FISHER, North Tawton, England. Filed Apr. 8, 1922. Serial No. 550,729. 2 Claims. (Cl. 60—15.)



1. The combination in an internal combustion engine, of high pressure cylinder, a low pressure and compression cylinder in coaxial relation to each other, a piston head for each cylinder, a common piston rod connected to each of the piston heads, a structure between the cylinders constituting a part of adjacent and connected heads of the cylinders, said structure also having inlet and outlet passages, a series of circumferential ports arranged to communicate with both cylinders, an air inlet passage which communicates with ports between the piston rod and the circumferential ports, a disk valve rotatably mounted in the structure and having four ports therethrough, two of said ports being positioned to aline with the ports with which the air inlet communicates, the other two ports of the disk being alined to one side both diametrically and circumferentially of the first mentioned ports and adapted to successively register with the circumferential ports, the parts being organized and actu-

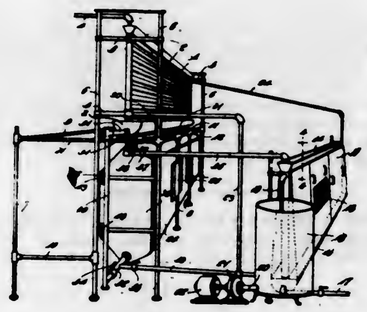
ated so that during a semi-rotation of the disk valve the high pressure cylinder operates as a four cycle engine and

the lower pressure cylinder as a two stroke engine, and during the other half of the rotation of the disk valve as an air compressor.



1,428,377. LOOSE-LEAF LEDGER. CHARLES M. JEWELL, Tulare, Calif. Filed Aug. 16, 1920. Serial No. 403,693. 3 Claims. (Cl. 129—1.)

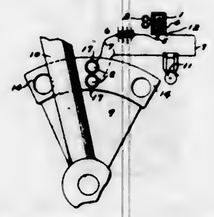
1. In a device of the character described, the combination of a suitable back-board and a plurality of sheet-holding posts in spaced relation thereon, a general entry sheet used for and adapted to receive monthly balances of a number of customers, and a plurality of current month entry sheets, smaller in size than the general entry sheets and adapted each to receive a current monthly account of an individual customer; such current month entry sheets being mounted upon said posts in overlapping relation to each other and each of said sheets engaging at least two of said posts; each current monthly entry sheet being composed of two leaves, one superimposed upon the other, and the lower leaf having its upper edge projecting beyond the upper edge of the upper leaf.



2. In a loose leaf book, the combination of a binding post whose cross section is substantially two trapezoids placed face to face, and a sheet having an aperture therein spaced from its edge and an opening leading from its edge to the aperture, said opening being wider at the edge of the sheet than where it communicates with the aperture, and said aperture being substantially similar in form to the cross section of the post.

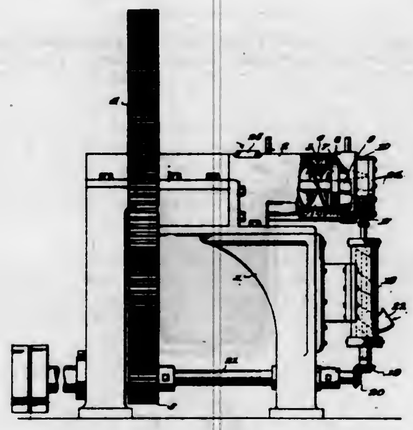
1,428,378. RAIL TIE PLATE. JOHN J. HESS, Seattle, and NELS JOHNSON, Spokane, Wash. Filed May 4, 1922. Serial No. 558,352. 1 Claim. (Cl. 235—304.)

A device of the class described comprising a tie plate formed with a screw threaded opening on one side of the base flange of a rail, a bolt threaded into said opening, a locking lever pivotally connected to said plate by said bolt, said locking lever being formed at its pivoted end with a cam head designed to frictionally grip the adjacent edge of the base flange of the rail, said lever being formed at its opposite end with an opening, said opening being designed to permit passage therethrough of a retaining spike or the like to maintain the lever in various set positions.



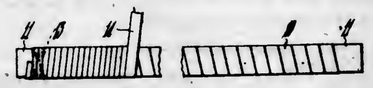
1,428,379. PASTEURIZER. YOSHIO KOKUSHO, Philadelphia, Pa. Filed Oct. 14, 1920. Serial No. 416,791. 3 Claims. (Cl. 204—24.)

1. In a pasteuriser, a milk heater comprising separable side sections having their edge portions in contacting relation, wall members of insulating material carried by the side sections and having extensions extending in overlapping and spaced relation to provide a milk channel having an inlet at one end and an outlet at its opposite end, and electrodes extending through the insulating wall member, milk in the channel bridging the space between the electrodes and completing a circuit to heat the milk.



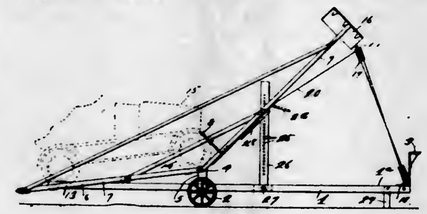
1,428,380. BRAKE-LEVER CIRCUIT CLOSER FOR AUTOMOBILE THEFT SIGNALS. DANA S. LEE, St. Louis, Mo. Filed Nov. 7, 1919. Serial No. 336,334. 1 Claim. (Cl. 200—59.)

An improved brake-lever circuit-closer for automobile theft signals, comprising a sector-plate; insulating-tubes embedded in said sector-plate and arranged one above the other; movable contacts carried by said sector-plate in said tubes; a head or flange upon the outer portion of said contacts to prevent said contacts from being pushed too far within said tubes; a shoulder or flange on the inner portion of said contacts to limit the outward move-



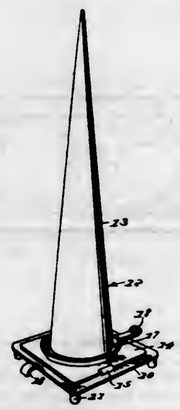
ment of the said contacts; springs in said tubes for transmitting current to said contacts, and urging the latter outwardly; and a brake-lever adapted to contact with the said contacts in said sector-plate simultaneously, substantially as described.

1,428,381. TUBING MACHINE. MELVIN S. LOWER, Ashland, Ohio, assignor to The Faultless Rubber Company, Ashland, Ohio, a Corporation of Ohio. Filed Nov. 3, 1921. Serial No. 512,697. 5 Claims. (Cl. 18—12.)



1. A mechanism for forming striped plastic tubing, comprising a main tubing machine embodying a discharge head, a separate expressing machine fixed to said head and discharging into an annular chamber in said head, and a plurality of ports leading from said chamber and discharging annularly into the discharge orifice of said main tubing machine, whereby material fed by said separate expressing machine will be deposited in stripes upon the material as its being formed and expressed from said main tubing machine.

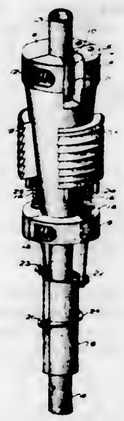
1,428,382. INNER TUBE AND METHOD OF MAKING THE SAME. MELVON A. MARQUETTE, Chicopee Falls, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Sept. 19, 1919. Serial No. 324,846. 3 Claims. (Cl. 18—56.)



1. A rubber tube composed of a helical strip of rubber arranged with its successive helices forming lapped joints, said joints being pressed to substantially the same thickness as the body of the tube.

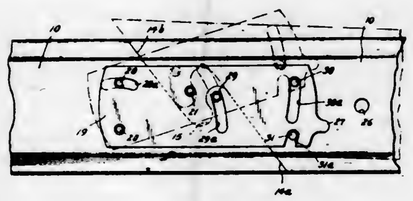
1,428,383. AUTOMOBILE HOIST. THOMAS A. MARTIN, Washington, D. C. Filed Sept. 21, 1921. Serial No. 502,187. 2 Claims. (Cl. 214—1.)

1. An automobile transporting and tilting device comprising a wheel supported diamond shaped frame, a tiltable frame pivoted to the wheel supported frame, said tiltable frame being provided with a weight receptacle adjacent one of its ends, a block and fall connected to the tiltable frame at its weight end and to the wheel supported frame, a rotatable drum carried by the tiltable frame and around which drum the lead of the block and fall extends, and a detent carried by the tiltable frame and cooperating with an apertured pivoted bar extending upwardly from the wheel supported frame between guides in the tiltable frame and forming means for holding the tiltable frame in any position to which it may have been tilted.



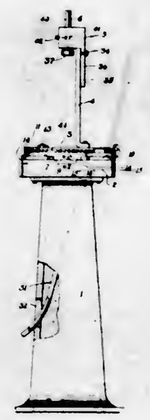
1,428,384. FLYCATCHER. MARTIN MAXIAN, Johnstown, Pa. Filed Aug. 2, 1921. Serial No. 489,238. 1 Claim. (Cl. 43—114.)

A fly catcher comprising a holder provided with legs to space the same from a supporting surface and formed on



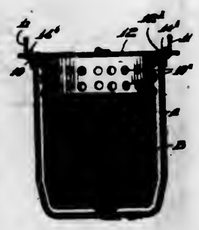
its upper face with oppositely disposed clips, said holder having a handle, and a replaceable unit having an adhesively coated surface and provided with a base for engagement with the clips on the holder, the said replaceable unit being formed with a drip cup adjacent the base and with a finger hold for withdrawing and inserting the base in engagement with the clips.

1,428,385. TUBING CATCHER. WILLIAM MEREDITH, Huntington Beach, and WALTER L. FOSTER, Whittier, Calif. Filed Dec. 17, 1921. Serial No. 523,197. 5 Claims. (Cl. 103—65.)



1. A tubing catcher comprising a split body arranged to be clamped about the tubing, and slips slidably mounted on said body so as to be expanded.

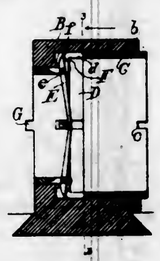
1,428,386. COLLAPSIBLE RIM. SAMUEL N. MEYER, New York, N. Y. Filed Dec. 22, 1920. Serial No. 432,505. 3 Claims. (Cl. 301—31.)



1. A collapsible rim having a transverse joint, and a keeper pivoted to both rim sections on opposite sides of the joint and with the pivots also on opposite sides of the longitudinal center line of the rim, whereby when the keeper is swung laterally around one pivot the two abutting edges of the sections are compelled to slide in substantial contact with each other while the rim contracts in circumference.

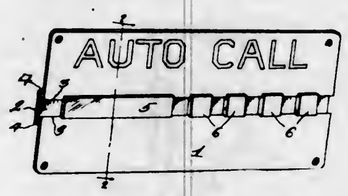
1,428,387. DRILL-TWISTING METHOD AND MACHINE. JOHN F. MEYERS, Alliance, Ohio, assignor to The Buckeye Twist Drill Company, Alliance, Ohio, a Corporation of Ohio. Filed May 16, 1921. Serial No. 469,824. 12 Claims. (Cl. 153—78.)

1. The method of twisting a drill blank which consists in successively twisting short sections of the blank and intermittently moving the blank endwise between successive twisting operations.



1,428,388. COMBINATION BOILER AND STRAINER. MARIE MILLER, Ottawa, Ontario, Canada. Filed Feb. 23, 1921. Serial No. 447,190. 1 Claim. (Cl. 53—1.)

A cooking utensil of the character described formed with hand grips, a lid formed with side wings diametrically opposed to one another and having elongated orifices therein designed to receive said hand grips, tongues hingedly connected to the side wings adjacent to said orifices and designed to completely close said orifices after the hand grips have passed therethrough.

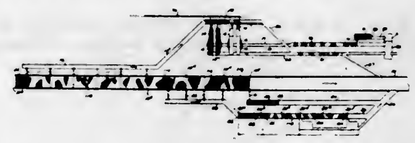


1,428,389. ADJUSTABLE GUN SIGHT. WALTER M. MILLER, Dougherty, Iowa. Filed Feb. 9, 1921. Serial No. 443,625. 4 Claims. (Cl. 33—53.)

1. In an adjustable gun sight, the combination with a supporting member, of a plurality of pointers, means borne by the supporting member for carrying the pointers, each pointer having one end pivotally connected with the said carrying means, the free ends of the said pointers

being arranged to move to and from a common center, and means borne by the said supporting member for operating the pointers.

1,428,390. CHANGEABLE SIGN. CHARLES MOORE, Visalia, Calif. Filed May 26, 1921. Serial No. 472,652. 1 Claim. (Cl. 40—142.)

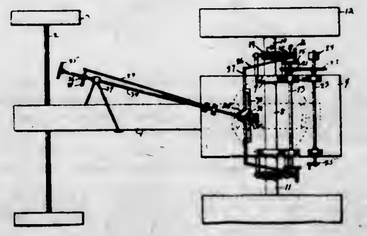


A display sign plate for the reception of tongues of blocks, said plate being formed from sheet metal and bent centrally longitudinally thereof to form a channel for receiving the tongues of the blocks, means whereby the sides of the plate may be secured to a support with the bent portion of the sign in engagement with the support and the rear face of the sign spaced from the support, said securing means forming means whereby the frictional holding of the tongues of the blocks may be varied through the longitudinal bending and flexing of the sign plate.

1,428,391. EXPANSION REAMER. ANTHONY A. MULAC, Alliance, Ohio, assignor to The Buckeye Twist Drill Company, a Corporation of Ohio. Filed May 27, 1921. Serial No. 473,014. 4 Claims. (Cl. 77—76.)

1. A reamer including a cylindric body having an axial bore, a series of kerfs extending outward from the axial bore part way to the periphery and a series of kerfs extending inward from the periphery part way to the axial bore, the kerfs of one series alternating with the kerfs of the other series, and means for expanding the body by an opening of the kerfs.

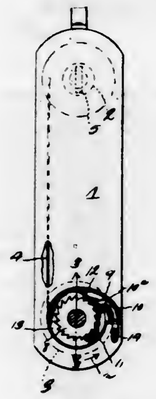
1,428,392. CONCENTRATOR. WILLIAM P. OGDEN, deceased, late of Denver, Colo., by Maude E. Holmes, administratrix, Spokane, Wash., assignor to J. M. Schnatterly, Spokane, Wash. Filed Jan. 15, 1919. Serial No. 271,316. 10 Claims. (Cl. 83—89.)



1. A gravity concentrator comprising a main flume, grizzlies at spaced intervals in the flume and spaced above the floor thereof, a conveyor flume, drawoffs leading from the bottom of the main flume beneath the grizzlies respectively, and connected with the conveyor flume, a distributor flume carrying baffles connected to said conveyor flume, drawoffs leading from said distributor flume and concentrating tables connected with said last mentioned drawoffs carrying riffles for retaining black sand and having an overflow for waste materials.

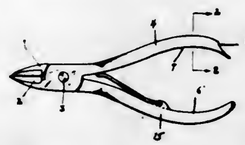
1,428,393. OPHTHALMIC MOUNTING. HAROLD K. PARSONS, Southbridge, Mass. Filed June 15, 1920. Serial No. 389,073. 2 Claims. (Cl. 88—50.)

1. In a device of the character described, the combination with a bridge member having a pivot receiving aperture therethrough, of a guard lever having an upstanding pivot portion extending through the aperture in the bridge portion, an actuating spring for the lever resting on the bridge and surrounding the pivot projection of the lever and a cap member carried by the pivot projection of the lever overlying the spring and slidably engaging a portion of the bridge for retaining the several parts in position.



1,428,394. TRACTOR. ERNEST A. PATCH, Prattsburg, N. Y. Filed June 16, 1921. Serial No. 478,010. 1 Claim. (Cl. 180—17.)

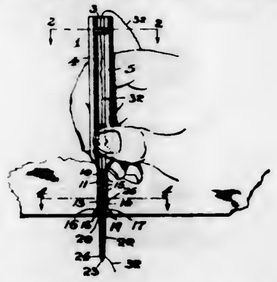
In a vehicle, a pair of driving disks, a pair of driven disks, in engagement therewith, a bar, a worm gear provided on the bar intermediate its ends, a worm in mesh with the worm gear, a shaft for actuating the worm, a



pair of levers pivoted intermediate their ends to the terminals of the bar, connecting means attached to the ends of the levers and the driven disks, links carried by the levers, and a rod connected to the links.

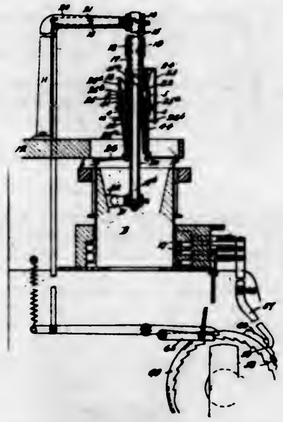
1,428,395. CAMERA. VICTOR G. PAUTLER, Fort Gage, Ill. Filed Apr. 15, 1921. Serial No. 461,541. 1 Claim. (Cl. 242—71.)

The combination with a camera having a film supply roller and a film accumulation roller, of handle members carried by said rolls, whereby said rolls may be rotated, a ratchet wheel carried by one of said rollers and disposed within a depression in one side of the camera, said depression having an offset portion to one side thereof, a spring actuated dog pivoted in said depressions where they communicate with each other and cooperating with the ratchet wheel, one end of said pivoted dog extending through the offset depression and provided with a finger engaging member overlying the side of the camera whereby said dog may be thrown out of engagement with the ratchet wheel and held out of engagement therewith, thereby allowing the ratchet carried roller to be reversely rotated.



1,428,396. MANICURING INSTRUMENT. ADOLPH F. POZDECK, Newark, N. J. Filed Oct. 29, 1921. Serial No. 511,261. 2 Claims. (Cl. 30—23.)

1. In a device of the character described, a pair of nail clippers, the handles of which are curved, a plurality of serrations cut upon the concave surface of the handles for the purpose set forth.

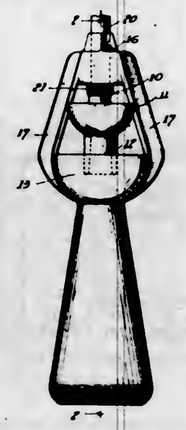


1,428,397. EMBROIDERY NEEDLE. SAMUEL M. RIKER, Chester, N. J. Filed June 22, 1921. Serial No. 479,701. 10 Claims. (Cl. 112—80.)

1. An embroidery needle comprising a handle-body provided with a longitudinally extending thread-receiving channel, a tubular extension at one end of said body, said extension being longitudinally slitted and having a plurality of laterally extending short slits, a needle having a portion movably disposed within said extension, and a laterally extending member projecting from said needle,

serving as a fingerpiece and being adapted to enter into retaining engagement with a laterally extending slit in said extension.

1,428,398. STRIPING MECHANISM FOR KNITTING MACHINES. FRANK W. ROBINSON, Reading, Pa., assignor to Schuylkill Hosiery Mills, Inc., Reading, Pa., a Corporation of Pennsylvania. Filed Jan. 5, 1921. Serial No. 435,215. 5 Claims. (Cl. 66—21.)



2. In combination with a knitting machine having needle-cylinder and operating-cam mechanisms; a radially and rotatively movable striping-thread finger; cam devices operative thereon to produce regular needle engaging movements of said finger; and a pattern-controlled series of jacks independently operative upon determined needles to temporarily raise them into cooperative relation to said finger.

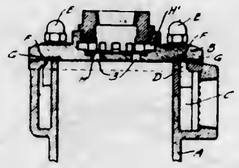
1,428,399. CONTAINER VENT. AUGUST SCHILLING, San Francisco, Calif. Filed Sept. 6, 1921. Serial No. 498,802. 5 Claims. (Cl. 220—44.)

1. A container vent and closure comprising a base for securing over a container wall and provided with a vent extending therethrough and formed with a depression at the inner end of said vent, and a flexible diaphragm of stretchable material secured to the inner end of said base and overlying said depression, said diaphragm being cut at a point overlying said base.

1,428,400. GAS BURNER. HERMAN D. SCHROEDER, Los Angeles, Calif. Filed Aug. 19, 1920. Serial No. 404,609. 6 Claims. (Cl. 158—118.)

2. In a gas burner, a gas nozzle, an open cup member arranged in front of the nozzle, an expanding nozzle leading from said member on the axis of the gas nozzle, a second open cup member into which the expanding nozzle discharges, and an expanding open ended combustion chamber leading from the second mentioned cup member.

1,428,401. PROCESS OF MAKING REENFORCED CONCRETE STRUCTURES. JOHN T. SIMPSON, Newark, N. J. Filed Jan. 25, 1918. Serial No. 213,640. 5 Claims. (Cl. 25—130.)

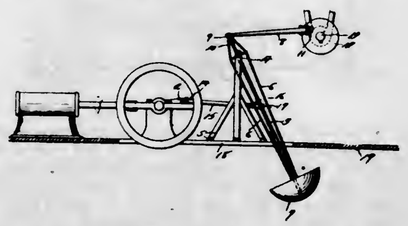


1. The herein described process, which consists in setting up shop cast reenforced concrete elements in alinement with their edges in contact, there being a groove in the edges of each plate, the grooves of adjoining plates being in alinement, calking the grooves from the inside forming molds on the inside of the structure and enclosing all of the seams between the elements, introducing concrete into the molds, and then removing the molds.

4. The herein described process, which consists in setting reenforced concrete elements in alignment, forming a mold on one side of the elements enclosing the joints between the elements whereby the elements become part of the mold, there being reinforcements of the elements projecting into the mold, securing wires to said reinforcements, there being loops formed on said wires extending outside of said mold, forcing wedges into said loops to securely fasten said mold into place, introducing concrete into mold, and then removing the mold.

1,428,402. RECIPROCATING PUMP OR COMPRESSOR. GEORGE F. STEEDMAN, St. Louis, Mo., assignor to Curtis & Co., Mfg. Co., Wellston, Mo., a Corporation of Missouri. Filed Jan. 10, 1921. Serial No. 436,113. 8 Claims. (Cl. 230—34.)

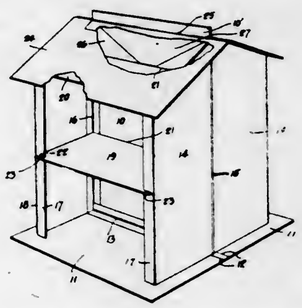
1. A pump, compressor or similar machine, comprising a cylinder provided in one of its ends with an inlet port, a head for said cylinder that extends over said port, retaining devices for said head that secure it to the cylinder, a valve for said port interposed between the head and the end of the cylinder and arranged between a pair of said cylinder head retaining devices, and a chamber for said



valve extending inwardly slightly beyond the inner face of the side wall of the cylinder and provided with an inner wall that limits the crosswise movement of the valve with relation to the cylinder.

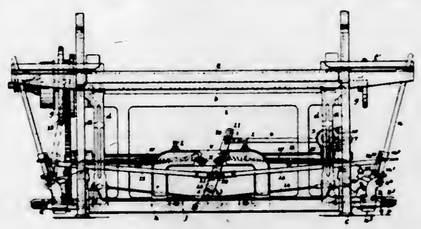
1,428,403. CARLINE. JOHN E. TESSEYMAN and THOMAS NATHAN RUSSELL, Chicago, Ill., assignors to Chicago-Cleveland Car Roofing Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 23, 1919. Serial No. 332,700. 6 Claims. (Cl. 108—5.6.)

1. In a carline for car roofs and the like, the combination of two L-shaped bars each of which is adapted to extend from side to side of the roof, said bars having their horizontal members lapped one on the other at the ridge, one of said bars being formed with a shoulder against which abuts the edge of the horizontal member of the other bar, said bars thence inclining away from each other, and declining towards their outer ends, and means whereby said lapped members are secured together.



1,428,404. MOTOR-BALANCING DEVICE. JAMES W. TURNER, Statesville, Tenn. Filed May 25, 1920. Serial No. 384,060. 1 Claim. (Cl. 74—14.)

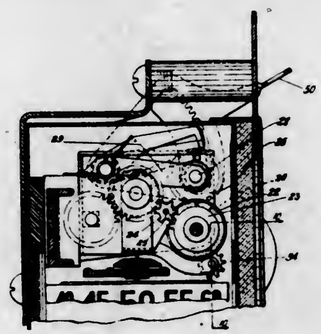
A motor balancing device comprising a pivoted lever pivoted to swing in a vertical plane, the pivotal point of said lever being adjacent the upper end of the lever, the lower end of said lever being provided with a weight right angularly disposed and oppositely disposed arms carried by the lever adjacent its pivotal point, downwardly, outwardly and inwardly extending truss rods extending from the upper end of the lever and over the right angularly disposed arms, said truss rod being connected to the lever adjacent the weight at its lower end, a connecting rod pivoted to the lever between its pivotal point and the weight and provided with a bifurcation for the reception of one of the truss rods, a motor for actuating said connecting rod, a substantially horizontally disposed connecting rod



pivoted to the upper end of the lever, said last named connecting rod forming means whereby the power from the motor and the swinging lever may be utilized for driving shafting.

1,428,405. TOY HOUSE. AUGUST F. WEGENER, Ridgewood, N. J. Filed Sept. 24, 1921. Serial No. 502,842. 7 Claims. (Cl. 46—37.)

1. A toy building comprising a roof, a base, a vertical wall panel, means to pivotally connect the roof and base members to said panel, other wall panels, a floor panel pivoted to the first mentioned wall panel and movable into horizontal position between said other wall panels, and means to fasten said other wall panels and floor panel in fixed position for holding the roof and base members and wall panels from pivotal movement when the building is set up.



1,428,406. LOOM. WILLIAM S. WELLS, South Bethlehem, Pa., assignor to Benjamin Eastwood Company, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 9, 1919. Serial No. 343,599. 7 Claims. (Cl. 139—48.)

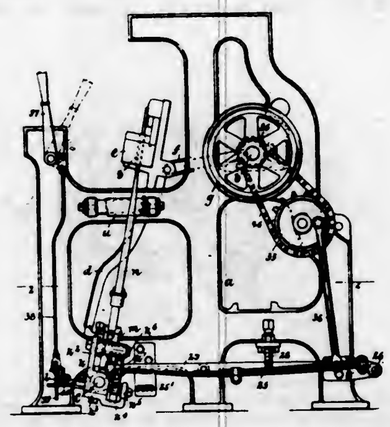
1. In combination, with a supporting structure, a pair of cockable picking members movable back and forth therein and each having a spring normally urging the same in one direction and movable in the other direction to cocked position, means to hold said members in cocked position movable to release the same, and mechanism to cause release of one member from and set the other in cocked relation to said means, and vice versa, alternately, including oscillators for causing releasing movement of said means, and means to actuate the oscillators alternately.

1,428,407. RESETTING MECHANISM. JOHN L. WHEELER, St. Louis, Mo., assignor, by mesne assignments, to The Measuregraph Company, a Corporation of Delaware. Filed Apr. 28, 1919. Serial No. 293,211. 6 Claims. (Cl. 235—144.)

1. In zero-setting mechanism for a counter having number wheels, the combination of a plurality of wheels corresponding to the number wheels, and carrying stop pins mounted so as to substantially align with each other when the counter wheels are in their zero position, a plurality of stop levers corresponding respectively to the said stop pins, a hand-actuated member, means for actuating the

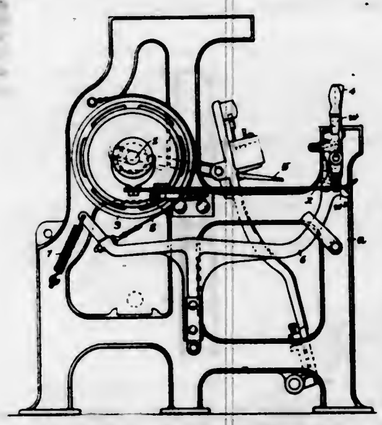
stop-levers by the first part of the movement of the hand-actuated member to bring the stop levers into the paths of the stop-pins, and means actuated during the remainder of the movement of the hand-actuated member to rotate the number wheels to their zero position.

1,428,408. QUICK-DETACHABLE COUPLING. JOHN A. WHITE, San Francisco, Calif. Filed Nov. 30, 1921. Serial No. 518,974. 5 Claims. (Cl. 287—53.)



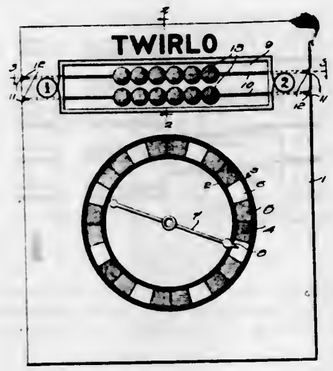
1. A separable coupling for rotary objects comprising a driving member having a central bore and a flange, a driven member having a central stud adapted to enter the bore of said driving member and a flange adapted to lie adjacent to the flange of said driving member, means actuated by a relative rotary movement between said members for connecting said flanges together to prevent endwise separation of said members, and a movable latch carried by the flange of one member and adapted to engage the flange of the other member to prevent said relative rotary movement.

1,428,409. LOOM. WILLIAM ZEEDY, Paterson, N. J., assignor to Benjamin Eastwood Company, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 28, 1920. Serial No. 413,321. 7 Claims. (Cl. 139—48.)



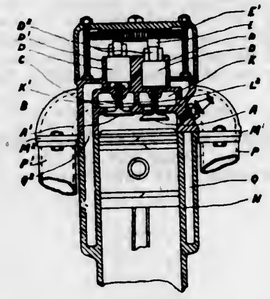
1. In combination, a supporting structure having a fixed portion and a batten-including portion movable back and forth, a cockable picking member movable with and also back and forth in the movable portion of said structure, a plate-spring fixed in the fixed portion of said structure and normally urging said member in the direction for impelling

the shuttle, a cocking device to hold said member cocked against the tension of said spring and movable to release



the same, and means to move said member to cocking position and said device to position to relase said member in alternation.

1,428,410. LOOM. WILLIAM ZEEDYK, Paterson, N. J., assignor to Benjamin Eastwood Company, Paterson, N. J., a Corporation of New Jersey. Filed May 28, 1921. Serial No. 473,507. 2 Claims. (Cl. 192—17.)

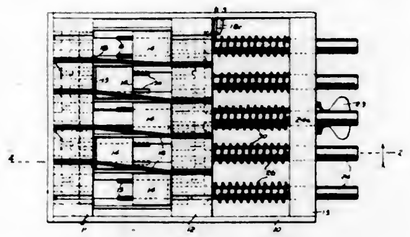


1. In combination, a loom frame, braking means including an actuating member movable back and forth to apply and release the brake, power controlling means including an actuating member movable back and forth substantially parallel with the first member to apply and cut off the power, a coupling normally connecting said members and adapted to move the first member to position to apply the brake when the second member moves to position to cut off the power, and means to uncouple said coupling from one member upon said members moving to said positions, whereby the first member may be thereupon moved to release said brake independently of the second member.

1,428,411. GAME BOARD. ALLAN J. BARBER, Woonsocket, R. I. Filed Mar. 21, 1921. Serial No. 454,111. 3 Claims. (Cl. 46—63.)

1. A game board comprising an indicator the surface of which is divided into a number of spaces of different colors, said board being provided with a cut-out portion, a plurality of rods extending across said cut-out portion, and counters arranged on said rods, the counters on each rod being of different color from the counters on the other rods and corresponding to one of the colors on the indicator.

1,428,412. INTERNAL-COMBUSTION ENGINE. ARTHUR WILLIAM BEAUCHAMP and EDGAR CHURCHILL DAVIDSON, Sandgate, Queensland, Australia. Filed Dec. 10, 1919. Serial No. 343,988. Renewed July 25, 1922. Serial No. 577,489. 3 Claims. (Cl. 123—52.)

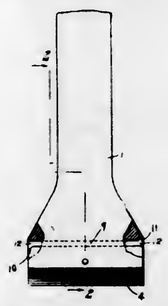


1. In combination, cylinders provided at opposite sides with apertured flanges connected to an intake pipe and an exhaust pipe, a detachable head for said cylinders provided with a centrally disposed horizontal compartment divided longitudinally by a wall into an inlet chamber and an exhaust chamber which communicates with the interiors of the cylinders, and pipes connected to said chambers and having horizontally disposed flanges detachably engaging the flanges of the cylinders.

1,428,413. COMBINATION CIRCUIT CONTROLLER. HENRY V. BELL, Elmhurst, Flushing, N. Y. Filed Feb. 12, 1921. Serial No. 444,474. 6 Claims. (Cl. 200—43.)

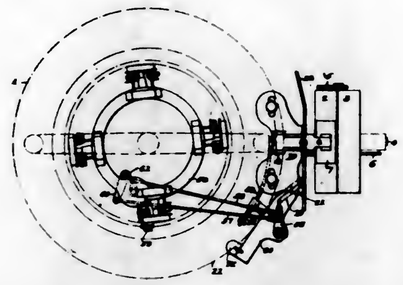
1. A combination circuit controlling means comprising separated series of terminals, conductor elements running back and forth between said terminals and elements mov-

able back or forth between the respective series of terminals, certain of said movable elements having members



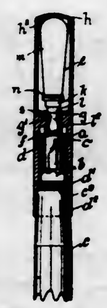
to complete the circuit at one series of the terminals, and others of said movable elements having members to complete the circuit at the terminals of the other series.

1,428,414. WIRE STRETCHER. JOHN H. BEST, Edmond, Kans. Filed Nov. 1, 1920. Serial No. 421,100. 1 Claim. (Cl. 24—230.5.)



In a wire stretcher a hook comprising a body having one end widened and flattened and formed with a hole for the passage of attaching means, said body having its other end formed with a bill tapered throughout its length and terminating in an outwardly deflected point, the body and bill being rectangular in cross section with opposite angles of the angular body forming the confronting edges of the body and bill, the tapering of the bill defining a wedge shaped opening between the bill and the body.

1,428,415. DRILL BIT. JAMES JOSAPH BROSSOIT, Salt Lake City, Utah. Filed Mar. 22, 192.. Serial No. 454,376. 5 Claims. (Cl. 287—103.)

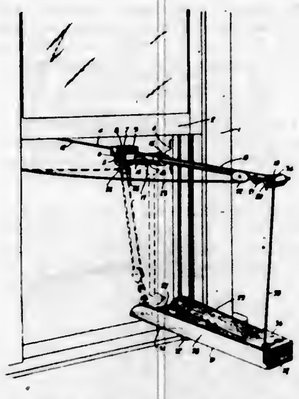


3. A drill having a shank portion provided with a recess in its lower edge, a cutting edge or tool disposed in said recess, a retaining plate disposed between the cutting tool and the shank portion, and means on said plate for locking the cutting tool in the recess.

1,428,416. STOP-MOTION BRAKE ATTACHMENT. FRANK CRAWFORD, Sr., New Brunswick, N. J., assignor to The Crawford Manufacturing Company, New Brunswick, N. J., a Corporation of New Jersey. Filed Jan. 22, 1919. Serial No. 272,537. 4 Claims. (Cl. 192—116.)

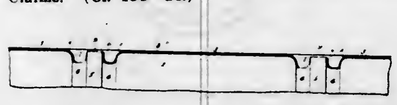
1. The combination in a brake release for knitting machines, of a brake; a lever for actuating the brake; a spring-pressed bolt for holding the lever and the brake in the raised position; a sliding bar; a spring for retracting the bar; a lever having two arms, one arranged to be engaged by the bar and the other arranged to engage the bolt; a shaft; an arm on the shaft engaging the bar; a slotted lever for retaining the bar in the projected position against the pressure of the spring; a latch for engaging the slotted lever; and means for releasing the latch.

1,428,417. FOUNTAIN PEN. MERTON DOUGLAS DAVIS, London, England. Filed Dec. 6, 1920. Serial No. 428,761. 6 Claims. (Cl. 120—42.)



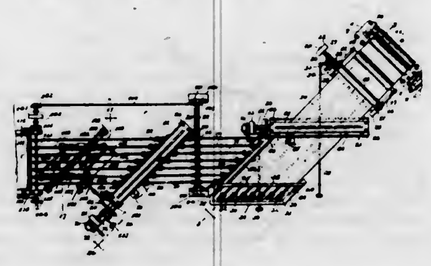
1. A fountain pen or the like device comprising a body member, a removable protective cap member adapted to be fitted on to either end of said body, a chamber in one of said members and a removable and telescopically collapsible filling appliance housed in said chamber, said appliance comprising at least two tubular members one of which is collapsible.

1,428,418. CLOTHESLINE BRACKET AND TRAY. DANIEL E. DAVISON, Brooklyn, N. Y. Filed Mar. 15, 1921. Serial No. 452,444. 2 Claims. (Cl. 68—3.)



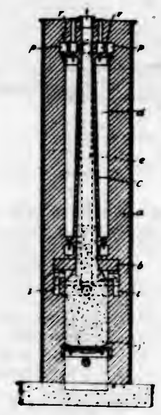
1. A clothes line support, comprising a bar carrying a securing bracket at one end and a pair of line rollers at the other, a pair of spaced pins extending crosswise through said bar at points between the bracket and the

rollers, a rotatable sleeve slidably mounted between said pins, said sleeve carrying an arm, said sleeve having



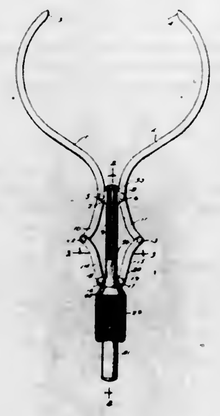
slots at both ends to engage either of said pins and so disposed that the sleeve is rendered capable of being locked against movement at every quarter turn.

1,428,419. METHOD OF MAKING SHOES OR CASINGS FOR PNEUMATIC TIRES. BARTHOLD DE MATTIA, Clifton, N. J. Filed Feb. 4, 1920. Serial No. 356,210. 5 Claims. (Cl. 154—14.)



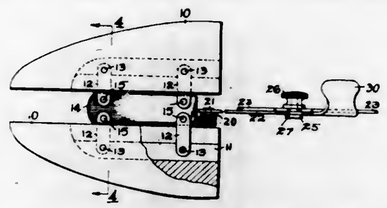
1. The method of forming shoes or casings for pneumatic tires, which consists in building up successive layers of superimposed fabric and separating such layers into cylindrical sections as they are built up, whereby to form a plurality of cylindrical tire blanks simultaneously and subsequently expanding and shaping each section.

1,428,420. MACHINE FOR CUTTING AND FEEDING TIRE-MAKING FABRIC. BARTHOLD DE MATTIA, Clifton, N. J. Filed Mar. 9, 1920. Serial No. 364,533. 11 Claims. (Cl. 164—48.)



1. In a machine of the class described, in combination, means for advancing a strip of fabric, and a cutting mechanism, comprising a bed plate, a reciprocating cross-head, means to reciprocate the cross-head, a draw cutter carried by said cross-head, means to operate said draw cutter, and means controlled by the movements of the cross-head to control the cutter operating means.

1,428,421. GASIFICATION OF COAL OR OTHER CARBONACEOUS MATERIAL. ARTHUR MCDOUGALL DUCKHAM, London, England. Filed May 2, 1921. Serial No. 466,223. 2 Claims. (Cl. 48—202.)

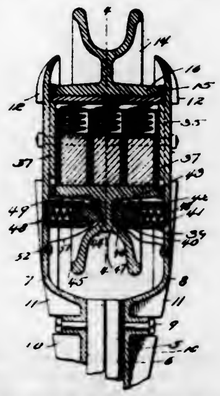


1. A process of gasifying coal and the like, which consists in carbonizing as completely as practicable the material in an externally heated vessel, receiving the residue from said vessel directly into a generator, heating the residue in the generator to incandescence by a blast of air, heating the said vessel externally by means of the sensible heat of the blow gases and in addition by burning any producer gas formed, substituting a steam blast for the air blast when the residue is incandescent, passing a portion of the water gas thus produced through the material in the said vessel and burning a portion of the said water gas so as to heat the said vessel externally.

1,428,422. CALIPER. BENJAMIN NAHABED DUDUKIAN, Syracuse, N. Y. Filed Mar. 9, 1920. Serial No. 364,408. 8 Claims. (Cl. 33—148.)

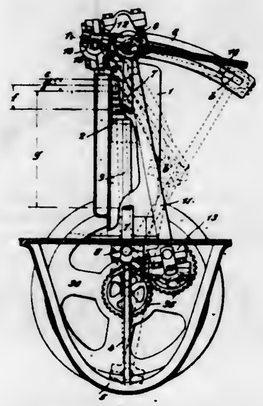
1. In a precision instrument of the character described, a pair of arms, means for swinging said arms toward and from each other, and a plurality of means associated with said arms for indicating the distance the ends of the latter are apart at any time, said means including a liquid indicator for indicating thousandths of an inch.

1,428,423. SHOE STRETCHER. ANSHELM BURTON ELMSTROM, Malden, Mass. Filed Nov. 15, 1920. Serial No. 424,007. 1 Claim. (Cl. 12—128.2.)



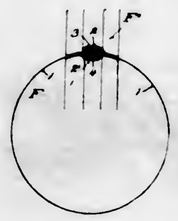
In a shoe tree, the combination of a wooden sectional toe portion formed in halves, a pair of parallel links pivoted to each half and adapted to extend therefrom toward the other half, the two corresponding links of each half making equal angles at all times with a central plane, a flat slide pivotally connected with said links on opposite edges of the slide and at equal distances apart, the two halves of said toe portion being provided with horizontal slots therein for reception of said links and slide, and means for moving said slide longitudinally.

1,428,424. ELECTRIC ADVERTISING SIGN. OTTO FEHLER, Berlin-Steglitz, Germany. Filed Oct. 12, 1920. Serial No. 416,591. 7 Claims. (Cl. 176—14.)



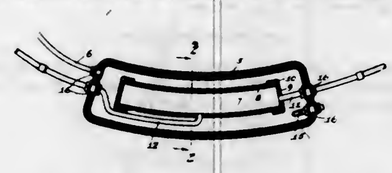
1. An incandescent advertising sign in which the filament constitutes the legend, comprising a lamp, a plurality of filament supporting hooks in said lamp, said hooks being of greater number than are required for the support of the filament in a single position of arrangement.

1,428,425. SELF-LUBRICATING BEARING OR AXLE. CHARLES M. FEIST, Sioux City, Iowa. Filed Mar. 2, 1921. Serial No. 449,176. 10 Claims. (Cl. 64—27.)



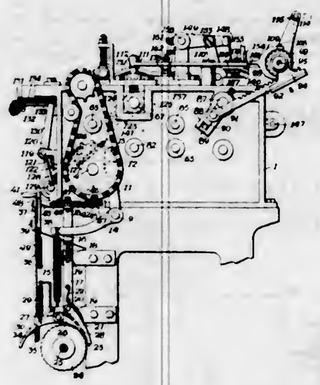
1. A wheel bearing for trolley wheels and the like, consisting of a cylindrical tubular body on which the hub of the wheel is mounted, automatically operating lubricating means wholly enclosed within the said body and acting on the inner side of the wheel hub, and a supplemental lubricating means comprising inwardly automatically movable lubricating material engaging the opposite portions of the flange of the trolley wheel between the hub of the latter and the outer grooved member.

1,428,426. INTERNAL-COMBUSTION ENGINE. GAETANO FERIANI, Belluno, Italy, assignor to Società Brevetti Feriani, Rome, Italy. Filed Jan. 30, 1920. Serial No. 355,216. 5 Claims. (Cl. 123—48.)



1. In an internal combustion engine of the variable stroke constant power type, the combination of one or more cylinders, a piston associated with each cylinder, a fixed tubular guide secured in the stem of each piston, a cross head at the end of the piston stem, connecting rods pivoted to the cross head, two slotted oscillating levers between said rods, and a block slidably mounted in the slot in each lever; one end of each of said rods being connected to the adjacent block.

1,428,427. PIPE CONSTRUCTION. PHILLIPP F. FLAGGE, Green Bay, Wis., assignor to Klauer Manufacturing Company, Dubuque, Iowa, a Corporation of Iowa. Filed Dec. 27, 1920. Serial No. 433,361. 5 Claims. (Cl. 113—33.)

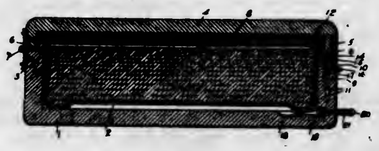


1. A method of forming metal conductor pipe sections consisting of continually feeding an initially flat blank to successively arranged sets of forming rolls, whereby the body of the blank is progressively shaped in tube formation having flat associated edge strips extending therefrom, and turning both of said edges in the same direction continuously until an interlocked double seam is produced.

1,428,428. METHOD AND TIRE-VULCANIZING APPARATUS. OSCAR M. FREDD, Hancock, Mich. Filed Apr. 5, 1921. Serial No. 458,826. 6 Claims. (Cl. 18—45.)

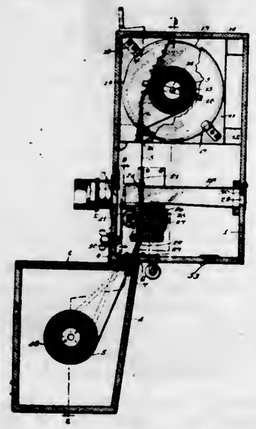
1. In combination with a pneumatic core or former, and means to apply fluid pressure thereto, for vulcanizing devices, a heating means within the pneumatic core or former, and means for supplying a heating medium to said heating means.

1,428,429. MACHINE FOR MAKING WINDOW-ENVELOPE BLANKS. SAMUEL FURMAN, Worcester, Mass., assignor to United States Envelope Company, Springfield, Mass., a Corporation of Maine. Filed Aug. 24, 1918. Serial No. 251,301. 13 Claims. (Cl. 93—61.)



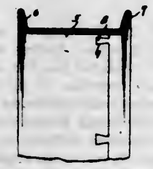
1. In a machine of the class described, means for gumming around the opening of a window envelope blank, comprising a rotatable gumming die support, a longitudinal gumming member having a fixed position on said support, a second longitudinal gumming member adjustable toward and away from said first gumming member and a rotatable member having a plurality of spaced grooves for cooperation with said gumming members, the spaces between said grooves corresponding to the several adjustments of said gumming members.

6. In a machine of the class described, means for advancing successive apertured window-envelope blanks, means for intermittently feeding a web of material for formation into patches to be applied to the apertures of said blanks, means for detecting the presence of a blank in motion on said advancing means, and means operable by said detecting means for interrupting the intermittent feed of patch material in the absence of a blank in motion on said advancing means.



1,428,430. CAN HOLDER. BENJAMIN KONST. GEROJOHN, Princeton, N. J. Filed May 7, 1921. Serial No. 467,684. 4 Claims. (Cl. 217—56.)

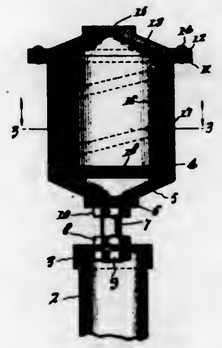
1. A can holder comprising a box, a hinged cover on the box, an air-tight packing carried by the cover and adapted to engage a can within the box when said cover is closed, said box having a peripheral groove around its upper edge, flanges on the cover accommodated in the



groove, said air-tight packing comprising a gasket carried by the flanges and a sheet of pressed cork carried by the under face of the box cover.

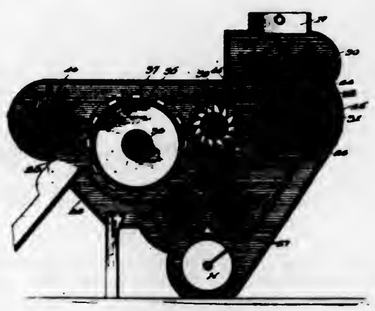
1,428,431. CAMERA. VICTOR A. GIANETT, New York, N. Y. Filed Dec. 9, 1920. Serial No. 429,458. 2 Claims. (Cl. 88—18.5.)

1. In a moving picture machine, a film feed including a guide plate formed with an opening, a frame pivoted at one end in juxtaposition to the plate, means normally urging the frame toward the plate for clamping the film therebetween, said frame having an opening aligning with the opening of the plate, said plate and frame also provided with additional aligned openings, a feeding mechanism arranged to cooperate with the film at the latter openings and adapted to press against and move the film longitudinally and at the same time move the film and frame laterally causing said frame to move away from the film for releasing the same as the film is moved, said frame automatically returning to a clamping position for holding the film stationary during the exposure thereof.



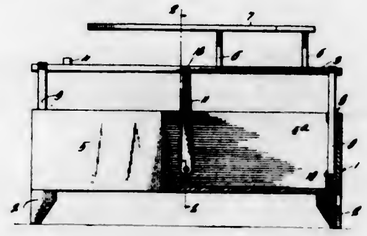
1,428,432. RIM. GEORGE E. GRUNDIG and SYLVESTER DIBBINS, Brooklyn, N. Y. Filed Oct. 22, 1921. Serial No. 509,464. 1 Claim. (Cl. 301—35.)

A tire rim comprising major and minor sections, the major section being formed along the inner edge thereof



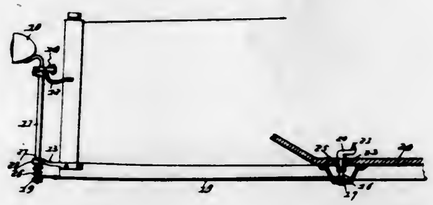
with dovetail notches, and dovetail lugs formed along the inner edge of the minor section and snugly received in said notches for holding the opposed edges of the major and minor sections flatly in engagement, said minor section being split whereby the dovetail lugs enter the notches by a radial movement.

1,428,433. CONDENSER FOR AUTOMOBILE RADIATORS. FRANKLIN J. GUSTINE, Chicago, Ill. Filed Jan. 31, 1921. Serial No. 441,316. 4 Claims. (Cl. 257—25.)



1. In combination with a vehicle radiator, a condenser composed of an outer casing or shell, a core within the shell provided with a spiral groove in communication with the radiator, and means for attaching the casing or shell to the radiator, substantially as described.

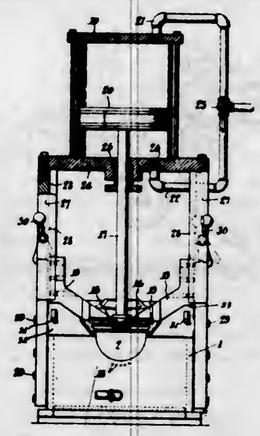
1,428,434. COTTON MACHINERY. JOSEPH LUTHER HART, Chickasha, Okla. Filed May 19, 1920. Serial No. 382,460. 13 Claims. (Cl. 19—36.)



2. In a machine of the character described, a casing, a false bottom in said casing having an upper reticulated portion, a lower reticulated portion and an intermediate inclined imperforate portion, a pair of feed rollers in the casing, a picker cylinder receiving the cotton from the feed rollers and delivering it against the upper reticulated portion of the false bottom, a pair of picker rolls engaging the cotton to carry it across the lower reticulated portion, a saw cylinder receiving the cotton from the picker rolls, a stripper cooperating with the saw cylinder, a spike cylinder arranged in cooperative relation with said stripper and said picker rolls and having its teeth spirally arranged, a doffer brush for the saw cylinder and a conveyor for the refuse arranged in said casing below the false bottom.

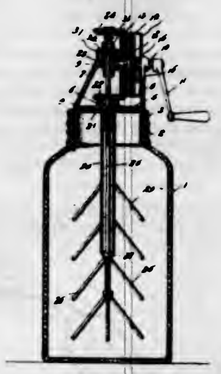
1,428,435. IRONING CHEST. DUKE O. HIMEBAUGH, Hooper, Nebr. Filed Jan. 29, 1920. Serial No. 354,912. 1 Claim. (Cl. 68—10.)

A chest of the class described having legs pivotally mounted therein, a lid hingedly connected with said legs and adapted to be reversed when in open position, another leg hingedly mounted in the chest and connected with the lid to hold it in open position said lid having a cleat extending transversely across its inner face and adapted to fit between the front and rear walls of the chest to hold the lid in closed position.



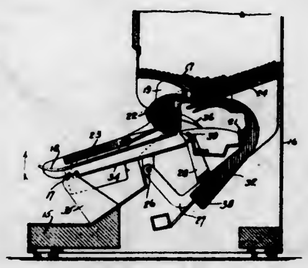
1,428,436. DIRIGIBLE HEADLIGHT. GEORGE L. HORTON, Caseville, Mich. Filed Apr. 20, 1921. Serial No. 462,951. 1 Claim. (Cl. 240—61.)

A dirigible headlight mechanism having headlights provided with spindles connected for simultaneous movement, means for rocking one of the spindles to vary the line of projection of the light rays from the headlights, collars provided with radial notches in their upper faces and rotatably supporting the spindles, compression springs in surrounding relation to the spindles below the collars, and diametrical pins inserted through the spindles above the collars and engaging notches in seats formed in the latter, whereby the lamps are retained in any angular position in which they may be disposed.



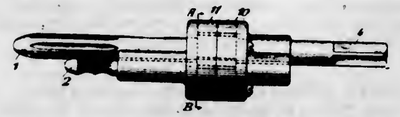
1,428,437. PULP MOLD. JACK C. JANKUS, Scranton, Pa., assignor to Woman's Institute of Domestic Arts & Sciences, Inc., Scranton, Pa., a Corporation of Delaware. Filed June 26, 1920. Serial No. 391,873. 7 Claims. (Cl. 92—59.)

1. In a press for shaping plastic material, the combination of pressure applying mechanism, movable and stationary mold members associated with said mechanism, means for feeding plastic material to the mold members, means for applying pressure to the movable mold member,



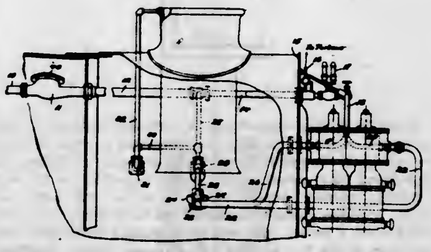
and devices for locking said movable mold member in position for exerting the desired maximum compression on the plastic material.

1,428,438. CHURN. MCBRIDE L. KELLY, Thomasville, Ga. Filed June 3, 1922. Serial No. 565,629. 3 Claims. (Cl. 259—104.)



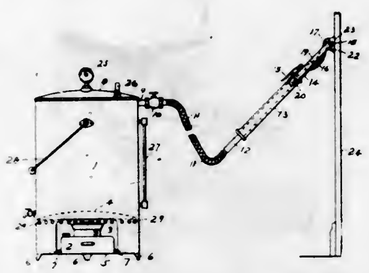
1. In agitator operating mechanism, a supporting frame comprising a bottom member and arms upstanding from the ends of the bottom member, said bottom member being formed with an opening, a tubular collar extending through said opening, a tubular shaft connected to said collar and depending therefrom, a shaft within said tubular shaft and acting to hold the tubular shaft to said tubular collar, agitators on said shafts, a shaft in axial alinement with the second named shaft and connected thereto and extending above said tubular collar, a beveled pinion on the upper end of said last mentioned shaft, a beveled pinion on the upper end of said tubular collar, a beveled gear meshing with said pinions for driving the same to operate said first and second named shafts in relatively reverse directions, a bearing collar carried on one of said collars for said last named shaft and driving means carried by the other of said arms for said beveled gear.

1,428,439. DISPENSING MACHINE. JOHN EDWIN KENKEL, Great Falls, Mont. Filed Sept. 17, 1921. Serial No. 501,490. 12 Claims. (Cl. 211—8.)



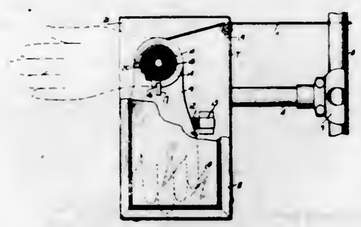
1. A dispensing machine including a hopper formed with an open end, a platform secured below said hopper, lugs movably mounted upon said platform, said lugs normally co-operating with the open end of said hopper to prevent articles within said hopper from passing therethrough and means also secured to said platform and connected to said lugs for permitting the latter to be positively moved to secure the deposit of an article upon said platform.

1,428,440. DEVICE FOR MOUNTING AND REMOVING TIRES. CARL KERSCHBAUM, Hinwil, Switzerland, assignor to the Firm Stössel & Cie., Wadenswil, Switzerland. Filed Jan. 28, 1921. Serial No. 440,766. 4 Claims. (Cl. 157—6.)



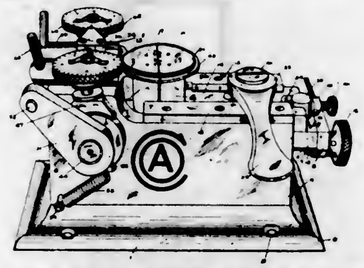
1. Implement for mounting and demounting pneumatic tires, comprising three positively rotated members, two of which serve to guide the implement on a wheel rim edge, while the third member is cylindrical and terminates in a pointed end extending beyond the other two members.

1,428,441. LOCOMOTIVE. WILLIAM F. KIESEL, JR., Altoona, Pa. Filed Feb. 2, 1920. Serial No. 355,707. 13 Claims. (Cl. 105—37.)



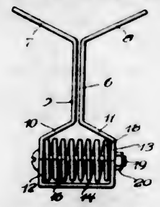
1. In a locomotive having a smoke box at the front thereof and steam operated auxiliary apparatus in front of said box, the improved means for supplying steam to said apparatus comprising a front bridge pipe extending through the front flue-sheet of the boiler and the smoke box to said apparatus and means to control the supply of steam to said apparatus.

1,428,442. APPARATUS FOR REMOVING WALL PAPER. EDGAR T. LANCASTER, Palatka, Fla. Filed Feb. 17, 1921. Serial No. 445,722. 1 Claim. (Cl. 126—271.1.)



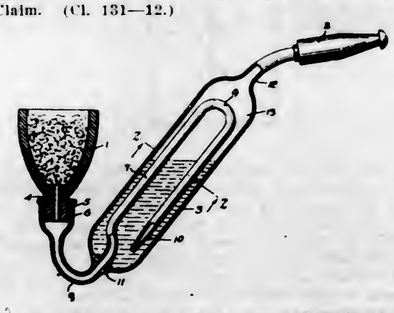
In an apparatus for removing wall paper; a portable steam boiler, having a steam outlet near its top; a main valve attached to said outlet; a flexible hose connecting said main valve with one end of an operating handle; the operating handle, consisting of a pipe incased in a heat insulating covering, forming part of the steam conduit; a spring operated valve attached to the other end of the operating handle; a flexible hose connecting said spring operated valve with the inlet pipe of a steam spray nozzle; the steam spray nozzle consisting of a perforated tube, having guide flanges at both ends; sockets formed in said guide flanges; flexible arms, secured on the operating handle, extending outwardly and forwardly, and having pins secured at their outer ends; and said pins engaging in the sockets in the steam spray nozzle flanges.

1,428,443. TRAFFIC MIRROR. JACOB MANDEL, New York, N. Y. Filed Dec. 13, 1921. Serial No. 522,178. 1 Claim. (Cl. 116—52.)



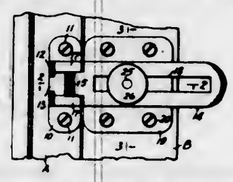
A traffic mirror comprising, a reflecting surface, a signal arm arranged in back of the reflecting surface, a shaft for pivotally supporting said signal arm, a casing for supporting said shaft, said casing together with said reflecting surface substantially enclosing said arm normally, a pulley loosely mounted on said shaft and provided with a notch, and means extending from said arm into said notch for locking the arm and pulley together, a spring connected with said shaft and said pulley for resiliently holding the pulley in a given position and for returning the same to that position when moved therefrom, and a flexible member connected with said pulley extending from said casing, said flexible member being adapted to be pulled for rotating the pulley and thereby swinging the arm to a position outside of said casing for giving a signal.

1,428,444. FRAME STRETCHER. ALBERT E. MAYNARD, Southbridge, Mass., assignor to American Optical Company, a Voluntary Association of Massachusetts. Filed Nov. 26, 1919. Serial No. 340,722. 26 Claims. (Cl. 29—20.)



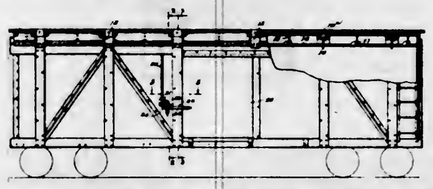
1. A device of the character described comprising a pair of relatively movable slide members, eye wire plates carried by said members, and means for relatively shifting said plates.

1,428,445. TENSIONING DEVICE FOR SHUTTLES. ARTHUR R. MEEKS, Columbus, Ga. Filed May 12, 1922. Serial No. 560,462. 2 Claims. (Cl. 139—46.)



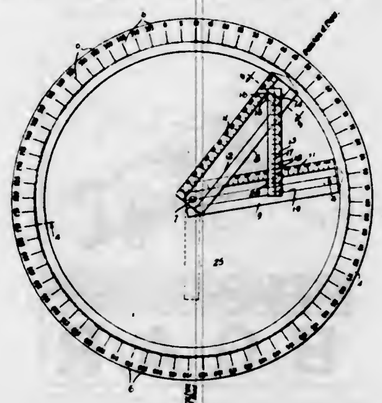
1. A tensioning device for shuttles comprising a metallic yoke having substantially parallel arms brought together upon the filling and having free extremities, the portion of the yoke adjoining the arms being relatively wide, resilient means placed in the relatively wide portion of the yoke, and adjusting means also connected with the relatively wide portion of the yoke, substantially as described.

1,428,446. SMOKING PIPE. GEORGE A. MILKIE, Brooklyn, N. Y. Filed Dec. 7, 1920. Serial No. 428,995. 1 Claim. (Cl. 131—12.)



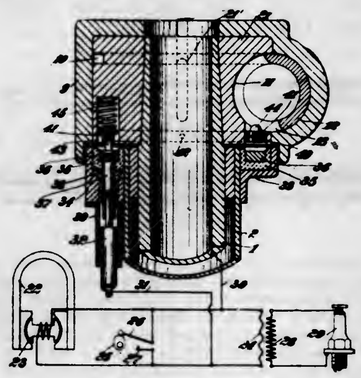
In a smoking pipe, a bowl, a stem, a barrel partially filled with liquid, a tube including a U-shaped portion, one end of said U-shaped portion forming a cup shaped receptacle receiving the lower end of the bowl, the other end of said U-shaped portion communicating with the lower end of the barrel, said tube extending upwardly in the barrel and including a return bend located above the water line in the barrel and a tapered open end located below the water line, the upper end of the barrel communicating with the stem.

1,428,447. SASH FASTENER. JOHN O'CONNOR, New York, N. Y. Filed Sept. 28, 1921. Serial No. 503,770. 6 Claims. (Cl. 292—268.)



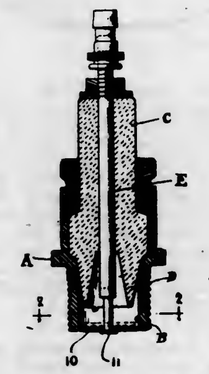
1. A sash fastener including a latch element, means to pivotally mount said element on the meeting rail of an outer sash to swing to a position in the plane of the outer sash or transversely to said plane to overlie an inner meeting rail, an element adapted to be secured to the meeting rail of the inner sash, and a clamp slidable longitudinally of said first element and having means to rockably and slidably engage the second element.

1,428,448. FREIGHT-CAR CONSTRUCTION. CALVIN PECK, Bloomfield, N. J., assignor of one-half to Mason F. Grymes, Orange, N. J. Filed Apr. 7, 1922. Serial No. 550,486. 5 Claims. (Cl. 105—377.)



1. A freight car construction which comprises a plurality of pivoted doors in the roof of the car, a slidable latch member within the car, means on each door to be engaged by the latch member, and means outside the car to operate the latch member.

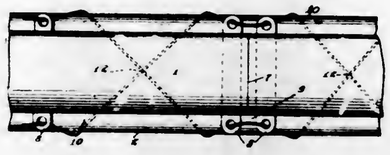
1,428,449. NAVIGATING INSTRUMENT. BRYAN W. PRALL, West New Brighton, N. Y. Filed Mar. 16, 1921. Serial No. 452,638. 7 Claims. (Cl. 33—75.)



1. An instrument of the character described, comprising a circular base plate, an upstanding peripheral flange around the base plate, a pair of radial indicating arms pivoted at the center of the base plate, a third indicating arm carried by one of the first mentioned arms, and means extending inwardly from said flange receiving and guiding the free ends of the first mentioned arms.

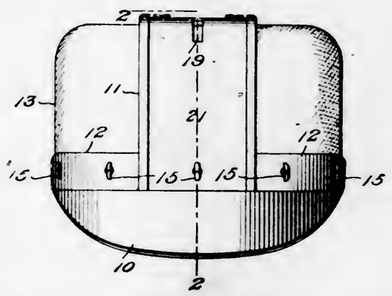
1,428,450. DEVICE FOR PREVENTING THE THEFT OF MOTOR CARS AND THE LIKE. WILHELM ROMEISER, Lichterfelde, near Berlin, and LUDWIG SCHIFF, Berlin, Germany, assignors to Hans Malzoff, Dresden, Saxonia, Germany. Filed Feb. 4, 1921. Serial No. 442,564. 6 Claims. (Cl. 70—127.)

4. In combination with the steering wheel, steering shaft, steering column, and the motor ignition circuit of an automobile or the like; an insulated metal ring fixed to the steering column; an electrical connection between the insulated ring and one lead of the primary ignition circuit; a locking member associated with the said wheel and adapted to be brought into three positions; a key for bringing the said locking member into the said three positions; the said member being adapted to fix the wheel immovably on the shaft in its one position, to loosen the wheel from the shaft while preventing its detachment therefrom in a second position, and to permit of the detachment of the wheel from the shaft in a third position; a rocking metal member associated with the shaft; a spring for moving the rocking metal member against the said insulated ring when the locking member is in its second position; means for moving the rocking metal member away from the insulated ring when the locking member is in its first position; and a second electrical connection between the rocking member and the other lead of the primary ignition circuit.



1,428,451. SPARK PLUG. HAROLD G. SCHLECHT, Bradentown, Fla. Filed Feb. 14, 1920. Serial No. 358,628. 2 Claims. (Cl. 123—169.)

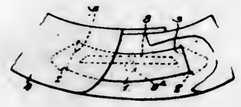
1. In a spark plug, a metallic shell, a main electrode rod having its cylinder end surrounded by the correspond-



ing end of the shell, and a disk slidably mounted on the cylinder end of the rod and having its edge located adjacent to the wall of the shell to produce a spark gap between said edge and wall.

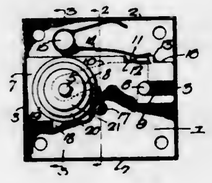
1,428,452. EMERGENCY TIRE. PHILIP N. SCHORR, Lancaster, Ohio. Filed Aug. 27, 1919. Serial No. 320,206. 1 Claim. (Cl. 152—23.)

An emergency tire for motor vehicle wheels, comprising a strip of flexible resilient material arranged to be seated within the rim construction of a vehicle wheel and to project radially beyond the same to provide a yieldable traction surface for said wheel, means for retaining said tire in its position of application upon said wheel, including a plurality of spaced metallic bars arranged to pass transversely through said tire so that the ends thereof will lie outside of the rim of said wheel, and a lacing arranged to pass through apertures formed in the outwardly projecting ends of said bars and to be trained in a crosswise manner around the felly of said wheel, whereby upon the tightening and securing of said lacing the ends of said tire will be drawn together to retain the latter in connection with said wheel.



1,428,453. CAP VISOR AND LAMP SUPPORT. BENJAMIN J. SCHWARZ, NELSON FORISTER, and ALBERT HIRT, Breeze, Ill. Filed Nov. 27, 1920. Serial No. 426,803. 1 Claim. (Cl. 2—106.)

A combined lamp support and visor for miner's caps comprising a single piece of material shaped to provide the visor, and an attaching flange curved to conform to the curvature of the crown of the cap, said flange being perforated, a lamp support rising from the visor centrally thereof and arranged directly in advance of the cap, the upper end of said support being offset at a right angle to repose upon the top of the cap, means for securing the offset portion to the top of said cap, said lamp support having a slot at the upper end thereof, and a metallic strip arranged within the cap and in parallel relation to said flange, and means for securing the said strip and flange together.

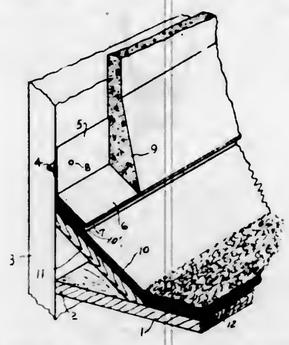


1,428,454. TIE ADJUSTER AND RETAINER. EDWARD ARTHUR SLACK, Auckland, New Zealand. Filed Dec. 31, 1920. Serial No. 434,228. 2 Claims. (Cl. 2—70.)

1. A tie adjuster and retainer comprising a body shaped to fit the front portion of a collar, supporting books carried by the terminals of the body adapted for insertion in slots formed in a collar, and collar button engaging means

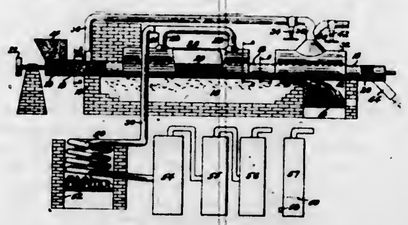
carried by the body constituting supplemental supporting means for maintaining the body in position.

1,428,455. LOCK. FRANK SOLEY, Philadelphia, Pa., assignor to The Miller Lock Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 30, 1921. Serial No. 504,296. 3 Claims. (Cl. 70—75.)



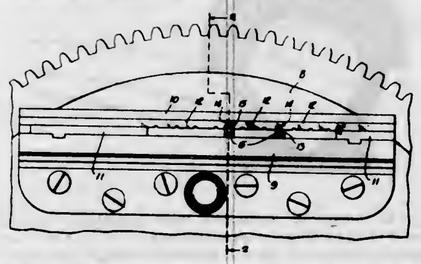
2. The combination in a lock, of a casing; two pins projecting from the casing; a bolt slidably mounted on the pins; a tumbler arranged to engage the bolt; a spring for yieldingly holding the tumbler in engagement with the bolt; a series of disk wards mounted on one of the pins; and a key hub mounted in the casing in such position in respect to the wards and the bolt that a key located in the key hub and turned will engage the tumbler and the bolt.

1,428,456. EDUCATIONAL APPARATUS. WALTER STRANDERS, London, England. Filed May 2, 1921. Serial No. 466,191. 5 Claims. (Cl. 35—9.)



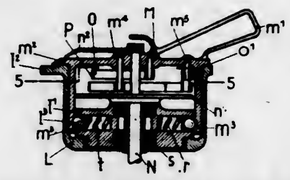
1. In educational apparatus the combination of a plurality of separate letter-elements each bearing an area of distinctive colour and a key-element bearing a series of distinctively coloured areas in an order such that the letter-elements when matched therewith by their coloured areas are arranged as desired.

1,428,457. ROOF FLASHING. GEORGE E. SWENSON, Hastings-on-Hudson, N. Y., assignor to The Barrett Company, a Corporation of New Jersey. Filed Aug. 30, 1920. Serial No. 406,954. 5 Claims. (Cl. 108—26.)



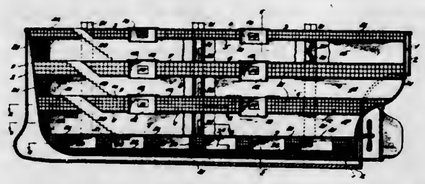
1. In a device of the kind described, in combination a wall, a sheet of material having one portion bent at an angle to another portion with its outer edge turned upwardly, one of said portions being applied to the said wall.

1,428,458. PROCESS AND APPARATUS FOR RECOVERY OF HYDROCARBONS FROM OIL SHALE. CAREY W. THOMPSON, New York, N. Y. Filed Sept. 15, 1919. Serial No. 323,883. 3 Claims. (Cl. 196—21.)



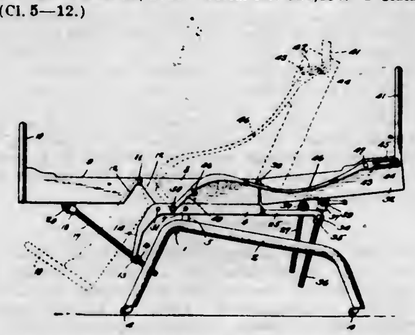
1. A process for distillation of hydrocarbons from oil shale comprising heating the shale by external means to free gasolene and light oils, removing light oils and gasolene then heating the shale at a higher temperature to vaporize the heavy hydrocarbons, and introducing the heavy vapors freed from said light oils and gasoline into a fresh cold quantity of shale prior to the first heat treatment.

1,428,459. MOLD FOR TYPOGRAPHICAL SLUGS. LOUIS C. TINSLEY, New York, N. Y. Filed May 16, 1921. Serial No. 470,126. 5 Claims. (Cl. 199—98.)



1. The combination with a mold for typographical machines, of a mold cap comprising a plurality of sections adapted to be secured together in alinement, means for securing said sections together, and core blocks secured to said mold cap by the securing means of the sections thereof.

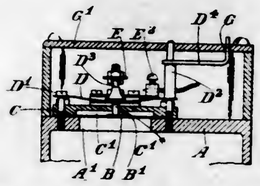
1,428,460. CONTROL MECHANISM. GRAF ALFRED VON SODEN-FRAUNHOFEN, Friedrichshafen, Germany, assignor to the Firm: Zahnradfabrik Aktiengesellschaft, Friedrichshafen-on-the-Bodensee, Germany. Filed June 28, 1920. Serial No. 392,443. 3 Claims. (Cl. 74—39.)



1. In a device of the kind described in combination, two members movable relatively to each other, a spring under preliminary tension operatively connecting said members and adapted, on being placed under increased tension by movement of one member, to cause the other member to follow this movement whereby the tension of said spring is reduced to its minimum which is equal to its preliminary tension, a fixed scale and pointers on both members adapted to coincide when said springs are under minimum tension.

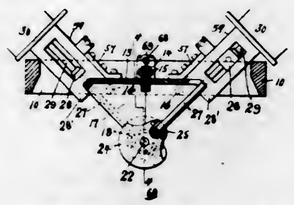
1,428,461. NONSINKABLE VESSEL. HENRY F. WAITZ, New York, N. Y. Filed July 13, 1920. Serial No. 395,914. 5 Claims. (Cl. 114—68.)

1. A vessel comprising a hull, a protective shell, and means spacing said hull and shell, said vessel having a plurality of double-walled buoyant unit containing decks, a plurality of double-walled buoyant unit containing compartments between decks, and said decks having hatchways leading therethrough which are provided with lateral doors and doorways for passage of said units.



1,428,462. BED. LLOYD W. WARD, Springfield, Mo., assignor of one-quarter to Osker C. Haggard, Springfield, Mo. Filed Dec. 23, 1921. Serial No. 524,456. 1 Claim. (Cl. 5—12.)

In a device of the class described, a base; a central section mounted to swing on the base; end sections pivoted



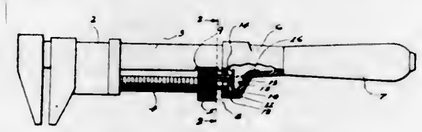
to the central section; shafts journaled on the end sections; supports mounted to rock on the central section; screws threaded in the supports; beveled pinions connecting the shafts with the screws; a shaft journaled on the central section; a support mounted to rock on the base; a screw threaded into the last specified support; a beveled pinion forming an operative connection between the last specified screw and the last specified shaft; and means for rotating the shafts.

1,428,463. ELECTRICAL CUT-OUT OPERATED BY FLUID PRESSURE. WALTER HENRY WELCH, Bristol, England, assignor to Harvey Frost & Company, Limited, London, England. Filed Mar. 1, 1920. Serial No. 362,176. 1 Claim. (Cl. 200—83.)

In a fluid pressure-operated electrical cut-out, the combination with a pressure member subjected to fluid pressure, and an electrical contact device comprising a movable contact member for controlling an electric circuit, of a bow spring having its central part operatively connected with said contact member, a screw positioning one end of the bow spring and arranged to thrust the central part thereof against said pressure member, a plate provided with a slot, a second screw positioning the other end of the bow spring and arranged to thrust the central part thereof against said pressure member, and an index arm that is rigidly attached to the said second screw, and extends into said slot, substantially as described.

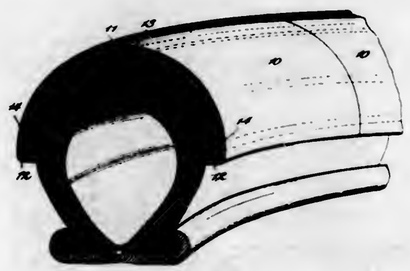
1,428,464. STEAM ENGINE. JAMES D. WHITE and DIRA S. STOUT, Nallen, W. Va. Filed July 6, 1918. Serial No. 243,590. 2 Claims. (Cl. 121—120.)

1. In a motor, a crank shaft support including coacting sections formed of upper platform members and a plurality of supporting webs including outer webs in spaced relation depending from the platform members and engaging edge to edge and with bearings for the crank shaft at their lower ends, clamp members connected to the outer webs to bind the sections together, ribs extending upwardly from said platform members and engaging face to face, fastening devices operating through said ribs, cylinders in diverging relation, and cross head guides between said cylinders and supporting sections and connected thereto.



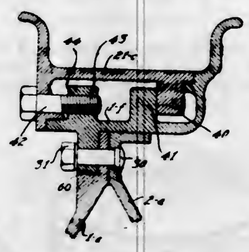
1,428,465. KNEECAP OR ELBOW BANDAGE. JAMES D. WILLMOTT, Philadelphia, Pa., assignor to William H. Horn & Brother, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 4, 1919. Serial No. 274,862. 5 Claims. (Cl. 128—165.)

1. A tubular fabric bandage having courses including encircling elastic elements and having an area from which said elements are omitted; with relatively non-elastic elements extending circumferentially of the bandage across



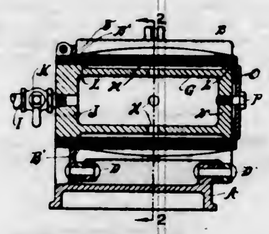
said area and tying together the substantially opposite portions of the elastic elements.

1,428,466. WRENCH. GUY AYERS, Libertyville, Ill. Filed Oct. 30, 1920. Serial No. 420,760. 1 Claim. (Cl. 81—171.)



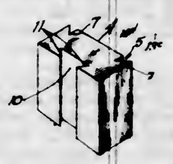
A wrench comprising a stationary jaw, a movable jaw thereon, a hollow handle connected to the stationary jaw and having a hollow projection, a screw having one end mounted in the movable jaw and the other end mounted in the projection, a nut on the screw having one end provided with serrations, a pin slidably supported by the projection and engaging the serrations, and a V-shaped leaf spring having one arm arranged vertically and pressing against said pin and the other arm resting flat against one wall of the projection, said spring being further provided with an extension extending into and lying in flat contact with the inner surface of the handle.

1,428,467. ARMOR FOR TIRES. STEPHEN ANDREWS, New York, N. Y. Filed Jan. 3, 1921. Serial No. 434,567. 2 Claims. (Cl. 152—16.)



1. An armor for pneumatic tires comprising interconnected sections disposed normally end to end in continuous relation, and elastic bands extending through the sections permitting relative movement of the sections with respect to each other.

1,428,468. WHEEL CONSTRUCTION. BURTON R. BOLENBAUGH, CYRUS BOLENBAUGH, RAY S. BOLENBAUGH, and LAURENCE W. LONG, Jackson, Mich., assignors of one-third to said Burton R. Bolenbaugh, said Cyrus Bolenbaugh and said Ray S. Bolenbaugh, one-sixth to said Long, one-sixth to Arthur Paulson, New York, N. Y., one-sixth to Hugh E. Keeler, Ann Arbor, Mich., and one-sixth to Lewis H. Flynn, Albany, N. Y. Original application filed Oct. 2, 1920, Serial No. 414,200. Divided and this application filed February 19, 1921. Serial No. 446,491. 1 Claim. (Cl. 301—11.)



In a wheel structure, the combination of a rim having an inwardly-extending, radial flange disks having outer side by side portions alongside said projection, one of the disk portions rabbeted to receive the said projection and the said other disk portion flanged to bear against the inner surface of the rim, and transverse bolts extending through and connecting the said rim flange and disk portions.

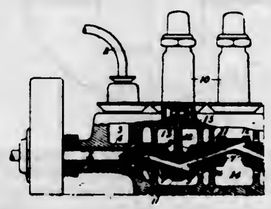
1,428,469. METHOD OF AND MACHINE FOR MANUFACTURING PAPER BARRELS. ROBERT S. BOLGER, Richmond Hill, N. Y. Filed July 14, 1919. Serial No. 310,784. 19 Claims. (Cl. 93—81.)

1. In a barrel body bilging machine, the combination of outer and inner forms between which the barrel body wall is adapted to be shaped under pressure, the inner form embodying a resilient wall held at both ends, the outer wall being bilged and non-resilient.

1,428,470. WALL CONSTRUCTION. EDWARD R. BRAINERD, Los Angeles, Calif. Filed Mar. 24, 1921. Serial No. 455,003. 3 Claims. (Cl. 72—30.)

1. A building block having one surface provided adjacent to its edges with substantially V-shaped grooves that are adapted to receive the wedge-shaped ends of wall panels, and there being a dovetail recess formed in another surface of said block adapted to receive plastic binding material in order to form an interlocking joint with an adjacent similar block.

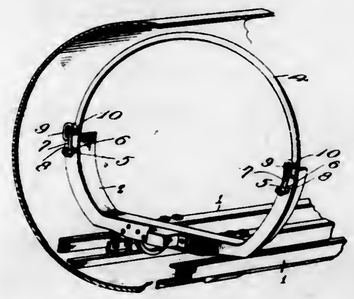
1,428,471. VALVE-SPRING LIFTER. FRANK M. BUTLER, Elko, Nev. Filed Apr. 27, 1920. Serial No. 376,948. 2 Claims. (Cl. 29—86.3.)



1. A valve lifter comprising two levers pivotally connected intermediate their ends, one of said levers being curved upwardly towards each end, from the pivot point, to form a recess adjacent the pivot, and a ring normally received in the recess but adapted to be slid towards either end of the levers.

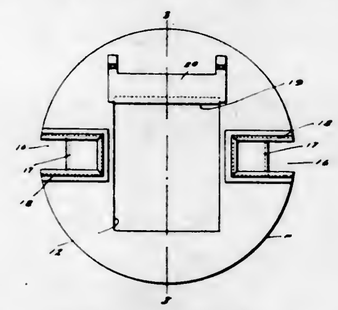
1,428,472. LOADING APPARATUS. FRED L. CATE, Detroit, Minn. Filed Apr. 29, 1921. Serial No. 465,390. 5 Claims. (Cl. 198—10.)

1. In an apparatus for the purpose set forth, a self-propelled truck, an excavating mechanism suspended forwardly of and from one end of said truck and including excavating and shoveling elements to excavate and shovel rearwardly the excavated material, an elevating conveying mechanism mounted on the forward end of said truck and projecting rearwardly from below the rear of said mechanism for receiving material therefrom, a loading conveyor projecting rearwardly from the rear end of the said elevating mechanism, means for propelling the truck, operative drive connections between said means and said mechanisms, and means for adjusting said excavating mechanism in a vertical direction, and means for adjusting said elevating conveyor mechanism at angle inclinations with respect to said excavator mechanism and truck.



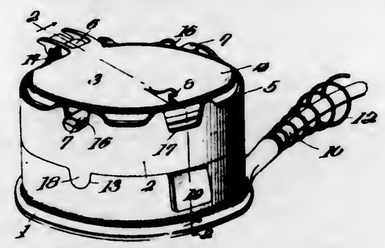
1,428,473. COMPRESSION PUMP. LEUIG CHEW and WILLIAM FREDERICK JENNINGS, London, England. Filed June 9, 1922. Serial No. 567,163. 3 Claims. (Cl. 230—27.)

1. In a compressor of the kind employed for refrigerating purposes, the combination of cylinders, pistons therein, a crank case communicating with the cylinders, bear-



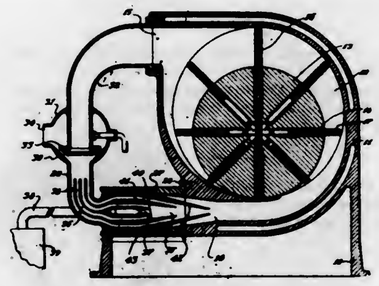
ings in the crank case, a crank shaft journaled in said bearings and having an induction passage extending therethrough and opening into the crank case, connecting rods coupled to the crank shaft for driving said pistons, said crank shaft having transverse holes leading from the induction passage to the bearings, a stuffing box for the crank shaft at one end of the crank case, a chamber in communication with said stuffing box and in connection with a source of gas and oil supply from the evaporator side of the refrigerating machine, and an annular chamber communicating with the stuffing box and the first mentioned chamber and also being in connection with the induction passage in said crank shaft, substantially as described.

1,428,474. BAIL FOR TIMBER CARS. JESSE C. COOK, Jeffersonville, Ind., and HAROLD E. AUSTIN, Louisville, Ky., assignors to American Creosoting Company, Louisville, Ky., a Corporation of Indiana. Filed Sept. 28, 1921. Serial No. 503,815. 4 Claims. (Cl. 280—179.)



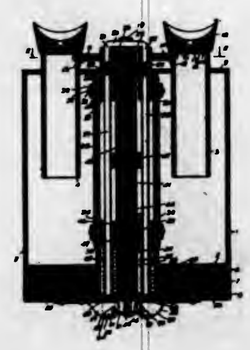
1. Bails for detachable engagement with the end sills of timber cars for wood impregnating cylinders having angularly disposed ends adapted to interlock with said end sills, a laterally projecting ear adjacent each of said angular ends and a pin in linked engagement with each ear and adapted for locking connection with the angular end of said bail.

1,428,475. MILK PAIL. GUY CORTLAND COOLIDGE, Seattle, Wash. Filed Sept. 6, 1921. Serial No. 498,734. 1 Claim. (Cl. 31—14.)



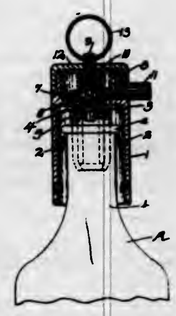
As a new and improved article of manufacture; a milk pail cover having an enlarged central opening, an inclined wall projecting downwardly from one edge of the opening and secured at its upper end thereto, a foraminated wall vertically arranged and rising from the lower end of said inclined wall and secured at its upper end to the opposite edge of the opening on the lower surface of said cover, vertically disposed side walls secured to the opposing side edges of the above mentioned walls and the side edges of the opening respectively, said walls formulating a substantially V-shaped chamber beneath said cover for the collection of foreign matter and the foraminated wall being adapted as an entrance to the pail, a plate adapted to normally cover the foraminated wall for protection thereof, a flange formed on said plate at a right angle thereto and designed to be hingedly secured to the upper surface of the cover adjacent the secured end of said foraminated wall and means associated with the edges of said cover to adjust the size thereof relatively to different size pails.

1,428,476. WAFFLE IRON. PATRICK F. CROSSAN, Allentown, Pa., assignor of one-half to William J. Ward, Allentown, Pa. Filed Mar. 16, 1922. Serial No. 544,293. 3 Claims. (Cl. 53—10.)



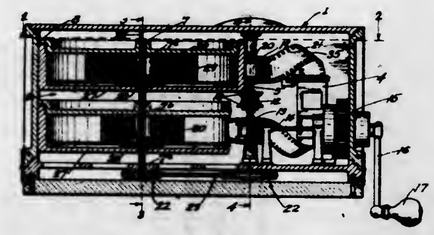
1. In combination with a waffle iron including a base and a two part hinged griddle adapted to be supported by said base for turning movement thereon, said base having recesses for the trunnions of the griddle and cut outs to receive and support the hinge of the griddle, means for superimposing the griddle on said base comprising a ring-like support having downwardly projecting tongues fitting within the recesses of said base, and ears overlapping said cut outs and frictionally engaging such base, said support having recesses for the trunnions of the griddle and cut outs to receive and support the hinge of the griddle.

1,428,477. ROTARY STEAM ENGINE. JOSÉ DEL MORAL, East Orange, N. J. Filed Oct. 2, 1920. Serial No. 414,189. 10 Claims. (Cl. 60—39.)



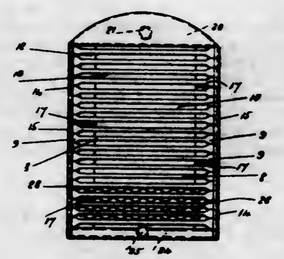
1. In an engine of the class described, a chamber having an inlet port and an exhaust port, a rotor operating within said chamber, a combining mixing apparatus or injector associated with said inlet port, a fluid supply pipe communicating with said injector, means for conveying the exhaust from the engine to said mixing chamber for further use, and relatively movable mixing blades arranged within the chamber and at opposite side of said steam nozzle.

1,428,478. FIELD GLASS. EVERETT K. DUNNE, Oneonta, N. Y. Filed Mar. 25, 1921. Serial No. 455,418. 6 Claims. (Cl. 88—35.)



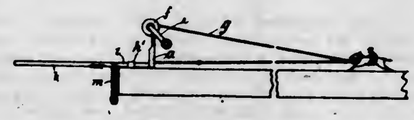
1. In a device of the character described, a U-shaped pivoting member, a pair of barrel sections pivotally connected to said U-shaped member, an auxiliary barrel section telescoping into each of the first mentioned barrel sections, means for rockably connecting the auxiliary barrel sections to said U-shaped member, and means for permitting the same to move in or out of said first mentioned barrel sections, said auxiliary sections being centrally arranged in said first mentioned barrel sections.

1,428,479. NONREFILLABLE-BOTTLE CAP. PAUL FUZY, Sheridan, Pa. Filed Feb. 21, 1921. Serial No. 446,680. 1 Claim. (Cl. 215—18.)



In a device of the character described, a body provided adjacent to its upper end with a web element dividing the body into an upper and a lower compartment, upwardly and inwardly inclined resilient members mounted within the lower compartment of the body, a tubular member depending from said web element and adapted to fit into the neck of the bottle, a valve mounted in the upper compartment of the body and adapted to close the upper end of said tubular member, a cover member secured on the upper end of the body, a rod slidable through said cover member, a disc secured on the lower end of the rod and positioned to press upon said valve so as to hold the same seated, and an expansion coil spring confined between said disc and the cover member.

1,428,480. FILM MAGAZINE FOR MOTION-PICTURE CAMERAS. ROLAND J. GIROUX, Los Angeles, Calif. Filed Nov. 11, 1920. Serial No. 423,348. 2 Claims. (Cl. 88—17.)

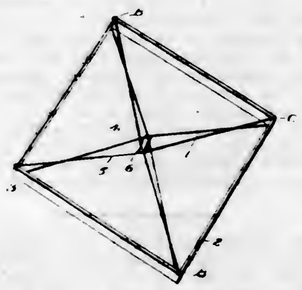


1. A motion picture camera comprising film reels disposed in planes parallel to each other, a film guide having its ends arranged in the same planes as the reels, and a film wound from one reel to the other and having its intermediate portion extended through the film guide.

1,428,481. RADIATOR. CHARLES W. GROSS, Napa, Calif. Filed Dec. 14, 1920. Serial No. 430,639. 5 Claims. (Cl. 257—131.)

1. In a radiator, a series of superposed tubular units, each unit being rectangular in cross-section and relatively broad in proportion to its depth, said units having end portions which are deeper than their main portions and which are stacked one above another, thereby forming horizontal air passages between the said main portions, the said end portions being open at each end and the said main portions having flat and parallel upper and lower sides between the said end portions, and vertical side chambers secured over the ends of the tubular units and operating to distribute the cooling fluid to them.

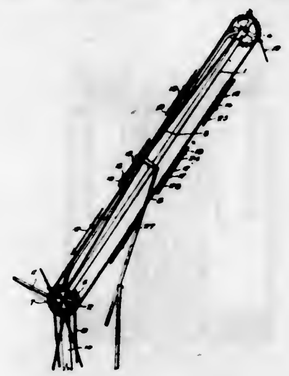
1,428,482. GAME APPARATUS. JOHN HAMPSON, London, England. Filed July 7, 1921. Serial No. 483,043. 6 Claims. (Cl. 46—56.) (Granted under the provision of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. Apparatus for playing race games, comprising in combination a stirrup shaped fitting carrying a rotatable spindle provided at one end with a handle and having a portion of its length formed as an irregular surface, a flexible member attached to a model and at one end to said spindle and supporting means for said fitting permitting the same to be manipulated in a horizontal plane during rotation of the spindle.

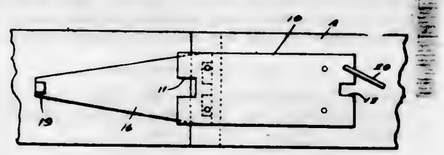
1,428,483. PUMP. LEWIS H. HANEY, Los Angeles, Calif., assignor to Standard Deep Well Company, Los Angeles, Calif., a Corporation of California. Filed June 20, 1921. Serial No. 478,990. 2 Claims. (Cl. 103—90.)

1. A pump comprising a casing formed of sections, a pair of coupling sleeves connecting the confronting ends of adjacent sections, one of said sleeves exceeding in diameter that of the sections and tapered in one direction from a point substantially medially of its ends, the other sleeve being relatively short and tapered from the first sleeve to the adjacent section, a plurality of vanes disposed radially within and formed integarily with the short sleeve, a bearing sustained axially within the sleeve by said vanes, a shaft journaled in the bearing, and an impeller fixed to the shaft and disposed within the first sleeve.



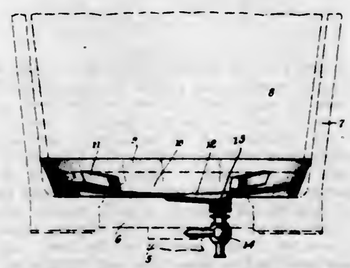
1,428,484. BRACE. SANDER LANKHEET, Hamilton, Mich. Filed May 24, 1920. Serial No. 383,976. 1 Claim. (Cl. 189—34.)

A brace comprising a frame, wires secured to said frame at its corners and crossing each other at their center at an angle, a tensioning pin having intersecting slots in each end for receiving said wires therein, said pin being of a predetermined length to separate the wires into sets and hold them under tension, and elements securing the ends of said wires to said frame.



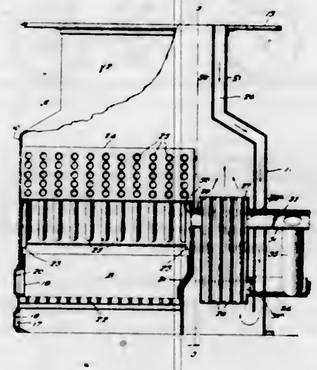
1,428,485. ELEVATOR. SANDER LANKHEET, Hamilton, Mich. Filed Sept. 18, 1920. Serial No. 411,031. 4 Claims. (Cl. 198—179.)

1. In an elevator construction, a traveling chain, rotary sprockets for moving said chain, hooks pivotally connected to the chain at spaced points, and clips secured to the chain at spaced points, said clips adapted to en-



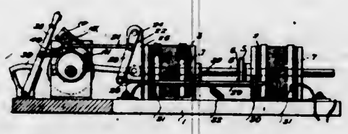
gage the adjacent hook during travel of the clips about the sprockets for moving the hooks into loading and unloading positions.

1,428,486. RIM EXPANDER AND LOCK. THOMAS F. LAWTER, Newcastle, Ind. Filed Oct. 18, 1920. Serial No. 417,618. 1 Claim. (Cl. 301—33.)



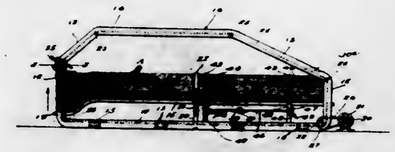
Means for expanding and locking a split rim comprising a plate secured upon the inner periphery of the rim at one side of and projecting beyond the split, said plate being formed at each end with a rectangular recess, a block secured upon the opposite side of the split, a leaf hinged upon said block and carrying a lug adapted to be engaged within the recess adjacent the split and formed at its free end with a lug engageable within the other recess, and a latch member pivoted upon the plate at the end remote from the split and engageable transversely over the leaf when the latter is swung into engagement with the plate.

1,428,487. SAUCER. DORR FRANKLIN LOUDON, New York, N. Y. Filed Nov. 2, 1921. Serial No. 512,366. 3 Claims. (Cl. 47—19.)



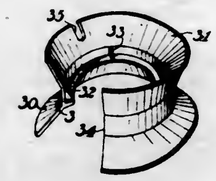
1. A saucer, including a side wall, and a base, the lower edges of said side wall extending to points below the point of connection of the base with said side walls, said base having its upper face curved downwardly towards the central point and being formed with a groove in its upper face, the base of said groove being inclined away from said central point and terminating in an opening at its opposite end.

1,428,488. FURNACE. DENNIS J. MCNERNEY, Portland, Oreg. Filed Mar. 22, 1921. Serial No. 454,345. 4 Claims. (Cl. 126—109.)



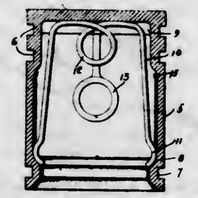
1. A furnace comprising an outer casing, a fire box including a relatively small casing having an open top, a plurality of heating drums or units closing said top, an additional heating drum or unit arranged at the rear of the fire box and communicating therewith, cold air ducts arranged within the outer casing, a smoke pipe leading from the additional heating drum, and a damper in said pipe.

1,428,489. ELECTRIC ENGINE. HARRISON MACE, Sidewood, Saskatchewan, Canada. Filed Feb. 6, 1920. Serial No. 356,723. 1 Claim. (Cl. 172—126.)



An electric engine comprising in combination a pair of electro-magnets having their cores provided with guide bores, a rod having its end portions slidable through said bores, an armature secured upon said rod and movable between the magnet cores, a support, a crank shaft journaled through said support and having a crank portion, a link connected with said rod and with said crank portion, a magnet controlling circuit including two contacts, and a reciprocatory switch bar adapted to contact therewith alternately, an eccentric cam on said shaft, a strap encircling said cam and having an arm, a guide pivoted upon said support, a slide movable within said guide and pivotally connected with said arm, a rod connected with said arm and with said reciprocatory switch bar, and means connected with said guide whereby to reverse its position for bringing the switch bar initially in engagement with either of said contacts, said means comprising a pivoted lever, a link connected with said lever and with said arm, and a notched segment moved over by the lever and adapted to hold the latter in selected position.

1,428,490. BUG-DISPLAY DEVICE. ISRAEL MALASKY, Johnstown, Pa. Filed Oct. 31, 1921. Serial No. 511,618. 4 Claims. (Cl. 211—22.)

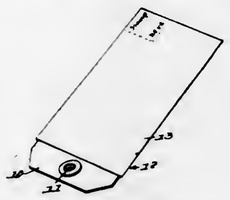


1. A display device of the character described comprising a pair of end frames of channel iron formation, a platform located between said frames for supporting a pile of rugs in normally superposed relation, elongated bars to be secured upon all the rugs at one end thereof and having their ends projecting into said channel frames, sprockets within said channeled frames, endless chains trained about said sprockets and simultaneously driven, and gripping members carried by said chains for engagement with the successive bars comprising shank members slidably associated with the chains, blocks carried by said shank members, and heads slidably associated with the block members and having cam noses.

1,428,491. ATTACHMENT FOR MILK-CAN-WASHING MACHINES. CHARLES A. MUSGRAVE, Seattle, Wash., assignor of one-half to A. N. Hendry, Seattle, Wash. Filed Feb. 5, 1921. Serial No. 442,705. 6 Claims. (Cl. 141—7.)

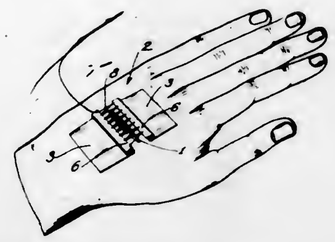
1. An attachment for milk can washing machines for handling small sizes of cans comprising a sleeve adapted to be placed upon the normal can supports and to receive the neck of the smaller sizes of cans, the ends of said sleeve being flared outwardly.

1,428,492. PISTON. VICTOR W. PAGÉ, New York, N. Y. Filed June 7, 1921. Serial No. 475,595. 8 Claims. (Cl. 74—108.)



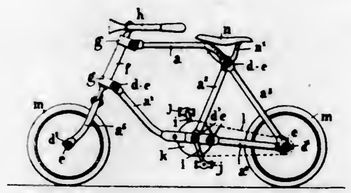
1. A piston having oppositely disposed resilient portions, and inverted U-shaped resilient member positioned within the piston and adapted to engage the resilient portions thereof to expand them relatively to the remainder of the piston.

1,428,493. LACE FASTENER. JOSEPH FRANCOIS PARADIS, Montreal, Quebec, Canada, assignor of one-half to Rene Chiquette, Montreal, Quebec, Canada. Filed Apr. 6, 1922. Serial No. 550,174. 1 Claim. (Cl. 24—122.)



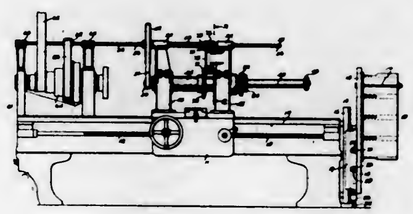
A lace fastener comprising a hook having widely spread eye bars converging to a central hook, the latter forming a lace fastening loop with said eye bars at the point of convergence of slightly less dimensions than a lace and extending on the same plane as the outer surface of said eye bars and outturned at the point.

1,428,494. PARCEL-POST-ENVELOPE TAG. WILLIAM BAUGHMAN PERRIN, Koshkonong, Mo. Filed Feb. 26, 1920. Serial No. 361,445. 1 Claim. (Cl. 229—74.)



A parcels post envelope tag consisting of a tag stub provided with means for attachment to a parcel, and a sheet consisting of a main fold and lateral flaps foldably related with the main fold, the main fold at one end being secured to the stub and the lateral flaps being attachable to the stub when folded, and a fastening flap formed with the main fold at the opposite end from the stub and having adhesive applied to its edges for securement on top of the lateral flaps.

1,428,495. ZINC-OXIDE ADHESIVE PLASTER. OWEN F. RADCLIFFE, Los Angeles, Calif. Filed Dec. 22, 1920. Serial No. 432,515. 1 Claim. (Cl. 128—335.)

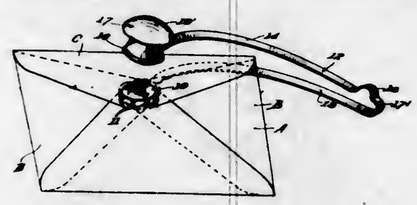


A plaster comprising a pair of adhesive strips having their confronting edges folded upon themselves to form grooves co-extensive in width with the strips and terminal flaps at the upper sides of the strips, flexible stiffening members within the grooves, and a lacing member engaging the flaps for drawing the strips toward each other, securing the flaps in overlapped relation and the stiffening members in spaced relation to each other.

1,428,496. CONSTRUCTIONAL TOY. JEAN LÉON LOUIS ROQUEFORT-VILLENEUVE, Paris, France. Filed Sept. 16, 1920. Serial No. 410,765. 3 Claims. (Cl. 208—106.)

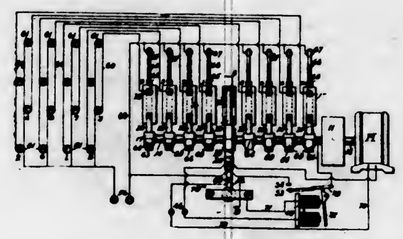
1. A toy cycle comprising a tubular member, bars extending rearwardly from said tubular member, collars surrounding said tubular member and having ears, fastening devices extending through the ends of said bars and through said ears, and a steering rod rotatably extending through said tubular member.

1,428,497. GRINDING DEVICE. CHARLES SHLAGEL, Clara City, Minn. Filed Aug. 13, 1921. Serial No. 492,049. 6 Claims. (Cl. 51—48.)



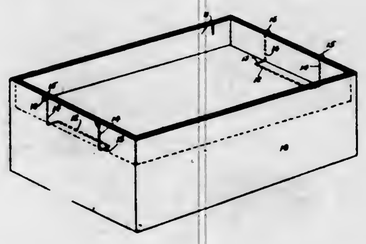
1. A grinding attachment for lathes comprising a support arranged for attachment to a lathe carriage, a work holder arranged for attachment to the tail end of a lathe and adapted to support a cylinder to be ground, an arbor carrying a grinding wheel adapted to grind the interior surface of the cylinder, an arbor supporting tube in which the arbor is journaled, a hollow shaft journaled in the said support and within which the said arbor supporting tube is divergently mounted, a driving shaft adapted to be driven from the lathe arbor, a sleeve mounted to slide on and to turn with the said driving shaft, the said sleeve being journaled in the said support, fast speed driving means connecting the said sleeve with the said arbor to rotate the latter at a high speed, and slow speed driving means connecting the said sleeve with the said hollow shaft to rotate the latter at a slow speed.

1,428,498. ENVELOPE-FASTENER-APPLYING DEVICE. ANTHONY TELLI, Washington, D. C. Filed Oct. 14, 1919. Serial No. 330,538. Renewed Feb. 2, 1922. Serial No. 533,672. 1 Claim. (Cl. 1—4.)



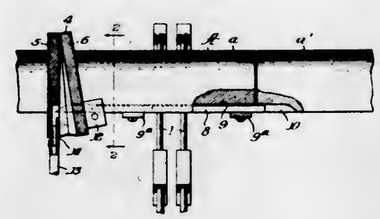
A device for applying fasteners for affixing envelope flaps and sheets formed of a single piece of metal bent back upon itself to form a pair of superposed shanks and an integral connecting resilient bight portion, the shanks being curved arcuately, an enlarged flattened head formed on one of the shanks to form an anvil, an enlarged flat

tened flange head formed on the outer end of the other shank, a weighted hammer head fitted in said flanged



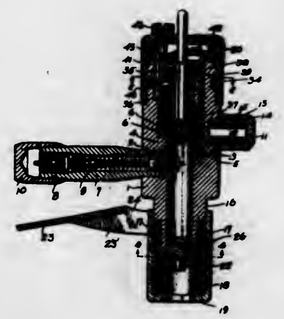
head, and an integral resilient outstruck shock absorbing bight portion formed in the shank that carries the hammer head.

1,428,499. SIGN FLASHER. JOHN H. WHEELOCK, Worcester, Mass. Filed May 11, 1917, Serial No. 168,018. Renewed Feb. 6, 1922. Serial No. 534,589. 9 Claims. (Cl. 177—346.)



8. In a system of the class described, the combination of a source of power, a circuit connected to the terminals thereof, a shaft, a controlling element and a master wheel on said shaft, means for closing contacts in said circuit by said controlling element upon the rotation of said shaft, means for thereafter closing other contacts in said circuit to complete the latter upon a predetermined rotation of said master wheel and means for thereafter shunting the circuit around said controlling element and breaking connections at the latter.

1,428,500. TRAY SUPPORT FOR BOXES. WILLIAM L. BUEDINGEN, Milwaukee, Wis. Filed July 12, 1919. Serial No. 310,377. 5 Claims. (Cl. 248—20.)

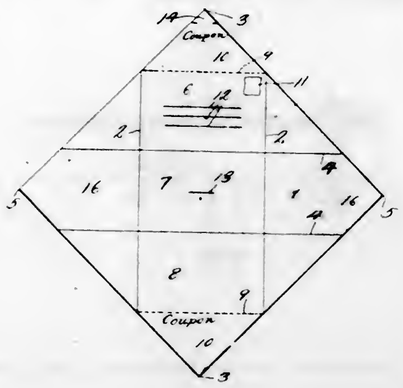


1. A box tray support comprising means for supporting a tray within a box, and means carried thereby and releasably engageable with the top edge of the tray to secure the same upon said support.

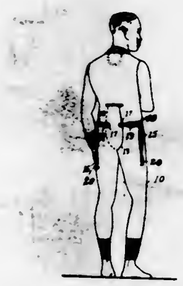
1,428,501. PNEUMATICALLY-OPERATED MUSICAL INSTRUMENT. ADOLPH P. GUSTAFSON, Chicago, Ill., assignor to M. Schulz Company, Chicago, Ill., a Corporation of Illinois. Filed June 26, 1920. Serial No. 391,898. 8 Claims. (Cl. 84—35.)

1. The combination with a transversely divided hammer rail, of means for connecting the adjacent ends of the separate sections together.

1,428,502. TIRE-PRESSURE-GAUGE CONNECTION. OSWALD H. HANSEN, New York, N. Y. Filed Mar. 26, 1921. Serial No. 455,733. 4 Claims (Cl. 285—164.)



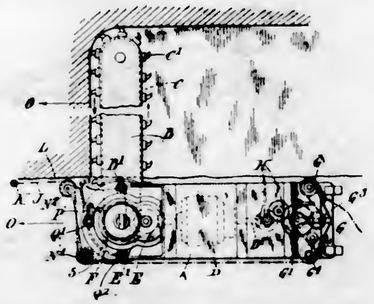
1. In a coupling of the class described, a casing, a sleeve slidable on the lower end of the casing and including an internal flange at its lower end, a resilient collar interposed between said flange and the end of said casing, a cam lever pivotally connected to the sleeve and fulcruming on the casing to slide said sleeve and positively effect internal bulging of said collar, said casing having an annular groove therein, said lever including arms straddling the casing and fulcruming on the bottom wall of said groove, and said arms being pivotally connected to said sleeve.



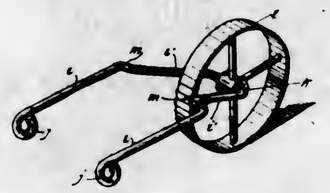
1,428,503. LETTER SHEET. MALCOLM G. MAJOR, Washington, D. C. Filed July 22, 1921. Serial No. 486,767. 3 Claims. (Cl. 229—92.7.)

3. A letter sheet comprising a square blank having central, upper and lower panel sections of the same dimensions, coupon sections at the top and bottom respectively of

the upper and lower sections, corner portions flanking the central, upper and lower sections, and the said central section having a slit disposed centrally thereof and parallel with the adjoining edges of the central and upper and lower sections.



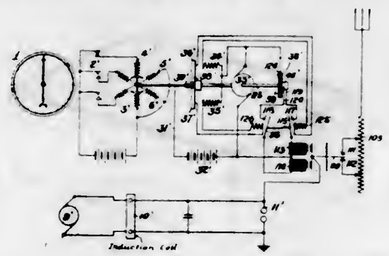
1,428,504. UNION SUIT. THOMAS HENRY SMITH, Jamestown, N. Y. Filed Mar. 23, 1921. Serial No. 454,639. 2 Claims. (Cl. 2—144.)



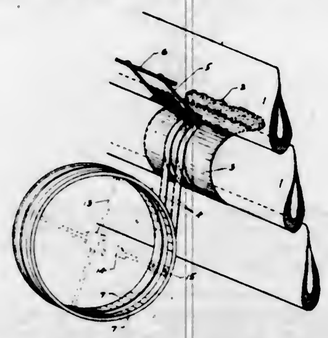
1. In combination with a garment having overlapping parts with free outer sides, a cord for each part doubled between its ends to form parallel portions that are affixed at the doubled end to the part, relatively short fabric members affixed to the garment adjacent to the respective free sides of the overlapping parts to provide a pair of parallel spaced guides which frictionally receive the respective parallel portions of the cords, the free ends of the respective cords being tied together at points beyond the fabric members so as to engage the outer ends thereof at points between the parallel guides to thereby restrict the extent of inward movement of the cords relative to the guides.

1,428,505. MINING MACHINE. MORRIS P. HOLMES, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Dec. 11, 1918. Serial No. 266,318. 21 Claims. (Cl. 262—30.)

1. In a mining machine, a casing, a laterally extending cutter bar at one end thereof, feeding mechanism on the opposite end of said casing, guiding means disposed on said casing adjacent said bar and the face, and a flexible feed member cooperating with said feeding mechanism and having a transversely extending portion engaging said guiding means.

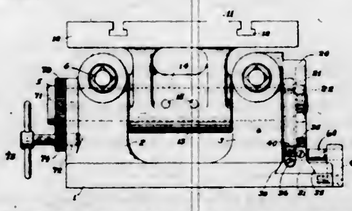


1,428,506. WHEEL-SUPPORT ATTACHMENT FOR DRAG SAW. EMIL G. KREBS, Tillamook, Oreg. Filed May 11, 1920. Serial No. 380,539. 1 Claim. (Cl. 280—61.)



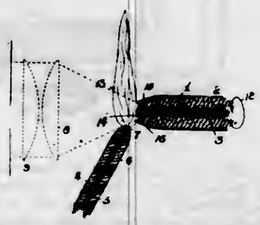
In combination with a supporting frame of the character described, provided with lateral handle bars, a wheel supporting attachment comprising, a substantially U-shaped frame, the free ends of the sides of which are provided with eyes for securing on said handle bars, the closed end of the sides being adapted to constitute a transverse axle portion, a wheel mounted on the latter, said sides being provided with offset portions constituting shoulders adapted to bear against and support said frame, said sides converging beyond said shoulders towards said axle portion to hold the wheel centrally between the sides.

1,428,507. WIRELESS REPEATER SYSTEM. ELMER A. SPERRY, Brooklyn, N. Y. Filed Mar. 12, 1920. Serial No. 365,144. 12 Claims. (Cl. 250—2.)



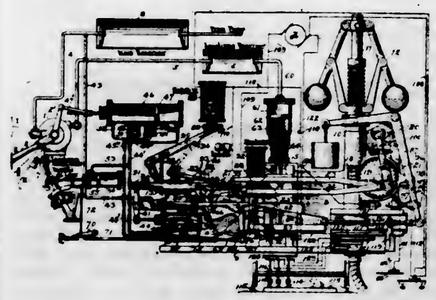
1. In combination, a pair of step-by-step repeater motors, and wireless means for causing one of said motors to follow the movements of the other of said motors in either of opposite directions.

1,428,508. METHOD OF MAKING SEMISOLID TIRES. REGINALD H. WATERS, Cumberland, Md., assignor to Kelly-Springfield Tire Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 6, 1921. Serial No. 490,293. 4 Claims. (Cl. 154—12.)



1. The method of producing a tire of the class described comprising the following steps: (*a*) winding a bifurcated strip upon an annular rim on either side of an annular support to the depth of said support; (*b*) continuing the winding with a unitary strip to the completion of the operation; (*c*) vulcanizing the structure; (*d*) removing the annular support.

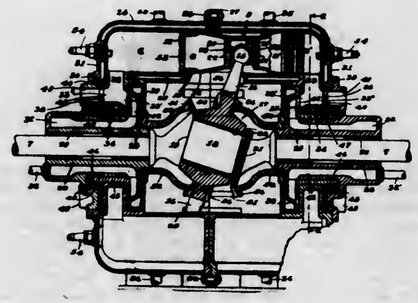
1,428,509. ANGLE BLOCK. WILLIAM H. WEINGAR, West Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 25, 1920. Serial No. 361,366. 23 Claims. (Cl. 90—59.)



1. A device comprising in combination, a base plate, an angle member mounted thereon, a slide mounted in said base plate, and means connecting said angle member and slide whereby movement of said slide relative to said base plate is proportional to the angular movement of said angle member.

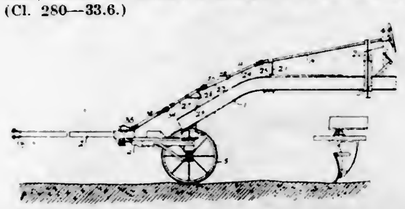
1,428,510. CONCENTRATED FLAMING ARC LAMP FOR PROJECTORS. PRESTON R. BASSETT, Brooklyn, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed June 26, 1920. Serial No. 391,973. 9 Claims. (Cl. 176—51.)

1. The method of producing a concentrated flaming arc without the employment of high current density and rapid electrode consumption, which consists in employing a positive carbon having a small, highly mineralized core of as high diameter ratio to the shell as 1:4 and a negative electrode of less diameter than the positive and operating such arc at ordinary current density.



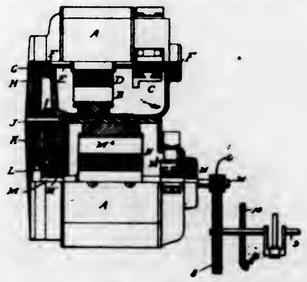
1,428,511. AUTOMATIC TRAIN-CONTROL DEVICE. HARRY G. DAVIS, Philadelphia, Pa. Filed Sept. 21, 1914, Serial No. 862,754. Renewed July 21, 1922. Serial No. 576,650. 80 Claims. (Cl. 246—66.)

12. In an apparatus of the character described the combination with an air brake mechanism capable of adjustment to "running" "service" and "lap" positions, of fluid pressure operated means to automatically adjust said air brake mechanism from "running" position to "service" position and thence to "lap" position substantially as specified.



REISSUES.

15,442. INTERNAL-COMBUSTION ENGINE. JOHN O. ALMEN, Seattle, Wash., assignor to Almen-Crosby Motors Co., Inc., Seattle, Wash., a Corporation of Washington. Filed Sept. 17, 1917. Serial No. 191,876. Original No. 1,233,635, dated July 17, 1917, Serial No. 114,982, filed Aug. 15, 1916. 12 Claims. (Cl. 123—58.)



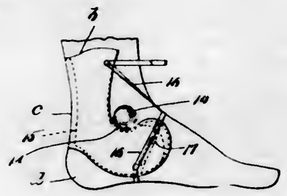
1. In an engine, a driving shaft, a plurality of parallel cylinders disposed concentrically about said shaft, passages at both ends of the cylinders for the inlet of combustible charges and for exhausting the gaseous products thereof, pistons for the respective cylinders, a rocker-head mounted on said shaft for wabbling movements, operative connections between the rocker-head and each of the pistons, and between the ends of the latter, rotary valves for controlling the inlet and exhaust gases, and means engaging the rocker-head whereby the wabbling movements of the latter will effect the operation of said valves.

15,443. STEERING GEAR FOR ROAD MACHINES. FRANKLIN E. ARNDT, Galion, Ohio, assignor to The Galion Iron Works and Manufacturing Company, Galion, Ohio, a Corporation of Ohio. Filed May 9, 1918. Serial No. 233,580. Original No. 1,166,036, dated Dec. 28, 1915, Serial No. 48,483, filed Sept. 1, 1915. 6 Claims. (Cl. 280—33.6.)

3. In a road machine, laterally disposed frame bars, a front or steering axle, a draft pole oscillatable laterally relative to the axle, and means for moving said draft pole to different angular positions relative to the line of draft of the machine including an operating shaft comprising a plurality of flexibly connected sections, one of said sections intermediate the ends of the shaft being relatively short, and means for supporting said short shaft section comprising an oscillatable bracket disposed above the laterally disposed frame bars and having its axis of oscillation approximately coincident with the axis of oscillation of the tongue, the short shaft section being journalled for axial rotation within the bracket, the forward portion of said short shaft section, when the bracket is turned to carry the shaft section approximately at right angles to the line of draft, projecting beyond said frame bars.

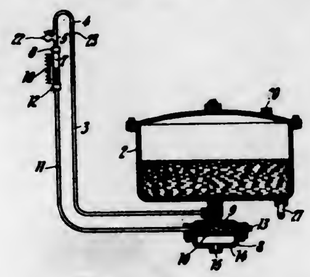
15,444. ENGINE STARTER. FRANK E. FISHER, Detroit, Mich. Filed Apr. 2, 1917. Serial No. 159,336. Original No. 1,113,156, dated Oct. 6, 1914, Serial No. 749,783, filed Feb. 21, 1913. 10 Claims. (Cl. 290—36.)

10. An electric starting and current generating apparatus for use with internal combustion engines comprising an enclosing frame adapted to be suitably supported in the chassis of an automobile, a shaft rotatably mounted in said frame, a motor and a generator both connected to said frame, said shaft being in alinement with and having a direct connection with the rotary element of the generator, and speed reduction gearing, and a ratchet driving mechanism between said shaft and the rotary element of the motor, said gearing and ratchet driving mechanism being incased in said frame.



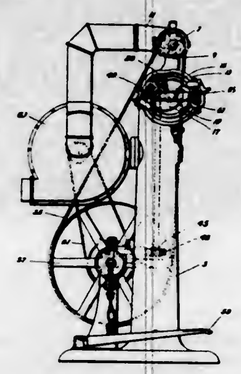
15,445. CHAIN CONNECTION. ALBERT P. GRIFFIN, Troy, N. Y., assignor of one-half to Arrow Grip Manufacturing Company, Inc., Glens Falls, N. Y., a Corporation of New York. Filed Apr. 21, 1922. Serial No. 555,902. Original No. 1,394,618, dated Oct. 25, 1921, Serial No. 459,382, filed Apr. 7, 1921. 9 Claims. (Cl. 24—232.)

1. A chain-connection comprising in combination a guard having a pair of trunnions on opposite sides of a circumferential flange, and provided with an open link-receiving slot along one side of said flange and trunnions; and a U-shaped link having terminals rotatively engaging



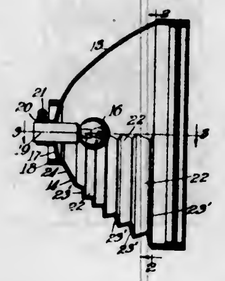
the respective trunnions and severally provided with link-receiving openings adapted to register with said open slot in one rotative position of said U-shaped link relatively to said guard.

15,446. ANKLE SUPPORTER. HARRY B. HAMILTON, New York, N. Y. Filed June 17, 1922. Serial No. 569,172. Original No. 1,397,095, dated Nov. 15, 1921, Serial No. 444,126, filed Feb. 11, 1921. 5 Claims. (Cl. 128—166.)



1. In an ankle supporter, in combination, a member to engage and support a thick portion of the side of the foot, and a filling member projecting from and beyond the inner surface of said member and arranged to engage and directly support a thinner portion of the foot adjacent to the ankle bone which is not directly supported by said member.

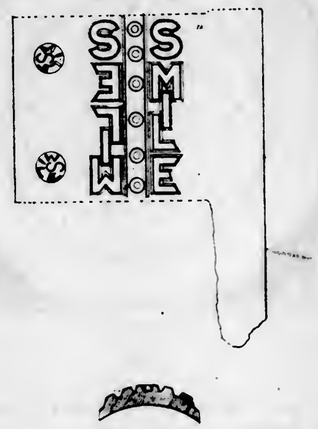
15,447. LIQUID LEVEL INDICATOR. ABRAHAM NOVICK, Brooklyn, N. Y., and EDWARD FISH, New York, N. Y., assignors to Ferdinand L. Smithe, New York, N. Y. Filed Dec. 28, 1921. Serial No. 526,628. Original No. 1,394,336, dated Oct. 18, 1921, Serial No. 441,722, filed Feb. 2, 1921. 8 Claims. (Cl. 73—54.)



1. In a liquid level indicator a tank for holding the liquid to be gaged, means forming a chamber and having a yieldable diaphragm forming one wall of the chamber, a pipe connecting the bottom portion of said tank with said chamber and including a transparent portion, said chamber and that portion of said connecting pipe extending from said chamber to said transparent portion being filled with an indicating liquid, that portion of said pipe extending from said tank to said transparent portion being in the form of an inverted U-bend containing in that part thereof adjacent said tank liquid similar to that to be gaged, and a pressure transmitting fluid in the U-bend portion of said pipe between the levels of the two liquids.

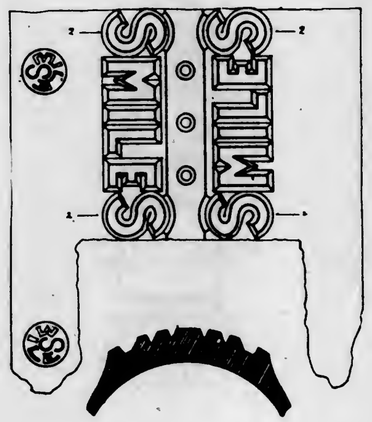
15,448. HEEL GOUGING AND LIP-CUTTING MACHINE. JOSEPH H. POPE, Hamilton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 13, 1922. Serial No. 543,510. Original No. 1,396,143, dated Nov. 8, 1921, Serial No. 262,295, filed Nov. 13, 1918. 23 Claims. Cl. 12—46.)

1. A machine of the class described, having in combination, a cutter, a holder for a heel, and power actuated means for causing the heel to be traversed by the cutter from a point near the rear of the heel to the breast thereof to form a gouge and for increasing the depth of the cut at the breast end to form a lip.



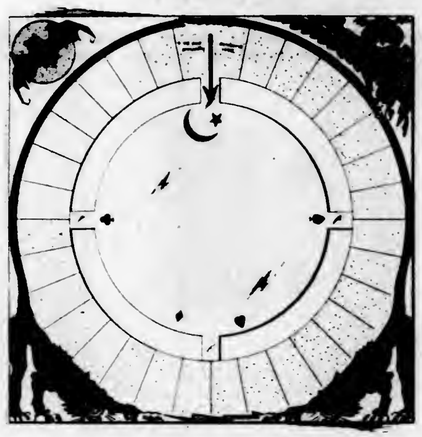
15,449. NONGLARE HEADLIGHT. CHARLES E. POST and PAUL G. WAGNER, Chicago, Ill., assignors to Frank E. Nellis, jr., Chicago, Ill. Filed Nov. 16, 1917. Serial No. 202,437. Original No. 1,189,621, dated July 4, 1916, Serial No. 87,047, filed Mar. 27, 1916. 11 Claims. (Cl. 240—41.)

1. In a non-glare headlight, the combination of a parabolic reflector having its upper half smooth and its lower half containing a plurality of concave reflector plates, said plates being portions of concentric spheres whose center is a point on the axis of the parabola slightly in advance of the focus thereof, and a light located at said point.



DESIGNS.

61,432. TIRE. HIRAM J. ANDRUS, Akron, Ohio. Filed Jan. 28, 1920. Serial No. 354,750. Term of patent 14 years.



The ornamental design for a tire substantially as shown.

61,433. TIRE. HIRAM J. ANDRUS, Akron, Ohio. Filed Oct. 3, 1921. Serial No. 505,197. Term of patent 3½ years.

The ornamental design for a tire substantially as shown.

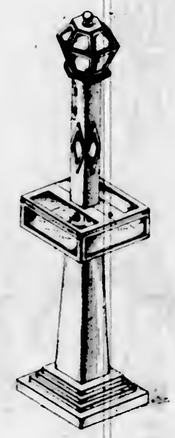
61,434. CHART FOR EDUCATIONAL GAMES. ALFRED Z. BAKER, Newark, N. J., assignor to Fulton Specialty Co., a Corporation of New Jersey. Filed May 18, 1921. Serial No. 470,613. Term of patent 14 years.

The ornamental design for a chart for educational games, as shown.

61,435. COMBINED BULLETIN AND TIME BOARD. IRA A. BURNETT, Chicago, Ill. Filed Dec. 23, 1921. Serial No. 524,505. Term of patent 7 years.

The ornamental design for a combined bulletin and time board, as shown.

61,436. WALL PAPER. EMILE ERICSON, New York, N. Y., assignor to Standard Wall Paper Co., Hudson Falls, N. Y., a Corporation of New York. Filed May 20, 1922. Serial No. 2,334. Term of patent 7 years.



The ornamental design for wall paper, as shown.

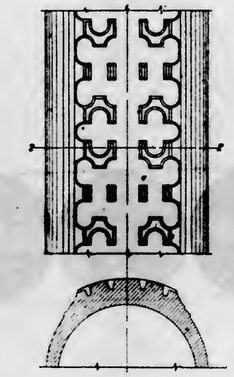
61,437. FLAG. STANLEY GADOMSKI, Chicago, Ill. Filed May 31, 1922. Serial No. 2,475. Term of patent 7 years.

The ornamental design for a flag, as shown.

61,438. DISPLAY STAND. JACOB GOLDBERG, Philadelphia, Pa. Filed Jan. 26, 1922. Serial No. 364. Term of patent 14 years.

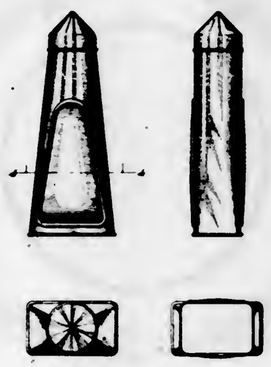
The ornamental design for a display stand as shown.

61,439. PLATE OR SIMILAR ARTICLE. WILLIAM D. HAVILAND, Limoges, France, assignor to Theodore Haviland & Co., New York, N. Y. Filed Dec. 2, 1921. Serial No. 519,529. Term of patent 14 years.



The ornamental design for a plate or similar article, as shown.

61,440. PLATE OR SIMILAR ARTICLE. WILLIAM D. HAVILAND, Limoges, France, assignor to Theodore Haviland & Co., New York, N. Y. Filed Dec. 2, 1921. Serial No. 519,530. Term of patent 14 years.

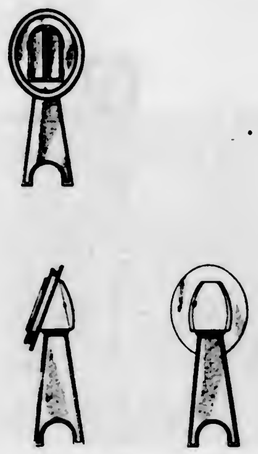


The ornamental design for a plate or similar article, as shown.

61,441. TIRE TREAD. EARL A. HECHT, Mansfield, Ohio. Filed Dec. 1, 1921. Serial No. 519,295. Term of patent 14 years.

The ornamental design for a tire tread as shown.

61,442. POWDER CONTAINER. CLEN S. HUMPHREY, Brooklyn, N. Y. Filed Oct. 6, 1921. Serial No. 505,939. Term of patent 14 years.



The ornamental design for a powder container, substantially as shown.

61,443. SIGNAL LENS PLATE. DELMAR LEWIS JOHNSON, St. Louis, Mo. Filed Dec. 12, 1921. Serial No. 521,939. Term of patent 7 years.

The ornamental design for a signal lens plate, as shown.

61,444. TELEPHONE CABINET. CHRIS A. MARTIN, Los Angeles, Calif. Filed Aug. 31, 1921. Serial No. 497,377. Term of patent 3½ years.

The ornamental design for a telephone cabinet as shown.

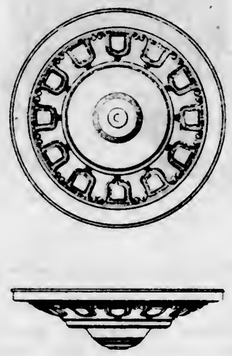
61,445. AVIATOR'S BADGE. HENRI MARVET, Houston, Tex., assignor to J. J. Sweeney Jewelry Co., Houston, Tex., a Corporation. Filed July 15, 1918. Serial No. 245,124. Term of patent 7 years.

The ornamental design for an aviator's badge, as shown.

61,446. CLASS RING. GEORGE A. MEELL, Philadelphia, Pa., assignor to Bailey, Banks & Biddle Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 9, 1922. Serial No. 2,141. Term of patent 7 years.

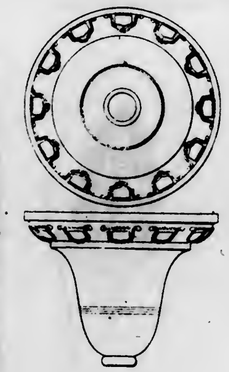
The ornamental design for a class ring, as shown.

61,447. PNEUMATIC-TIRE TREAD. OWEN MOYNIHAN, Cleveland, Ohio. Filed Apr. 8, 1920. Serial No. 371,160. Term of patent 7 years.



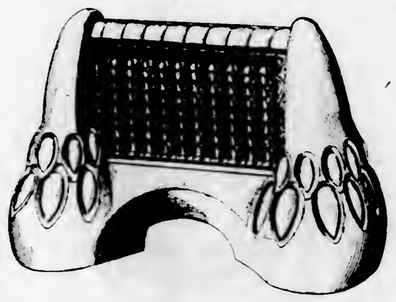
The ornamental design for a pneumatic tire tread, as shown.

61,448. FLOWERPOT. DANIEL RAYMOND, San Jose, Calif., assignor to Garden City Pottery Company, Inc., San Jose, Calif. Filed Dec. 20, 1921. Serial No. 523,785. Term of patent 14 years.



The ornamental design for a flower pot as shown.

61,449. CHANDELIER PLATE. MORRIS SCHLEPP, New York, N. Y. Filed Nov. 28, 1921. Serial No. 518,457. Term of patent 7 years.



The ornamental design for a chandelier plate, as shown.

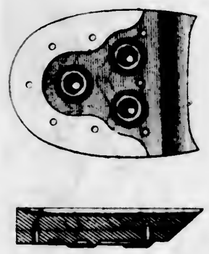
61,450. CEILING CANOPY. MORRIS SCHLEPP, New York, N. Y. Filed Nov. 28, 1921. Serial No. 518,458. Term of patent 7 years.

The ornamental design for a ceiling canopy, as shown.

61,451. GAS HEATER. GUSTAVE F. SCHMIDT, Chicago, Ill. Filed Dec. 23, 1921. Serial No. 524,501. Term of patent 7 years.

The ornamental design for a gas heater as shown.

61,452. EMBLEM OR BADGE. HOWARD E. SMART, Omaha, Nebr. Filed Oct. 14, 1921. Serial No. 507,800. Term of patent 14 years.

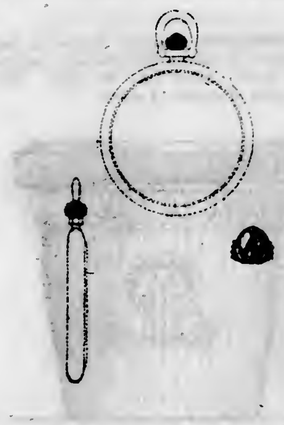


The ornamental design for an emblem or badge as shown.

61,453. RUBBER SOLE. DUDLEY M. TODD, Chicago, Ill., assignor to Dryden Rubber Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 13, 1922. Serial No. 685. Term of patent 14 years.

The ornamental design for a rubber sole as shown.

61,454. RUBBER HEEL. DUDLEY M. TODD, Chicago, Ill., assignor to Dryden Rubber Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 13, 1922. Serial No. 686. Term of patent 14 years.

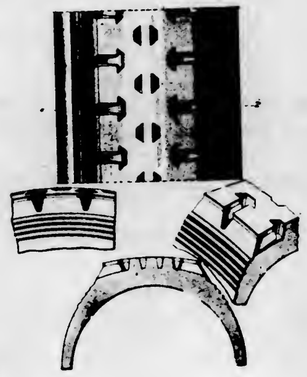


The ornamental design for rubber heel as shown.

61,455. RING. ALBERT VERBER, New York, N. Y. Filed May 5, 1922. Serial No. 2,093. Term of patent 7 years.

The ornamental design for a ring, as shown.

61,456. WATCHCASE CROWN. LOIS MCG. WILLIAMS, Fort Thomas, Ky., assignor to The Wadsworth Watch Case Company, Dayton, Ky., a Corporation of Kentucky. Filed May 15, 1922. Serial No. 2,243. Term of patent 14 years.



The ornamental design for a watchcase crown, substantially as shown.

61,457. ADVERTISING DEVICE. FRANK S. WOODROW, New York, N. Y. Filed Dec. 16, 1921. Serial No. 522,928. Term of patent 7 years.

The ornamental design for an advertising device, substantially as shown.

61,458. TIRE TREAD. PAUL WORTH, Akron, Ohio, assignor to The India Tire and Rubber Company, Mogadore, Ohio, a Corporation of Ohio. Filed July 10, 1922. Serial No. 3,025. Term of patent 14 years.

The ornamental design for a tire tread as shown.

TRADE-MARKS

OFFICIAL GAZETTE, SEPTEMBER 5, 1922.

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 117,379. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES.) WILLIAM G. HENNENHOFER, doing business as Savage Grip Sales Company, Denver, Colo. Filed Apr. 11, 1919.

SAVAGE-GRIP.

No claim is made to the word "Grip" apart from the mark as shown.

Particular description of goods.—Patches for Fabric Tires and Inner Tubes.

Claims use since 1919.

Ser. No. 120,909. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) COCKATOO PRESERVES LIMITED, doing business as Manufacturers, Collingwood, Victoria, Australia. Filed July 25, 1919.

Trade-mark consists of the word "Cockatoo" and the representation of a cockatoo resting on a bough.

Particular description of goods.—Anchovy Essence (a Sauce Made from Anchovies), Coffee Essence, Coffee and Chicory Essence, Cheese, Chutney, Canned Fruits, Fruit Relish, Fruit Salad, Honey, Herbs, Jams, Jellies, Marmalade, Mushroom Catchup, Parisian Essence, Pickles, Preserved Fruits, Fruit Sauces, Tomato Catchup, Tomato Soup, Tomato Purée, Tomatoes (Canned), Vinegar, Banana Butter, Lemon Butter, Peanut Butter, Pineapple Butter, Raspberry Butter, and Vanilla Butter (a Compound Made from Butter, Eggs, and Flavoring, and Used as a Filling).

Claims use since Apr. 14, 1899.

Ser. No. 122,185. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) PITTSBURGH LAMP, BRASS & GLASS COMPANY, Pittsburgh, Pa. Filed Aug. 30, 1919.

No claim is made to the word "Pittsburgh" nor to the representation of the goods apart from the mark shown.

Particular description of goods.—Oil Stand Lamps, Oil Hanging Lamps, Portable Gas Lamps, and Oil Stoves.

Claims use since about Aug. 16, 1919.

Ser. No. 124,640. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) BUOB AND SCHEU, Cincinnati, Ohio. Filed Nov. 7, 1919.

LIMO

Particular description of goods.—Automobile Tops and Curtains.

Claims use since Oct. 10, 1919.

Ser. No. 125,501. (CLASS 37. PAPER AND STATIONERY.) HIGHLAND MANUFACTURING COMPANY, Holyoke, Mass. Filed Dec. 2, 1919.

AUTHOR'S Linen

No exclusive claim to the use of the word "Linen."

Particular description of goods.—Writing, Typewriting, and Printing Papers, Papeteries; Writing, Correspondence, and Index Cards, and Writing Tablets and Pads.

Particular description of goods.—Nonalcoholic, Noncereal, Maltless Beverage Sold as Soft Drinks and Sirup for Same.
Claims use since Sept. 30, 1910.

158,581. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) OSCAR C. MACK, doing business as O. C. Mack and Co., St. Louis, Mo. Filed May 4, 1922. Serial No. 163,340.

THE VISIBLE

Particular description of goods.—Chemical for Testing Woolen and Silk Fabrics.
Claims use since May 5, 1903.

158,582. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) POULTRY PRODUCERS OF CENTRAL CALIFORNIA, INC., San Francisco, Calif. Filed Feb. 1, 1921. Serial No. 143,058.

NULAID

Particular description of goods.—Eggs.
Claims use since July, 1919.

158,583. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) REMINGTON SALT COMPANY, Ithaca, N. Y. Filed May 8, 1922. Serial No. 163,538.

REMINGTON

Particular description of goods.—Salt.
Claims use since on or about Jan. 1, 1902.

158,584. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE SCHOLL MANUFACTURING COMPANY, Chicago, Ill. Filed Apr. 4, 1922. Serial No. 161,754.

Dr Scholl's

Particular description of goods.—Preparations for Use in the Treatment of Foot Troubles.
Claims use since on or about May 1, 1916.

158,585. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE SCHOLL MANUFACTURING COMPANY, Chicago, Ill. Filed Apr. 4, 1922. Serial No. 161,756.

Dr Scholl's

Particular description of goods.—Preparations for Use in the Treatment of Foot Troubles.
Claims use since 1915.

158,586. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JEAN SÉNÉGAS, New York, N. Y. Filed Apr. 8, 1922. Serial No. 161,945.

JEAN'S

Particular description of goods.—Cosmetics, Particularly Solutions for Lightening the Hair.
Claims use since 1902.

158,587. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) TRACY-WALDRON FRUIT COMPANY, Lodi, Calif. Filed Sept. 16, 1921. Serial No. 153,019.

Besgrade

Particular description of goods.—Fresh Grapes.
Claims use since July 16, 1921.

TRADE-MARK REGISTRATIONS RENEWED.

20,628. BOLTS FOR CARRIAGES, MACHINES, PLOWS, ETC. Registered January 19, 1892. THE UPSON NUT COMPANY, Unionville, Conn.; The Bourne-Fuller Company, Cleveland, Ohio, assignee. Renewed January 19, 1922.

21,267. TEA. Registered June 7, 1892. PAXTON & GALLAGHER, Omaha, Nebr.; Paxton & Gallagher Co., a Corporation of Nebraska, assignee. Renewed June 7, 1922.

21,268. TEA. Registered June 7, 1892. PAXTON & GALLAGHER, Omaha, Nebr.; Paxton & Gallagher Co., a Corporation of Nebraska. Renewed June 7, 1922.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

COMMISSIONER'S DECISIONS.

EX PARTE FESENMEIER.

Decided August 8, 1922.

1. CLAIMS—PRODUCT DEFINED BY THE PROCESS.

The rule against allowing claims for a product defined by the steps of the process of producing it is well enough settled, and the objections to the violation of the rule are material and should not be lightly disregarded. Where it is possible to define a product by its characteristics, this should be done.

2. SAME—HOW THE CHARACTERISTICS OF A PRODUCT ARE ASCERTAINED.

It is not necessary that the characteristics of the product as defined in a claim be such that the general public by a mere casual inspection can determine the novel features. It is sufficient if this may be done by an expert, or by bending, breaking, chemically testing, or even destroying the particular specimen or article.

3. SAME—PRODUCT NEW.

When the product is novel and involves invention and can not be defined except by the process involved in its creation, there are cases holding such a claim may be allowed, and such a claim has been sustained by the courts. (*Globe Nail Co. v. U. S. Horse Nail Co.*, 19 Fed., 819; *Oval Wood Dish Co. et al. v. Sandy Creek N. Y. Wood Mfg. Co.*, 62 Fed., 285.)

4. SAME—PRODUCT OLD.

Where the product is old, it is not patentable merely because a new process of producing it has been discovered, nor does a claim become patentable merely by including the steps of the new process. (*Cochrane et al. v. Badische Anilin & Soda Fabrik*, 111 U. S., 293.)

5. SAME—WHEN CLAIM SHOULD BE ALLOWED.

When a product is better cooked and rended, is more concentrated, more palatable, better flavored, and contains all the essential oils, essences, and aromas extracted in the process of producing the product, and these qualities can not be described in a claim so as to identify the product save by including the steps of the process involved, *Held* such a claim should be allowed.

APPEAL from Examiners in Chief.

HOP LIQUID PRODUCT AND PROCESS OF MAKING SAME.

Application filed November 11, 1920, No. 423,383.

Messrs. Alexander and Dowell for the applicant.

KINNAN, *First Assistant Commissioner:*

This is an appeal from the decision of the Examiners in Chief, rejecting claims 4, 5, and 6, of which claim 4 will serve for illustrative purposes:

4. The herein described hop liquid product obtained by subjecting a mixture of fresh cured hops and liquid in a hermetically sealed container to a temperature sufficient to extract all the essential oils, essences, and aromas from the hops and disseminate same through the liquid.

The references are: Hoehl, 1,381,833, June 14, 1921; Moore, British, 522, March 2, 1853.

A further reference is the patent to Lawrence, No. 156,802, Nov. 10, 1874.

The alleged invention relates to the production of a canned substance containing a mixture of hops and a liquid hermetically sealed in the container. Appellant has been allowed claims for the process by which he produces his product, and is here seeking the allowance of claims for the product defined by the steps of the process by which it is produced.

The rule against allowing claims for a product defined by the steps of the process of producing it is well enough settled, and the objections to the violation of the rule are material and should not be lightly disregarded. Where it is possible to define a product by its characteristics, the practice is clearly settled that this should be done. Where, however, the product is novel and involves invention and can not be defined except by the steps of the process involved in its creation, there are cases holding that such a claim may be allowed, and it has been sustained by a Court.

In *ex parte Painter* (57 O. G., 999; C. D., 1891, 200), the Commissioner stated:

When the case arises that an article of manufacture is a new thing, a useful thing, and embodies invention, and that article can not be properly defined and discriminated from the prior art otherwise than by reference to the process of producing it, a case is presented which constitutes a proper exception to the rule.

In *ex parte Shneckner* (106 O. G., 765; C. D. 1903, 315) the Commissioner stated:

It is the general rule that an article of manufacture should not be defined in the claim by the process of making it.

That objections to such a claim have been raised by courts, in the adjudication of patent cases, is clear enough. In the *Hide-Ite Leather Company et al.* v. *Fibre Products Company et al.*, Circuit Court of Appeals of the First Circuit (226 F. R., 34), the court, referring to such a claim, stated:

It is also a well recognized rule that, although a product has defined characteristics by which it may be identified apart from the process, still, if in a claim for the product, it is not so described, but is set forth in the terms of the process, nothing can be held to infringe the claim which is not made by the process.

This holding is based upon the rule of the Supreme Court of the United States in the case of Cochrane et al. *v.* Badische Anilin & Soda Fabrik, 111 U. S., 293, in which the court said:

Every patent for a product or composition of matter must identify it so that it can be recognized aside from the description of the process for making it, or else nothing can be held to infringe the patent which is not made by that process.

Where the product is new and has been defined in this way, claims of such character have been sustained. as was above noted. In the *Globe Nail Co.* v. *United States Horse Nail Co.* (19 Fed., 819), a claim for a horseshoe nail made by certain steps recited in the claim was sustained.

In the case of *Oval Wood Dish Co. et al.* v. *Sandy Creek, N. Y., Wood Mfg. Co.* (60 Fed., 285), Judge Coxe, in holding the following claim valid—

A plate or dish cut or scooped from a block of wood in concavo-convex form, as an article of manufacture,

stated—

the product patent does not cover every wooden plate or dish. * * * It refers to a dish made by the machine of the second patent, or its equivalent, or by a similar method. * * * A dish having these characteristics and the features covered by the claims is a new article possessing advantages not existing before.

In the cases above noted the article or product was novel. This will be seen from the quotation from each one of these adjudicated cases.

Where the product is old, it is not patentable because a new process of producing it has been discovered, nor does a claim for the product become patentable merely by including the steps of the new process. If such a claim is sustained by the court, it is construed as a claim for a novel process, and should, therefore, be drawn in the form of a process claim. In the case of *Societe Fabriques de Produits Chimiques De Thann et De Mulhouse* v. *George Bueders & Co.* (135 R. R., 102), the court held that a patent distinctly for a product produced by a certain process is void if the product has been previously produced by any other process.

Again, in the above-noted decision, *Cochrane et al.* v. *Badische Anilin & Soda Fabrik*, the court, referring to the article defined by the process of producing it, stated:

It was an old article. While a new process for producing it was patentable, the product itself could not be patented, even though it was a product made artificially for the first time.

The question presented for review is whether the instant case is one to which the rule against claims of this character should be applied, or whether it is one forming a just exception, one where the product is new and involves inventive concept in its production, and yet can not be defined save by stating the steps necessary to produce it. The only change in the character of the product set forth in the claims, aside from the steps of the process, is that all the essential oils, essences, and aromas have been extracted from the hops and disseminated through the liquid. Is this product new?

Appellant urges that it is; that there is a more thorough cooking and rending; a product more concentrated than obtained heretofore, one that is more palatable, and is better flavored by reason of its having embodied in it all the essential oils, essences, and aromas extracted from the hops and made to permeate the liquid. I am not prepared to dispute this contention. The oils of hops are very volatile, and heating in an open vessel, as disclosed by the British patentee, even at a low temperature, would necessarily drive off much of the volatile fumes of the essences and aromas. An attempt to restore this lost portion by adding beer wort or aromatic oil of hops to replace that lost is more uncertain and in my judgment would not produce the same product obtained by heating to the higher temperature in the sealed receptacle, and thereby extracting substantially all the oils, essences, and aromas and preventing their escape and forcing them to be disseminated through the liquid. It would seem there has been produced a novel product.

In defining the characteristics of the product, so that it may be identified, it is not necessary that they be so defined that the general public, by a mere casual inspection, can determine the novel features of the product. It is sufficient that an expert can do this. The article or product may have to be bent, broken, tested chemically, or even destroyed to determine its characteristics, but if these are so set forth that they may be determined in one of these ways it is sufficient.

The applicant has stated he is unable to define his product by any other means than by the steps of the process of producing. The Examiner has suggested no other way, and I am unable to add anything by way of suggestion. It is thought, therefore, that the claims should be allowed in their present form.

The decision of the Examiners-in-Chief is reversed.

DECISIONS OF THE U. S. COURTS.

U. S. Circuit Court of Appeals—Seventh Circuit.

JESSURUN v. PEERLESS LIGHT CO.

Decided February 7, 1922.

[Fed Rep., 113.]

PATENTS — No. 907,770, FOR ELECTRIC-LIGHT SWITCH, HELD NOT TO DISCLOSE INVENTION.

The Fulton patent, No. 907,770, for an electric-light switch to be operated by a pull upon a pendent cord or chain, which differed from a device patented 30 years before only in the shape of the clamp by which it was attached to the key, *Held* void for failure to disclose invention.

APPEAL from the District Court of the United States for the Eastern Division of the Northern District of Illinois.

Suit for infringement of Letters Patent No. 907,770 by Albert E. Jessurun against the Peerless Light Company. From a decree dismissing the bill, plaintiff appeals. Affirmed.

Mr. William R. Rummler and *Mr. Cyrus W. Rice* for the appellant.

Mr. Russell Wiles for the appellee.

Before ALSCHULER, EVANS, and PAGE, Circuit Judges.

EVANS, *Cir. J.*:

Appellant, as the owner of a patent upon an electric-light switch issued to Walter W. Fulton, sought to restrain appellee from further infringing claims 1 and 3 of the patent. The district court held the claims invalid and dismissed the bill.

To borrow the language of patentee:

The invention relates to such electrical switches as are operated by a pull upon a pendent cord or chain.

Claim 1 reads as follows:

In combination, a spring clip having arms adapted to embrace the flattened T-head of an electrical switch key from end to end, each arm of the clip being apertured to receive one end of the key head, a crank arm carried by the clip, and a pendent cord carried by the crank arm.

Many prior patents were received in evidence, indicating that the art was well filled with very narrow patents. Only one of them need be considered.

Some 30 years before the issuance of the patent in suit, one Lewis obtained a patent upon an improvement:

The object being to provide simple and convenient means for turning the current on and off a lamp provided with the usual flat key or thumbpiece, and primarily designed to be operated by hand, but hung or placed so as to be not readily accessible for such operation. With these ends in view my invention consists in a two-armed operating lever having its central portion or body adapted to fit over or embrace an ordinary flat key or thumbpiece.

The single claim reads:

The combination, with an incandescent electric lamp having a flat key or thumbpiece for turning the current off and on, of a two-armed operating lever having a central body portion provided with an opening adapting it to be slipped over and secured to the thumbpiece or key, and operating chains or cords attached to the outer ends of the arms of the lever and hanging down within easy reach for turning on and off the current, substantially as described.

If we were to restrict the language of the claim ("and secured to the thumbpiece or key") to the single form of structure shown in the drawings; that is, to securement by the elasticity of the central body or portion (a construction which we do not believe we would be justified in adopting), even then the only advance which Fulton made was to provide for the securement of the spring clip to the flat T-head of the electric switch key by bending the clip so as to inclose the end of the key head.

In other words, the patent deals, not with the electric switch as such, but with a very simple device attachable to the switch by a clip. The hanging chains or cords long used in such constructions make operation by people of short stature easy. The asserted novelty in Fulton's combination, that which distinguishes it from Lewis's, is restricted to the means for securing the clip to the key head. As Judge Carpenter appropriately said:

The clip adapts itself to the device to which it is attached, and certainly there is nothing novel in stamping a hole of any shape in the side of the clip to enable it to fit.

Counsel for appellant argues that, if we should characterize as mechanical skill Fulton's contribution to the art, then numerous patents cited by defendant, including the Lewis patent, were improperly issued by the Patent Office, for none represents greater inventive genius than that manifested by Fulton. This hardly answers the court's position. Assuming that the Patent Office erred in granting other patents of narrow and simple construction, it would hardly justify the issuance of still another patent, dealing with the same art, no more entitled to recognition. But counsel, in making these comparisons, loses sight of the fact that each and every one of the prior patents narrowed the field open to Fulton, and were pertinent upon the only inquiry to which the court was addressing itself, viz: Was Fulton's contribution invention?

Counsel for appellant has brought to our attention all of the facts presented in this suit which support his contention that invention rather than mechanical skill was displayed by Fulton. We are, however, unable to escape the conclusion, in view of the state of the art here disclosed, that Fulton's device did not rise to the dignity of invention. In other words, we agree with the district judge in holding both claims invalid for want of invention.

The decree is affirmed.

ADJUDICATED PATENTS.

(U. S. C. C. A. Pa.) The Eckstein patent, No. 881,561, for waxed candy labels, *Held* anticipated. *Reuckheim Bros. & Eckstein* v. *D. L. Clark Co.*, 280 Fed. Rep., 714.

(U. S. C. C. A. N. Y.) The Armstrong patent, No. 1,113,149, for audion radio amplifier with feedback circuit, *Held* valid and infringed. *Armstrong* v. *De Forest Radio Telephone & Telegraph Co.*, 280 Fed. Rep., 584.

(U. S. C. C. A. N. Y.) The Beecroft patent, No. 1,244,944, for cabinet for talking machines, *Held* void for lack of invention. *Beecroft & Blackman* v. *Rooney*, 280 Fed. Rep., 543.

(U. S. D. C. Wis.) The Perkins reissue patent, No. 13,436, claims 28, 30, and 31, for glue from starch base, *Held* limited to product of described process. *Perkins Glue Co.* v. *Gould Mfg. Co.*, 280 Fed. Rep., 728.

Interference Notices.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., Aug. 11, 1922.

S. F. Myers & Co., their assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Roland A. Geell, of No. 15 Maiden Lane, New York, N. Y., for registration of a trade-mark and trade-mark registered November 5, 1895, No. 27,193, to S. F. Myers & Co. of 48 and 50 Maiden Lane, New York, N. Y., and a notice of such interference sent by registered mail to said S. F. Myers & Co. at the said address having been returned by the post office undeliverable, notice is hereby given that unless said S. F. Myers & Co., their assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING,
Acting Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., August 15, 1922.

Halla Dagger Medicine Company, their assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Charles Cramer, of Gardner, Kans., for registration of a trade-mark and trade-mark registered October 12, 1915, No. 106,153, to Halla Dagger Medicine Company, of Great Falls, Mont., and a notice of such declaration sent by registered mail to Halla Dagger Medicine Company at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Halla Dagger Medicine Company, their assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., August 15, 1922.

Knox Manufacturing Co., their assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Dupuis Chemical Co., of Los Angeles, Calif., for registration of a trade-mark and trade-mark registered January 19, 1920, No. 72,330, to Knox Manufacturing Co., of 709 South Los Angeles Street, Los Angeles, Calif., and a notice of such declaration sent by registered mail to Knox Manufacturing Co. at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Knox Manufacturing Co., their assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., August 15, 1922.

George W. Caldwell, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Charles F. Hamel, of 1910 Cherry Street, Toledo, Ohio, for registration of a trade-mark and trade-mark registered August 16, 1904, No. 43,203, to George W. Caldwell, 44 North Street, Middletown, N. Y., and a notice of such declaration sent by registered mail to Caldwell at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Caldwell, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., August 15, 1922.

David F. Halsted, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Cooper, Coate & Casey Dry Goods Co., of Seventh and Los Angeles Streets, Los Angeles, Calif., for registration of a trade-mark and trade-mark registered April 17, 1900, No. 34,451, to David F. Halsted, of 70 and 72 Franklin Street, New York, N. Y., and a notice of such declaration sent by registered mail to David F. Halsted at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Halsted, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., August 29, 1922.

The Reid-Edelmuth Manufacturing Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of The Allman Gas Engine and Machine Co., of 481 Canal Street, New York, N. Y., for registration of a trade-mark and trade-mark registered November 16, 1909, to The Reid-Edelmuth Manufacturing Co., of 247 Bush Street, Brooklyn, N. Y., and a notice of such declaration sent by registered mail to The Reid-Edelmuth Manufacturing Co. at the said address having been returned by the post office undeliverable, notice is hereby given that unless said The Reid-Edelmuth Manufacturing Co., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING,
Acting Commissioner.

Patents Nos. 1,428,512 to 1,429,214.

THE OFFICIAL GAZETTE OF THE United States Patent Office.

Vol. 302—No. 2. TUESDAY, SEPTEMBER 12, 1922. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

Printed copies of patents are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

(ORDER No. 2,778.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., September 1, 1922.

Pursuant to the provisions of section 487 of the Revised Statutes, Edwin L. Rice, of Washington, D. C., registration No. 11,209, has been disbarred from practice before the United States Patent Office.

WM. A. KINNAN,
Acting Commissioner.

Adverse Decisions in Interference.

PATENT No. 1,270,471.

On July 5, 1922, a decision was rendered that John C. Wahl was not the first inventor of the subject matter covered by claims 8, 10, and 11 of his Patent No. 1,270,471, subject, "Calculating machine," and no appeal having been taken within the time allowed such decision has become final.

PATENT No. 1,393,430.

On August 7, 1922, a decision was rendered that Henry P. Clausen was not the first inventor of the subject matter covered by claims 1 and 3 of his Patent No. 1,393,430, subject, "Telephone system," and no appeal having been taken within the time allowed said decision has become final.

Interference Notice.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., August 29, 1922.

The Reid-Edelmuth Manufacturing Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of The Allman Gas Engine and Machine Co., of 481 Canal Street, New York, N. Y., for registration of a trade-mark and trade-mark registered November 16, 1909, to The Reid-Edelmuth Manufacturing Co., of 247 Bush Street, Brooklyn, N. Y., and a notice of such declaration sent by registered mail to The Reid-Edelmuth Manufacturing Co. at the said address having been returned by the post office undeliverable, notice is hereby given that unless said The Reid-Edelmuth Manufacturing Co., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING,
Acting Commissioner.

Drawings.

RULE 53.

53. When there are drawings, the description will refer to the different views by figures and to the different parts by letters or numerals, (preferably the latter.)

RULE 52—EXTRACT.

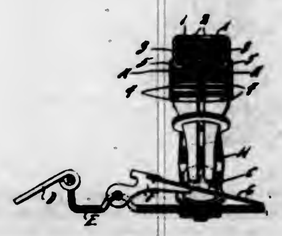
(f) The different views should be consecutively numbered. Letters and figures of reference must be carefully formed. They should, if possible, measure at least one-eighth of an inch in height, so that they may bear reduction to one twenty-fourth of an inch; and they may be much larger when there is sufficient room. They must be so placed in the close and complex parts of drawings as not to interfere with a thorough comprehension of the same, and therefore should rarely cross or mingle with the lines. When necessarily grouped around a certain part, they should be placed at a little distance, where there is available space, and connected by short lines with the parts to which they refer and by short broken lines when the number or letters refers to parts shown in dotted lines. They should not be placed upon shaded surfaces, and when it is difficult to avoid this, a blank space must be left in the shading where the letter occurs, so that it shall appear perfectly distinct and separate from the work. If the same part of an invention appear in more than one view of the drawing it must always be represented by the same character, and the same character must never be used to designate different parts.

It is suggested that numerals or letters be used without exponents.

Photostat Copies.

In ordering photostat copies of United States and foreign patents, when only the number of the patent is given the whole patent, comprising specification and drawing, will be furnished, unless the order specifically states that the "specification only" or "drawing only" is required. Care should be taken in making out orders for foreign patents to give the year of the patent, as in old French and British patents the number will vary according to the year.

Condition of Applications Under Examination at Close of Business September 2, 1922.



(Total number of applications awaiting action, excluding Trade-Mark division, 69,261; Trade-Mark division, 8,132. Oldest new case, Dec. 9; oldest amended, May 13, 1921. The dates given are 1921 except where * indicates 1922.)

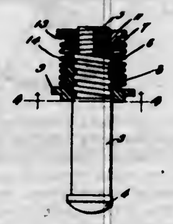
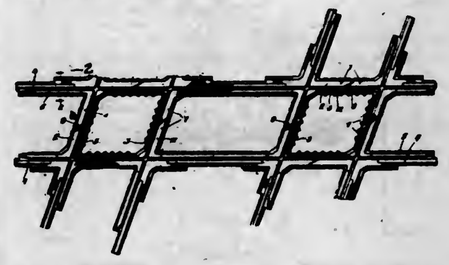
PATENTS



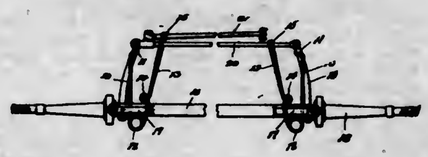
GRANTED SEPTEMBER 12, 1922.

1,428,512. JAW FOR ANIMAL TRAPS. ALBERT M. AHERN, St. Louis, Mo. Filed Dec. 12, 1921. Serial No. 521,630. 8 Claims. (Cl. 43—36.)



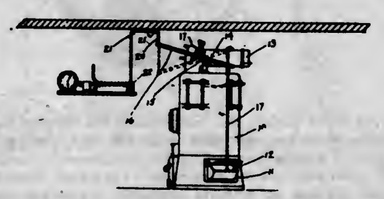
8. In an attachment for an animal trap having a rigid jaw and a trippable jaw-holding member adapted to engage said jaw, said attachment comprising a double jaw provided with a flexible outer jaw member, flexible inner jaw members, separating members extending from said outer jaw member to said inner jaw members, and flexible attaching members extending from said inner jaw members to secure the double jaw to said rigid jaw, said inner jaw members being separated from each other at a point substantially midway between the ends of the double jaw to provide a space for the trippable jaw-holding member, and said separating members being spaced from each other to receive the trippable jaw-holding member.

1,428,513. ATTACHMENT FOR BEARINGS. JOHN A. ANDERSON, Geneseo, Ill. Filed Sept. 22, 1921. Serial No. 502,534. 2 Claims. (Cl. 85—32.)



1. In a device of the class described the combination with a bolt having separately threaded portions, the threads on one portion being pitched oppositely to the threads on the other portion, of nuts engaging the respective threaded portions, a coiled spring extending around the nuts and connected at one end to one of the nuts, and means for adjustably connecting the other end of the spring to the other nut.

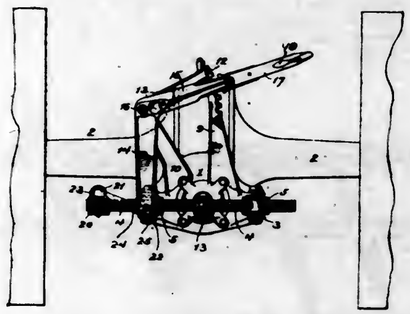
1,428,514. RAILROAD CROSSING. VICTOR ANGERER, Ridley Park, Pa., assignor to William Wharton, jr., & Company, Incorporated, Easton, Pa., a Corporation of Pennsylvania. Filed Jan. 24, 1922. Serial No. 531,408. 10 Claims. (Cl. 246—463.)



6. A railroad crossing comprising crossing members of greater height than the adjoining rails, and having diagonally disposed abutting faces, means for securing them relatively, and guard rails having integral foot extensions which underlie and raise the running rails.

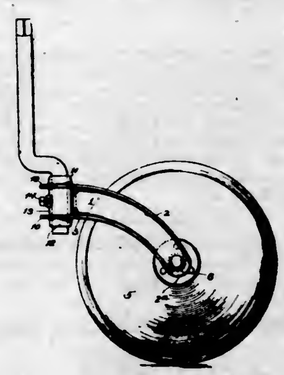
1,428,515. STEERING-GEAR STABILIZER. GEORGE Y. BEAL, Choctaw, Okla. Filed July 6, 1921. Serial No. 482,824. 3 Claims. (Cl. 280—94.)

1. A steering gear stabilizer comprising a substantially V-shaped spring formed from a single length of material bent to define diverging spring arms connected by intermediate coils and each having spaced sides diverging to said coils, one of the arms being formed to extend through the knuckle yoke of an axle engaging a steering arm near its free end and the other of the arms of the spring being formed to straddle the axle engaging a reach rod connected to said steering arm.



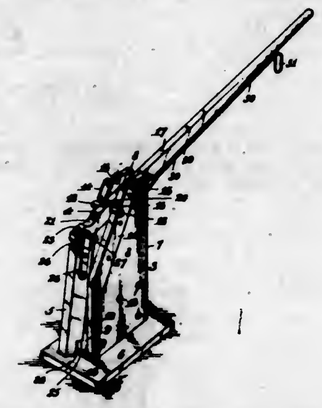
1,428,516. FURNACE CONTROL MECHANISM. CHRISTOPHER R. ABBOTT, Anderson, Ind. Filed Aug. 1, 1921. Serial No. 488,907. 5 Claims. (Cl. 161—8.)

1. In a clock controlling device, the combination of a clock, yieldingly mounted releasable means, latching



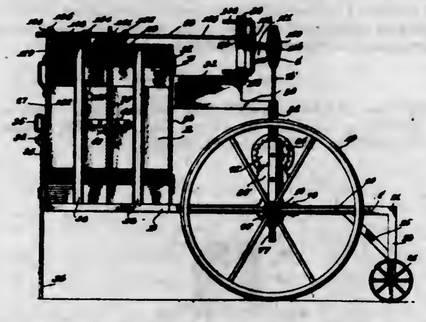
mechanism therefor and releasable by said clock, a weight for maintaining said latching mechanism in the latching position, and means for adjusting the latching position of said latching mechanism.

1,428,517. HITCH DEVICE. RUDOLPH J. ALTGELT, South Bend, Ind., assignor to Oliver Chilled Plow Works, South Bend, Ind. Filed May 9, 1921. Serial No. 468,136. 3 Claims. (Cl. 280—33.12.)



1. In a hitch device, the combination with a bracket, of a longitudinally movable hitch bar mounted therein, an operating lever pivotally supported on the bracket, an elongated bearing sleeve rigid with said hitch bar and disposed approximately at right angles to the axis thereof, and a connecting link having a crank pin at one end loosely connected with said lever and having a crank arm at its other end mounted in said elongated bearing sleeve.

1,428,518. YOKE CONSTRUCTION FOR ROLLING COLTERS AND THE LIKE. RUDOLPH J. ALTGELT, South Bend, Ind., assignor to Oliver Chilled Plow Works, South Bend, Ind. Filed Feb. 13, 1922. Serial No. 536,208. 2 Claims. (Cl. 97—43.)



1. A sheet metal yoke, comprising two arms, integrally connected at one end, said yoke provided with parallel flanges projecting forwardly from the connected portion of said arms and forming therewith a yoke head, one of said flanges having an integral upwardly projecting bearing sleeve and the other flange having an integral downwardly projecting bearing sleeve.

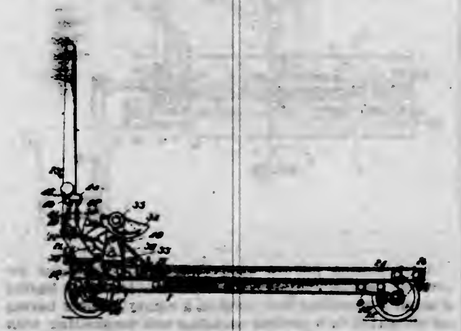
1,428,519. VEHICLE JACK. JOSIAH S. ANDREWS, Buffalo, N. Y. Filed Mar. 10, 1920. Serial No. 364,642. 4 Claims. (Cl. 254—129.)

1. A vehicle jack comprising a support having spaced uprights and abutments, notches in said uprights arranged in pairs, an actuating lever having fulcrum pivots removably entered in a pair of said notches and extending forwardly and rearwardly from said pivots, and a retaining lever having a forked upper end straddling said actuating lever and being pivotally connected thereto, said retaining lever having a shouldered lower end adapted to engage one of the steps or abutments of said upright.

1,428,520. PROFILOGRAPH. THOMAS K. ABTEME, New York, N. Y., assignor of one-half to John P. Drakas, Locust Valley, Long Island, N. Y. Filed Apr. 8, 1921. Serial No. 459,787. 12 Claims. (Cl. 234—8.)

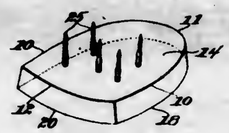
1. A profilograph comprising a main frame, profile paper carried by the main frame, a stationary marking instrument carried by the main frame, a supplemental frame hingedly carried by the main frame, a ground engaging wheel carried by the supplemental frame, and means operatively connected to the swinging supplemental frame for feeding the paper past the marking instrument and for raising and lowering the paper in relation to the marking instrument.

1,428,521. PROCESS OF RECOVERING IRON OXIDE AND OTHER PRODUCTS FROM SPENT IRON SLUDGE. CHARLES V. BACON, Mahwah, N. J. Filed Jan. 2, 1920. Serial No. 348,775. 7 Claims. (Cl. 134—59.)



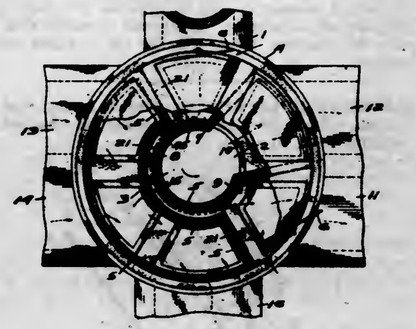
7. The process which consists in subjecting iron sludge comprising essentially iron oxide to the action of concentrated sulfuric acid sufficient to convert the same into a substantially dry mixture consisting essentially of ferrous and ferric sulphates, heating the resultant sulfate compounds to a sufficiently elevated temperature and for a sufficient time to decompose the same into volatile oxy-sulfur compounds and iron and separately recovering such iron oxide.

1,428,522. LIFTING TRUCK. ARTHUR M. BARRETT, Winnetka, Ill. Filed May 3, 1920. Serial No. 378,514. 26 Claims. (Cl. 254—10.)



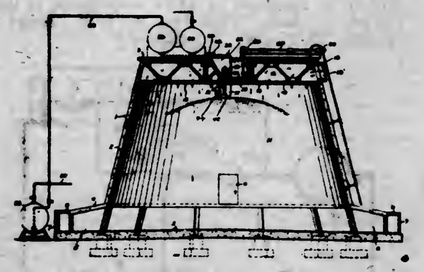
1. A lifting truck comprising a main frame having supporting wheels and a steering member, a lifting frame mounted on said main frame, a steering handle adapted to be operated to raise the lifting frame, means for securing the handle in a substantially upright position, mechanism adapted to be operated to move said handle to disengage it from said securing means.

1,428,523. LIFTING TRUCK. ARTHUR M. BARRETT, Winnetka, WILLIAM CHILDRESS, Oak Park, and FRANK TROTT, Harvey, Ill., assignors to said Barrett. Filed June 13, 1918. Serial No. 239,739. Renewed Feb. 15, 1922. Serial No. 536,838. 19 Claims. (Cl. 254—10.)



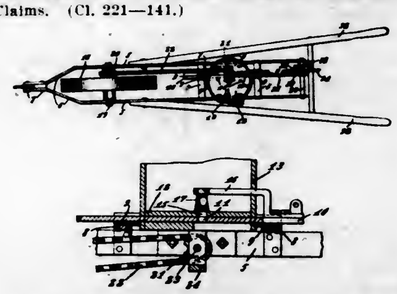
8. A lifting truck comprising a main frame having supporting and steering wheels, a lifting frame mounted on said main frame and movable longitudinally and vertically relatively thereto, a steering handle connected with the steering wheel, a rocking member mounted on said main frame, means operatively connecting said rocking member with said lifting frame whereby said lifting frame may be raised and moved longitudinally by rocking said member, and means detachably connected with said steering handle and adapted to swing laterally therewith when the same is operated to steer the truck, for actuating said rocking member.

1,428,524. RUBBER HEEL. HERMAN L. BEAL, Brookline, Mass. Filed June 17, 1918. Serial No. 240,375. 5 Claims. (Cl. 36—35.)



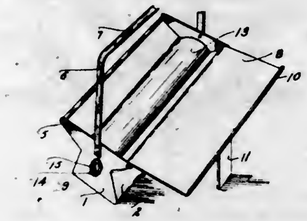
3. A rubber heel comprising a body portion having a concave attaching face, nail-holding means embedded in the heel, and a plurality of divergent attaching nails fixed in the nail-holding means and protruding from the attaching face.

1,428,525. GAS AND AIR REVERSING VALVE. WILLIAM G. BERGMAN, Toledo, Ohio. Filed Aug. 2, 1920. Serial No. 400,886. 23 Claims. (Cl. 137—148.)



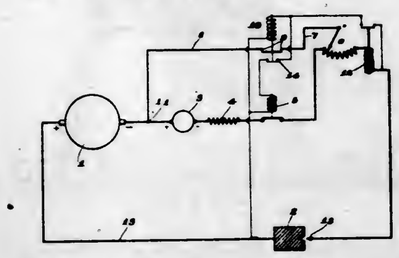
3. In an air and gas reversing valve, a valve member having a gas chamber and a waste gas chamber, and an air passageway located between the gas and waste gas chambers for directing air between the chambers.

1,428,526. PROCESS AND APPARATUS FOR TREATING LATEX. CHARLES E. BRADLEY, Montclair, N. J., and JOSEPH G. COFFIN, Hempstead, N. Y., assignors to General Rubber Company, a Corporation of New Jersey. Filed Dec. 7, 1921. Serial No. 520,505. 32 Claims. (Cl. 18—.)



1. In a process for treating latex or similar material, feeding latex onto a moving surface, discharging the latex from the surface as a series of particles, and withdrawing moisture from the particles.

1,428,527. PLANTER. LEWIS R. BRANTLEY, Marietta, Ga. Filed Dec. 22, 1921. Serial No. 524,212. 2 Claims. (Cl. 221—141.)

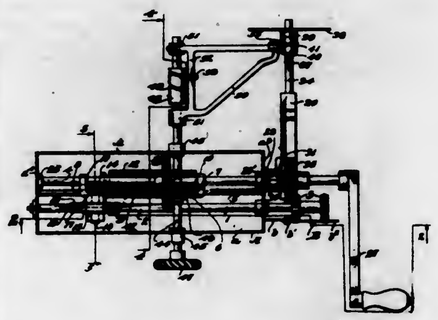


1. A planter comprising a frame, a hopper carried by the frame and having a rotatable bottom member formed with openings, a slidable plate adapted to be adjusted with respect to the bottom member, said plate having an opening, said plate adapted to be moved to bring the opening thereof to a position under a predetermined opening of the rotatable bottom member, means for rotating the bottom member, means for securing the plate in its positions of adjustment, and means movable with the plate for guarding the opening in the rotatable bottom member.

1,428,528. SCRUBBING PAIL. GEORGE BRYAN, Spokane, Wash. Filed Mar. 5, 1921. Serial No. 449,844. 2 Claims. (Cl. 91—66.)

1. The combination with a rectangular container having vertical end walls and converging side walls forming a longitudinally extending throat, of a drum rotatable in the container and having a part of its upper portion projecting through said throat, said container having upwardly diverging side wings, for the purpose described.

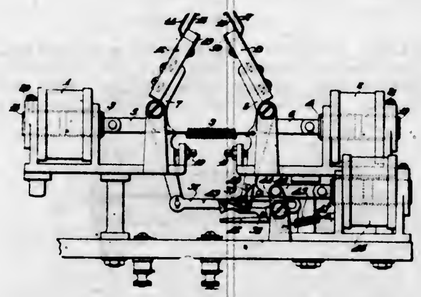
1,428,529. ELECTRIC WELDING. FRANCIS S. CALDWELL, Columbus, Ohio, and ALAN M. BENNETT, Westfield, N. J., assignors, by mesne assignments, to Burke Electric Company. Filed Jan. 10, 1917. Serial No. 141,507. 15 Claims. (Cl. 219—8.)



1. In an arc system for welding, repairing and otherwise treating metals, the combination with a main generator, of an auxiliary generator, arc electrodes, conductors connecting said electrodes in circuit with said generators and means for rendering said auxiliary generator inactive.

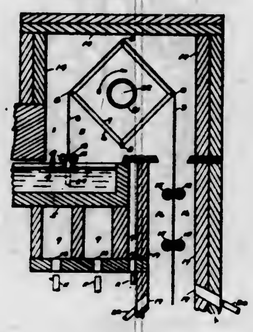
1,428,530. SPRAYER NOZZLE. GABRIEL J. CASSIDY, Hastings, Minn. Filed June 8, 1920. Serial No. 387,293. 2 Claims. (Cl. 251—135.)

2. A nozzle comprising a body having a bore, there being an elongated slot in the body communicating with the bore; a valve mounted to reciprocate in the bore; a closure on the outer surface of the body and extending across the slot; a bowed spring strip superposed on the closure; a connecting element located in the slot and engaging the valve, the connecting element passing through the closure and engaging the spring strip to put the same under tension; and a securing element connecting the closure and the spring strip with the body, the closure and the strip being slotted to receive the securing element and to permit a reciprocation of the strip and the closure.



1,428,531. MOTION-PICTURE APPARATUS. JAMES CHAMBLESS, Jasper, Ala., assignor of one half to H. W. Cranford, Jasper, Ala. Filed June 16, 1921. Serial No. 478,081. 14 Claims. (Cl. 88—17.)

1. In motion picture apparatus of the character described, the combination with a film moving shaft having a spirally extending cam portion, a rotary member having an elongated cam portion engaging and cooperating with the spiral cam of the shaft for intermittently rotating the latter, and means for sliding the elements relative to each other to frame the picture without interruption of the intermittent film movement.



1,428,532. SIGNAL-CONTROLLING APPARATUS. WINTHROP M. CHAPMAN, Needham, Mass. Filed Feb. 13, 1917. Serial No. 148,312. 8 Claims. (Cl. 246—129.)

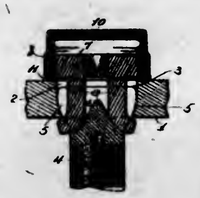
1. A signal controlling apparatus, having in combination, rail contacts including an insulated section of rail arranged to be closed by the wheels of a car, a signal controlling circuit closed by the closure of said contacts, a magnet in said circuit, a signal circuit closing member actuated by said magnet, and means for

maintaining said member in circuit closing position during an interruption of said signal controlling circuit.

1,428,533. APPARATUS FOR AND METHOD OF DRAWING SHEET GLASS. JOSEPH P. CROWLEY, Toledo, Ohio, assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed May 16, 1919. Serial No. 297,667. 7 Claims. (Cl. 49—17.)

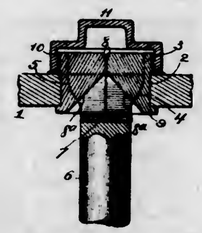
2. In an apparatus for continuously drawing sheet glass, a rotary device for flattening the sheet and changing its direction of travel, the sheet carrying surface of said device comprising a series of plane surfaces symmetrically arranged about the axis of the device, and sharp wear-resisting members at the edges formed by the intersecting plane surfaces, said edges engaging and holding the sheet, and the sheet being flattened upon the intermediate plane surfaces.

1,428,534. STEEL AND IRON ALLOY. PHILIPPE DE CLAMECY, Boston, Mass., assignor to B. F. Sturtevant Company, Hyde Park, Mass., a Corporation of Massachusetts. Filed Oct. 6, 1919. Serial No. 328,685. 2 Claims. (Cl. 75—1.)



1. An alloy of iron or steel, containing over 1½% and less than 6% of cobalt, over ½% and less than 6% of chromium, over ½% and less than 7½% of nickel, and over ½% and less than 3% of silicon.

1,428,535. ADJUSTABLE JACK. OLIVER C. DENNIS, Wilmette, Ill. Filed Apr. 17, 1922. Serial No. 553,695. 6 Claims. (Cl. 179—96.)

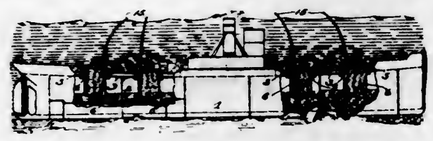


1. A jack of the character described having a base portion and a contact finger adjustable relative to said base portion.

1,428,536. STAY-BOLT STRUCTURE FOR BOILERS. ETHAN I. DODDS, Pittsburgh, Pa., assignor to Flannery Bolt Company, Pittsburgh, Pa. Filed Oct. 3, 1921. Serial No. 504,888. 5 Claims. (Cl. 85—1.5.)

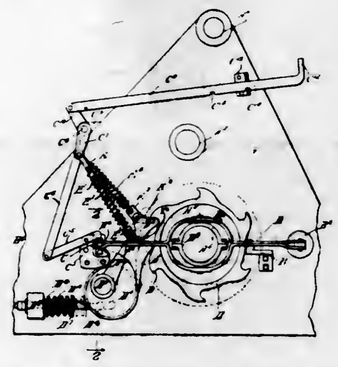
1. In a staybolt structure, the combination with a boiler sheet having a bolt opening, of a clincher member having a part passing through the boiler sheet adjacent to said bolt opening and engaging the inner portion of the boiler sheet, said clincher member provided with means forming a closure over the bolt head.

1,428,537. STAY-BOLT STRUCTURE FOR BOILERS. ETHAN I. DODDS, Pittsburgh, Pa., assignor to Flannery Bolt Company, Pittsburgh, Pa. Filed Nov. 2, 1921. Serial No. 512,294. 2 Claims. (Cl. 85—1.5.)



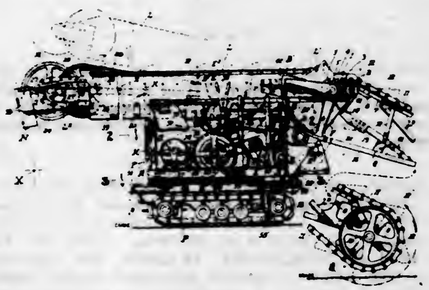
1. In a staybolt structure, the combination with a boiler sheet having an opening, of a two part bearing member passing through said opening and adapted to engage the inner face of the boiler sheet, the outer ends of the parts of said bearing member projecting beyond the outer face of the boiler sheet and threaded externally, a cap or closure threaded on said bearing member and cooperable with the boiler sheet, and stay bolt having a head mounted within the parts of said two-part bearing member.

1,428,538. METHOD OF AND APPARATUS FOR RAISING SUBMERGED VESSELS. FREDERICK W. ESELING, New York, N. Y., assignor to Submarine Devices Corporation, a Corporation of Delaware. Filed Nov. 12, 1920. Serial No. 423,576. 10 Claims. (Cl. 114—50.)



1. The method of raising submerged vessels, which consists in forcing air under pressure into a hold to expel the water, maintaining permanently within the hold a column of water to trap the introduced air in sufficient

volume to give the necessary buoyancy to the vessel to cause it to rise, and allowing the trapped air to escape

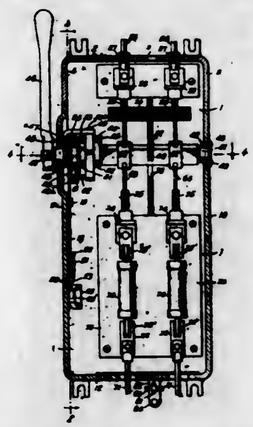


through said column of water in accordance with the reduction in hydrostatic pressure resulting from the rise of the vessel.

1,428,539. JIB HOIST AND AUTOMATIC INTERLOCKING DEVICE FOR LOCOMOTIVE CRANES AND THE LIKE. WALTER FERRIS, South Milwaukee, Wis., assignor to Bucyrus Company, South Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 1, 1917. Serial No. 151,859. 9 Claims. (Cl. 192—12.)

6. In a detent motion a ratchet wheel, a pawl permissibly engaging said ratchet wheel by gravity or otherwise, a yielding operating member which may be set to cause withdrawal of the pawl when the load is relieved therefrom, and non-yielding interlocking means which functions to prevent the movement of the yielding member during period of interlock.

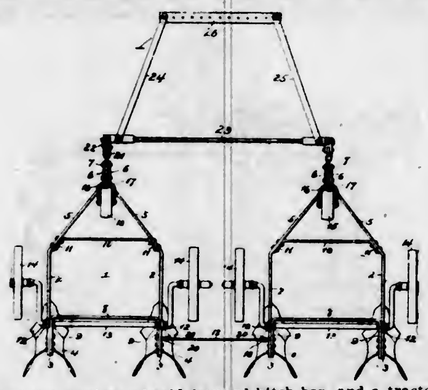
1,428,540. EXCAVATOR AND LOADER. WALTER FERRIS, South Milwaukee, Wis., assignor to Bucyrus Company, South Milwaukee, Wis., a Corporation of Wisconsin. Filed July 15, 1918. Serial No. 244,834. 25 Claims. (Cl. 37—24.)



1. An excavator comprising a supporting truck and means for propelling and controlling it, a platform mounted thereon and means for rotating it about an axis removed from the truck, a two-part excavating and spoil conveying ladder mounted on the platform the axis about which the platform rotates being substantially coincident with the discharge end of the ladder.

1,428,541. STAY-BOLT STRUCTURE FOR BOILERS. JOHN ROGERS FLANNERY, Pittsburgh, Pa., assignor to Flannery Bolt Company, Pittsburgh, Pa. Filed Feb. 23, 1921. Serial No. 447,067. 6 Claims. (Cl. 85—1.5.)

1. A staybolt having a tell-tale hole provided with a porous closure.



1,428,542. SNAP-SWITCH MECHANISM. ARTHUR L. FREEBT, Ensley, Ala. Original application filed May 22, 1918, Serial No. 235,924. Divided and this application filed Apr. 9, 1921. Serial No. 460,053. 6 Claims. (Cl. 200—70.)

1. In an electric switch a quick throw snap mechanism comprising an operating shaft having switch blades secured thereto, a pair of oppositely wound volute springs secured to said shaft for moving said blades alternately in opposite directions, a ratchet secured to said shaft, trip pawls to alternately prevent the movement of said operating shaft arranged for engagement with said ratchet, a control lever provided with means for engaging said springs to store torque therein upon the movement thereof and means carried by said control lever for disengaging the said trip pawl acting to prevent the rotation of said ratchet.

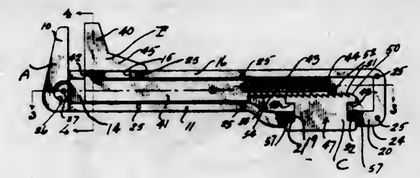
1,428,543. LISTER PLOW. ARTHUR D. GALLAGHER, South Bend, Ind., assignor to Oliver Chilled Plow Works, South Bend, Ind. Filed Nov. 29, 1919. Serial No. 341,349. 1 Claim. (Cl. 97—36.)

A four-row lister plow comprising two double-row wheeled lister plows, a rod loosely connected at its respective ends with rear portions of the respective lister plows, to maintain them in spaced relation, clevises pivotally connected with the respective lister plows, a forward hitch bar, links connecting respective end portions of said forward hitch bar with the clevises of the respective lister plows, draw bars pivotally connected with respec-

tive end portions of said forward hitch bar, and a tractor clevis with which the forward end portions of said bars are connected.

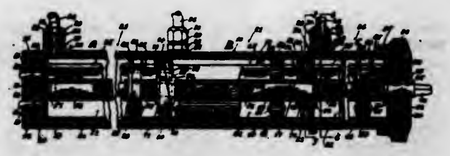
1,428,544. REMOVABLE CAP FOR TYPEWRITER KEYS. ROBERT S. GRAHAM, New York, N. Y., assignor of one-half to Willis M. Follmer, New York, N. Y. Filed Feb. 4, 1922. Serial No. 534,013. 3 Claims. (Cl. 197—102.)

1. A cap for a typewriter key arranged to be removably secured thereto, the top of said cap being provided with side and end cushion members, said side members being broader than said end members, and an opening in the top of said cap surrounded by said cushion members.



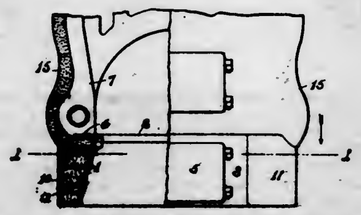
1,428,545. LOCK NUT. MORRIS JACOBS, deceased, late of Brooklyn, N. Y., by Saly Jacobs, administratrix, Brooklyn, N. Y. Filed July 12, 1921. Serial No. 484,258. 10 Claims. (Cl. 151—25.)

1. The method of assembling a nut and a locking wire therefor, which consists in shaping the locking wire into a shaft portion and another portion disposed at less than a right angle to one another, pressing the wire into its seat until the second portion is substantially parallel to the face of the nut, thus bringing the locking wire under initial transverse tension, and then securing the locking wire in place in the nut by bending its end to form a locking lever.



1,428,546. AUTOMATIC WRENCH. HJALMAR JOHNSTON, Duluth, Minn. Filed Sept. 22, 1921. Serial No. 502,420. 6 Claims. (Cl. 81—142.)

1. A wrench, comprising in combination a fixed jaw having a casing rigid therewith, a sliding jaw including a shank rigid therewith, said shank being entirely positioned in said casing for concealed sliding therein, means engag-

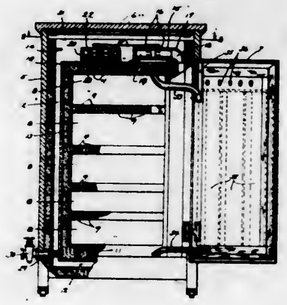


ing said casing and shank for forcing said sliding jaw toward said fixed jaw, and means for locking said sliding jaw in predetermined relation to the casing.

1,428,547. FORCE-FEED OIL AND GREASE DISTRIBUTOR. WILLIAM LEE KLASERNER, Ludlow, Ky. Filed Mar. 28, 1921. Serial No. 456,317. 12 Claims. (Cl. 184—27.)

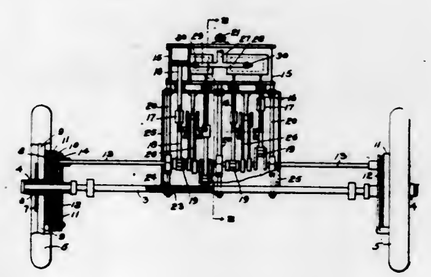
3. In a force feed lubricant distributor, a casing, a removable lubricant container received within said casing, a plurality of self-contained lubricant chambers in said container adapted to contain grease, parts to be lubricated, tubular connections between said parts and said lubricant chambers, and means to combinedly force grease from said chambers to said parts to be lubricated through said tubular connections.

1,428,548. FURNACE-BASE INSULATION. CHARLES R. KLINE, Reading, Pa. Filed Mar. 27, 1920. Serial No. 369,182. 2 Claims. (Cl. 110—1.)



1. In a device of the character described, a furnace base section composed of inner and outer upright walls, said inner wall forming an ash pit chamber and having an upper outwardly deflected flange adapted to form a seat for the furnace sections, said outer wall terminating below said flange, thereby forming an open top packing chamber, and front end closures connecting said inner and outer walls.

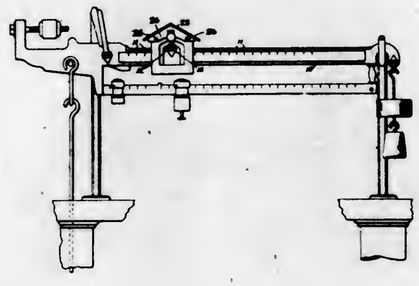
1,428,549. REFRIGERATOR. FERDINAND KOBER, Milwaukee, Wis. Filed Sept. 2, 1919. Serial No. 321,020. 6 Claims. (Cl. 257—21.)



1. A refrigerator of the class described comprising a casing, a compartment within the casing, a water cham-

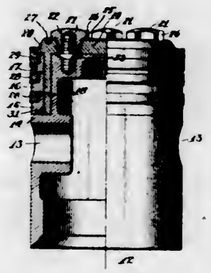
ber surrounding the compartment, an air space surrounding the water chamber, a sand chamber surrounding the air space and insulating the same from the casing, a blower for circulating air through the air space, and

hydraulic means for operating said blower, said hydraulic means supplying water to the water chamber and to the sand chamber to maintain the sand therein in a moist condition.



1,428,550. MOTOR VEHICLE. DUNCAN MACDONALD, Pittsburgh, Pa. Filed Apr. 28, 1920. Serial No. 377,183. 5 Claims. (Cl. 180—56.)

1. In a motor vehicle, a load-supporting axle provided with a centrally arranged webbed portion, a pair of driving wheels rotatably mounted on the opposite ends of said axle, a ring gear mounted concentrically on the inner side of each driving wheel, a pair of alined driving axles journaled in parallelism with said load-supporting axle and having their adjacent ends provided with crank portions, pinions mounted on the outer ends of said axles and in mesh with said ring gears, a multiple cylinder reciprocating engine, a series of T rods supportingly connecting the engine to the load-supporting axle and operative connections between the pistons of said engine and said driving axles whereby power is applied to said driving wheels.

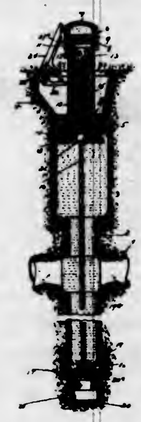


1,428,551. SCALE-BEAM POISE. JOSEPH J. MAGRADY, Chicago, Ill. Filed Dec. 12, 1921. Serial No. 521,808. 5 Claims. (Cl. 265—49.)

1. A poise having a solid body slotted through from side to side for the reception of a scale beam on which the body is slidable, said body having a vertical bore and a forward sight opening, a bushing in the said bore, a latch pin movable in the bushing, a lever having a shiftable pivot at its rear end at the upper portion of the body and having a pivotal connection intermediate its ends with the upper end of said latch pin, said lever having a forward end projecting forwardly beyond the

body and provided with a handle, and a detachable covering for the upper portion of the body in the form of a pitched roof having depending flanges connected to the body.

1,428,552. ENGINE PISTON. EMIL MULLERN, North Arlington, N. J. Filed Apr. 30, 1920. Serial No. 377,738. 4 Claims. (Cl. 74—108.)

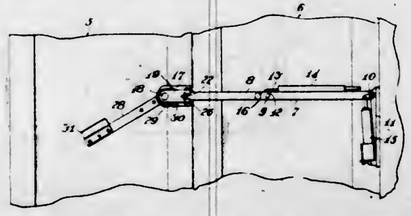


1. An engine piston comprising a body having a cylindrical reduced end; a solid supporting ring removably mounted on said end, said ring being recessed to form a groove for the reception of an expansible packing ring; a packing ring having a beveled extension exposed to the compression chamber of the cylinder with which said piston is associated for being expanded by the pressure formed in said chamber, said ring having a chamfered extension at the opposite edge thereof for wiping the wall of the cylinder with which said piston is associated.

1,428,553. SPRINKLER. BEN OAKES, Detroit, Mich. Filed Feb. 8, 1919. Serial No. 275,686. 8 Claims. (Cl. 299—61.)

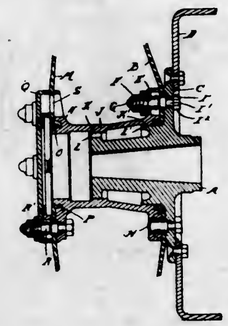
1. A lawn sprinkler, comprising a casing having provision for drainage, a nozzle having a follower normally housed within said casing, means for admitting water under pressure to said casing and thence to said nozzle, the follower having a surface acted upon by the water

pressure to project the same from the water casing, a valve controlling drainage of the casing, and means for



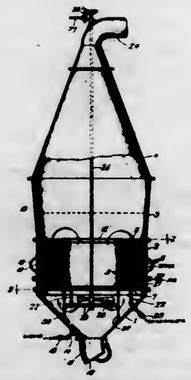
actuating said valve to its closed position by the follower as the latter is projected.

1,428,554. WARDROBE TRUNK AND GARMENT-HANGER BRACKET THEREFOR. SYDNEY OSTERWEIL, Newark, N. J. Filed Apr. 5, 1921. Serial No. 458,776. 2 Claims. (Cl. 211—16.)



1. A garment hanger-bracket for trunks comprising a channelled supporting element adapted to be mounted in embracing relation about the marginal edge-portions of the open end of the body-section of a trunk; and means extending from said supporting element for the suspension therefrom of garment hangers.

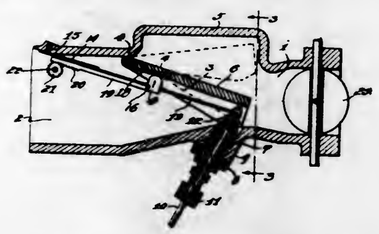
1,428,555. MECHANISM FOR OPERATING SLIDING DOORS. ELLIS J. G. PHILLIPS, Aurora, Ill., assignor to Richards-Wilcox Manufacturing Company, Aurora, Ill., a Corporation of Illinois. Filed Sept. 21, 1921. Serial No. 502,124. 8 Claims. (Cl. 268—8.)



1. Sliding door operating mechanism comprising in combination, an arm adapted to be pivotally connected at one end with a door, and a pair of toggle-levers pivotally connected together at their inner ends, one of which levers is adapted to be pivotally connected at its outer end with a fixed support, the outer end of the other lever being interlocked with and forming a rigid prolongation of said arm.

1,428,556. DUAL VEHICLE WHEEL. ALDEN L. PUTNAM, Detroit, Mich., assignor, by mesne assignments, to Detroit Pressed Steel Company, Wilmington, Del., a Corporation of Delaware. Filed Feb. 28, 1918. Serial No. 219,563. 3 Claims. (Cl. 301—36.)

1. The combination with a wheel hub having a radially extending flange, of a sleeve member for engaging said hub and forming an extension thereof, radially extending flanges at the inner and outer ends of said sleeve member, a disk wheel member secured between the inner flange of said sleeve and the flange on said hub, a disk wheel member seated on the outer flange of said sleeve, a series of cooperating studs and nuts for clamping the inner flange of said sleeve member to the flange of the hub to secure the inner disk wheel, and a series of cooperating studs and nuts for clamping the outer disk wheel member to the outer flange of said sleeve, said inner and outer series of studs being out of alignment with each other and said outer flange being apertured in alignment with the studs of the inner series for engagement of a tool therewith.



1,428,557. VACUUM APPARATUS. THOMAS RAY and JOSHUA R. RAY, Manistee, Mich., assignors to Ray Bros. Corporation, New York, N. Y., a Corporation of New York. Filed Dec. 3, 1917. Serial No. 205,245. 5 Claims. (Cl. 257—106.)

1. In an apparatus of the kind described, and in combination, a heating drum provided with end plates, each

having a series of openings therein, the peripheral outer edge of each opening being inclined, and tubes connecting said plates terminating within the openings of the plates below the inclined portions thereof, the outer ends of said tubes being bevelled in keeping with the inclined portions of the openings.

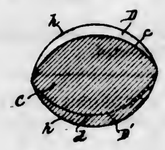
1,428,558. CARBURETOR. HAROLD G. RENNER, Detroit, Mich. Filed July 24, 1920. Serial No. 398,619. 8 Claims. (Cl. 261—44.)

1. In a carburetor, the combination with a casing having a mixing passage and an air inlet thereto, of a liquid fuel nozzle opening into said mixing passage, a needle valve controlling said nozzle, a pivotal valve subjected to pressure of the incoming air, a rock-arm carrying said needle valve, a bearing member movably embracing said arm and engaging said pivotal valve and means causing said rock arm to move in unison with said valve, whereby an opening of the air valve effects a predetermined opening of the needle valve.

5. In a carburetor, the combination with a casing having a mixing passage and an air inlet thereto, of a liquid fuel nozzle opening into said mixing passage, a needle valve controlling said nozzle, a pivotal valve subjected to the pressure of the incoming air and having its free end arranged above said needle valve, a rock-arm carrying said needle valve extending beneath said valve and having a greater radius than the air valve, a bearing member interposed between said rock-arm and air valve, and carried by one thereof, and means for adjusting said bearing to or from the pivot of the air valve.

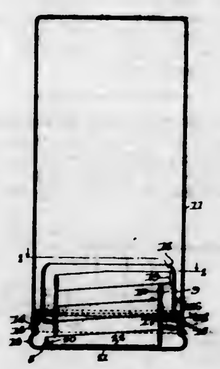
8. In a carburetor, the combination with a casing having a mixing passage and an air inlet thereto, of a liquid fuel nozzle opening into said mixing passage, a needle valve controlling said nozzle, a pivotal valve subjected to pressure of the incoming air, a rock arm carrying said needle valve, means causing said rock-arm to swing in unison with said valve, and means for varying the angular movement of the rock-arm with respect to the movement of said valve.

1,428,559. SUSTAINING ELEMENT OR FEATHER FOR FLYING-MACHINE WINGS. FRANCOIS M. RILLEAU, New York, N. Y. Filed Mar. 2, 1921. Serial No. 449,150. 6 Claims. (Cl. 244—31.)



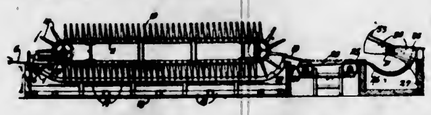
1. A sustaining element or feather for flying machine wings comprising a covered frame-work providing a concavo-convex main body portion terminating in a springy curved and twisted outer tip portion, a longitudinal bracing member secured upon the upper convex side of said main body portion, and means for pivotally mounting said sustaining element or feather upon a support.

1,428,560. STRAP AND BELT TIGHTENING BUCKLE. WALLACE W. ROBINSON, Portland, Me. Filed Mar. 12, 1920. Serial No. 365,223. 9 Claims. (Cl. 24—191.)



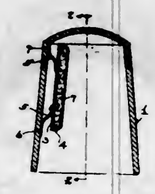
1. A take-up buckle consisting of a base with a strap bearing lever pivotally attached to said base intermediate its ends, said base having a strap receiving opening at one end and means of attaching the strap to the other end and having located between these ends a post which bears upon a portion of the strap when the lever is in the operative position thereby preventing the strap from slipping.

1,428,561. METAL BAR OF CURVED CROSS SECTION. KARL R. SCHUSTER, New York, N. Y. Filed May 2, 1921. Serial No. 466,037. 2 Claims. (Cl. 29—180.)



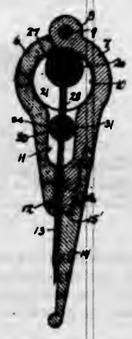
2. A cross sectionally curved bar the surfaces of which are bounded by two reversed curves which cross each other in the plane of the major axis of said bar, and ribs integral with the bar the outer surfaces of said ribs being curved to occupy an eccentric relation to the curved bar surfaces and which outer curved rib surfaces meet the curved surfaces of the bar in planes corresponding to the major axis of the bar.

1,428,562. SHAVING-SOAP CONTAINER. JULIUS SCHWANTES, Milwaukee, Wis., assignor to The Palmolive Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Jan. 20, 1919. Serial No. 272,120. 7 Claims. (Cl. 206—56.)



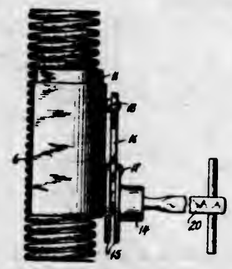
1. A soap container, comprising a base member, means when in normal position for clamping one end portion of a stick of material thereto and manually expansible by a revoluble movement only to release the stick of material, and a casing covering the stick of material and removably connected to the base member.

1,428,563. CLEANING AND PLATING APPARATUS. GEORGE W. SCHWEINSBERG, Brooklyn, N. Y., assignor to U. S. Electro Galvanizing Company, a Corporation of West Virginia. Filed Feb. 18, 1919. Serial No. 277,773. 17 Claims. (Cl. 204—11.)



1. In cleaning and plating apparatus the combination with a cleaning tank and a plating tank, of tracks passing therethrough and adapted to conduct electric current from the articles being treated in one of said tanks, means for supplying current to the electrolyte, and means for automatically carrying the articles through said tanks along said tracks.

1,428,564. MANICURE DEVICE. PAUL SERENE, Youngstown, Ohio, assignor of one-third to L. F. Donnell and one-third to B. P. Higby, both of Youngstown, Ohio. Filed Mar. 2, 1922. Serial No. 540,467. 5 Claims. (Cl. 182—74.)

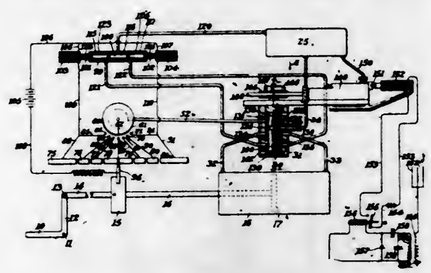


5. In a manicure device, the combination of a thimble, a curved plate, springs attached to said plate and thimble to resiliently space said plate from the interior of said thimble, a buffing pad mounted on said plate, and a curved spring attached to said plate and carrying a nail cleaning and filing member.

1,428,565. POWER-OPERATED RAZOR. PAUL SERENE, Youngstown, Ohio, assignor of one-third to L. F. Donnell and one-third to B. P. Higby, both of Youngstown, Ohio. Filed Mar. 4, 1922. Serial No. 540,954. 7 Claims. (Cl. 30—12.)

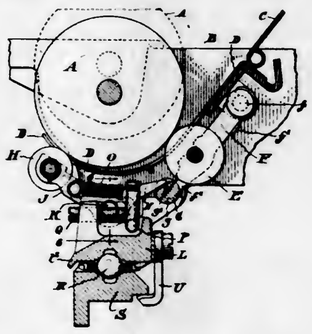
1. In a power operated razor, the combination of a handle having a longitudinal aperture, a two part hinged housing connected to said handle, an eccentric driving crank mounted in said housing, a rotatable driving shaft in said handle operatively connected to said crank to rotate the latter, a driving tube mounted on said crank in said housing, a blade hinged to said tube and extending outwardly between said housing members and adapted to be reciprocated at right angles to the blade by reciprocation of said driving tube.

1,428,566. SPRING COMPRESSOR. FREDERIC TIMMERMAN, New York, N. Y. Filed Dec. 3, 1920. Serial No. 427,933. 10 Claims. (Cl. 20—86.3.)



1. A spring handling and compressor tool comprising a pair of spring grip members movable one in relation to the other, a link having one end pivotally attached to one of the aforesaid members, and a rotatable device journalled on the other member and having pivotal connection with the other end of the aforesaid link, the said link being curved so as to swing around the axis of the rotatable device with the middle portion thereof engaging the rotatable device so as to effect a locked position to hold a spring compressed, and handle means related with the rotatable device to operate the tool.

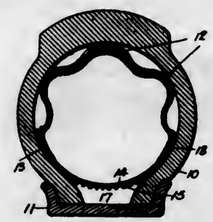
1,428,567. COMBINED TELEPHONE RECEIVER AND TRANSMITTER. JOHN S. TIMMONS, Yonkers, N. Y. Filed July 31, 1919. Serial No. 314,411. 11 Claims. (Cl. 179—103.)



1. A telephone hand set comprising a handle of rigid form having at one end a receiver adapted to be pressed to the ear of the operator and having the other end recessed, combined with a transmitter arranged in the recessed end of the handle and movable therein and also having its operative portion for contact with the operator extending outside of and beyond the bounding walls of the recess, and spring devices for yieldingly holding the transmitter in position to normally assume a normal position but with freedom to oscillate laterally in all directions relatively to the handle when subjected to influencing a pressure, whereby it may shift its position under the pressure exerted by the handle when being adapted to the contacting part of the operator's person.

1,428,568. STEERING MECHANISM. ALBERT D. TRENOR, New York, N. Y., assignor to John Hays Hammond, jr., Gloucester, Mass. Filed Oct. 29, 1915, Serial No. 58,595. Renewed Feb. 8, 1922. Serial No. 535,094. 14 Claims. (Cl. 114—24.)

1. In a control system, a movable body, a rudder for directing said body angularly, means for controlling said rudder, a gyroscope, a pair of electric circuits, electric controlled devices in each circuit, two series of contacts common to said circuits, one series being controlled by the movement of said body and the other series by said gyroscope, means under the control of said devices for actuating said rudder controlling means when one or the other of said devices is energized by the closing of any of said contacts and means for automatically breaking one circuit and energizing the other after said rudder has reached a predetermined position.

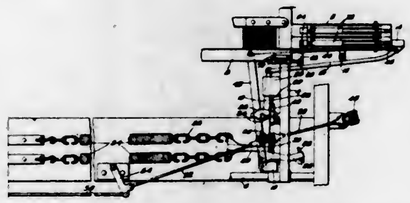


1,428,569. PAPER-FEED PRESSURE DEVICE FOR TYPEWRITING MACHINES. ANTHONY UTZ, Hartford, Conn., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of California. Filed Dec. 3, 1921. Serial No. 519,642. 10 Claims. (Cl. 197—138.)

1. The combination with a rotary platen of paper feed pressure devices comprising a plurality of front pressure rolls, a supporting arm for each pressure roll, a short rock shaft on which each arm is supported, means for preventing endwise movement of the shafts and the arms, and means for holding the rolls with yielding pressure against the platen.

1,428,570. SELF-SEALING INNER TUBE FOR AUTOMOBILE TIRES. HERBERT N. WAYNE, Washington, D. C. Filed Aug. 21, 1920. Serial No. 405,006. 4 Claims. (Cl. 152—13.)

1. In combination, a tire casing and an inner tube, the tube having non-elastic flexible side strips applied between the tube and the casing around the lower side walls of the tube whereby to restrain and hold the tube

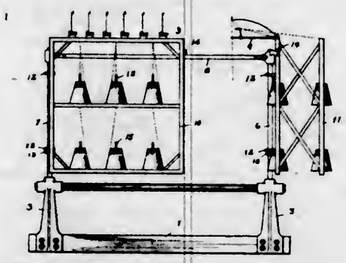


in relatively fixed position at said points of reinforcement and permit expansion above and below the reinforcement.

1,428,571. FIBRILLOUS TIRE. HERBERT N. WAYNE, Washington, D. C. Filed Nov. 24, 1920. Serial No. 426,251. 8 Claims. (Cl. 152—13.)

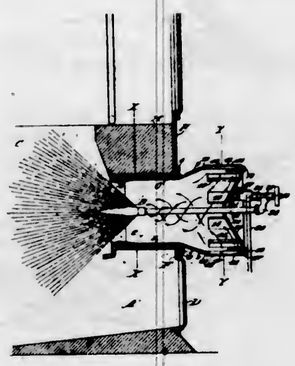
1. A tire casing having the main portion of the carcass body composed of fibrous material and rubber ground together.

1,428,572. LOOM. EZEKIEL J. WILSON, East Greenbush, N. Y., assignor to F. C. Huyck & Sons, Rensselaer, N. Y., a Corporation of New York. Filed May 23, 1921. Serial No. 471,640. 8 Claims. (Cl. 139—83.)



1. A loom having, in combination, a lay, picking mechanism at each end of the lay including a picker stick, electro-magnetic means for controlling the operation of each picking mechanism by a shuttle at the opposite end of the lay.

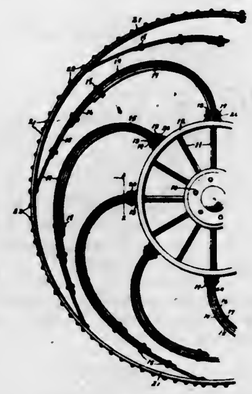
1,428,573. YARN STAND FOR KNITTING MACHINES. EARL M. WITHERELL, Duluth, Minn., assignor of one-half to F. A. Patrick & Company, Duluth, Minn., a Corporation of Minnesota. Filed Sept. 17, 1921. Serial No. 501,290. 1 Claim. (Cl. 66—12.)



The combination with a flat knitting machine of the character described having an upright frame structure on

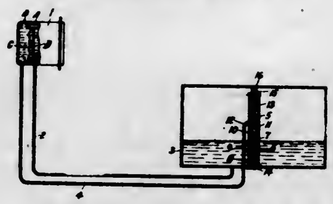
the bed thereof, of a yarn stand or rack pivotally mounted at each end of said frame, take up brackets carried by each stand, and bobbin spindles carried by each

stand whereby one of the stands may be replenished or supplied with yarn while the other is in operative engagement with the machine.



1,428,574. OIL-BURNING APPARATUS. ERNEST L. WOOLLEY, Providence, R. I. Filed Dec. 29, 1919. Serial No. 348,017. 7 Claims. (Cl. 158—1.5.)

1. In an oil-burning apparatus, the combination with a tubular casing adapted to be inserted into the fire-door opening of a furnace and provided with a funnel-shaped extension flaring outwardly a considerable distance beyond the front of the furnace with its maximum diameter at the outer end and having air-ports spaced around the circumference of the casing at its enlarged end, of a damper-ring rotatable on the enlarged annulus of the casing to adapt it to open and close the air-ports, a fuel feed-pipe projecting axially into the casing, an oil-burner on the feed-pipe positioned within the smaller diameter of the casing at a distance inwardly beyond the air-ports, and means for connecting the feed-pipe with the source of fuel supply.

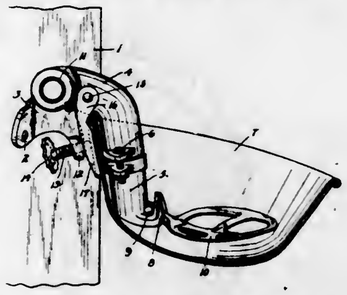


1,428,575. SPRING WHEEL. DAVID YOAKAM, Liberty Township, Warren County, Iowa. Filed Oct. 13, 1919. Serial No. 330,360. 3 Claims. (Cl. 152—29.)

1. A spring wheel, comprising a rigid hub structure, spaced pairs of resilient lugs extending outwardly therefrom, a group of leaf springs clamped between the members of each pair of lugs and extending outwardly on

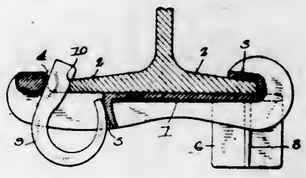
curved lines, and tread members carried by the outer ends of said springs.

1,428,576. DEPTH OR LIQUID-LEVEL GAUGE. CHARLES ABRAHAMS, Brooklyn, N. Y., assignor to Jacob Abrahams, New York, N. Y. Filed Jan. 21, 1921. Serial No. 439,042. 3 Claims. (Cl. 73—54.)



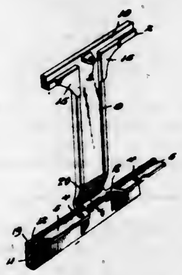
1. In an apparatus for indicating the depth or level of a liquid supply on movable vehicles or vessels, and operated through the difference in the pressures of the liquid in the supply tank and of the liquid column in an auxiliary chamber of constant level, the combination of two chambers and adapted to be filled with liquid, an elastic wall separating the chambers, an indicating mechanism arranged to be operated by the movement of the elastic wall, a supply chamber containing the liquid the level of which is to be indicated, and connected with one of said first named chambers, an auxiliary chamber in which the liquid is to be maintained at a constant level and connected with the other of said first named chambers, a pump barrel having its inlet connected to the liquid supply and its outlet connected to the auxiliary chamber, and a piston freely movable by its own inertia in said barrel.

1,428,577. CLAMPING DEVICE FOR DRINKING BOWLS. ROBERT ACKERMAN, Minneapolis, Minn., assignor to Hudson Manufacturing Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Oct. 7, 1920. Serial No. 415,372. 2 Claims. (Cl. 119—75.)



1. A drinking fountain structure comprising, a bowl, a nozzle forming pipe extending into said bowl, a bracket supporting said pipe, a clamping member pivoted to the side of said pipe, said pipe being formed to contact the inner surface of the bowl adjacent the top thereof, and said clamping member being formed to contact the outside

surface of the bowl adjacent the top thereof, said bracket having a downwardly extending lug adjacent said clamp-

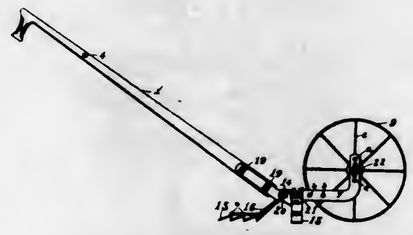


ing member, and a screw passing through said lug and engaging said clamping member to clamp the bowl between the same and said pipe.

1,428,578. RAIL ANCHOR. LAURENCE J. BERKELEY, Milwaukee, Wis. Filed Apr. 3, 1922. Serial No. 549,019. 10 Claims. (Cl. 238—324.)

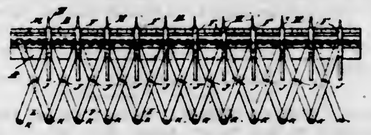
1. A rail anchor comprising a bar adapted to extend across the under side of a rail base and provide at one end with a jaw fitting over one edge of the rail base and at the other end with key bearings, and a spring key adapted to be inserted and forced transversely of the rail into place against said bearings and the other edge of the rail base and acting when in place to grip the rail base between the jaw and key with yielding pressure.

1,428,579. STOVE DOOR. EDWARD E. BLACKBURN, Marion, Ind., assignor to Hoosier Stove Company, Marion, Ind., a Corporation of Indiana. Filed Apr. 30, 1921. Serial No. 465,793. 4 Claims. (Cl. 126—190.)



1. An oven having a door frame comprising a bottom member and an upright member, the said members being provided with a bearing, that portion in the upright member opening on the inner side of the frame, a door pivotally mounted in the said bearing and having a stop for cooperating with the inner side of the upright member for holding the door in open position.

1,428,580. TIRE COVER. FRANK T. BOHAN, New Brunswick, N. J. Filed Sept. 16, 1920. Serial No. 410,580. 2 Claims. (Cl. 150—54.)



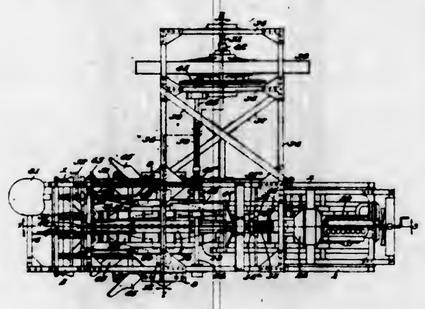
2. A tire cover comprising an endless envelope consisting of two endless annular bands of burlap overlapping each other along one of their marginal edges and secured together by a circumferential line of stitching, the other edges of said annular band being adapted to lie closely adjacent and to define an opening to receive the tire, said last mentioned marginal edges being turned back upon the body of the annular band, a line of stitching for securing each of the turned back edges to the body of its band, and a lacing device for securing the open edges of the band to retain a tire within the envelope and comprising a row of fastening devices along one of said edges, and a row of fastening devices along the other of said edges and alternately arranged with respect to the first mentioned fastening devices, each of said fastening devices having portions arranged between the body of the annular band and the turned back portion and secured thereto, and lacings adapted to be reeved in opposite directions through said fastening devices and to have their free ends secured together.

1,428,581. WHEEL HOE. CHARLES E. CURTISS, Clinton, Wis. Filed Sept. 29, 1920. Serial No. 413,584. 7 Claims. (Cl. 97—42.)

2. In an implement of the character described, having a wheel supported frame, a transverse horizontal blade, widely overhanging and attached to said frame in close proximity to the wheel and a pan, having transverse alternating ridges and depressions upon its lower side, attached to said frame, in operative position, rearwardly of said horizontal blade, substantially as set forth.

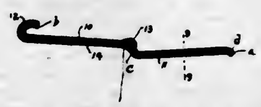
1,428,582. QUICK-EQUALIZING MARKER. FRANK W. DEITZ, Cleveland, Ohio. Filed Mar. 24, 1919. Serial No. 284,778. 4 Claims. (Cl. 33—192.)

1. In a multiple ruling device, in combination, a plate or bar having a graduated edge and provided with a



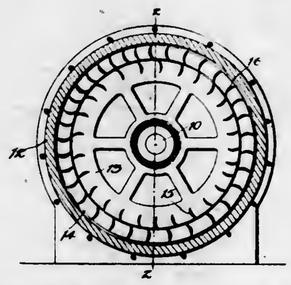
groove parallel to the edge, a multiple number of bases slidably movable in said groove, vertically swinging supports for drawing implements secured to said bases, and a rack composed of pairs of crossed bars, the bars in each pair being pivoted together intermediate of their ends, and the outer ends of adjoining pairs being pivoted together, and the inner ends of adjoining pairs being pivoted together and to said bases.

1,428,583. DUST RECEPTACLE FOR VACUUM CLEANERS. FRANK J. DEUTSCH, Cleveland, Ohio, assignor of one half to Edmond Farkas, Cleveland, Ohio. Filed May 17, 1920. Serial No. 382,107. 11 Claims. (Cl. 183—42.)



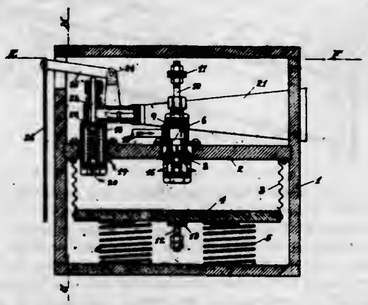
1. In a dust-receptacle for vacuum cleaners, the combination of a fabric bag; a dust-discharge opening formed therein; means controlling the discharge from said opening; means holding said controlling means closed; a detent for said last-mentioned means; and a manually-operated trip for said detent.

1,428,584. TRACTOR. RAPHAEL JOSEPH FOLSE and FREDERICK LAWRENCE HECKER, New Orleans, La. Filed July 25, 1921. Serial No. 487,228. 23 Claims. (Cl. 180—9.2.)



1. In a tractor, the combination of a frame, two parallel endless traction members supported by the frame, a ground wheel at one side of said traction members, a motor, and two independent sets of means actuated by the motor for positively driving both said traction members and the ground wheel, respectively.

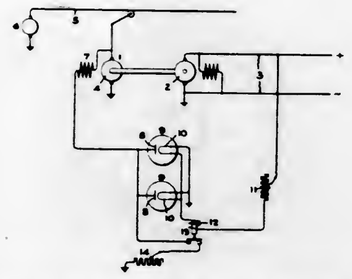
1,428,585. HAIR WAVER. GEORGE A. FRANZ, Omaha, Nebr. Filed Feb. 6, 1922. Serial No. 534,426. 4 Claims. (Cl. 132—41.)



1. In a hair waver, an elongated frame, a resilient tube embracing and normally resisting relative movements of the frames, said second frame having one of its ends mounted on the first named frame to permit a swinging movement relative thereto for engagement of a part of the tube on the second frame with that part of the tube on the hook of said first named frame.

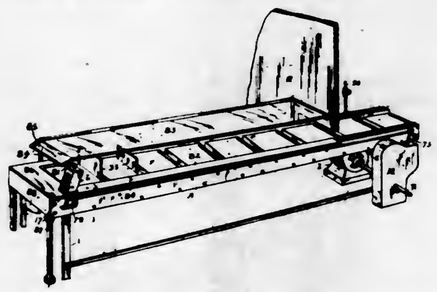
1,428,586. FLEXIBLE POWER TRANSMISSION. BENJAMIN GARRISON, Morgantown, W. Va. Filed Feb. 4, 1919, Serial No. 274,853. Renewed Apr. 30, 1920. Serial No. 378,012. 1 Claim. (Cl. 60—54.)

A flexible fluid transmission comprising the combination of driving and driven shafts, a fluid casing into which the adjacent ends of the shafts extend including side plates having cavities around the hub portions thereof forming an annular fluid channel, a transmission fluid within the channel of said casing, opposing wheels of similar construction secured in laterally spaced relation on the shaft ends within the casing having thickened hubs between the hub portions of the casing side plates, annular series of blades carried by said wheels and each blade extending in an approximately straight line at right angles to its wheel and toward the other wheel, said series of blades being arranged at different distances from the axes of the said shafts and overlapping one another in the space between the wheels.



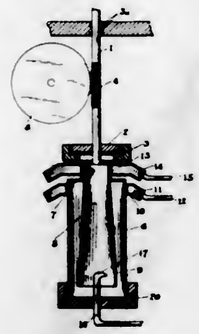
1,428,587. FOGHORN FOR MOTOR CRAFTS. OLE HAKONSEN, Skudenes, Norway. Filed Aug. 27, 1921. Serial No. 495,900. 9 Claims. (Cl. 116—58.)

8. A signaling device comprising a flexible air reservoir, said reservoir being connected to a source of compressed



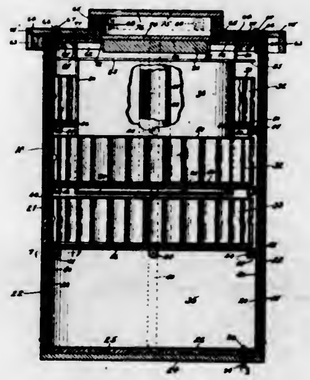
air, a valve for controlling the passage of air from said source to said reservoir, said valve having a valve stem, means normally holding said stem in position to maintain said valve open to permit passage of air to said reservoir, a connection between said reservoir and said stem whereby said reservoir when full actuates said stem against the action of said means to close said valve, a horn connected to said reservoir and adapted to be operated by compressed air, a second valve, normally closed, interposed between said reservoir and said horn, and means for causing said reservoir to collapse to discharge the air contained therein through said horn when said second valve is opened, the collapse of said reservoir permitting said first-named means to open said first valve and permit the supply of air from said source to refill said reservoir.

1,428,588. SPEED-REGULATING ARRANGEMENT. LAURENCE A. HAWKINS, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 11, 1920. Serial No. 402,759. 4 Claims. (Cl. 171—312.)



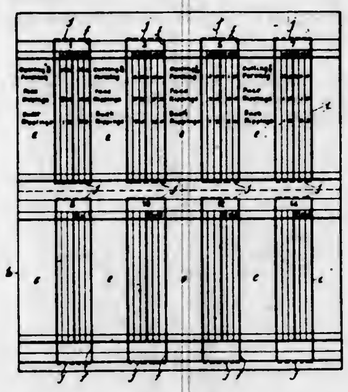
4. A speed regulating arrangement for a direct current motor comprising an electron discharge tube adapted to control the excitation of said motor, means for varying the filament current of said tube in accordance with variations in the speed of said motor, and means in circuit with the filament for automatically changing the motor connections.

1,428,589. AUTOMATIC SALES APPARATUS. EDWARD H. HELT, Bellevue Borough, Pa. Filed Dec. 14, 1920. Serial No. 430,673. 12 Claims. (Cl. 211—8.)



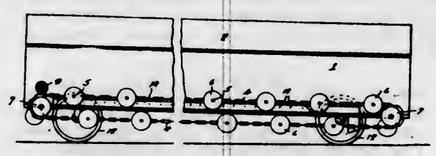
1. In automatic service apparatus, the combination of a plurality of series of dispensing shelves, each series being comprised of shelves arranged to move in unison and to be presented in turn in the dispensing position, and the several series being arranged in parallelism, a common source of power for causing said series of shelves to travel, clutch mechanisms interposed between the series of shelves and said source of power, a separate clutch mechanism being provided for each series of shelves so that any single selected series of shelves may be caused to travel independently of the remaining series, and an individual coin-controlled device for each of said clutch mechanisms whereby upon the insertion of the proper coin or coins into one of said coin-controlled devices the associated clutch mechanism may be thrown into its operative position and the associated series of shelves caused to travel independently of the remaining series.

1,428,590. APPARATUS FOR SEPARATING OILS. ADOLPH W. HILLE, Denver, Colo., assignor to American Shale Reduction Company, a Corporation of Delaware. Filed Nov. 26, 1921. Serial No. 517,959. 5 Claims. (Cl. 233—21.)



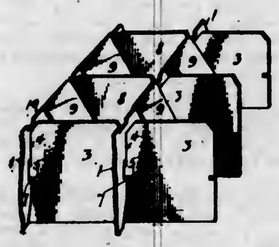
1. A centrifugal separator comprising an outer hollow member and an inner hollow member within and carried by the outer member and of substantially less diameter and open at its lower end, the inner and outer members being each provided with discharge openings near their upper ends, means for rotating the two members together, and means for directing the liquid to be treated against the inner surface of the inner member near its lower end.

1,428,591. REFRIGERATOR. EZEKIEL H. HOLLAND, Byron, Ga. Filed Mar. 18, 1920. Serial No. 366,862. 16 Claims. (Cl. 62—59.)



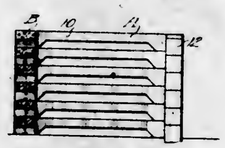
1. In a refrigerator, a receptacle, an article support and an ice tank within the receptacle and located one over the other, a tubular vertical passageway through the ice tank, and an opening through the support in substantial registration with said passageway but terminating at a point spaced from said passageway.

1,428,592. ACCOUNT SHEET. WILLIAM PRICE JENKINS and WILLIAM DOWNING WOOLLEY, Tredegar, England. Filed Oct. 28, 1920. Serial No. 420,208. 4 Claims. (Cl. 282—27.)



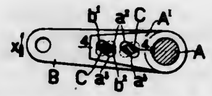
1. A device of the character described, comprising superposed sheets bearing columns for particulars and appended columns for lists of items, said sheets being slit and so disposed relatively to each other as to cover said list columns of an upper sheet and expose said particulars columns of a lower sheet.

1,428,593. PORTABLE DRYING APPARATUS. TOBIAS JOHNSEN, North Bay, Ontario, Canada. Filed Feb. 7, 1920. Serial No. 357,082. 3 Claims. (Cl. 34—12.)



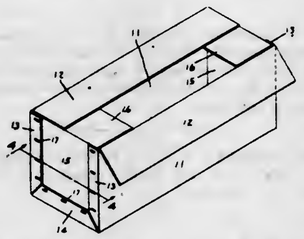
3. A portable drying apparatus of the class described comprising a chamber of elongated form, an endless carrier operable through the chamber including supporting bars and rollers mounted thereupon, air conduits disposed upon the bottom of the chamber beneath the carrier and having a plurality of escape openings, a trough arranged at one side of the chamber to receive the moisture from the walls thereof and to direct the moisture from the apparatus, and means for acting upon the material to loosen same as it is fed into the receiving end of the chamber.

1,428,594. EGG SEPARATOR. BENJAMIN KAINER, New York, N. Y. Filed Dec. 5, 1921. Serial No. 520,031. 2 Claims. (Cl. 217—34.)



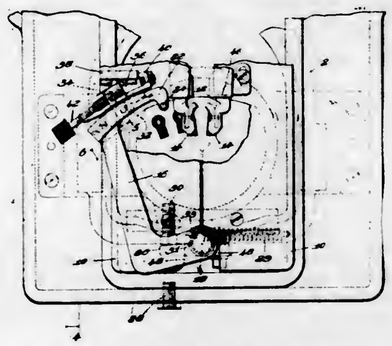
1. A separator for holding eggs in a crate comprising a plurality of longitudinal and cross strips forming compartments between them to receive therein the eggs for shipment, and flaps extending from the top edges of said strips and into said compartments and adapted to press the eggs into contact with the walls of said compartments.

1,428,595. CRIBBING. PAUL KIRCHER, Chicago, Ill., assignor to Massey Concrete Products Corporation, Chicago, Ill., a Corporation of Virginia. Filed Dec. 12, 1921. Serial No. 521,656. 5 Claims. (Cl. 61—47.)



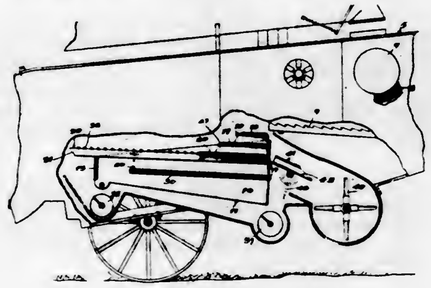
2. A cribbing comprising a plurality of anchor slabs arranged in spaced tiers, a plurality of stretchers extending between the tiers of anchor slabs, the rear ends of the anchor slabs of each tier being concavo-convex in transverse cross section for the purpose set forth.

1,428,596. COUPLING. PAUL KRÜGER, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed June 6, 1921. Serial No. 475,287. 2 Claims. (Cl. 74—39.)



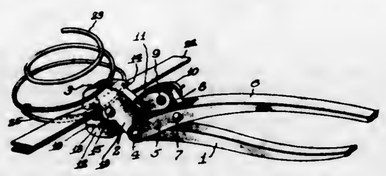
1. In a coupling of the class described a pair of members to be intercoupled, said members being formed with slots so disposed that they cross each other, a coupling bolt passing through said slots, said slots being disposed at such an angle relatively to one another that the sides thereof engage said bolt when force is applied to either member thereby automatically coupling said members together.

1,428,597. SHIPPING BOX FOR CANNED GOODS. ROBERT L. LEMON, Indianapolis, Ind., assignor to Van Camp Packing Company, Indianapolis, Ind., a Corporation. Filed Aug. 19, 1921. Serial No. 493,718. 1 Claim. (Cl. 229—23.)



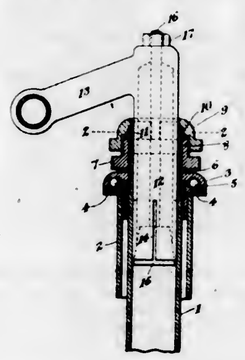
A paper or straw board box comprising a main body blank providing a box bottom, two sides, two top flaps, said top flaps being arranged to fold toward each other over the top of box so that their edges will abut each other, and end securing strips folded over each end of each side and each end of the bottom, a pair of end blanks each providing a top flap so positioned as to fold over the top of the box so as to lie adjacent the under surface of the top flaps, and means for rigidly securing said end flaps to said end securing strips, substantially as described.

1,428,598. WORK-SPACING MECHANISM IN BUTTONHOLE-SEWING MACHINES. BERNARD T. LEVESQUE, Wenham, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 14, 1919. Serial No. 337,983. 10 Claims. (Cl. 112—65.)



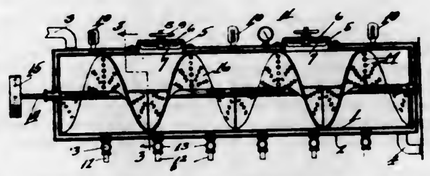
1. A buttonhole sewing machine having in combination a stitch-forming mechanism and a reciprocating work clamp relatively movable to sew about a buttonhole and a work spacer operated by the relative travel of the work clamp and stitch-forming mechanism.

1,428,599. THRASHER. JOE M. LUNZ, Wright, Kans. Filed Oct. 19, 1921. Serial No. 508,775. 7 Claims. (Cl. 130—15.)



1. In a thrashing machine, the combination with a shoe having inwardly directed terminal portions of a plurality of stub chaffers having lugs adjustably connected to said inwardly directed portions and a tailing chaffer connected to said shoe.

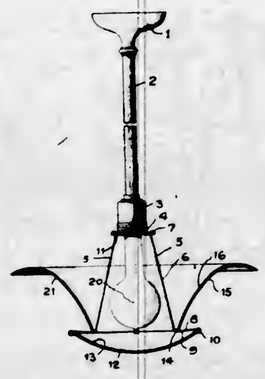
1,428,600. PLIERS. WILLIAM D. MCCULLOUGH, Detroit, Mich. Filed Apr. 26, 1920. Serial No. 376,475. 1 Claim. (Cl. 294—36.)



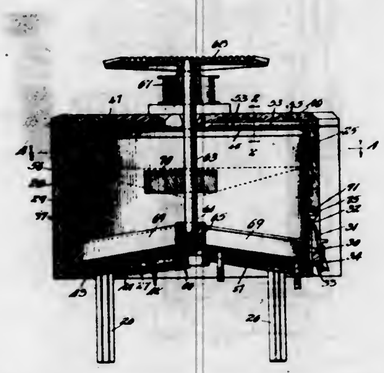
Pliers comprising a handle bar terminating in a jaw, said handle bar having a side wall provided with a recess, a lever pivotally connected to said handle bar jaw and terminating in a jaw, said lever having a recessed wall portion engaging in the recess of said handle bar, a handle bar having an inset link connection with said lever and pivotally connected to both sides of the first mentioned handle bar, and gripping members carried by the confronting faces of the jaws of said lever and said handle bar.

1,428,601. BICYCLE STEERING HEAD. JOHN J. MCGUCKIN, Brooklyn, N. Y. Filed Nov. 5, 1921. Serial No. 513,181. 5 Claims. (Cl. 208—116.)

1. In a bicycle, the combination of a non-contractible tubular fork-head, a handle bar stem telescoped therein, means for locking the lower end of said stem to the fork-head, a contractible element surrounding said stem, and cooperating retracting and contracting means carried by the fork head for clamping the upper end of the fork-head to said stem.



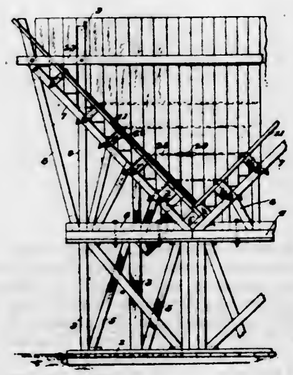
1,428,602. PROCESS FOR TREATING CHEESE. PHILIP MALEKOW, Chicago, Ill., assignor to Baker Food Products Company, Chicago, Ill., a Corporation of Delaware. Filed Apr. 19, 1920. Serial No. 374,856. 2 Claims. (Cl. 99—8.)



2. The process of sterilizing and canning cheese which includes introducing comminuted cheese into a closed chamber, heating, and simultaneously agitating the cheese in said chamber until completely sterilized, and then discharging the cheese from the chamber into cans.

1,428,603. LIGHTING FIXTURE. FREDERICK W. MATHIEU, New York, N. Y., assignor to Duplexalite Corporation, New York, N. Y., a Corporation of New York. Filed Dec. 4, 1918. Serial No. 265,202. 1 Claim. (Cl. 240—78.)

In an electric lighting fixture, the combination of a lamp and socket, a socket cover having an outwardly extending flange, a plurality of supporting rods associated with said socket, such rods having upper ends retained in said flange and flaring portions comprising an outwardly extending transverse portion having hooked extremities, a spherical translucent member retained and supported by said hooked portions and an upwardly flaring member of translucent material open top and bottom surrounding the rods and supported below the lamp filament of said transverse portions.

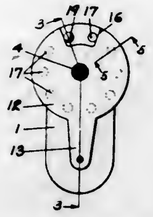


1,428,604. METHOD OF AND APPARATUS FOR MANUFACTURING DEXTRINE. JOSEPH J. MERRILL, Chicago, Ill., assignor to Corn Products Refining Company, a Corporation of New Jersey. Filed Apr. 23, 1917. Serial No. 163,945. 10 Claims. (Cl. 127—10.)

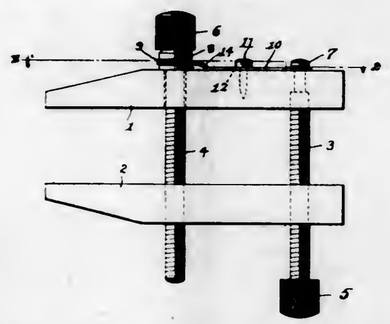
1. In apparatus for manufacturing dextrine, the combination of a circular dextrinising vessel having a door in its side wall, headers in upright arrangement on opposite sides of the door, and steam pipes arranged adjacent the side wall of the vessel surrounding the major part of the same and connected at opposite ends with said headers.

1,428,605. PORTABLE HOPPER. PHILIP NEARY, Walla Walla, Wash. Filed Oct. 1, 1920. Serial No. 414,144. 4 Claims. (Cl. 20—1.2.)

1. A hopper structure, comprising a plurality of sections adapted to be secured together to provide a hopper frame, each section including a base, a supporting strip arranged thereon, side-wall receiving strips secured in spaced parallel relation on the supporting strip, and an upright rising from the supporting strip to hold the upper ends of the side walls.



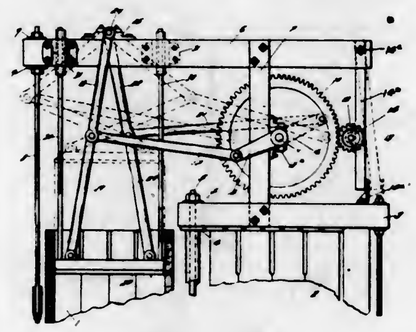
1,428,606. RECIPROCATING ROCK DRILL FOR SUPPLYING WATER TO BORE HOLES DURING DRILLING. WILLIAM EDWIN NETTLE, PAUL SELBY, JAMES BLYTHE, and JOSEPH HENRY HOLMAN, Johannesburg, Transvaal, South Africa. Filed July 21, 1920. Serial No. 398,024. 5 Claims. (Cl. 121—4.)



1. In a rock-drill, in combination, a cylinder, a reciprocating piston in said cylinder, a drill steel operably connected to the piston, said piston and steel having a passage through which water passes to the bore hole, the reciprocating parts having a space which is placed in communication with the cylinder at both the front and back of the piston, and a water supply tube which passes through the piston and said space to convey water to the passage through the reciprocated parts.

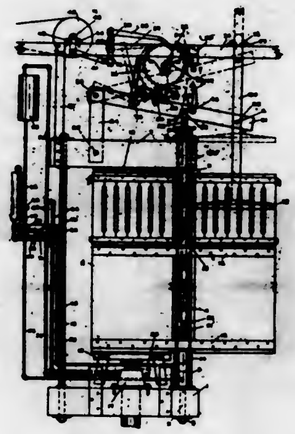
1,428,607. TRANSFER MECHANISM FOR REGISTERS. HENRY P. NORDMARK, Grand Rapids, Mich., assignor of one-half to F. I. Chichester, Allegan, Mich. Filed Nov. 30, 1920. Serial No. 427,267. 2 Claims. (Cl. 235—143.)

1. In a transfer mechanism, the combination of a series of disk-like number wheels, transfer division plates with a notch corresponding to the point of engagement for transfer, a series of perforations in all of said wheels except the first corresponding to the numerals to be transferred, one of which is slightly larger than the other and contains a ball of a diameter corresponding to the thickness of the said disk number wheels, a perforation in the first wheel of the series at an equal radial distance from the center, corresponding in size to the larger hole containing the ball, a ball in the initial number wheel hole or pocket, a disk spring pressing the said ball towards the higher number wheels adapted to coact and engage the perforations in the next higher number wheel and effect transfer by step-by-step action and to press the ball in the enlarged perforation of the higher number wheel to engage a still higher number wheel and effect transfer, all coacting substantially as described for the purpose specified.



1,428,608. CLAMP. JOHN WM. PARKER, Barrington, R. I., assignor to Brown & Sharpe Manufacturing Company, Providence, R. I. Filed July 15, 1921. Serial No. 485,051. 4 Claims. (Cl. 144—300.)

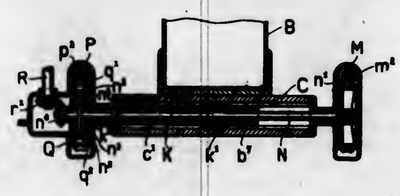
1. In combination with a clamp having parallel jaws and screws, a head on one screw having a circular groove, the free end of the other screw having a circular groove, a locking plate interposed between the two screws and having each end formed with a U-shaped slot engaging in the respective grooves, the end of the plate adjacent the head being offset from the adjacent jaw, and a clamping screw for securing the plate to the said jaw, said plate having an elongated slot receiving the clamping screw.



1,428,609. TRAMPER. JAMES M. PEERSON, Florence, Ala. Filed Mar. 1, 1919. Serial No. 280,188. 5 Claims. (Cl. 100—25.)

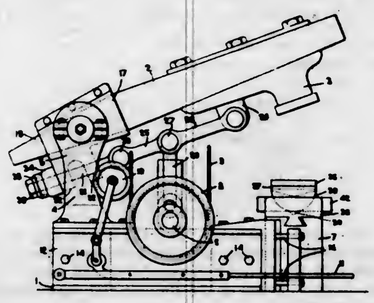
5. In a tramper mechanism, a press box, a platen movable thereinto, a shaft parallel with the transverse center of the platen, two pairs of toggle links hung from said shaft and connected to opposite ends of the platen, and power driven crank mechanism connected to the toggles

at their knuckle joints and adapted to move the latter in opposite directions to break the joints across a transverse vertical central plane through the press box, substantially as described.



1,428,610. DOUBLE-BOX COTTON PRESS. JAMES M. PEERSON, Huntsville, Ala. Filed Feb. 10, 1921. Serial No. 443,940. 20 Claims. (Cl. 100—28.)

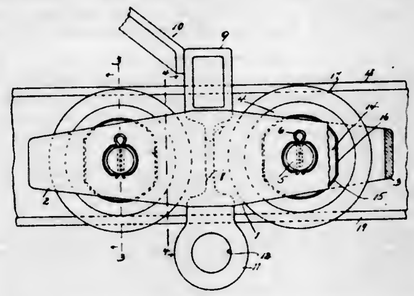
3. In combination, a receptacle for material to be compressed, a platen reciprocable thereinto, an operating mechanism for the platen comprising means to lift and release the platen for a gravity drop, and means to engage and positively drive the platen for the remainder of its stroke downwardly.



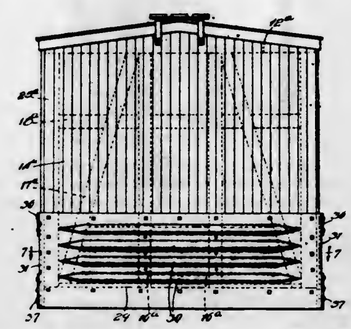
18. The combination with a rotating double press, of top and bottom supports therefor, a hydraulic press column mounted between said supports, a gland in the upper end of the column, a pump plunger reciprocable in the column and adapted to be packed by said gland, a hydraulic ram operable by the hydraulic pressure generated by said pump, an arm pivoted to the upper end of the plunger, a platen operably connected to one end of said arm, a rocking pivotal support for the other end of said arm, and a drive for said arm compressing trip means to lift the arm, and cam means to depress the arm.

1,428,611. GUN WITH LATERALLY-ADJUSTABLE BARREL. RICHARD SCHÜRMANN, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Sept. 7, 1920. Serial No. 408,745. 4 Claims. (Cl. 89—41.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

2. In a gun having a gun barrel adjustable in lateral direction and a traversing gear for laterally adjusting the gun barrel, a sighting device arranged to partake on each lateral adjustment of the gun barrel and comprising a sighting means carrier adjustable in lateral direction relatively to the gun barrel and a gear for effecting the lateral adjustment of the sighting means carrier, two driving members for operating said traversing gear independently of each other and means positively connecting said sighting means adjusting gear to one of said driving members, whereby the gun barrel and the sighting means carrier may be rotated through the same angle but in opposite direction when the driving member positively connected to the sighting means adjusting gear is operated and the other driving members is held stationary.



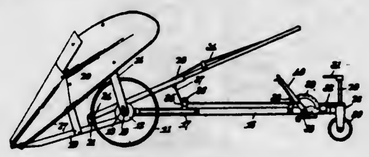
1,428,612. POWER HAMMER. WILLIAM E. SHEEHY, Newfields, N. H., assignor of one-half to Leonard W. Sheehy, Newfields, N. H. Filed Mar. 2, 1921. Serial No. 449,022. 6 Claims. (Cl. 78—32.)



1. In a power helve hammer, the combination with a frame carrying an anvil, of a helve member pivoted to the frame and carrying a hammer, two pivotally connected links, one of which is pivoted to the helve and the other of which has a yielding connection therewith, and a crank shaft connected to said links.

1,428,613. TROLLEY. WILLIAM E. SIMPSON, Detroit, Mich., assignor to Palmer-Bee Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 29, 1920. Serial No. 426,978. 7 Claims. (Cl. 105—155.)

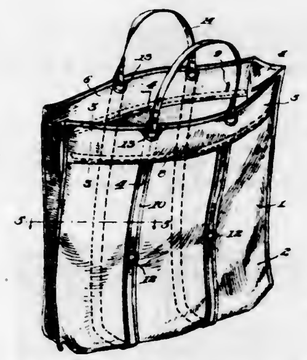
2. In a trolley, a frame having spaced side bars, an integral cross web connecting said side bars and forming a reinforcement therefor, said cross web having an I-shaped cross section, and an abutment extending from and integral with said cross web, said abutment having an I-shaped cross section transverse to said cross web, one end of said abutment being adapted for engagement of a driver.



1,428,614. END REENFORCEMENT FOR RAILWAY CARS. VINTON E. SISSON, Chicago, Ill., assignor to Walter P. Murphy, New York, N. Y. Filed May 16, 1919. Serial No. 297,590. 10 Claims. (Cl. 105—410.)

1. The combination with a wooden wall extending from the floor to the roof of a railway car, of a metal reinforcing structure on the outside of the car and formed with a plurality of strengthening and rigidifying corrugations which merge into each other so that said structure has a sinuous configuration in cross section.

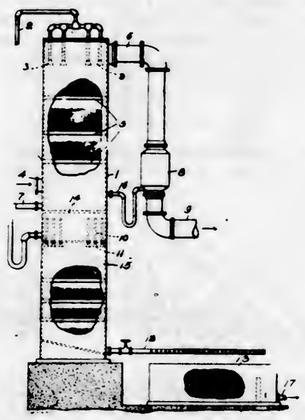
1,428,615. SNOWPLOW. WILLIAM C. SPEER, Wright, Kans. Filed May 14, 1920. Serial No. 381,322. 1 Claim. (Cl. 37—7.)



A snow plow including a push pole, a frame pivotally supported on the forward end of the pole for vertical movement, ground wheels on the sides of the frame, a plow rigidly supported on the frame, braces rigidly carried by the pole and movably connected to the frame at

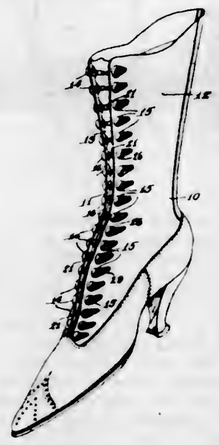
points in line with the pivotal connection of the frame with the pole, a lever rigidly connected with the frame and extending rearwardly over the pole, a lever pivotally supported on the pole, and a flexible element connected to the first and second levers and slidably engaged with the pole.

1,428,616. PROCESS OF RECOVERING VANADIUM. WILLIAM E. STOKES, Rockville Center, N. Y., assignor to United States Processes, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 19, 1921. Serial No. 438,486. 5 Claims. (Cl. 23—13.)



1. A process of recovering vanadium, comprising heating an ore in admixture with an alkali-metal nitrate.

1,428,617. SHOPPING BAG. JACK THAW, Baltimore, Md. Filed Nov. 15, 1921. Serial No. 515,337. 6 Claims. (Cl. 150—1.)



1. A shopping bag including flexible side and bottom walls, straps attached to the side walls of the bag by rows of stitching or the like, the ends of said straps terminating at the mouth of the bag, grommets passing through the respective strap ends and the side walls of the bag, and handles having their ends secured in said grommets.

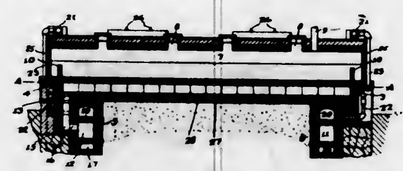
1,428,618. PURIFICATION OF WASTE LIQUID. FRED W. WAGNER, Pittsburgh, Pa. Filed Aug. 24, 1920. Serial No. 405,667. 12 Claims. (Cl. 210—16.)

1. The process herein described of removing a hydrocarbon compound from aqueous solution, which consists in causing a stream of reducing gas to pass through and out from said solution and as it passes through to mingle intimately with such solution in the presence of a catalyzer.

1,428,619. MEANS FOR CONVERTING LACE SHOES TO BUTTON SHOES. PHILIP A. WEIGEL, Riverton, N. J. Filed Feb. 28, 1922. Serial No. 539,956. 4 Claims. (Cl. 24—203.)

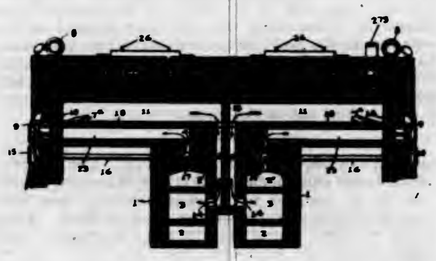
1. A device of the class described, comprising buttons, members, connected with said buttons, adapted for insertion through aligned openings in the front flaps of a shoe, means to connect said members on a transverse plane and means to adjust the tension of said connecting means, substantially as described.

1,428,620. METHOD AND APPARATUS FOR BALANCING CRANK SHAFTS AND THE LIKE. CARL L. WILBER, Detroit, Mich., assignor to The Jefferson Forge Products Co., Detroit, Mich., a Corporation of Michigan. Filed Feb. 14, 1921. Serial No. 444,926. 7 Claims. (Cl. 29—6.)



1. The method of balancing crank shafts and the like, comprising the forming of center bearings in the opposite ends of said shaft concentric to the axis of balance in the rough forging, finishing the forging and rebalancing the finished structure.

4. A device for balancing crank shafts and the like, comprising a member having a true cylindrical surface, means for engaging said member with the ends of the shaft and adjusting the same radially into concentric relation to the axis of balance in the rough forging, and a center bearing forming tool engageable with said member concentric to the cylindrical surface thereof for forming a center bearing in the end of the shaft.



1,428,621. BY-PRODUCT COKE OVEN WITH SOLE FIRING. BERNHARD ZWILLINGER, New York, N. Y.; Klara Zwillinger, administratrix of said Bernhard Zwillinger, deceased. Filed Mar. 22, 1919. Serial No. 284,376. 23 Claims. (Cl. 202—9.)

1. A coke oven comprising an elongated oven chamber, open at both ends, said ends provided with doors for sealing the oven chamber against the admission of air, said oven chamber being also provided with a sole constructed to receive the charge in a horizontal layer, a plurality of

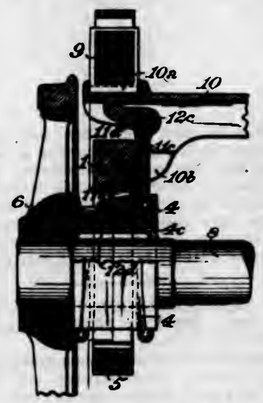
flues underneath the sole of the oven for heating it, and gas and air ports for each flue, the gas and air ports being arranged adjacent the inlet ends of the flues and at both ends of the oven.

1,428,622. SOLE-HEATED COKE OVEN. BERNHARD ZWILLINGER, New York, N. Y.; Klara Zwillinger, administratrix of said Bernhard Zwillinger, deceased. Filed Feb. 24, 1920. Serial No. 360,757. 25 Claims. (Cl. 202—9.)

20. In a sole fired coke oven, a sealed oven chamber, two systems of separate and independent combustion flues located beneath the sole, a transverse division wall, midway of the oven, for separating the two systems, and two sets of gas and air ports, each set adjacent to an end of the oven, for supplying gas and air to the flues.

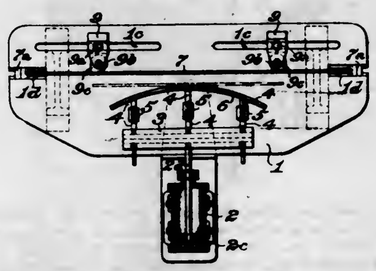
1,428,623. LOAD-SUPPORTING BUILDING TILE. CHARLES R. BIRDSEY, Hinsdale, Ill., assignor, by mesne assignments, to United States Gypsum Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 23, 1918. Serial No. 251,115. 5 Claims. (Cl. 108—10.)

3. A building tile having an inspection opening extending from its exterior inwardly thereof, in combination with reinforcing means embedded in the tile and terminating short of the exterior of the tile, said reinforcing means extending to said sight opening.



1,428,624. PLASTER BOARD. CHARLES R. BIRDSEY, Hinsdale, Ill., assignor, by mesne assignments, to United States Gypsum Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 2, 1920. Serial No. 348,943. 4 Claims. (Cl. 154—45.9.)

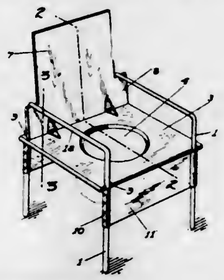
2. A plaster board comprising a body, a cover sheet extending over one face of the body and folded over the edges onto the opposite side of the body with the edges adjacent each other, and a sealing strip arranged over and secured to said sheet at the junctures of said edges on the exterior of the cover sheet and depressed to substantially flush with the main portion of the face of the board.



4. A plaster board comprising a body, a cover sheet extending over one face of the body and folded over the edges onto the opposite side of the body, with the edges of the sheet adjacent to but separated from each other, and a sealing strip arranged over said body in overlapping relation with the adjacent edge portion of the sheet.

1,428,625. LATERAL-MOTION APPLIANCE FOR LOCOMOTIVE DRIVING BOXES. ALFRED W. BRUCE, New York, N. Y. Original application filed Aug. 18, 1921, Serial No. 493,299, now Patent No. 1,414,455, dated May 2, 1922. Divided and this application filed Mar. 22, 1922. Serial No. 545,715. 2 Claims. (Cl. 105—80.)

1. In a locomotive engine, the combination of a side frame; a driving box, fitted, with the capacity of relative movement, therein; a spring supporting beam, which is vertically movable, relatively to the driving box; a link rocker, interposed between, and bearing on, the driving box and the supporting beam; and a pin, coupling said rocker to the supporting beam.

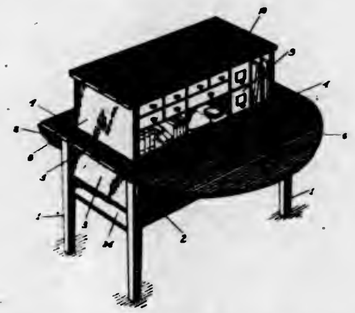


1,428,626. SPRING-FORMING MACHINE. THOMAS F. BUCKLEY, Scranton, Pa. Filed July 30, 1921. Serial No. 488,545. 6 Claims. (Cl. 153—51.)

1. In a spring forming machine, the combination of a supporting table, provided with guide slots; a flexible resistance member, extending longitudinally thereon; blocks, connected to the ends of said member and fitted to

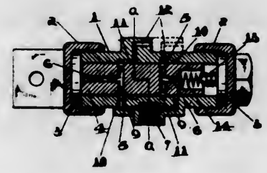
slide in said guide slots in the table; means, located below the table and connected to said blocks, for imposing tension on the resistance member; a curved formation plate, which is movable towards and from the resistance member; and means for imparting movement to the formation plate.

1,428,627. COLLAPSIBLE TOILET CHAIR. BENJAMIN F. GRABFELDER, Stockton, Calif. Filed Aug. 24, 1921. Serial No. 494,915. 2 Claims. (Cl. 155—31.)



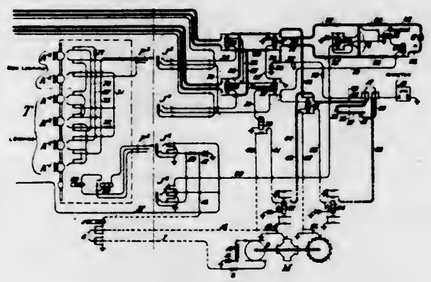
1. A collapsible chair comprising a pair of transversely spaced frames, each frame comprising a pair of spaced legs and a rigid connection therebetween and members turnably mounted on and extending between the corresponding legs of the opposed frames, and hinged together intermediate their ends in a vertical plane for folding movement inwardly of the frames, said members when outstretched being adapted to support a seat member.

1,428,628. PREPARED FLOUR. WILLIAM P. M. GEBLCK, St. Paul, Minn. Filed Nov. 24, 1919. Serial No. 340,405. 7 Claims. (Cl. 99—10.)



3. An improved flour comprising a non-glutenous cereal element, a glutenous cereal element, and approximately 4% of an acid milk product resulting from the removal of the milk fats and the major part of the original water of solution.

1,428,629. COMBINED TABLE AND BOOKCASE. CHARLES H. GUNN, Oakland, Calif. Filed May 16, 1921. Serial No. 469,802. 4 Claims. (Cl. 45—70.)

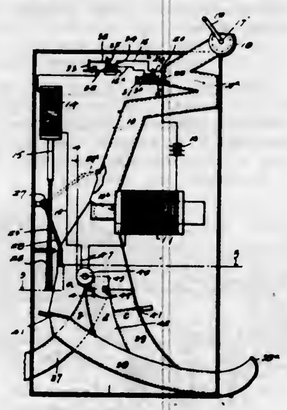


1 A combined table and cabinet comprising a permanent table portion provided with an enlarged opening, a cabinet slidably mounted in said openings for vertical movement therethrough, a folding table-top member hinged to the permanent table portion, raising mechanism for the cabinet, and actuating means for said mechanism mounted on the under side of the folding table member, said means being actuable at will after the folding member has been raised to an operative position.

1,428,630. VIBRATOR FOR RAPPING PATTERNS IN MOLDING. OLIVER S. HAMMOND, Guelph, Ontario, Canada. Filed Dec. 2, 1920. Serial No. 427,810. 1 Claim. (Cl. 22—56.)

In a vibrator, the combination of a body having an air inlet and a pair of outlets formed in its sides; a plunger adapted to reciprocate in said body, the body having a pair of annular channels formed in its inner surface at each side of the centre of its length, one channel at each end being in communication at all times with the air inlet, and the other channel at each end being at all times in communication with an air outlet and the plunger having an annular channel formed at each side of its centre, the channel at one side of the centre of the plunger being adapted to communicate with the inlet channel at the same side of the centre of the body while the other channel in the plunger is in communication with an outlet channel at the other side of the centre of the body, and passageways extending from each channel in the plunger to the adjacent end of the same.

1,428,631. TESTING AND ADJUSTING APPARATUS FOR CORD CIRCUITS. WILLIAM H. HARRISON, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Feb. 7, 1920. Serial No. 357,068. 6 Claims. (Cl. 179—175.)

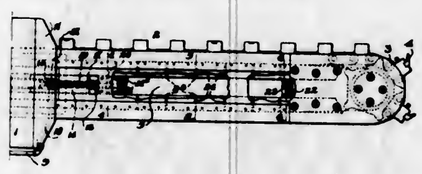


1. A testing system comprising an operator's cord circuit having a direct current relay and an alternating current relay, an auxiliary circuit associated with said relays, a testing circuit adapted to be associated with said cord circuit comprising individual equipment for testing the direct and alternating current relays, a portable test set adapted to be associated with the testing circuit and auxiliary circuit, switching means in said set for selectively associating the direct and alternating current relays with their individual equipment, a relay in said test set operable upon such association, and signaling means in said test set controlled by said relay for indicating the operation of the direct and alternating current relays.

1,428,632. AUTOMATIC COIN SELECTOR. DAVID HENDRICKSON, Berkeley, Calif. Filed Sept. 7, 1920. Serial No. 408,504. 12 Claims. (Cl. 194—99.)

1. A coin selector having an electro magnet of which the poles are separated to form an upwardly and downwardly open gap, a coin chute leading to the gap at an

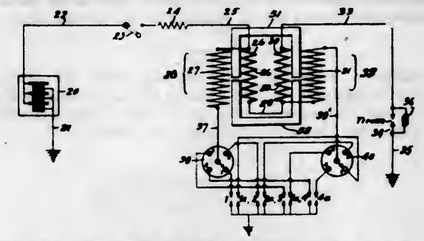
inclination to effect a rolling movement of a coin traversing the same, a circuit including said electro magnet and



a source of energy and a switch having a dimensionally selective circuit closing element arranged in the path of a coin traversing the chute.

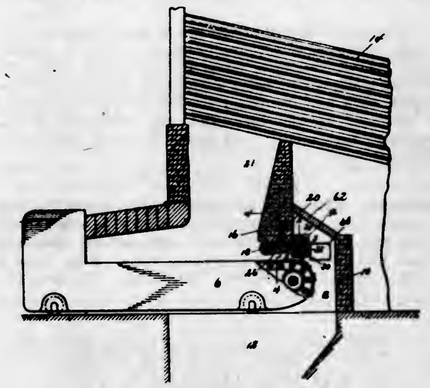
1,428,633. FERTILIZER MATERIAL AND PROCESS OF PRODUCING SAME. ADDISON F. HOFFMAN, Pittsburgh, Pa. Filed Apr. 23, 1918. Serial No. 230,342. 4 Claims. (Cl. 71—9.)

1. A fertiliser material precipitated from acid coal mine water by partial neutralization of its ferric sulphate content so that the major portion of the ferric content of the material is basic ferric sulphate, together with such organic matter as is a constituent of such water.



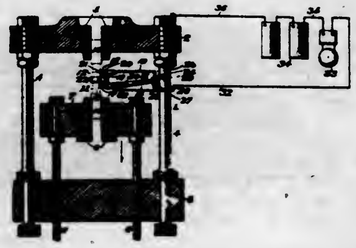
1,428,634. MINING MACHINE. MORRIS P. HOLMES, Claremont, N. H., assignor, by mesne assignments, to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Nov. 24, 1916. Serial No. 133,144. 25 Claims. (Cl. 262—30.)

1. In a mining machine, a cutter bar having a longitudinally disposed enclosed vertically central fluid conducting chamber therein and a series of laterally extending communicating outlets and a cutter chain movable around said bar.



1,428,635. IGNITION SYSTEM. JOHN H. HUNT, Dayton, Ohio, assignor to The Dayton Engineering Laboratories Company, a Corporation of Ohio. Filed Sept. 28, 1918. Serial No. 256,000. 2 Claims. (Cl. 123—148.)

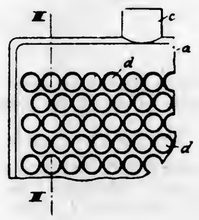
1. In an ignition system for internal-combustion engines having a plurality of spark plugs for each cylinder, the combination with a current source and a timer; of a plurality of ignition coils each having a primary winding and a secondary winding, the primary windings being connected on series with the timer and current source, and the secondary windings being arranged in parallel relation; a common magnetic circuit for the primary windings and providing an air gap within each winding; and



means for conducting sparking impulses from each of the secondary windings to one of the spark plugs in each cylinder.

1,428,636. FURNACE-BRIDGE-WALL CONSTRUCTION. FRANK A. HURLBUT, Flat River, Mo. Filed July 13, 1918. Serial No. 244,821. 4 Claims. (Cl. 110—40.)

2. A furnace construction comprising a fire chamber having a progressive feed stoker and a bridge wall overlying the rear end of said stoker, a gate structure associated with the lower portion of said wall and comprising a transverse shaft having a gate member provided with a bearing having a vertically elongated bearing passage accommodating said shaft, whereby said member is permitted a limited degree of free vertical sliding movement relatively to said shaft.

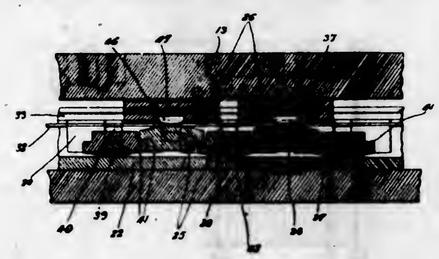


1,428,637. YIELD-POINT DETECTOR. MORTON C. HUTCHINSON, Woodbury, N. J., assignor of one-half to Leon G. Buckwalter, Merchantville, N. J. Filed Feb. 26, 1919. Serial No. 279,368. 10 Claims. (Cl. 73—51.)

1. In a device of the character described, a body portion, an arm carried thereby and provided with a point

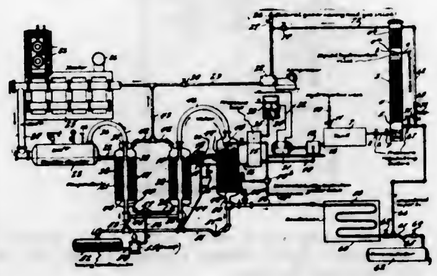
to engage the specimen to be tested, a second arm pivoted upon the body portion and having a point to engage the specimen, means to hold the device in place while in use, and circuit closing means operated by the pivoted arm.

1,428,638. PROCESS FOR PRODUCTION OF HEAT-EXCHANGING BODIES. HANS FREDERIK BARKER JÖRGENSEN, Copenhagen, Denmark. Filed July 24, 1920. Serial No. 398,763. 2 Claims. (Cl. 204—8.)



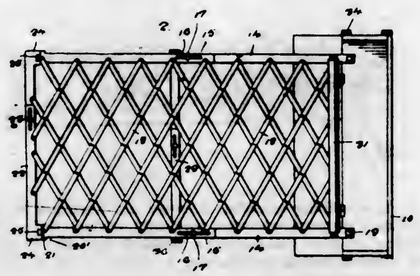
1. The herein-described process of manufacturing automobile radiators, comprising preparing a fusible metallic core; then depositing a metal electrolytically upon said core, such deposition being commenced in a non-acid depositing-bath and continued therein until a firm coating is produced on the core, and then completed in the depositing bath proper; and finally removing the core by melting it out.

1,428,639. METHOD OF PRODUCING VISIBLE SIGNALS AND ADVERTISEMENTS ON WATER SURFACES. HELMUT JÜNGHANS, Schramberg, Germany, and FRITZ GLOCAUER, Cincinnati, Ohio. Filed June 7, 1922. Serial No. 566,668. 15 Claims. (Cl. 40—125.)



15. Apparatus of the character described, comprising a member adapted for disposition in water, and means associated with said member for graphically producing at the surface of the water a sign to be displayed; substantially as described.

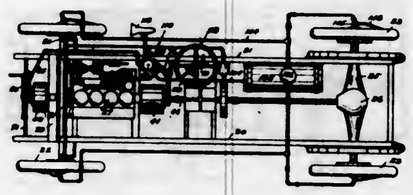
1,428,640. BEARING. ALBERT KINGSBURY, Pittsburgh, Pa. Filed Dec. 31, 1917. Serial No. 209,617. 38 Claims. (Cl. 64—25.)



35. A bearing comprising a base ring, a plurality of equalizer plates mounted on said base ring to tilt only in a circumferential direction with respect to the axis of the bearing, equalizer plates mounted on and bridging the space between adjacent ends of said first-named equalizer plates and bearing shoes tiltably mounted on said last-named equalizer plates.

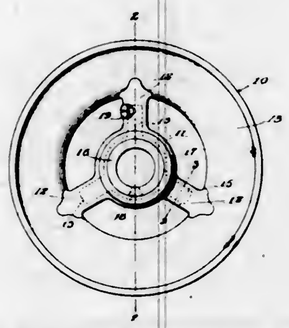
1,428,641. METHOD AND APPARATUS FOR TREATING OR CONVERTING COMPOUNDS PREFERABLY OF A HYDROCARBON NATURE. WILLIAM JOHN KNOX, New York, N. Y., assignor to Erskine D. Warren, New York, N. Y. Filed Mar. 24, 1919. Serial No. 284,818. 44 Claims. (Cl. 196—25.)

1. A process of producing hydrocarbon compounds which consists in evolving hydrocarbon vapor from hydrocarbon liquid at one point, heating the evolved vapor at a second point to a temperature sufficient to dissociate the hydrocarbons therein, utilizing the said heated dissociated vapor by contacting the same with the surface of hydrocarbon liquid at a third point to heat the latter and to evolve vapor therefrom, employing the resulting commingled vapor to evolve further vapor at the first point, and subsequently subjecting the said commingled vapor to condensation.



1,428,642. CONVERTIBLE COT AND TABLE. CHARLES LAMBIE and FREDERICK W. LAMBIE, Minneapolis, Minn. Filed Dec. 13, 1920. Serial No. 430,233. 2 Claims. (Cl. 5—72.)

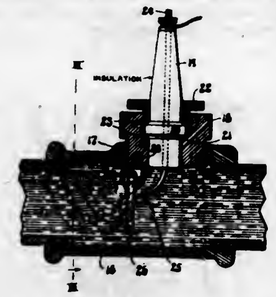
1. A device of the character described comprising an enclosing box adapted to be clamped upon the running board of an automobile, a collapsible supporting frame normally disposed within said box and formed of a plurality of adjustably connected sections, a collapsible bottom member of lasy tong formation adapted to rest upon the supporting frame when assembled, in combination with a canopy structure including pairs of slidably adjustable uprights adapted for association with the ends of the box, the ends of the box being provided with sockets receiving said uprights, slidably adjustable inclined brace bars pivotally connected with said uprights, socket



members formed on the intermediate portions of the side bars of the supporting frame, a verticle adjustable inverted U-shaped arch having lower ends of its arms detachably engageable with said second named socket, and a cover connected with the upper ends of said first named pairs of uprights stretched over said last named uprights and detachably connected with the end bar of the frame.

1,428,643. PNEUMATIC CONTROL SYSTEM. JAMES H. LANGLEY, Long Beach, Calif. Filed Oct. 3, 1918. Serial No. 256,654. 4 Claims. (Cl. 60—17.)

3. In a pneumatically controlled power transmission system for vehicles, the combination of a prime mover provided with a throttle valve, a power shaft secured to said prime mover, a pneumatic clutch comprising a casing secured to a section of said shaft, pistons in said casing connected to an independent section of said shaft, a speed governor geared to said engine, a pneumatic casing connected to said clutch, means connecting said pneumatic casing and said governor, and operating means secured to said throttle valve and to the aforesaid means.

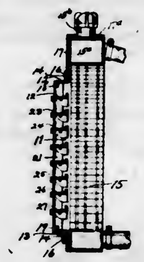


1,428,644. TROLLEY WHEEL. NATHAN L. LIEBERMAN, Bayonne, N. J. Filed Jan. 25, 1921. Serial No. 439,773. 2 Claims. (Cl. 64—26.)

1. In a lubrication system for trolley wheels, the combination with the wheel and axle, of a plurality of lubricant reservoirs formed one in each of the several spokes of the wheel, each reservoir being open to an annular outlet passageway common to the several reservoirs, the outlet passageway being formed in the hub of the wheel; the relation of the annular passageway to the axle being such that the lubricant contained in the reservoirs is continuously fed to the axle under all operating conditions.

1,428,645. FLUID-ACTUATED CIRCUIT CONTROLLER. GEORGE P. MCDONNELL, St. Louis, Mo. Filed Oct. 10, 1918. Serial No. 257,616. 4 Claims. (Cl. 200—81.)

4. A fluid actuated circuit controller comprising an annular collar adapted to enter an aperture in a fluid conduit, a plate formed conductor pivotally mounted on said collar, a core of insulating material positioned in said collar, and a conductor passing through said core and

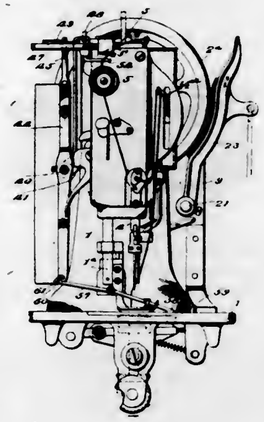


projecting therefrom to a position adjacent to the first conductor, said contacts being so disposed as to be immersed in the fluid when said closure is applied to said aperture.

1,428,646. METHOD OF PRODUCING BARIUM CHLORIDE. JAMES H. MACMAHON, Saltville, Va., assignor to The Mathieson Alkali Works, Inc., a Corporation of Virginia. Filed Aug. 20, 1920. Serial No. 404,788. 4 Claims. (Cl. 23—13.)

1. The method of producing barium chloride which comprises reacting upon finely ground barium carbonate with a hot solution of ammonium chloride to form barium chloride and volatile by-products, and removing the volatile by-products substantially as rapidly as formed by aspirating the solution with air.

1,428,647. SHUTTER FOR AUTOMOBILE RADIATORS. JACK E. MESSENGER, Des Moines, Iowa. Filed Jan. 28, 1919. Serial No. 273,635. 6 Claims. (Cl. 257—132.)



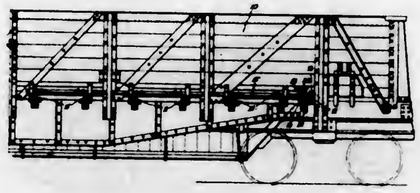
1. In an assemblage of the class described, the combination of a radiator and a shell therefor having an inner flange overlapping the margins of the radiator, and a shutter frame arranged in a plane parallel with and adjacent to said radiator and formed with a marginal flange located between and held by said radiator and inner flange, such engagement forming the only means for connecting said shutter frame to said radiator.

1,428,648. STOPPING MECHANISM FOR SEWING MACHINES. HENRY C. MILLER, Waterford, N. Y. Filed Nov. 12, 1917. Serial No. 201,583. 28 Claims. (Cl. 112—219.)

1. In combination, stitch forming mechanism, power means, thread tension devices, means for shifting the power, a trip actuated in one direction by the tension of

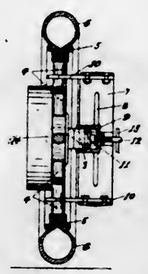
the thread, and means between the power shifting means and the trip to move said trip in opposition to the tension of the thread whereby the trip is constantly vibrated during the stitching operation, said trip having an abutment to cause actuation of the power shifting means when the thread breaks or becomes slack.

8. In a sewing machine, the combination of stitching mechanism, a driving shaft therefor, a stop motion, a tension trip actuated by the tension of the thread, a trigger co-operating with the trip means between the trigger and the driving shaft including a cam actuated latch, a cam actuated catch to periodically engage the latch, the latch holding the stop motion in position to permit operation of the stitching operation.



18. In combination, upper and lower stitch forming mechanism a take up member, power means, means intermittently operated by the power means for pulling off a definite supply of thread to supply the upper stitching mechanism, and connections between the thread pull off means and the power means for stopping the stitching mechanism if the lower thread pays out or the upper thread breaks or becomes slack.

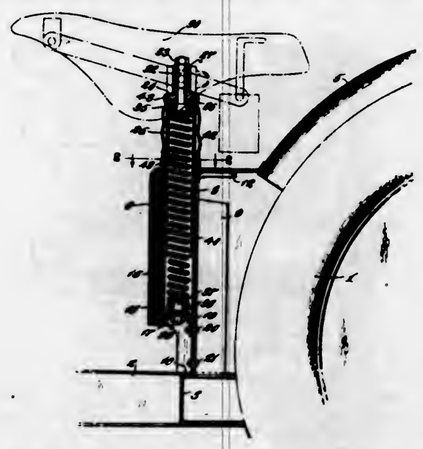
1,428,649. LOCKING DEVICE FOR STEERING WHEELS. HIRAM C. MILLER, Parkesburg, Pa. Filed June 18, 1921. Serial No. 478,705. 5 Claims. (Cl. 70—129.)



1. The combination with a steering column having a steering wheel, of a pair of clamps having portions concentric with said column, fillers between said portions and the column, a casing enclosing corresponding ends of said clamps, means securing said corresponding ends of said clamps together, means passing through the casing and said corresponding ends, the extremity of one of said corresponding ends having a sleeve, a locking element passing through said casing and through the sleeve and being operatively connected to one of the spokes of the steering wheel, and means in the casing operatively connected with the element for locking the same therein.

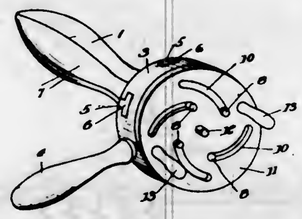
1,428,650. DUMP-DOOR-OPERATING MECHANISM. JOHN O. NEIKIRK, Lombard, Ill., assignor to Rodger Ballast Car Co., Chicago, Ill., a Corporation of Missouri. Filed May 13, 1922. Serial No. 560,532. 9 Claims. (Cl. 105—244.)

1. Door operating mechanism comprising a shaft, socket means rigidly connected thereto for convenience in applying a turning force to said shaft, stop means rigidly connected to said shaft, said stop means having stop members thereon in staggered relation, bracket means, and means pivotally connected to said bracket means for consecutively engaging said stop members.



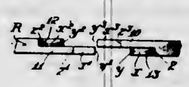
1,428,651. POWER ATTACHMENT. GEORGE R. NELSON, Center City, Minn. Filed May 29, 1922. Serial No. 564,359. 3 Claims. (Cl. 74—106.)

1. A power attachment for an auto-vehicle wheel consisting of a pulley having an integrally formed hub cup adapted to slidably and concentrically engage the hub of the wheel, hooks near the periphery of the pulley for engagement with the spokes of the wheel, and means operative against the hub of the wheel for forcing the pulley outwardly against the resistance of said hooks.



1,428,652. VEHICLE SEAT SUPPORT. BOUDEWIJN B. NEUTEBOOM, Detroit, Mich., assignor, by mesne assignments, to Sinclair Molitor Corporation, New York, N. Y., a Corporation of Delaware. Filed Aug. 28, 1918. Serial No. 251,728. 7 Claims. (Cl. 208—61.)

1. In a seat support for vehicles, the combination of telescoping tubes of such cross-sectional shape as to hold them against relative turning, one of said tubes having the seat operatively connected to it, and the other being carried by the vehicle, a closure for the outer end of each tube, an anchorage member within each tube and

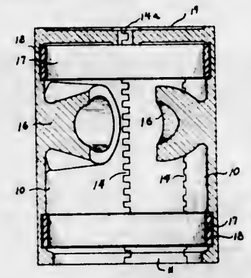


attached to the closure thereof, and a spring having its ends secured to said anchorage members.

1,428,653. DILATOR COMBINATION. PETER NICK, Los Angeles, Calif. Filed June 10, 1920. Serial No. 387,822. 2 Claims. (Cl. 174—89.)

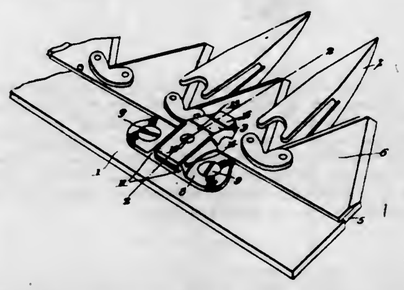
1. A dilating instrument including a block provided with radial dove-tailed grooves in its forward face, slides mounted in said grooves, dilating members extending forwardly from said slides, said blocks being provided with slots extending through the rear thereof from said grooves, pins projecting from said slides through said slots, a disk pivoted on the rear of said blocks, said disk being provided with cam slots into which said pins extend whereby said dilating members are spread or closed when said disk is turned in one direction or the other.

1,428,654. PACKING RING. EDWARD R. NORMAN, Chicago, Ill. Original application filed June 4, 1917. Serial No. 172,604. Divided and this application filed Nov. 28, 1917. Serial No. 204,310. 2 Claims. (Cl. 74—109.)



2. A transversely split packing ring having on each of its ends an outer projection and an inner shoulder, the projection on one end fitting over and contacting with the shoulder on the opposite end and the projections and shoulders all extending transversely of the ring to the median circumferential plane of the ring.

1,428,655. TELESCOPE-SIGHT MOUNTING. RUDOLF NOSKE, San Francisco, Calif. Filed Nov. 3, 1921. Serial No. 513,886. 6 Claims. (Cl. 33—50.)



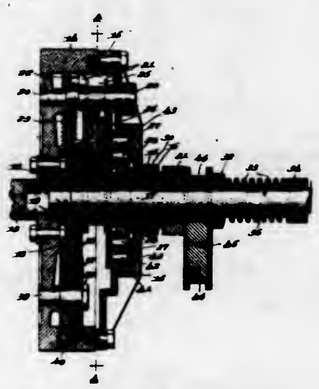
1. A mounting for telescope sights for rifles and the like comprising a stationary mounting plate having a groove in the top thereof and arranged to be secured upon the breach of a rifle; a movable mounting plate mounted upon said stationary plate, said movable plate having a transversely disposed groove matching with the groove formed in the top of the stationary plate; a pin slidably mounted between said matching grooves; and means for moving said pin into locking engagement between the plates to rigidly secure the movable plate against longitudinal movement when in use.

1,428,656. SECTIONAL PISTON FOR ENGINES. HANS PETERSEN, Davenport, Iowa. Filed July 22, 1921. Serial No. 486,662. 7 Claims. (Cl. 74—108.)

1. A device of the class described, comprising a cylindrical body formed of two or more sections having interlocking edges, and a segmental head the edges of which are fitted with inter-engaging tongues and grooves.

1,428,657. SICKLE. WILBUR F. PURDY, Chinook, Mont. Filed July 30, 1921. Serial No. 488,639. 2 Claims. (Cl. 56—305.)

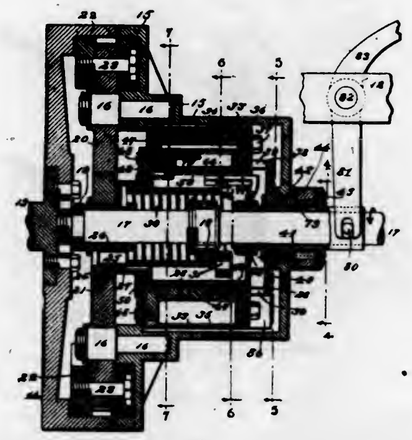
1. In a mowing machine, a finger bar having a guard carrying a stationary cutter, a reciprocating cutter co-operating therewith, a clip including a base secured to the finger bar, spaced ribs on the base providing a pocket therebetween, a body pivotally secured in the pocket to the ribs, said body having its outer portion widened to provide shoulders that are disposed opposite the ribs and to provide a finger outward of the shoulders,



spring means exerting a lifting pressure between the body and the base, removable means adjustably connecting the body to the base, whereby the finger of the body may be brought into frictional contact with the base of the said body and its finger swung away from the base, and said adjusting means providing a guide for the spring.

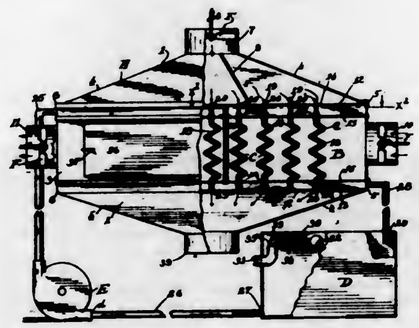
1,428,658. LAP. LORENCE S. RASMUSEN and HERMAN B. CARLSON, Davenport, Iowa. Filed Feb. 15, 1921. Serial No. 445,071. 12 Claims. (Cl. 51—206.)

1. A lap including a tubular body, a conical seat arranged within the body having slots arranged therein, a plug slidable within the body and having a tapering point engaging the seat, a movable sleeve threaded into one end of the body, elastic means disposed between the sleeve and plug whereby adjustment of the sleeve will cause the plug to expand the walls of the body, and means carried by the plug to engage the slots in the seat for preventing turning movement of the plug during the expansion.



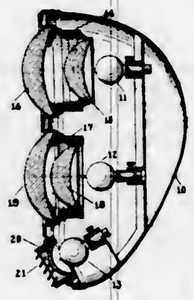
1,428,659. VARIABLE-SPEED TRANSMISSION. JOHN REECE, Boston, Mass., assignor to Reece Transmission Company, Boston, Mass., a Corporation of Maine. Filed Mar. 11, 1920. Serial No. 364,895. 15 Claims. (Cl. 74—34.)

1. A variable speed transmission apparatus comprising in combination, a rotating driving member, an elastic device eccentrically secured to said driving member, a rotatable driven member, and a train of connections, between said elastic device and the driven member, including a one-way device controlling the same, whereby rotation is transmitted through said device, in one direction only, to the driven member.



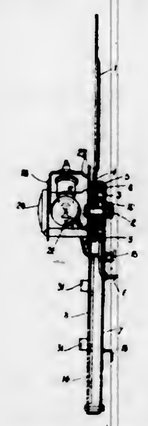
1,428,660. VARIABLE-SPEED TRANSMISSION. JOHN REECE, Boston, Mass., assignor to Reece Transmission Company, Boston, Mass., a Corporation of Maine. Filed Mar. 11, 1920. Serial No. 364,896. 11 Claims. (Cl. 74—34.)

1. A variable speed transmission apparatus comprising in combination, a rotating driving member, a yielding and reasserting device carried on said driving member, a rotatable driven member, and a train of connections, between said device and the driven member, including a one-way device controlling the same, whereby rotation is transmitted through said device, in one direction only, to the driven member; said one-way device consisting of a



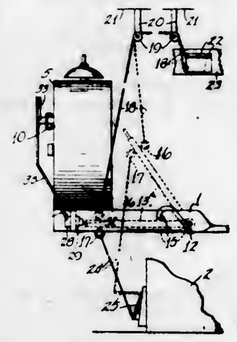
hydraulic mechanism substantially as described wherein the liquid flows in one direction during forward rotation but is checked against reverse flow.

1,428,661. AIR COOLER. ROBERT N. RICHARDSON, Los Angeles, Calif. Filed Feb. 25, 1920. Serial No. 361,140. 2 Claims. (Cl. 62—139.)



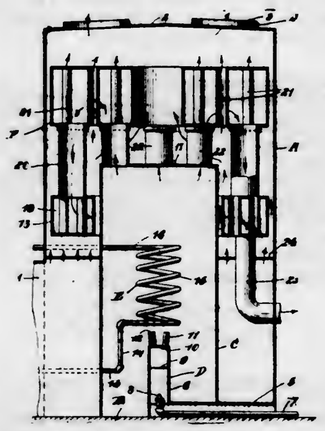
1. In an air cooling device, including a housing, a casing having an air inlet and outlet opening within said housing, a hood having an air inlet opening mounted above said casing, a hood having an air outlet opening mounted below said casing, liquid tanks mounted above and below the casing within the housing and covered by the base portions of the hoods, said tanks having their top and bottom walls perforated, tubular members within the casing, a portion of the upper ends of which passes through the perforations in the walls of the upper tank and communicates with the interior of the upper hood, while a portion of the lower ends of same passes through the perforations in the lower tank walls and communicates with the interior of the lower hood, means within the casing for forcing a stream of air therethrough, and means within the upper hood for drawing air within the same through the tubular members.

1,428,662. VEHICLE HEADLIGHT. WALTER D'ARCY RYAN, Schenectady, N. Y. Filed Dec. 17, 1921. Serial No. 523,033. 2 Claims. (Cl. 240—41.)



1. A headlight composed of a three unit combination, the first unit comprising a light source and two jointly functioning lens to gather the light rays and project them forwardly in a long, narrow and glareless beam; the second unit comprising a light source and two jointly functioning lenses to gather and disperse the light rays in a broad, glareless, manner, in the field between the long beam and near the vehicle, the third unit comprising a light source, and a deflecting medium to deflect the rays to the roadway immediately in advance of the machine; and to the sides thereof, substantially as shown and described.

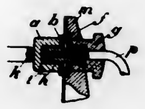
1,428,663. MOTOR DIRECTION INDICATOR. MORRIS SHACHTMAN, London, England. Filed July 15, 1921. Serial No. 485,035. 2 Claims. (Cl. 116—51.)



1. A direction indicator for motor vehicles comprising in combination a pivoted indicating plate provided with desired warning indications, a cover or shield behind which the pivoted plate is normally concealed, a pulley on the pivoted plate, a rotatable controlling switch placed conveniently to the driver and wholly flexibly connected to the indicator, stops for holding the switch in predetermined positions corresponding with the required positions of the pivoted indicating plate, a flexible cable, one end of which is connected to the controlling switch and the other end to the pulley on the pivoted plate, a coil spring arranged within the pulley on the pivoted plate and acting to normally hold the plate behind its shield or cover, a stop against which the pivoted plate bears when in the concealed position and hook shaped stops which hold and retain the pivoted plate in the indicating positions.

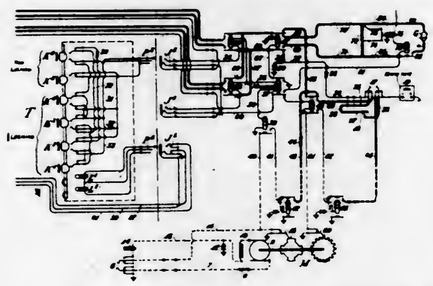
1,428,664. DRAFT REGULATOR. WILLIAM W. SMALLEY, Chicago, Ill. Filed Jan. 11, 1922. Serial No. 528,462. 6 Claims. (Cl. 161—8.)

1. A device of the type described comprising an L-shaped bar, a spring-pressed frame pivotally carried by said bar, the free end of said frame adapted to be normally disposed in the bend of said L-shaped member, a sleeve carried by said bar, and having a slot therein, a finger carried by the free end of said frame and adapted to enter said slot and to be received in said sleeve, a clock having an alarm winding stem, and means operatively connecting said stem to said sleeve, whereby the rotation of said sleeve will release said frame.



1,428,665. HOT-AIR FURNACE. ADAM L. SMITH, Youngstown, Ohio. Filed Feb. 11, 1921, Serial No. 444,167. Renewed Feb. 14, 1922. Serial No. 536,537. 1 Claim. (Cl. 126—116.)

In a furnace of the class described, a supporting base, a closed casing mounted on said base, a cold air supply conduit opening into the lower portion of said casing through one side wall thereof and hot air outlets in the top of said casing, a main heating chamber within the casing with the walls thereof spaced from the casing walls, heating means in said chamber, an auxiliary air heating chamber arranged above said main heating chamber and

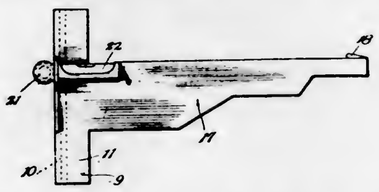


extending adjacent to and spaced from said casing walls, pipes connecting said main and auxiliary heating chambers, a supplementary air heating chamber surrounding said main chamber at a point below the auxiliary chamber and having a plurality of cold air pipes extending therethrough, pipes connecting said auxiliary and supplemental heating chambers, and an exhaust pipe leading from the bottom of said supplemental chamber.

1,428,666. SHORT-CIRCUIT TERMINAL FOR THE MAGNETO-ELECTRIC IGNITION APPARATUS OF INTERNAL-COMBUSTION ENGINES. GOTTLIEB STEINER, Solothurn, Switzerland, assignor to the Firm Scintilla, Solothurn, Switzerland. Filed May 28, 1920. Serial No. 385,057. 2 Claims. (Cl. 123—149.)

1. A short circuiting device for the primary winding of the magneto electric ignition apparatus of internal combustion engines, including an internally screwed metal socket fixed in an insulated manner inside the magneto casing, a cylindrical metal piece externally screwed for co-acting with said internally screwed socket and connecting one end of a short circulating cable to said internally screwed socket and a cylindrical extension, formed of insulating material, of said externally screwed metal piece external to said magneto casing and partly enclosing and rigidly attached to said externally screwed metal piece, the said short circuiting cable traversing said externally screwed cylindrical metal piece and its insulated extension in an axial direction, thus permitting of the simultaneous attachment or removal of the cable and the said externally screwed metal piece with its insulated extension.

1,428,667. TESTING AND ADJUSTING APPARATUS FOR CORD CIRCUITS. JOHN F. TOOMEY, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Mar. 9, 1920. Serial No. 364,397. 6 Claims. (Cl. 179—175.)



1. A testing system comprising an operator's cord circuit, electromechanisms included in said circuit operable by current of different characteristics, an auxiliary circuit associated with said electromechanisms, a testing circuit adapted to be associated with said cord circuit, a portable test set adapted to be associated with said testing circuit and said auxiliary circuit, switching means in said set for controlling the application of current to said electromechanisms, and signaling means in said set operable when associated with said auxiliary circuit for indicating the action of said electromechanisms upon the application of current thereto.

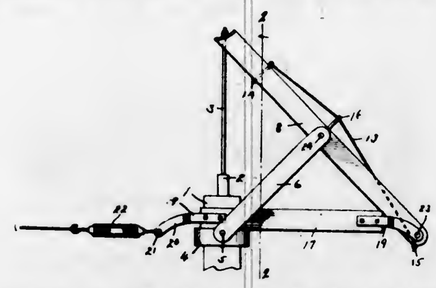
1,428,668. PROCESS FOR THE PRODUCTION OF ACETALDEHYDE FROM ACETYLENE. LAURENT EMILE MARIE TREVOUX, Petit-Quevilly, France, assignor to La Société Anonyme de Produits Chimiques Etablissements Malétra, Petit-Quevilly, France. Filed May 31, 1921. Serial No. 473,803. 7 Claims. (Cl. 204—9.)

1. The process for the regeneration of the residual reaction liquors obtained in the synthetic production of acetaldehyde from acetylene, in the presence of metallic mercury in an acid medium, and of a substance adapted to maintain the catalyzing action of the mercury, which comprises removing the acetaldehyde and mercury from said liquor and submitting the remaining liquor to an oxidizing action.

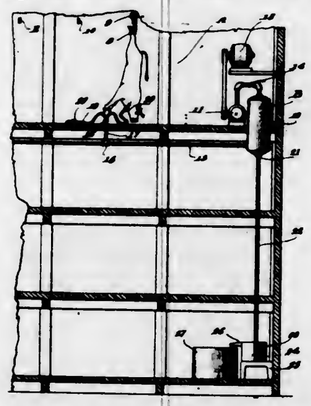
1,428,669. STADIA-ROD ATTACHMENT. JOHN D. WATSON, Lake City, Calif. Filed Jan. 29, 1921. Serial No. 441,092. 4 Claims. (Cl. 33—46.)

1. The combination with a stadia rod, of a member mounted thereon and provided with front and rear sights aligned at a right angle to the rod, and a level indicating means located in juxtaposition to one of said sighting elements.

1,428,670. VACUUM-OPERATED COW MILKER. JOSEPH NORMAN WILLIAMS, Pukeatua, and HARRY CYRIL MIDDLETON, Te Awamutu, New Zealand. Filed June 27, 1921. Serial No. 480,807. 1 Claim. (Cl. 31—73.)



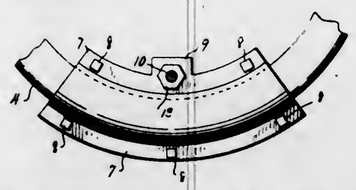
In combination with the vertical air pipe of vacuum operated cow milking apparatus, a central pipe interposed in said vertical air pipe and having upper and lower openings in its sides and a block between said openings, and an airtight transparent vessel secured to and surrounding said central pipe.



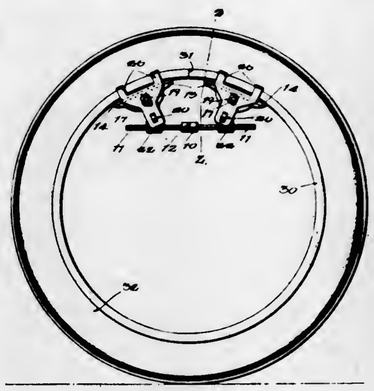
1,428,671. OIL-WELL PUMP JACK. HERMAN R. WILLIS and REUBEN M. WILLIS, Chanute, Kans. Filed July 30, 1920. Serial No. 399,976. 1 Claim. (Cl. 74—5.)

A pumping jack comprising a collar clamp adapted to embrace the head of a well casing, oscillating arms pivotally connected at one end to said collar clamp, a lift beam pivotally attached to the opposite ends of said arms, said lift beam being slit longitudinally at one end to provide resilient tongues, an apertured plate secured to the top of said tongues for maintaining the same sprung apart and also constituting a guide for a pump rod passing

through the slit portion of the beam, parallel side bars, connected to the opposite end of the lift beam and slidable over the collar clamp and connecting means at the front end of the slidable bars for actuating the lift beam and pump rod.

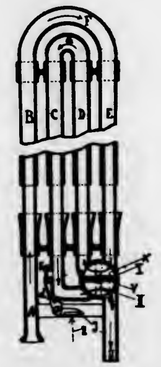


1,428,672. METHOD AND APPARATUS FOR REMOVING BLOOD FROM ANIMALS IN PROCESS OF SLAUGHTERING. JOHN A. WILSON, Kansas City, Kans., assignor to The Wilson Slaughtering Device Co., Kansas City, Mo., a Common Law Trust. Filed Mar. 2, 1920. Serial No. 362,684. 25 Claims. (Cl. 17—30.)



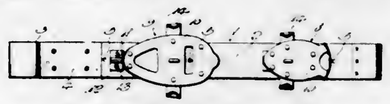
1. That step in the process of killing animals consisting of piercing the animal's throat and drawing the blood from the wound by a vacuum.

1,428,673. BRAKE. WILLIAM R. ABELL, Marbury, Md. Filed July 16, 1921. Serial No. 485,225. 3 Claims. (Cl. 188—204.)



2. The combination of an arched shaped lever for motor vehicle brake beams and a member for connecting said lever to connectors for the brake shoes comprising a pair of plates arcuately curved longitudinally to conform to the curvature of the arch and formed transversely to fit the cross sectional contour of the arch, and means for securing the plates together upon the arch.

1,428,674. RIM REDUCING AND EXPANDING IMPLEMENT. JAMES R. ABERCROMBIE, Siloam Springs, Ark. Filed Jan. 21, 1922. Serial No. 530,988. 2 Claims. (Cl. 157—1.)



1. An implement for reducing and expanding rims, including a pair of clamping members, each having a solid transversely bored body portion provided with a depending portion and with side lugs below the ends of its bore, a pair of clamping side plates having upper rim engaging hooks and also provided with body openings to aline with the bore of the body of the clamping member, and with lower slotted openings to receive the lugs of said body, clamping bolts extending through the bore of the body and through said clamping side plates, and a nut swiveled in the depending portion of the body, and an actuating rod having oppositely threaded side portions extending through the said swiveled nuts for shifting the clamping members toward and away from one another.

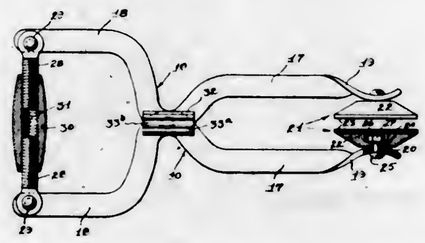
1,428,675. TROMBONE. JOSEF FRANZ SERAFIN ALSCHAUSKY, Gautzsch, near Leipzig, Germany. Filed Oct. 21, 1920. Serial No. 418,609. 2 Claims. (Cl. 84—395.)

1. An improved trombone comprising in combination with the mouth piece and the bell tube, four main tubes, two U-shaped slides connecting said tubes into an outer pair and an inner pair, a three port valve located to connect at will either an outer tube or an inner tube directly to the bell tube, and means for operating said valve so that the two inner main tubes are shut off, the instrument being thus transformed into an alto-trombone.

1,428,676. SNOW SKATE. PETER BARLOW, Rochester, Minn. Filed May 31, 1921. Serial No. 473,719. 1 Claim. (Cl. 46—67.)

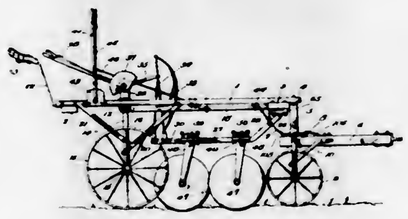
A skate of the class described comprising a runner, having a plurality of vertical longitudinally alined bolt-holes, plates secured to the under face of said runner, having rows of alined screw-threaded holes alined with said bolt-holes, foot supports shiftable along the upper face of the runner, and retaining bolts carried by said supports, said bolts extending through the bolt holes and having their lower threaded ends engaged with the threaded holes in said plates.

1,428,677. DOLL. ELIZABETH BARRY, Portland, Oreg. Filed Sept. 22, 1921. Serial No. 502,375. 4 Claims. (Cl. 46—40.)



1. In a doll, a head comprising a covering having a strip secured at the ends thereof and extending from the front towards the back, flexible material extended beneath the strip to simulate hair, the strip also defining a part in the hair.

1,428,678. CLASP. SAMUEL BUCHSBAUM, Chicago, Ill. Filed Oct. 20, 1919. Serial No. 331,840. 4 Claims. (Cl. 24—238.)



3. A clasp of the character described comprising a main element having a hook shaped portion, and a straight portion, a tubular member slidable on said straight portion and adapted to engage said hook shaped portion to close the opening in said hook and a stop on said main member opposite said straight portion to retain said slidable member in hook closing position, said stop and said straight portion cooperating to retain said slidable member in inoperative position when said member is moved therebetween.

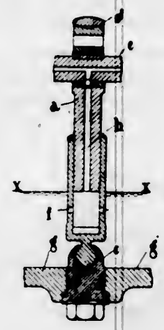
1,428,679. GLASS TONGS. CARL F. CASWELL, Coon Rapids, Iowa. Filed Sept. 8, 1919. Serial No. 322,488. 5 Claims. (Cl. 294—28.)

1. In a device of the class described, a pair of levers pivotally connected between the ends thereof, the junction between said levers forming a rest adapted to bear against an object grasped by the device, the adjacent ends of the levers forming opposed arms on one side of the rest and opposed jaws on the other side of said rest, a revoluble grip carried by said arms and providing a combination handle and arm actuating device for spreading, retracting and locking the arms with respect to each other to thereby close, open and secure said jaws.

1,428,680. HOE. CHARLES H. CLARK, Easton, Me. Filed June 9, 1920, Serial No. 387,707. Renewed Mar. 2, 1922. Serial No. 540,614. 2 Claims. (Cl. 97—85.)

1. In a machine for the purposes set forth, the combination of a main frame consisting of longitudinal beams, cross beams secured to and extending laterally beyond said beams, a rolling support for the front end of said frame, the width of said support being less than the length of the cross beams, longitudinal coupling bars having their ends secured to the ends of the respectively adjacent cross beams, axle members secured to the ends of the rear cross beam, wheels mounted upon said axle members, braces secured to said axle and extending forwardly therefrom to the longitudinal coupling bars and secured thereto, and other braces secured to said axle members and extending rearwardly and inwardly therefrom and secured to the side beams of the main frame.

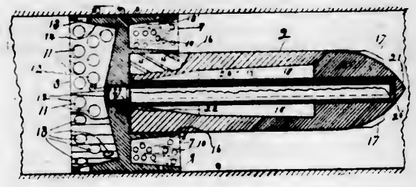
1,428,681. AUTOMOBILE TRUCK. REUBEN S. CLYMER, Quakertown, Pa. Filed Sept. 23, 1920. Serial No. 412,176. 2 Claims. (Cl. 254—88.)



1. In a device of the class described, a frame comprising parts which are relatively adjustable with respect to each other to alter the length of the same; means for holding said parts in adjusted positions with respect to each other; anti-friction devices fixed on the frame for rotation and located in parallel planes inclined with respect to the horizontal; lifting jacks mounted to travel on the anti-friction devices, each jack comprising parts connected for relative vertical movement, and means

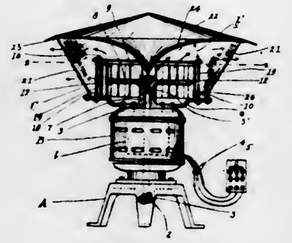
under the control of an operator for producing relative lifting movement between the parts of the jack; a longitudinally adjustable connection between the jacks; a latch pivotally mounted with respect to one jack and

cooperating with a portion of the frame to hold the jacks against downward sliding movement on the anti-friction devices; and means for operating the latch from a remote point.



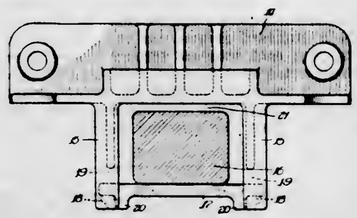
1,428,682. MEANS FOR LUBRICATING INTERNAL-COMBUSTION ENGINES. GEORGE CONSTANTINESCO, Weybridge, England. Filed Feb. 11, 1919. Serial No. 276,342. 3 Claims. (Cl. 184—27.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

2. Means giving a continuous delivery for lubricating internal combustion engines comprising a pivot on the crank case of the engine, a cylinder oscillating about the pivot and being immersed and oiled and provided with openings near its lower end permitting of the passage of oil into the cylinder, an eccentric on the crank shaft of the engine, a piston operating in the cylinder and operably connected about the eccentric on the crank shaft so as to be reciprocated during the rotation of the crank shaft, the piston being designed to close the openings in the cylinder on its downward stroke and being provided with a longitudinal passage way through which the oil is pumped to the system to be lubricated and the pumping being effected by the inertia of the liquid column in the piston.



1,428,683. PROJECTILE. KENNEDY DOUGAN, Minneapolis, Minn. Filed Aug. 1, 1918. Serial No. 247,860. 6 Claims. (Cl. 102—29.)

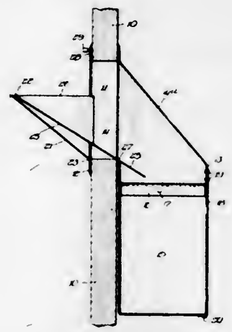
5. A projectile, a circular head of larger diameter than said projectile detachably secured thereto and separable therefrom by the greater respective air pressure exerted thereon in proportion to their weights when traveling rapidly through the air, a cylinder formed axially in said projectile having its rear end open, a plurality of cylinders telescopically mounted in said first named cylinder, means for limiting the outward movement of said second named cylinders, a head having greater diameter than that of the smallest of said plurality of cylinders rigidly secured to or formed integral with the rear end of said smallest cylinder, a cylinder formed in the front side of the aforementioned first named head having its front end open and adapted to receive said second named head, and



means for flexibly holding said second mentioned head in said cylinder in said first mentioned head, said means being adapted to draw said plurality of cylinders out of said first mentioned cylinder when said head moves slower than said projectile.

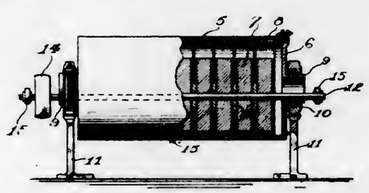
1,428,684. SIREN. EMIL W. ERICK, Canby, Minn. Filed Dec. 14, 1921. Serial No. 522,316. 5 Claims. (Cl. 116—147.)

1. In a siren, the combination of a frame, a rotor revoluble on said frame, fastening means engageable by a stator for fastening the latter in operative position to the frame around the rotor, and a round stator having a plurality of ports in its peripheral wall and consisting solely of an open ended relatively thin sheet metal shell, the ported wall of the shell being so thin as to be incapable of maintaining the shell in true circular form without additional support, said shell engaging with said fastening means to be thereby fastened and supported in true circular form to permit said rotor to freely rotate therein.



1,428,685. CARRY-IRON ARRANGEMENT. FRITZ B. ERNST, Chicago, Ill. Filed Jan. 24, 1921. Serial No. 439,540. 5 Claims. (Cl. 213—42.)

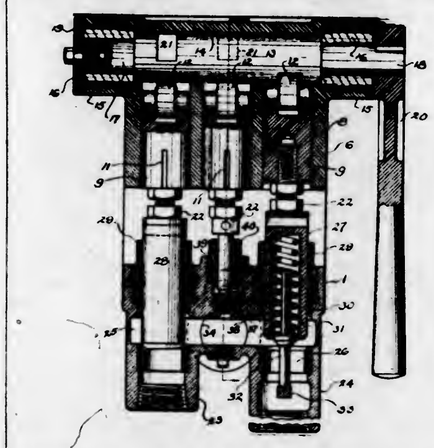
1. A striking casting having depending arms adapted to receive a carry iron, a carry iron retained therein, a draw bar supported by the carry iron and having a predetermined vertical clearance from the striking casting,



and interengaging lugs upon the ends of the carry iron and the casting arms, the interengaging portions of the carry iron and casting being greater in extent than the draw bar clearance.

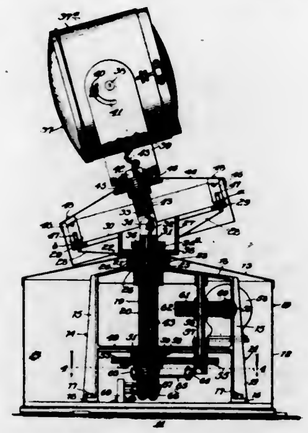
1,428,686. ASH RECEPTACLE. HARRY L. FARGO, Ripon, Wis. Filed Jan. 29, 1921. Serial No. 440,841. 12 Claims. (Cl. 220—18.)

12. In an ash receiving device comprising an upper receptacle having an opening therein, a lower receptacle detachably secured to said upper receptacle, a frame adapted to be secured to the dash of an automobile, a door hingedly secured to said frame, and an apron hingedly secured to said door and extending through an opening in the said dash and into the said upper receptacle, the said apron having upturned wing portions at its sides whereby a channel is formed leading into the said receptacle.



1,428,687. TUBE MILL. JOSÉ FERENCZ, Curityba, Parana, Brazil. Filed Apr. 30, 1921. Serial No. 465,692. 1 Claim. (Cl. 83—9.)

The combination of a pair of pedestals, fixed bearings thereon, a drum disposed between said pedestals and having hollow trunnions at its ends journaled in said bearings, a standard secured on one pedestal, an arm extending from said standard through the adjacent trunnion, a bar carried by said arm and disposed longitudinally within the drum, and grinding rollers suspended from said bar within the drum to co-operate with the inner surface of the drum for grinding material fed into the drum.

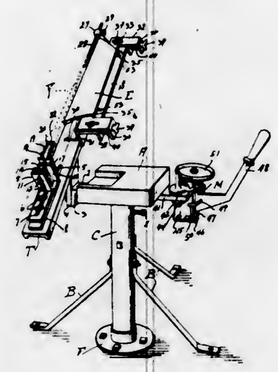


1,428,688. HYDRAULIC VALVE. HERBERT L. FRITTS, Detroit, Mich. Filed Apr. 2, 1921. Serial No. 457,881. 11 Claims. (Cl. 135—16.)

1. A valve of the type described comprising a body having a chamber adapted to communicate with high and low hydraulic pressues and a discharge connection, high and low pressure valve members operatable in said valve body and adapted to be opened by hydraulic pressure, an exhaust valve member operatable in said valve body, means

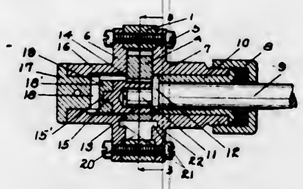
adapted to open said exhaust valve member, and rotary means adapted to successively close said valves and permit of only one of said valves being opened at a time.

1,428,689. MECHANISM FOR OPERATING SEARCHLIGHTS. LOUIS GREENBERG, Chicago, Ill. Filed Jan. 29, 1919, Serial No. 273,730. Renewed Dec. 9, 1921. Serial No. 521,252. 13 Claims. (Cl. 240—48.)



6. The combination with a base, of two upright shafts rotatably mounted therein, a search light tiltably connected with one of said shafts, the other shaft being provided with an annular track having all portions thereof in an inclined plane arranged substantially transverse to the longitudinal axis of said shafts, said search light having rollers bearing against said track, and means for turning said shafts.

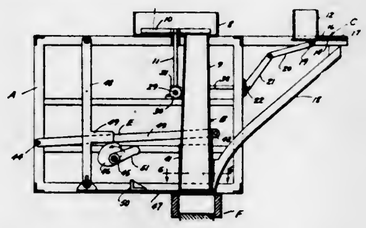
1,428,690 GAUGE. ALBERT M. GUILLET, Charlotte, N. C Filed Feb. 26, 1920. Serial No. 361,542. 6 Claims. (Cl. 33—174.)



1. A device of the class described comprising a support, a table carried thereby, an elongated support for the

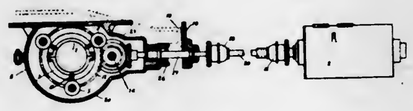
whirl end of a spindle carried by said table, and a spindle center carried by the table, said spindle center having its

longitudinal axis disposed in alinement with the longitudinal axis of said support.



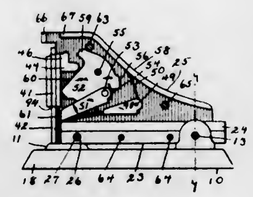
1,428,691. ROTARY PUMP. WILLIAM A. HATCHER, Detroit, Mich., assignor to Wernicke-Hatcher Pump Company, Grand Rapids, Mich, a Corporation of Michigan. Filed Feb. 19, 1921. Serial No. 446,470. 3 Claims. (Cl. 103—44.)

1. In a rotary pump of the class described, the combination of a suitable cylinder with intake and discharge ports, a cylindrical piston therein of less diameter than said cylinder, arranged and disposed in contact with said cylinder, suitable heads for the said cylinder, one of which is provided with a hub and stuffing box, a shaft disposed in said hub with a crank pin at its inner end on which said piston is journaled, a bushing between said crank pin and said piston secured to the said piston and having a diametrically-disposed rib at the end thereof, the opposite head of said cylinder being provided with a cap and having within the same a diametrically-disposed rib, a block between said bushing and cap having recesses for the said ribs on opposite faces thereof disposed in planes at right angles to each other, and a sliding vane between said piston and said cylinder separating the intake from the discharge, all coacting substantially as described for the purpose specified.



1,428,692. VENEERING APPARATUS. JOHN HERMAN, Los Angeles, Calif. Filed Aug. 23, 1920. Serial No. 405,398. 5 Claims. (Cl. 25—41.)

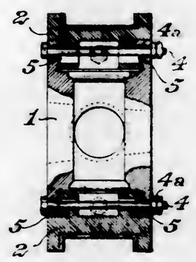
1. In a veneering machine, the combination with a mold box of a chute to feed pulp thereto for the body of a block, an apron movable into said box to provide a facing space therein, a hopper for facing material, means to deliver from said hopper to said facing space a quantity of facing material, means to open said chute to said box,



and means to successively move said apron into said box, deliver facing material of substantially the same dimensions as said facing space thereto and open said chute.

1,428,693. AXLE-DRIVEN-TRANSMISSION MECHANISM. GEORGE EGBERT HULSE, Newark, N. J., assignor to Safety Car Heating & Lighting Company, a Corporation of New Jersey. Filed May 6, 1919. Serial No. 295,190. 10 Claims. (Cl. 74—56.)

1. In combination, a tubular drum, a rotative axle extending continuously through said drum and operatievly connected therewith, an external gear on said drum, a counter-shaft having its axis parallel to the axis of said drum, a relatively wide pinion on said counter-shaft meshing with said gear, a bevel gear on said countershaft, a driving shaft having its axis at right angles to the axis of said counter-shaft, a bevel gear thereon meshing with said first-mentioned bevel gear, and a casing enclosing said drum and gears and supporting said countershaft.



1,428,694. STAPLE BINDER. BERTHOLD JAHN and ERNEST EMIL KAHL, New Britain, Conn., assignors to The B. Jahn Manufacturing Company, New Britain, Conn., a Corporation. Filed Nov. 25, 1916. Serial No. 133,357. Renewed Feb. 23, 1921. Serial No. 447,224. 3 Claims. (Cl. 1—23.)

2. In a staple binder, a die member positioned between a pair of side frames, pivotally connected by one end to the base, and having a die at the other end, the lower portion of the said die member fitting between the said side frames, and the upper portion thereof having recesses at the sides suitably to receive a staple strip, and the said die member being formed of two parts of sheet metal, one of the said parts being bent transversely into generally U-shape with an off-set in the side walls to provide for

the said recesses, and the other of the said parts being of U-shape and fitting and filling the said lower portion of the said one part, the said die member having a bed for a die of generally conical form, and the said die member having means for adjustably holding the die for permitting of changing the active cutting edge portion.

1,428,695. CROSSHEAD. JULIUS KINDERVATER, New York, N. Y. Filed Oct. 22, 1921. Serial No. 509,480. 3 Claims. (Cl. 74—84.)

1. The combination of, a cross head, having undercut or dovetailed slipper recesses on its guide adjoining sides; correspondingly tapered slippers fitted in said recesses; and means, interposed between the inclined sides of said slippers and recesses, for effecting adjustment of the slippers to take up vertical wear thereof without necessitating their removal from the recesses.

1,428,896. LAWN-EDGE TRIMMER. WILLIAM LENEHAN, Denver, Colo. Filed July 9, 1921. Serial No. 482,412. 3 Claims. (Cl. 97—28.)

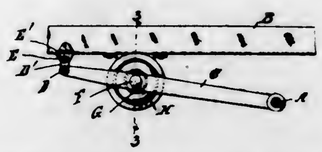
2. In a lawn edge trimmer, the combination with a frame having loops formed in its sides, bearings in the loops, of an axle engaged in the bearings, bolts passable through the loops, bearings and axle, a wheel rotatably engaged on the axle, a moldboard having angularly disposed cutting edges and detachably secured upon opposite sides of the loops, and a handle secured to the frame.

1,428,697. OPHTHALMIC MOUNTING. THOMAS LEYTHAM, Rochester, N. Y., assignor to Shur-on Optical Co., Inc., Rochester, N. Y., a Corporation of New York. Filed Mar. 31, 1921. Serial No. 457,232. 3 Claims. (Cl. 88—43.)

1. An ophthalmic mounting comprising a pair of continuous lens rings, formed of a cellulose composition, a curved bridge formed of a cellulose composition and extending from one ring to the other, and a reinforcing piece entirely surrounded by said bridge and curved to conform

substantially to the curve of the bridge, so as to maintain the bridge in its curved form when the lens rings are heated for the purpose of inserting the lenses therein.

1,428,698. SIGN AND THE LIKE. GUSTAVE C. LOEWENTHAL, New York, N. Y. Filed May 18, 1921. Serial No. 470,515. 4 Claims. (Cl. 91—67.9.)

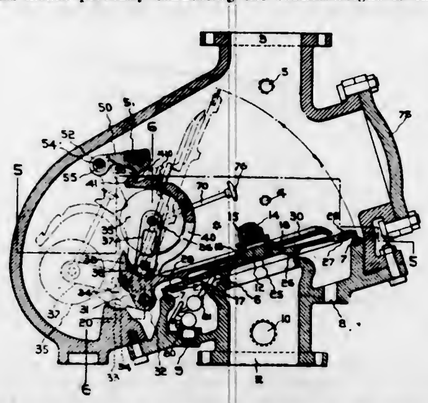


1. The method of rendering paper translucent, consisting in applying to the paper a solution consisting of about seventy five per cent linseed oil and about twenty-five per cent of turpentine, paraffin and a drier in approximate equal proportions.

3. A sign consisting of a body of translucent paper having advertising matter embossed thereupon and rendered less inflammable by the action of cellulose acetate.

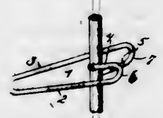
4. A sign or the like, comprising a sheet of paper having a translucent embossed portion and a different colored translucent body portion.

1,428,699. SPRING SUPPORT FOR VEHICLES. HILDING LÜBECK, Herserud, Sweden. Filed Nov. 20, 1919. Serial No. 339,289. 1 Claim. (Cl. 267—15.)



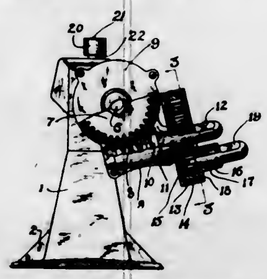
In a spring support for vehicles, the combination with the vehicle frame and a wheel axle, of a lever, pivotally connected with said frame and said axle, so as to allow the lever not only to swing with respect to said frame, but also to move lengthwise thereof, a ring carried by said lever between said axle and the point of oscillation of the lever, another ring carried by said frame and arranged substantially concentric with said first named ring, and a pneumatic tire interposed between asid rings.

1,428,700. DRY-PIPE VALVE. JOHN R. MEADOWCROFT, Montreal, Quebec, Canada. Filed Feb. 5, 1919. Serial No. 275,226. 17 Claims. (Cl. 169—22.)



1. In a dry pipe valve, the combination with a pivoted arm for carrying the valve and the valve carried thereby,

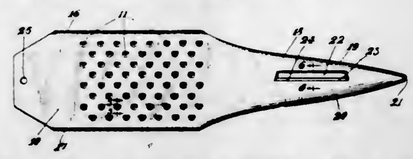
of a counterweight movable relatively to the carrying arm, and means pivotally connecting the counterweight to the



said carrying means whereby the opening of the valve is accelerated.

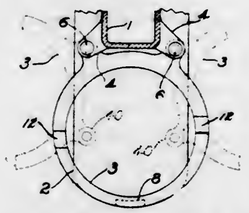
1,428,701. WIRE LOOP. OTTO A. MICHELIS, Detroit, Mich. Filed Apr. 13, 1921. Serial No. 461,143. 2 Claims. (Cl. 5—29.)

1. The combination in a spring structure comprising a plurality of coiled springs and ties therefor each consisting of a wire loop the arms of which terminate in oppositely disposed hooks disposed in superimposed relation with the bight of one hook projecting slightly beyond the other, facilitating the engagement of the loops with adjacent springs, one coil normally lying in the closed end of the loop and the other within both of said hooks.



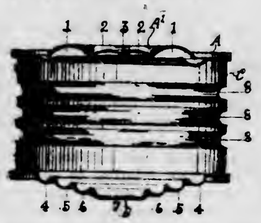
1,428,702. LIFTING JACK. JOHN A. MORRISON, Mansfield, Ohio. Filed Feb. 24, 1921. Serial No. 447,474. 2 Claims. (Cl. 254—97.)

1. A lifting jack provided with a standard containing lifting mechanism, a rotatable shaft provided with a worm engaging the lifting mechanism and having a squared portion, an internal gear fixed upon said shaft, a pinion meshing with said internal gear, a shaft upon which the pinion is fixed, said last named shaft provided with a squared portion and an operating handle provided with a socket interchangeably mountable upon said squared portions.



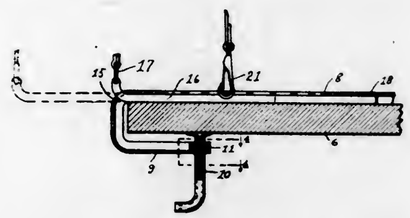
2. A lifting jack provided with a standard containing a sliding rack bar, a pinion engaging the rack bar, a worm gear fixed to the pinion, a rotatable shaft provided with a worm engaging the worm gear and having a squared portion, an internal gear fixed upon said shaft, a pinion meshing with said internal gear, a shaft upon which the pinion is fixed, said last named shaft provided with a squared portion and an operating handle provided with a socket interchangeably mountable upon said squared portions.

1,428,703. CULINARY IMPLEMENT. ENGELBERT NICOLUSSI, Glendive, Mont., assignor of one-half to Charles Nicolussi, Chicago, Ill. Filed Mar. 9, 1922. Serial No. 542,359. 3 Claims. (Cl. 146—7.)



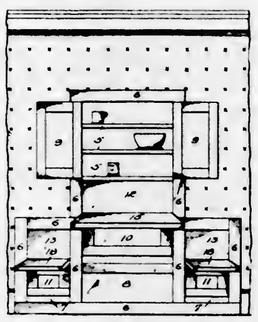
2. A culinary implement comprising a flat sheet of metal having flanged edges, a handle extending therefrom, and a plurality of upstanding projections having openings directed towards one side of said sheet, the mentioned openings being proportioned to produce particles of various magnitude when used as a grater depending upon the depth said projections are entered into the substance operated upon.

1,428,704. MIXING MACHINE. GUNTHER H. PETRI, Boston, Mass. Filed Oct. 12, 1920. Serial No. 416,378. 5 Claims. (Cl. 259—102.)



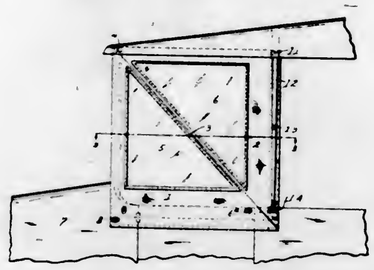
1. In mechanism for holding material and operating thereon, a pedestal for the operating mechanism, combined with a receptacle holder having a plurality of pivots supported on the pedestal on different axes, and a receptacle supported by said holder adapted to hold the material on which said mechanism operates; each of said pivots being removable whereby the holder and receptacle may be swung about another of them.

1,428,705. CAN FOR PRESERVES. JULIUS A. PICKENS, Easley, S. C. Filed Jan. 29, 1920. Serial No. 354,977. 3 Claims. (Cl. 220—72.)



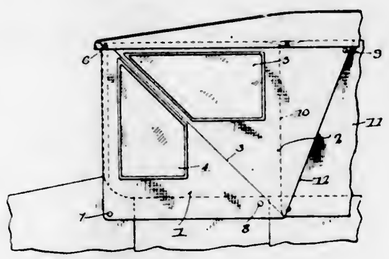
1. A packing can having a top constructed with a steam-cavity, said steam-cavity surrounding and converging into a gas-cavity and said gas-cavity opening into a vent, substantially as described.

1,428,706. LUGGAGE CARRIER. ROBERT H. PRICHARD, Los Angeles, Calif. Filed Mar. 3, 1919. Serial No. 280,502. 2 Claims. (Cl. 224—29.)



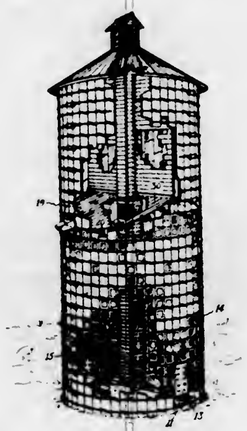
2. In a luggage carrier a base bar composed of U-shaped channel iron having one end bent around and under the other portion to lie parallel thereto, said end being pierced and adapted to receive between it and the other portion the edge of the running board of an automobile; a nut in said pierced end held positioned therein by deforming portions of the walls of said end; and a screw in threaded engagement with said nut and passing through the hole in said end.

1,428,707. IN-A-WALL FURNITURE. JOHN P. FROST, St. Louis, Mo. Filed Jan. 23, 1919. Serial No. 272,760. 1 Claim. (Cl. 45—51.)



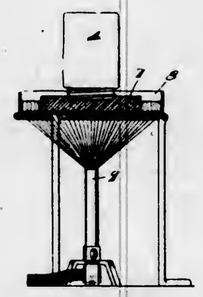
In-a-wall furniture of the class described comprising, in combination, a pair of opposed uprights arranged in spaced relation, a top piece for said uprights, a back piece for said uprights extending from the top piece to a point intermediate the top piece and the bottom edges of said uprights, a front wall for said uprights, a door hingedly connected at its lower edge to said front wall to complete a compartment between the uprights, back piece and front wall, a board member receivable in a vertical position within said compartment, a trunnion extending laterally from each side face of the board member near the rear end thereof and receivable in opposed slotted openings in the uprights which openings extend from a point near the lower edge of the uprights to a point adjacent the lower edge of the back piece, said board member capable of being raised and extended forwardly in a horizontal position with relation to the uprights when the hinged door is moved to its position, said board member when in its extended position resting both upon the lower face of the hinged door and the upper face of the front wall and the upper face of the board member at its rear edge engaging the lower face of the back piece for guiding and retaining the board member in its horizontally extended position.

1,428,708. VEHICLE QUARTER CURTAIN. MAXIMILIAN RAHR, Jr., Manitowoc, Wis. Filed Sept. 20, 1918. Serial No. 254,937. 1 Claim. (Cl. 296—138.)



The combination with a vehicle body, door, and canopy, of a set of triangular side curtain members, in hinge connection with each other along upwardly converging lines, and adapted to fold one upon another, button fastening means for detachably supporting the lower member with its lower margin extending below the top of and connected with the door, and with an upwardly extending margin in the vicinity of the axial line of the door hinges, and detachable means for supporting a second member as an extension of the first member,—the hinge connection between said members being located along an oblique line extending upwardly from the swinging corner of the door, the hinge connection between said members terminating substantially in a line with the upper edge of the door, the members being unconnected below the top of the door, whereby one or all of the members of said set of triangular side curtain members may be folded either inwardly or outwardly while the retained portion of the curtain remains taut.

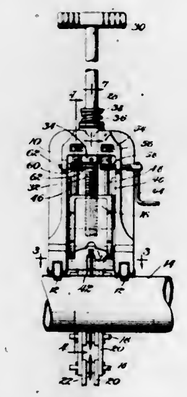
1,428,709. VEHICLE CURTAIN. MAXIMILIAN RAHR, Jr., Manitowoc, Wis. Filed Aug. 26, 1920. Serial No. 406,080. 1 Claim. (Cl. 296—138.)



The combination of an automobile having a canopy top, a door, a rear curtain, and a front quarter curtain, said front quarter curtain having a main forward body portion of substantially rectangular contour and having a triangular rear portion unitarily formed therewith and having one of its apices adjacent the bottom corner of the rectangular portion, and a fastening means carried by the upper apex and at the rearmost portion of the curtain, and a cooperating fastening means carried by said rear curtain, at a point a material distance from the forward edge of said rear curtain whereby upon detachment of said fastening means said door may be opened without disturbing any other point of attachment of said quarter curtain.

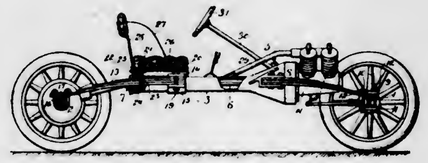
1,428,710. GRAIN CRIB. GEORGE B. READ, Bloomington, Ill. Filed Oct. 28, 1921. Serial No. 511,204. 8 Claims. (Cl. 72—6.)

1. In a concrete stave grain crib, in combination, a corn crib section formed by sections of super-posed stave members having ventilating openings, a grain bin section mounted thereabove and formed by super-posed sections of solid stave members, a roof for the grain bin section, having a cupola provided with ventilating openings therein, transverse partition members between the corn and grain bin sections, and a vertically disposed stack open at its upper end, and having in its lower portion within the corn crib section ventilating openings.



1,428,711. JAR SEAL AND METHOD OF APPLYING THE SAME. BERNARD F. ROEHRIG, Pasadena, Calif. Filed Dec. 14, 1918. Serial No. 266,685. 13 Claims. (Cl. 215—37.)

13. A receptacle having a congealable adhesive mixture of one substance upon the edges of the mouth thereof and a sealing wafer partially composed of a similar substance fused therewith and forming a hermetical closure, substantially as described.

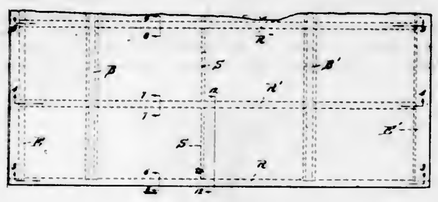


1,428,712. PIPE CUTTER. WALTER J. SANDERS, Chicago, Ill., assignor of one-half to John H. Sanders, Chicago, Ill. Filed Mar. 25, 1922. Serial No. 546,603. 3 Claims. (Cl. 81—189.)

2. In mechanism of the class described, a plurality of supporting wheels in alignment with each other in a plane transverse to the axis of a pipe to be cut and adapted to travel around the circumference of such a pipe, another similar set of wheels parallel thereto, a U-shaped body member having two arms, lying in the plane of the axis of the pipe to be cut, one of which affords journal support for each of said sets of wheels, a crosshead intermediate of said sets of wheels reciprocatable with reference to the body member, means to so reciprocate the crosshead, a chain carrying pipe cutting member, attached to the cross-

head and embracing the pipe to be cut, intermediate of the first sets of wheels, a second crosshead reciprocatable in the U-shaped member located outside the first crosshead adjacent to the pipe to be cut, a pipe cutting instrument on the second crosshead and slow motion means for moving the second crosshead toward or from a pipe to be cut, all of the parts being arranged and disposed as shown and described, for the purposes set forth.

1,428,713. AUTOMOBILE. WILLIAM F. SCHOENHARD, Kansas City, Mo. Filed July 15, 1920. Serial No. 396,566. 4 Claims. (Cl. 180—64.)



1. In an automobile, the combination with a front axle and a rear axle, of an engine support comprising a longitudinal tube open at its rear end, an engine carried by said tube having an exhaust pipe discharging into said tube, a drive shaft connected with the engine and extending through said tube, and springs supported by said axles and supporting said tube, substantially as set forth.

1,428,714. AEROFOIL. PETER SCHWAMB and PHILIP EBERHARDT, Arlington, Mass. Filed Aug. 9, 1918. Serial No. 249,211. 1 Claim. (Cl. 244—31.)

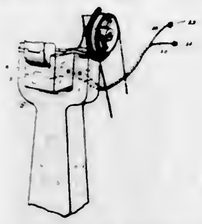
An aerofoil comprising a framework and a stiff wooden covering extending from the leading edge to the trailing edge on both sides of the framework, the framework comprising longitudinal spars and transverse ribs, the stiff wooden covering being glued to both the spars and the

ribs substantially continuously throughout the length of the spars and ribs respectively, thereby to afford the stiff-

ness usually supplied by trussing and bracing and at the same time serving as the exterior air surface of the aerofoil.

1,428,715. BALL-AND-SOCKET JOINT. IRA D. SHAW, Boston, Mass. Filed Aug. 13, 1921. Serial No. 492,045. 2 Claims. (Cl. 287—90.)

1. In a ball and socket joint, a ball member comprising an attachable shank, a ball carried by it, a socket member comprising an attachable casing having a side opening in it through which the ball is inserted to become socketed within the casing, and bearings oppositely arranged within the casing between which the ball is socketed to turn, a flange inturned from off the end of said casing retaining one of said bearings and a spring within the casing engaging the other of said bearings for holding it in engagement with the ball and the ball in engagement with the bearing retained by the flange as aforesaid.

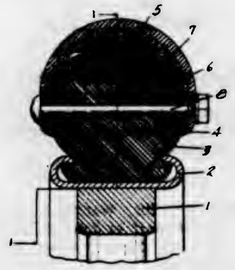


1,428,716. MACHINE FOR PICKLING METAL PLATES AND BLANKS. REUBEN STANLEY SMITH and EDWARD W. BURGESS, Milwaukee, Wis., assignors to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed Feb. 2, 1920. Serial No. 355,727. 39 Claims. (Cl. 266—7.)

1. In an apparatus for pickling metal plates or blanks, a line of vats, in combination with a conveyor provided with depending supports to carry the plates or blanks through the vats, means to feed the plates or blanks to the conveyor, and means to deliver the plates at the end of their travel.

1,428,717. HEATER FOR STITCHING MACHINES. JOSEPH STANGL, West Bend, Wis. Filed Oct. 22, 1919. Serial No. 332,464. 3 Claims. (Cl. 219—43.)

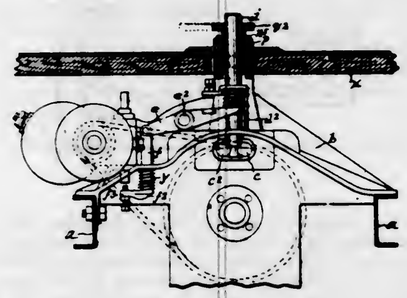
1. A heating unit comprising a container, a base member disposed in said container and having large capacity for retaining heat, spaced substantially parallel pockets in said member, a heating element disposed in each pocket, and means independently connecting the heating elements



with a source of power, whereby the heating elements may be singly or jointly employed to heat said member.

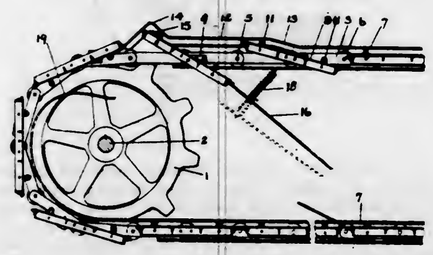
1,428,718. RADIATOR. PAUL A. STURTEVANT, Chicago, Ill. Filed Mar. 26, 1921. Serial No. 455,963. 5 Claims. (Cl. 257—125.)

1. A radiator for motor vehicles, comprising a core, a hollow outer casing surrounding said core and divided into separable sections open along the inside thereof, said core having water circulating tubes and a head sheet surrounding the core, said head sheet extending across and closing the opening along the inside of said sections, said tubes secured to said head sheet and opening into said outer casing through the head sheet, means for holding the marginal portions of said head sheet against said sections on opposite sides of the opening therein, and means for releasably clamping said sections together about said core.



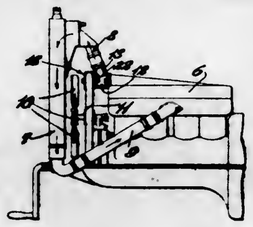
1,428,719. CUSHION TIRE. WASHINGTON D. TELLER, Wasepi, Mich. Filed Apr. 29, 1922. Serial No. 557,282. 4 Claims. (Cl. 152—1.)

1. In a tire, the combination with a cushion body member provided with rim engaging means comprising a fabric



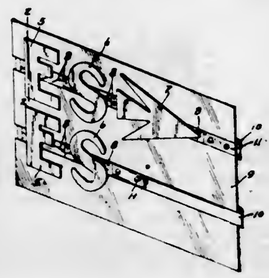
wall having resilient cushion means therein, a tread portion of relatively soft rubber seated on the periphery of said body member, an outer casing member embracing said body member and resilient tread portion with its sides lapping the sides of said body member and secured thereto at substantially spaced intervals by cross bolts disposed through said outer casing and body member, substantially as described.

1,428,720. AUTOMOBILE LOCK. HORACE T. THOMAS, Lansing, Mich. Filed Aug. 27, 1919. Serial No. 320,105. 11 Claims. (Cl. 74—58.)



1. The combination of a change speed gearing, a part adapted to lock said gearing, a starting motor, said part being adapted to set said motor into operation toward one end of its travel, an automatic means for locking said part in a position in which the change speed gearing is locked and the starting motor is inoperative, and an adjustable means for preventing the operation of the means for locking said part.

1,428,721. CONVEYER. EARLE A. TOWNE, Albion, Mich., assignor to Union Steel Products Co., Ltd., Albion, Mich. Filed Jan. 16, 1922. Serial No. 529,688. 11 Claims. (Cl. 198—158.)

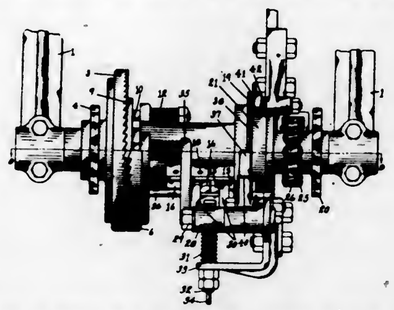


10. In a structure of the class described, the combination of a horizontal conveyer way and coacting endless conveyer chain, carriers journaled on said conveyer chain, guide rollers on said carriers coacting with said way to maintain the carriers in load carrying position, a discharging and reversing switch way opening into the said conveyer way to receive the guide roller of each carrier, and a slide disposed below the upper reach of the conveyer and discharging to the lower reach thereof, the upper ends of said slide being spring supported and positioned to be engaged by the rear ends of the carriers as they are tilted to discharge the load.

1,428,722. WATER CIRCULATOR FOR WATER-COOLED ENGINES. FRANK BENJAMIN UPTON and WILLIAM CLARK KIRK, Chattanooga, Tenn., assignors to Patten Manufacturing Company, Chattanooga, Tenn., a Corporation of Tennessee. Filed Jan. 17, 1918. Serial No. 212,200. Renewed Nov. 28, 1921. Serial No. 518,427. 3 Claims. (Cl. 123—175.)

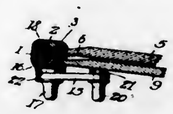
1. In combination with the water cooling system of an internal combustion engine, a circulating unit detachably secured to the water outlet of said engine, said unit comprising a hollow elbow-shaped shell having a water chamber therein and inlet and outlet openings for said chamber, a bearing member secured to said shell, a shaft carried by said bearing member and extending into the wall of said chamber, a screw propeller secured to the end of the shaft within the chamber, a driving pulley secured to the other end of said shaft, means for lubricating the shaft bearing, a stuffing box formed by said bearing member and the shell, packing within said box, said stuffing box being adjacent to said water chamber whereby water is prevented from entering said bearing and washing away the oil therefrom.

1,428,723. SIGN WITH INTERCHANGEABLE CHARACTERS. ANDREW A. URNESS, Alexandria, Minn. Filed Dec. 6, 1919. Serial No. 343,031. 2 Claims. (Cl. 40—140.)



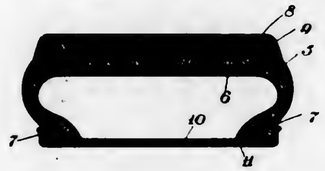
1. A sign comprising a supporting back having a dovetailed channel therein and a plurality of characters each having a dove tailed strip of sheet metal secured transversely across the back thereof, the top and bottom edges of the strip being free and resilient and normally spread wider than the channel in the sign, whereby the said edges can be pressed together for insertion into said channel, said strip holding the characters in position by the friction thereof with the sides of said channel.

1,428,724. INTERMITTENT DRIVING MECHANISM. BERT L. VAN ORMAN, Detroit, Mich., assignor to L. A. Young Industries, Inc., Detroit, Mich. Filed May 15, 1922. Serial No. 561,086. 8 Claims. (Cl. 74—54.)



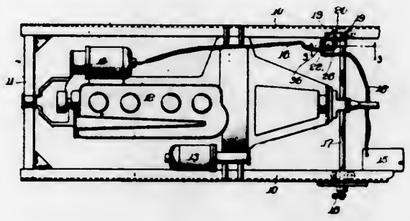
1. In a structure of the class described, the combination with a supporting shaft, a driving clutch member rota-

tably mounted thereon, a driven clutch member provided with an elongated hub having a longitudinal groove therein, a sleeve on which said driven clutch member is mounted provided with a disk-like flange disposed between said clutch members, pins carried by said flange disposed through said driven clutch member, clutch member engaging springs carried by said pins, a driving dog reciprocating in said groove in said driven clutch member, a clutch releasing lug secured in said groove, a spring



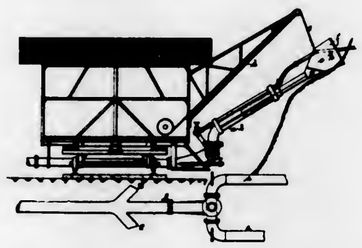
acting to engage said driving dog, a driven member provided with a disk notched to receive said dog, said disk being connected to said driven member by a shear pin, means for returning said driven member to its initial position, a stop disk on said driven clutch member, a return stop pawl coacting therewith, a friction brake member coacting with said stop disk, and a releasing lever with which said driven clutch member and said driving dog are engaged by the rotation of the driven clutch member to release the clutch and said dog.

1,428,725. WINDOW-SASH FASTENER. EDWARD H. WALTERS, Chicago, Ill., assignor to Lite Products Corporation, Chicago, Ill., a Corporation of Delaware. Filed Sept. 14, 1921. Serial No. 500,473. 5 Claims. (Cl. 292—202.)



1. A window having a frame, a pane slidable therein, an arm pivoted to the frame upon an axis oblique to the plane of the pane, whereby rotation about its axis will bring the free end of the arm toward and from the surface of the pane, the plane of rotation of the arm being near enough to the plane of the pane to cause the free end of the arm to exert pressure upon the pane substantially normal to its surface when said arm is rotated to acting position.

1,428,726. PNEUMATIC TIRE. NATHANIEL G. WARTH, Gallipolis, Ohio. Filed Dec. 10, 1919. Serial No. 343,837. 2 Claims. (Cl. 152—18.)

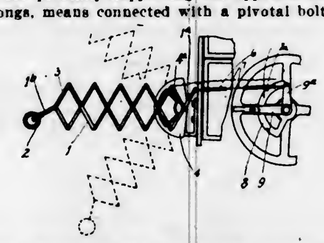


1. A pneumatic tire comprising a casing provided with a carcass, said casing being normally of oblate form in cross section, said casing having incorporated with its carcass at the tread side a band that is inextensible and is straight and rigid in cross section and of substantially the width of the casing, said band adapted to prevent expansion of the casing from its normal oblate form upon inflation.

1,428,727. PROTECTIVE DEVICE FOR AUTOMOBILE BATTERIES AND GENERATORS. FRED C. WASSMAN, Melrose Park, and EARL KENDALL, Maywood, Ill. Filed Sept. 17, 1920. Serial No. 411,003. 2 Claims. (Cl. 171—313.)

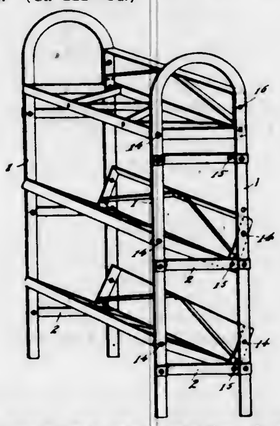
1. The combination with the frame, controller shaft, hand brake lever, generator and battery of an automobile, and a circuit line connecting said generator and battery, of a switch in said circuit line mounted on said frame, a spring urging said switch in one direction, and a striker on said controller shaft operating to move said switch in the opposite direction when said brake lever is swung in one direction.

1,428,728. FLUSHING APPARATUS. WILHELM WEBER, Wiesbaden, Germany, assignor to the Firm Gewerkschaft Hansbach II, Wiesbaden, Germany. Filed Jan. 22, 1921. Serial No. 439,272. 2 Claims. (Cl. 263—3.)



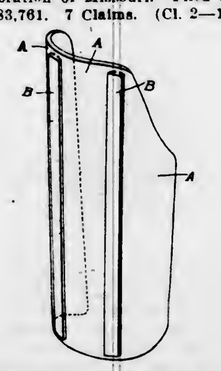
1. An improved locomotive flushing apparatus for the obtention of flushing material from minings comprising in combination, a frame mounted on wheels, an electrically operated slewing crane supported by said frame, a flushing conduit under said frame, a U-shaped connecting pipe at the head of said flushing conduit, telescopic pipes in each arm of said connecting piece, a funnel shaped head at the upper end of each telescopic pipe suspended to said slewing crane, a water pipe upon each of said telescopic arms and a flushing nozzle of said water pipe in said flushing head.

1,428,729. VEHICLE DIRECTION INDICATOR. BERNARD WEINSTEIN, Los Angeles, Calif. Filed Feb. 21, 1921. Serial No. 446,740. 2 Claims. (Cl. 116—40.)



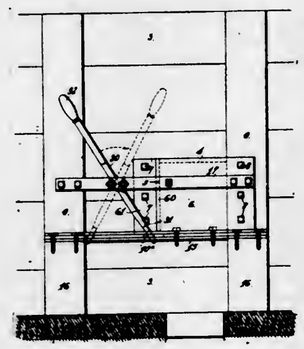
1. A device of the class described, including a lazy tongs, adapted to be extended, raised and lowered, a signal monuted on the extended end of said lazy tongs,

means for pivotally supporting the opposite end of said lazy tongs, means connected with a pivotal bolt connect-



ing two members of said lazy tongs intermediate their ends for controlling the radial and extending movement of said lazy tongs.

1,428,730. DISPLAY RACK. EDWARD B. WESTON, Dayton, Ohio. Filed Apr. 22, 1922. Serial No. 556,070. 5 Claims. (Cl. 211—14.)



2. In a display rack the combination of metallic end standards, with open metallic shelves to be secured in said standards, said shelves each comprising a main shelf and a rear section, with means for pivoting the two sections together, and means for locking the sections in angular relation.

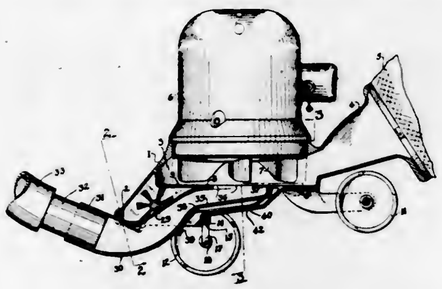
1,428,731. THIGH GUARD. WILLIAM P. WHITLEY, St. Louis, Mo., assignor to Rawlings Mfg. Co., St. Louis, Mo., a Corporation of Missouri. Filed July 11, 1921. Serial No. 483,761. 7 Claims. (Cl. 2—190.)

1. A thigh guard composed of a number of stiff sections hinged together, and stiff protecting devices separate and distinct from said sections arranged at the front side of the guard and extending longitudinally of the joints between said sections for preventing a sharp object from penetrating or passing through any of said joints.

1,428,732. GATE VALVE FOR SAND AND GRAVEL DUMPS. WILLIAM M. WILLIAMS, Reno, Nev., assignor of one-half to William W. Allington, Reno, Nev. Filed Aug. 2, 1921. Serial No. 489,336. 2 Claims. (Cl. 193—45.)

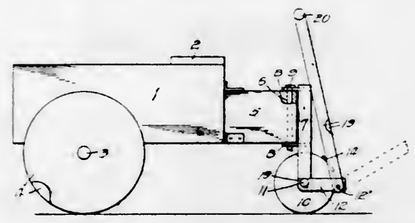
1. In an offtake for sand and gravel dumps and the like, the combination with a retaining wall along the bottom of the dump, the said wall having an outlet at the bottom of the pump through which the material from the dump is discharged by gravity; of a housing that constitutes a chamber into which the material as it gravitates through the retaining wall outlet is received, a gathering conduit below the receiving chamber, the said chamber having a discharging opening in the bottom thereof through which the material passes into the conduit, the said opening being of less area than the opening in the retaining wall.

1,428,733. APPARATUS FOR MOLDING COMPOUND. LYNDON F. WILSON, Chicago, Ill. Filed Aug. 29, 1921. Serial No. 496,227. 5 Claims. (Cl. 18—39.)



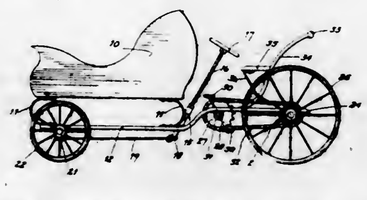
1. An apparatus for molding compound, comprising a plurality of supporting members, a series of angle bars disposed between said members in parallel contiguous relation with their apices extending upwardly to form a corrugated bed, and means for holding said bars against displacement.

1,428,734. VACUUM CLEANER. WILLIAM J. WISE and THOMAS O. ADAMS, New Philadelphia, Ohio, assignors to The Wise-McClung Manufacturing Company, New Philadelphia, Ohio, a Corporation of Ohio. Filed June 3, 1921. Serial No. 474,672. 9 Claims. (Cl. 15—9.)



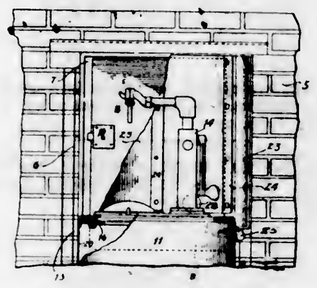
1. In a vacuum cleaner including a case containing a fan chamber and a nozzle having, an inlet mouth, a tubu-

lar attachment arranged to be inserted through said inlet mouth and nozzle and into the fan chamber and adapted



to be connected to a hose and spring means upon the attachment for engagement with the lower wall of the casing.

1,428,735. COASTER VEHICLE. THEODOR WOEHR, St. Louis, Mo. Filed June 18, 1921. Serial No. 478,520. 1 Claim. (Cl. 280—88.)

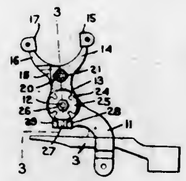


In a vehicle steering mechanism comprising in combination with a body, a forked member pivotally connected to the forward end of said body, an axle supported by said forked member, a steering wheel rotatably supported by said axle, a pair of arms fixed to said axle and directed forward therefrom, a tongue pivotally connected to said arms in advance of the steering wheel and a brake shoe fixed to said tongue and movable thereby into contact with the forward periphery of the steering wheel for controlling the rolling movement of said wheel.

1,428,736. PERAMBULATOR. FRANK WOJCICKI, Bayonne, N. J. Filed Nov. 3, 1921. Serial No. 512,421. 1 Claim. (Cl. 208—45.)

A vehicle comprising a substantially rectangular frame, a perambulator body mounted at the front, a pair of driving wheels at the rear, a pair of pivoted axles at the front having wheels thereon, means for steering said front wheels, means for manually propelling the vehicle from the rear, a cranked shaft journalled in the side elements of said frame, a seat adjacent said shaft, pedals on the cranks of said shaft, and driving connections between said shaft and said rear wheels, said connections being closely adjacent one of said side frame members.

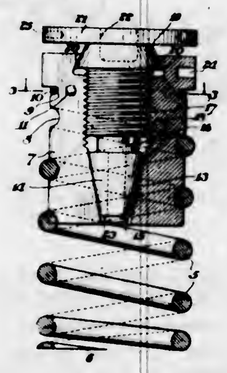
1,428,737. WEATHER-PROTECTED OIL-DISPENSING APPARATUS. ANDREW D. WYCKOFF, Oak Park, Ill. Filed Apr. 11, 1921. Serial No. 460,375. 8 Claims. (Cl. 221—73.)



1. Weather protected liquid dispensing apparatus comprising, a tank, liquid dispensing apparatus rotatively mounted thereon and a windshield partly surrounding said liquid dispensing apparatus and mounted to rotate therewith.

1,428,738. MUTING DEVICE FOR TUNING PIANOS. MAXIMILLIAN R. YOUNGMAN, San Diego, Calif. Filed Dec. 23, 1921. Serial No. 524,526. 5 Claims. (Cl. 84—458.)

1. A muting device for tuning musical string instruments, including a plurality of hollow mute members made of a resilient material adapted to be inserted between and securely held in place by strings variously spaced, and a resilient elastic band connecting and made an integral portion of said mute members.

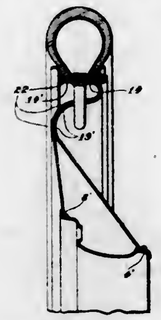


1,428,739. PICKER-STICK CHECK FOR LOOMS. HENRY W. YOUNGQUIST, Manchester, N. H., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed June 17, 1921. Serial No. 478,233. 2 Claims. (Cl. 139—22.)

1. In a picker stick mechanism comprising a picker stick having a rocker shoe, a rocker shoe stand and means for actuating said picker stick, a picker stick check comprising a rigid arm, pivotally mounted on said rocker stand, having a member positioned in the path of said picker stick to engage one side thereof, a complementary arm adjustably mounted on said pivoted arm at a distance above its pivot and having a member positioned to engage the opposite side of said picker stick,

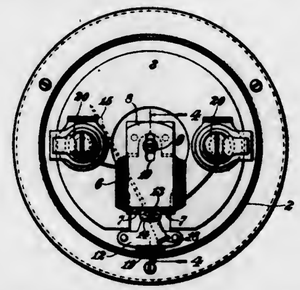
said arms being so positioned as to engage the picker stick in advance of the limits of its inward and outward movements and frictional means for braking the movement of said picker stick check operable gradually to arrest the picker stick.

1,428,740. SPRING. NICHOLAS W. AKIMOFF, Wynnewood, Pa. Filed Oct. 5, 1920. Serial No. 414,730. 13 Claims. (Cl. 267—61.)



6. A spring device comprising a coil spring, a mandrel upon which one end of said coil spring is mounted having a helical groove complemental to the interior surface of said coil spring, said mandrel comprising a plurality of segmental sections hinged relatively to each other, an expanding device mounted in said mandrel comprising a tapered plug engaging a complemental interior portion of said mandrel, and means for advancing and retracting said tapered plug within said mandrel comprising a spindle in threaded engagement with said mandrel.

1,428,741. DISK WHEEL. ROBERT P. ALLISON, Baltimore, Md. Filed July 23, 1919. Serial No. 312,804. 11 Claims. (Cl. 301—63.)

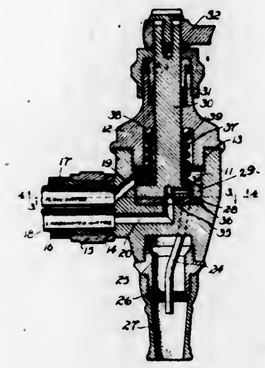


1. In a wheel for road vehicles, having a hub and a demountable sheet metal supporting member therefor, means for demountably connecting the hub to the sheet metal member, consisting of a circularly arranged wedge and a correspondingly shaped channel, circularly arranged to receive the wedge; and means for drawing the wedge into the channel to hold the parts in rigid engagement.

1,428,742. DISK WHEEL. ROBERT P. ALLISON, Richmond, Va. Original application filed Feb. 3, 1919, Serial No. 274,719. Divided and this application filed Oct. 8, 1921. Serial No. 506,226. 13 Claims. (Cl. 301—63.)

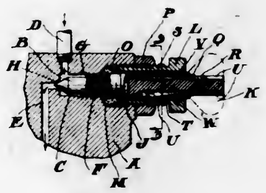
3. Means for supporting the hub of a wheel consisting of sheet material having peripheral corrugated portions substantially concentric with the wheel and extending on each side of the central plane of rotation of the wheel, and diverging members extending inward from the corrugations and secured to the hub at points widely spaced in the direction of its axis, the diverging members being inclined at different angles but in the same general direction as related to the plane of rotation of the wheel, one said member having the greatest inclination extending from one end of the hub through the central plane of rotation to the base of the corrugated portion where it meets the other said diverging member, the corrugations extending substantially equal distances on each side of the central plane.

1,428,743. ELECTRICAL MEASURING INSTRUMENT. EDWIN C. BALLMAN, St. Louis, Mo., assignor to Stahl A. Whitten, St. Louis, Mo. Filed July 19, 1918. Serial No. 245,737. 2 Claims. (Cl. 171—95.)



1. An electrical measuring instrument, comprising a base, a permanent horse-shoe magnet on said base, a current-carrying coil adapted to set up a magnetic field at an angle to the field of said permanent magnet, a movable vane adapted to be influenced by said fields, a support for said coil mounted on said base, and a core for said coil, mounted on and guided by said support and adjustable relatively to said vane.

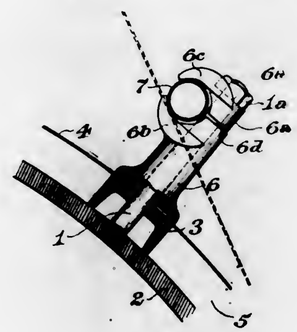
1,428,744. DISPENSING VALVE. CHARLES L. BASTIAN and HJALMAR MATHISEN, Chicago, Ill., assignors to The Bastian-Blessing Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 16, 1921. Serial No. 515,471. 9 Claims. (Cl. 225—25.)



1. In a dispensing valve, the combination of a casing having a chamber therein, a valve member in said chamber,

said casing having an inlet for one liquid above said valve member and an outlet for that liquid below said valve member, said valve member having a transverse passage for connecting said inlet and outlet, said casing having an

inlet and an outlet for another liquid below said valve and said valve member having a return passage on its lower side for establishing communication between the last mentioned inlet and outlet.

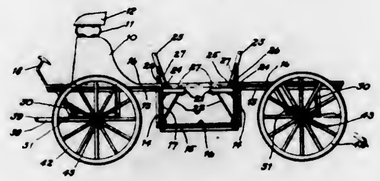


1,428,745. VALVE-SPINDLE-RETAINING DEVICE. LEWIS C. BAYLES, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed May 28, 1921. Serial No. 473,418. 6 Claims. (Cl. 251—163.)

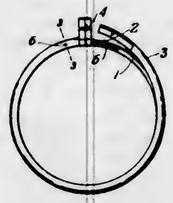
2. A device for retaining a screw threaded valve spindle in its casing, comprising a retainer in the form of a U-shaped spring adapted to pass through the spindle, one spring arm of the retainer being longer than the other to facilitate entry of both arms into the bore of the valve casing as the valve and spindle are inserted, said arms being adapted to bear against the walls of the casing and resist the tendency of the valve spindle to rotate due to vibration.

1,428,746. HANDRAIL COLUMN. JAMES G. BLUNT, Schenectady, N. Y. Filed May 23, 1922. Serial No. 563,167. 5 Claims. (Cl. 105—457.)

1. In a hand rail or pipe supporting column, the combination of a stand, having a hand rail or pipe seat at its top; a cap, adapted to co-operate with said seat in embracing a hand rail or pipe; and means for connecting said stand and cap and securing them in position for service.

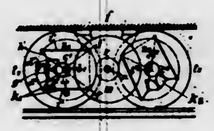


1,428,747. LICENSE TAG FOR MOTOR VEHICLES. BÖRJE H. BÖRJESON, St. Paul, Minn. Filed Nov. 12, 1921. Serial No. 514,615. 6 Claims. (Cl. 283—18.)



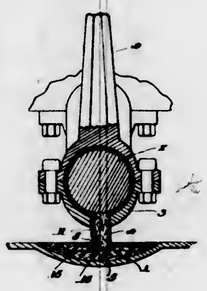
1. A flexible sheet comprising panels arranged end to end and adapted to be separated, one having a license number thereon for the rear of the car, the other panel having a corresponding license number for the front of the car and also having at one end a permanently attached certificate of registration.

1,428,748. FARM WAGON. FRANK BROSOSKY, Haywood, W. Va., assignor of one-half to Andrzej Kubis, Moundsville, W. Va. Filed Jan. 26, 1922. Serial No. 532,022. 2 Claims. (Cl. 296—25.)



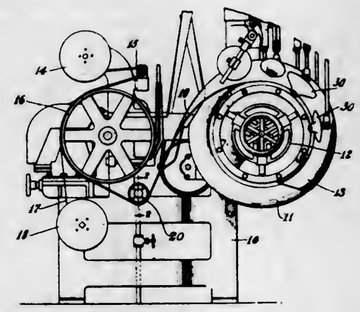
1. A farm wagon comprising a body having an offset frame, a floor on said frame, a lowered platform open at the sides and top, seats in said space above said platform below the level of the body floor, seat backs adapted to fold upon the seats forming a continuous level body floor, and means for maintaining said seat backs in either raised or lowered position.

1,428,749. SHELL FRAME FOR EYEGLASSES. JAMES HOYT BROWN, New York, N. Y. Filed Apr. 9, 1920. Serial No. 372,402. 4 Claims. (Cl. 88—47.)



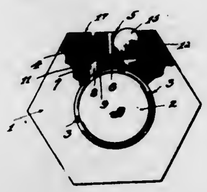
1. A method of securing a covering on an eye-wire, which consists in forming a lug on the wire, forcing a covering thereover, drilling the covering and lug and placing a pin in the drill hole.

1,428,750. SHAFT COUPLING. JACOB BUCHLI, Baden, Switzerland, assignor to Aktiengesellschaft Brown, Boveri & Cie., Baden, Switzerland. Filed Mar. 5, 1919. Serial No. 280,828. 4 Claims. (Cl. 105—132.)



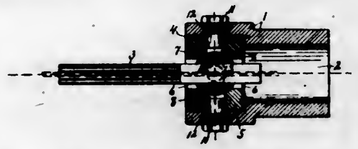
1. A device for coupling two driven shafts of a vehicle and a driving shaft resiliently mounted with respect to said driven shafts on said vehicle including two articulated couplings spaced apart angularly in relation to their respective planes of symmetry, and two members connected by said couplings to their respective shafts and coacting with a common member.

1,428,751. OILING DEVICE. MATT BUAKE, West Duluth, Minn. Filed June 14, 1921. Serial No. 477,559. 2 Claims. (Cl. 184—13.)



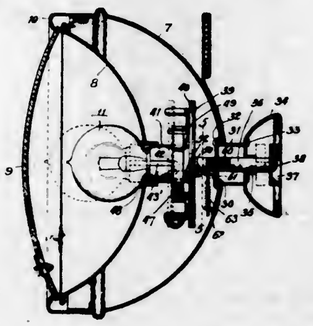
1. In combination with an internal combustion engine, including the casing thereof having its lower portion provided with oil wells, a crank shaft, a piston connecting rod and a connecting rod bearing for the crank shaft which is disposed above the well, of a tubular member let in the bottom of the bearing and communicating with the bore thereof, said member having an outer closed wall provided with a projection forming a scoop, said tube having an inwardly flared opening above but in a line with the scoop, and a flat spring valve in the tube normally closing the opening.

1,428,752. METHOD AND APPARATUS FOR MAKING TIRE CASINGS. JAMES L. BUTLER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed May 27, 1919. Serial No. 300,022. 5 Claims. (Cl. 154—10.)



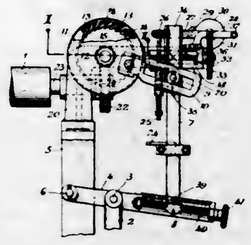
2. In a machine for building pneumatic tire casings, the combination of a rotary tire-forming core, a drum for feeding fabric to said core, adapted to be rotated at a slower peripheral speed than that of the core so that the middle of the fabric is stretched in passing onto the core, a roller over which the fabric passes in flat condition between said drum and core, and means for supplying a hot fluid to the interior of said roller.

1,428,753. NUT LOCK. JOSEPH CAPPEL and CLIFFORD R. EDWARDS, Peoria, Ill. Filed May 2, 1921. Serial No. 466,163. 7 Claims. (Cl. 151—10.)



1. In combination, a bolt having a groove extending longitudinally of its threaded portion, and a nut for said threaded portion having a recess in one of its faces part of which extends into the threaded bore, there being a ridge in said nut at substantially the middle of the recess, a latch in the recess adapted to engage the groove of the bolt, a member resting between its ends on said ridge and at one end engaging the latch, and extending at its other end into the part of said recess opposite that having said latch, and a spring constantly tending to force the latch into the groove.

1,428,754. TOOL CHUCK. JAMES CARR, Syracuse, N. Y. Filed Feb. 23, 1921. Serial No. 447,029. 6 Claims. (Cl. 279—18.)

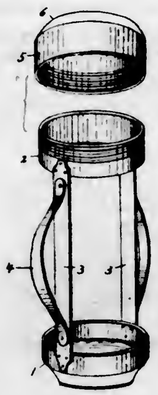


1. In a tool chuck, the combination of a rotary head having a lengthwise opening therethrough, a collar pivotally mounted in the opening and slidable lengthwise of its pivotal axis, and a tool supporting member slidable crosswise of and within the collar.

1,428,755. ELECTRIC LAMP. ARTHUR E. CASE, Marion, Ind., assignor to Delta Electric Company, Marion, Ind., a Corporation of Indiana. Filed Mar. 23, 1918. Serial No. 224,470. 3 Claims. (Cl. 240—44.)

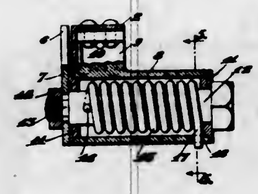
1. In a lamp of the character described, the combination of a casing, a rod containing a member on and projecting rearwardly from the casing, a socket-supporting disk in the casing, an incandescent lamp socket mounted on the disk, a switch for the lamp, and a rod rotatably held in the member and having means to shift the switch.

1,428,756. PLAIN-NET LOOM. EMANUEL CAVIGELLI, St. Margarethen, near Munchwilen, Switzerland, assignor to The Firm Schweiz Gesellschaft für Tullindustrie A.-G., Munchwilen, Switzerland. Filed Mar. 25, 1921. Serial No. 455,513. 6 Claims. (Cl. 96—20.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



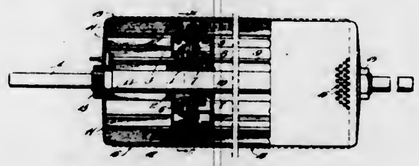
6. In an automatic fabric winding device for plain net looms, a fabric beam, a ratchet wheel secured thereto, a large number of pawls acting thereon only one of which is in full engagement with the said wheel at any one time, a pawl carrier surrounding said wheel, a lever connected to the carrier, a reciprocable rod having sliding connection with the lever, a lever pivoted at one end to a fixed part and adjustably connected with the end of said rod, mechanism to progressively shorten the effective length of the first lever and an adjustable stop on said rod to actuate said mechanism.

1,428,757. BOOKHOLDER. WILLIAM V. COATS, Greenville, Ohio. Filed July 6, 1921. Serial No. 482,825. 3 Claims. (Cl. 45—57.)



2. A book holder including an inverted U-shaped body member providing a horizontal supporting rail having depending side posts, and substantially U-shaped base members comprising surface engaging portions having front and rear uprights, the rear uprights having a portion of their length coiled about the side posts pivotally connecting the base members thereto and the forward uprights being engageable with the forward edge of a book resting against the supporting rail.

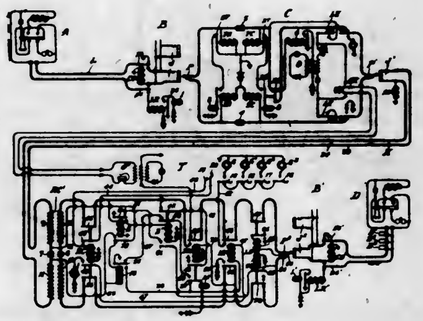
1,428,758. NURSING-BOTTLE-SUPPORTING FRAME. ISA BELLE COWLES, Syracuse, N. Y. Filed Apr. 9, 1921. Serial No. 460,018. 2 Claims. (Cl. 215—11.)



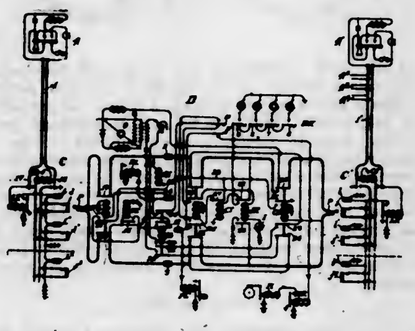
1. A combined bottle-holder and nipple-clamp for nursing bottles comprising a cup-shaped base, a band above and in spaced relation to said base, circumferentially spaced tie-pieces connecting said base and band to hold them in fixed relation one above the other, said band being of sufficient size to permit the bottle to pass endwise therethrough, and a cap-ring adjustable lengthwise of and upon said band and having its upper end contracted for engaging and clamping a nipple to the month of the bottle.

1,428,759. HINGE FOR FOLDING BEDS. HARRISON U. CRAIN, St. Louis, Mo. Filed July 10, 1919. Serial No. 309,947. 3 Claims. (Cl. 16—180.)

3. In an adjustable spring hinge structure for the purpose described, a supporting element, a second supporting element pivotal with respect to said first mentioned element, said first mentioned element having a polygonal aperture therein, a stud having a reduced shouldered portion near one end, of a polygonal shape corresponding to the aperture in said supporting element, the end portion of said stud beyond said polygonal portion thereof being screw-threaded and provided with a retaining nut to engage said supporting element to secure said stud in place, a sleeve rigidly secured to said pivotal supporting element, flanged bearing collars fitted in the opposite end portions of said sleeve and rotatable on said stud, a spring coiled about said stud, one end portion of said spring being inserted through a transverse aperture in said stud and its other end portion being located in an open-ended slot in the adjacent end portion of said sleeve and retained by the bearing collar, and means on the end of said stud for engaging the outer face of said bearing collar to retain the assembled parts in place.



1,428,760. COUCH ROLL. TRUMAN ALONZO CUISH, Jr., Green Bay, Wis. Filed June 24, 1920. Serial No. 391,308. 5 Claims. (Cl. 92—47.)

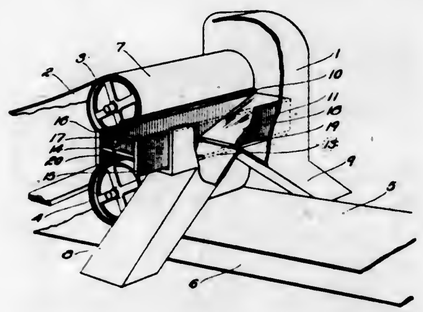


1. In a couch roll, a shaft, an expansible drum mounted on the shaft, an elastic cover for the drum, the ends of the cover being brought over the ends of the drum into close proximity to said shaft, and means for securing the ends of the cover around the shaft.

1,428,761. TRUNK CIRCUIT WITH INSTANTANEOUS DISCONNECT AND RECALL. HIRAM D. CURRIER, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 29, 1914. Serial No. 815,122. 36 Claims. (Cl. 179—49.)

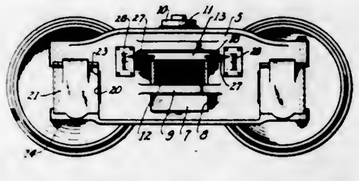
27. A telephone system comprising a telephone line, a cut-off relay for said line, a link circuit for connection with said line, a link relay adapted to be included in circuit with said cut-off relay when said link circuit is connected to said line, and means for substituting a resistance coil for said link circuit relay thereby causing the said cut-off relay to de-energize.

1,428,762. TELEPHONE SYSTEM. HIRAM D. CURRIER, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 29, 1914. Serial No. 815,123. 97 Claims. (Cl. 179—58.)



1. In combination with a calling telephone line a plurality of multiple connecting terminals for said line located at a central office switchboard, a cut-off relay for said line, having its coil connected to one of said multiple terminals, operators' link circuits distributed among operators' positions of said switchboard, and means initially operated through a circuit including the coil of said cut-off relay whereby any one of said link circuits may be connected to any one of said multiple line terminals when answering a call to the exclusion of the remaining link circuits that attempt to answer the call.

1,428,763. GRAIN CHUTE. HARRY W. DAVISSON, Kansas City, Mo., assignor of one-half to James C. Patrick, Kansas City, Mo. Filed Feb. 18, 1921. Serial No. 445,947. 2 Claims. (Cl. 193—31.)

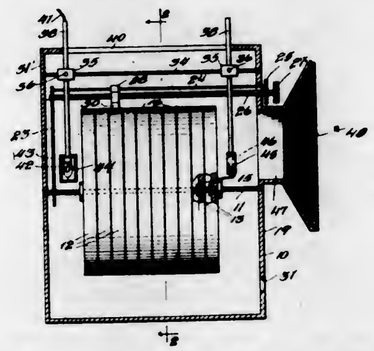


1. A grain delivery belt, a casing into which the delivery belt discharges, delivery chutes in spaced relation in the

bottom of the casing, and a sliding hopper in the casing of greater length than the width of the belt and provided

with a discharge opening adapted to register with either of the delivery chutes when the hopper is slid in either of two directions.

1,428,764. CAR TRUCK. JOSEPH DEMARCO, Kolze, Ill. Filed Oct. 24, 1921. Serial No. 509,797. 1 Claim. (Cl. 105—197.)



A car truck comprising a pair of integral side frames, each frame having an opening in its central portion, springs mounted in said opening, a bolster-beam connecting said frames, the ends of said bolster-beam being slidably mounted vertically by dovetailing in the respective frames, and a strengthening beam connecting the lower portions of said frames, the ends of said strengthening beam being fixed to the respective frames, a plate mounted in each of the openings of said frame between said springs and the end of said bolster-beam, with a pin projecting from the end of each of said bolster-beams, through said plate and through a portion of one of said springs.

1,428,765. METHOD OF AND APPARATUS FOR GLUING SHEETS EDGE TO EDGE. ARMIN ELMENDORF, Madison, Wis., assignor to Haskelite Manufacturing Corporation, a Corporation of New York. Filed June 1, 1920. Serial No. 385,530. 3 Claims. (Cl. 144—289.)

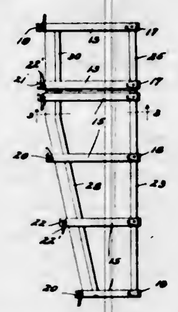
1. The method of producing sheets out of pieces glued edge to edge, which consists in applying glue to the edges of such pieces to be joined together, forming a stack of layers out of such pieces placed edge to edge, alternating said layers with spacing devices, and then applying sufficient pressure to one edge only of each of said layers in a direction at right angles to the joint therein to move them bodily along the spacers.

1,428,766. EXHIBITING APPARATUS. CHARLES MALCOLM FARBER, Tampa, Fla. Filed Aug. 27, 1919, Serial No. 320,202. Renewed Feb. 7, 1922. Serial No. 535,112. 4 Claims. (Cl. 40—28.)

1. An exhibition apparatus of the character described, comprising a casing, a support shaft arranged therein, a plurality of disks pivoted upon the shaft and having radial openings, a plurality of articles to be exhibited carried by each disk, a screw arranged adjacent their periphery and extending longitudinally of the disks, means to support the screw so that it may be moved circumferentially of the disks, and also turned upon its longitudinal axis, a feed block carried by the screw and having an extension projecting into the radial openings, and a source of light and means of magnification arranged within the casing.

1,428,767. RADIATOR HANGER. JOHN W. FARLEY, Cleveland, Ohio. Filed Mar. 21, 1921. Serial No. 454,033. 2 Claims. (Cl. 248—30.)

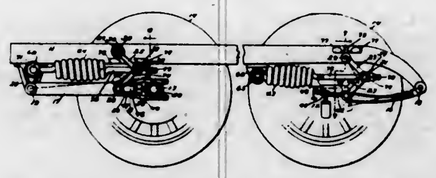
1. A bracket of the character described having a vertically disposed section and upper and lower rearwardly extending arms, the end portions of the arms being bent upwardly and then rearwardly and downwardly to form hook elements for engaging elongated transversely extending wall-carried supports and slidably mount the bracket upon the supports whereby the bracket may be adjusted transversely.



1,428,768. RENEWABLE FUSE. JOHN L. FAY, St. Louis, Mo., assignor of one-half to Ward S. Ireland, St. Louis, Mo. Filed May 16, 1919. Serial No. 297,606. 2 Claims. (Cl. 200—132.)

1. A renewable fuse comprising a fuse element, terminal stems, and fastening means whereby the end portions of the fuse element are detachably secured to said terminal stems, the end margin of each terminal stem being provided with opposing pairs of outturned lips to provide

abutments for limiting the width of the fuse element applicable to the stem, said abutment lips having oppositely disposed side edges adapted to engage the side edges of the fuse element.

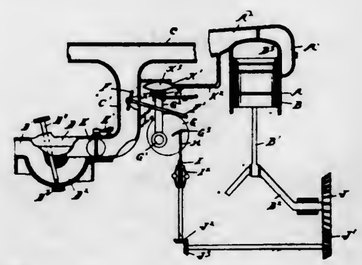


1,428,769. TROUSERS PRESS. CHARLES T. FERGUSON, New York, N. Y. Filed Nov. 15, 1921. Serial No. 515,183. 3 Claims. (Cl. 100—57.)

1. A trousers-press including a base member, an upper press member and means for clamping said press members together, press bars engaging said press members longitudinally of the press, and means for permitting adjustment of said bars with respect to each other for accommodating varying sized garments.

3. A trousers-press including a base member, an upper press member, cross bars on said members, hinges fastened to the ends of said bars along one edge of said members, a press bar on each member fastened under the cross bars longitudinally of the members and adjacent to said hinges, a movable press bar on each member adjustable in its position in longitudinal recesses in the cross bars, and means for clamping the press members together.

1,428,770. RESILIENT SUPPORT FOR VEHICLE BODIES. CHARLES FORTH, Detroit, Mich. Filed Oct. 12, 1920. Serial No. 416,398. 13 Claims. (Cl. 267—20.)

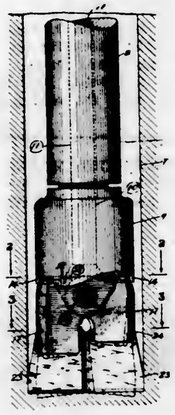


5. In combination with a vehicle body and its front and rear supporting axles, fore and aft extending arms at the forward end of the body on its opposite sides pivoted at their forward ends to said body and pivoted at their rear ends to the front axle, flexible connecting members jointed respectively to the arms and vehicle body, springs anchored to the vehicle body in rear of the front axle and connected respectively with said flexible members, fore and aft extending arms at the rear end of the body on the opposite sides of the same pivoted at their rear ends to the vehicle body and at their forward ends to the rear axle, flexible connecting members pivoted respectively to said arms and to the vehicle body, and springs anchored to the vehicle body in rear of the rear axle and connected with the said flexible members respectively.

1,428,771. ANCHORING MEANS FOR CONCRETE BODIES. JAMES MARTIN FOX, Madison, Wis. Filed Feb. 11, 1922. Serial No. 535,883. 1 Claim. (Cl. 238—370.)

In an anchoring device comprising a concrete body having a wooden plug inserted therein while the concrete is plastic, whereby said plug serves for attaching means for securing articles together.

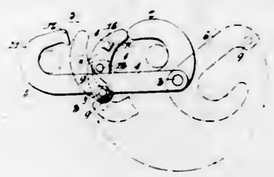
1,428,772. ENGINE COMPRESSION REGULATOR. PHELPS M. FREER, Detroit, Mich. Filed Jan. 20, 1921. Serial No. 438,629. 4 Claims. (Cl. 123—108.)



1. In an internal combustion engine, the combination with the engine cylinder, of mechanism associated therewith for automatically increasing the degree of compression in said cylinder in accordance with the increase in the speed of the engine.

1,428,773. [WITHDRAWN.]

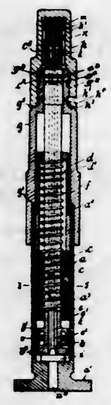
1,428,774. FISHTAIL BIT. WILLIAM R. GARDNER, Los Angeles, Calif. Filed Sept. 19, 1921. Serial No. 501,725. 5 Claims. (Cl. 255—76.)



1. A fish-tail bit comprising a hollow shank adapted to be secured to a hollow stem for the circulation of water therethrough, cutters pivotally secured to said

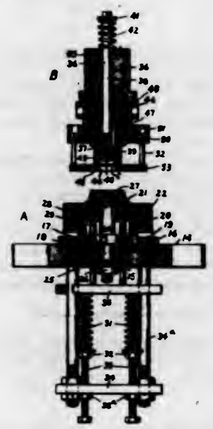
shank so as to expand or contract, said cutters having their planes disposed at an angle to the radius of rota-

tion of the bit so as to move cuttings toward the bore of said shank.



1,428,775. RELEASABLE HOOK. WILLIAM GOETZ, Vancouver, British Columbia, Canada. Filed Sept. 22, 1920. Serial No. 412,078. 4 Claims. (Cl. 294—83.)

1. A releasable hook, comprising in combination a member having provision at one end for connecting it to a line or anchorage and the other end lengthwise divided into two parallel and adjacent sides, a hook pivotally mounted between the sides of the connecting member adjacent the bend of that hook to the shank, a retaining member pivotally mounted on the connecting member and adapted to be moved over that side of the end of the shank which is toward the bend of the hook, and means for securing the retaining member in the retaining position.

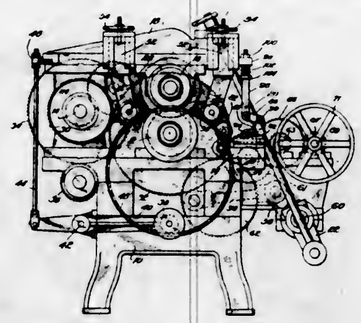


1,428,776. COMBINED PRESSURE GAUGE AND VALVE. JOHN ELPHINSTONE GRAHAM, London, England. Filed Nov. 10, 1920. Serial No. 423,072. 5 Claims. (Cl. 152—11.5.)

5. A combined valve and pressure gauge adapted for use with pneumatic tyres, comprising in combination, a casing, a slidable piston in said casing, a loading plug having a screw threaded engagement with said casing, a recording cap having a screw threaded engagement with the exterior of said casing, a spring between the upper face of said piston and said loading plug, a rod attached to said piston and extending through said loading plug and cap, markings on said rod co-operating with the upper edge of said cap, a longitudinal groove in said rod, a ring threaded on to said rod, a projection on said ring,

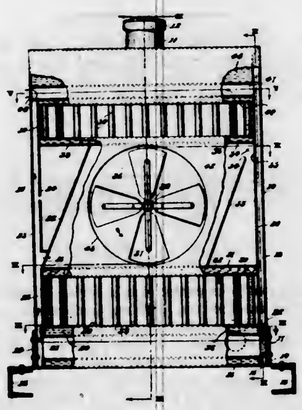
engaging said groove, a longitudinal groove on the interior of said casing and a projection on the periphery of the ring engaging the groove in the casing.

1,428,777. DIE STRUCTURE. ERIC J. L. GRANLOW, Schenectady, N. Y. Filed June 3, 1921. Serial No. 474,860. 6 Claims. (Cl. 29—1.)



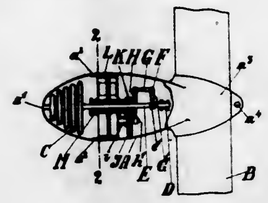
1. In combination, a die structure comprising two spaced concentric die members and a second die structure having two concentric die members one of which has a forming surface and the other a cutting edge located behind said forming surface, said die members co-operating to first strike up a cup-shaped protuberance from a sheet of material and then cut the bottom from the protuberance.

1,428,778. ROLLING MACHINE. CHARLES G. GROTNES, Chicago, Ill. Filed May 24, 1920. Serial No. 383,666. 8 Claims. (Cl. 153—28.)



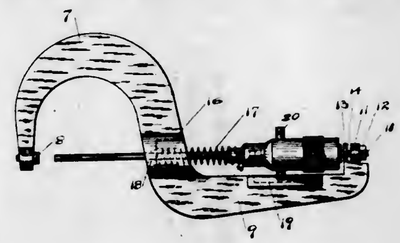
1. In a rolling machine, a pair of rolls shaped to bend a rim and in bending to narrow it, guides engaging the

edges of the rim to hold it in correct alinement, and a connection between said guides and one of said rolls for



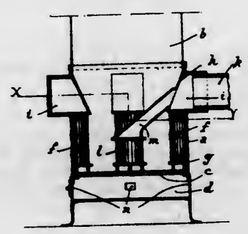
automatically moving said guides to keep them in contact with the edges of the rim as it becomes narrower during the closing of the rolls.

1,428,779. AUTOMOBILE RADIATOR. JOHN HAYDUSEK and MATUS HUSARCIK, Racine, Wis. Filed May 16, 1919, Serial No. 297,472. Renewed June 20, 1921. Serial No. 479,084. 2 Claims. (Cl. 257—126.)



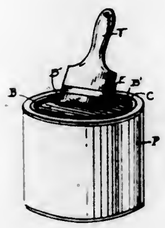
1. A radiator structure comprising a casing having inner walls spaced from the opposite ends thereof forming upright air spaces, upper and lower tubular members communicating with the atmosphere at their relatively opposite ends with their other ends communicating with said air spaces at opposite sides of the casing, the casing having a substantially central fan chamber open at the front and closed at the rear of the radiator, upwardly inclined parallel partitions at opposite sides of the fan chamber, the said partitions and inner walls having openings communicating with said air passages whereby a passage of air is provided through the casing between the opposite ends of said tubular members.

1,428,780. SPEED INDICATOR. PAUL JARAY, Friedrichshafen, Germany, assignor to the Firm Luftschiffbau Zeppelin, Gesellschaft mit beschrankter Haftung, Friedrichshafen, Germany. Filed June 28, 1920. Serial No. 392,573. 3 Claims. (Cl. 73—2.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. In a device of the kind described in combination, a stream lined casing, a Pitot tube in said casing opening towards the front of said casing and an indicating device for the tube within said casing.

1,428,781. MICROMETER ADAPTER. HENRY JOHNSON, Portland, Oreg. Filed Jan. 5, 1921. Serial No. 435,115. 4 Claims. (Cl. 33—167.)



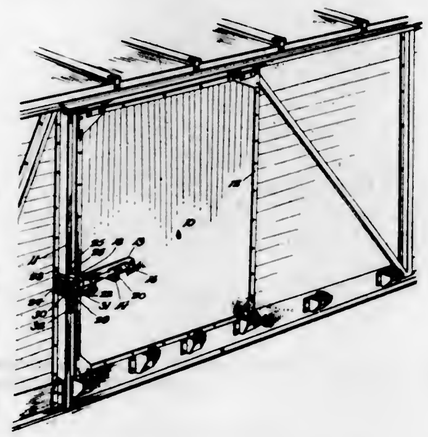
1. A micrometer device comprising a yoke; an arm projecting from said yoke; a contact member upon said arm; and means to mount an inside micrometer caliper upon said arm, one end of said caliper being in contact with said member.

1,428,782. STOVE ADAPTED TO BURN SAWDUST, SHAVINGS, AND LIKE WORKSHOP REFUSE. JULES JOUCLARD, Versailles, France. Filed Aug. 23, 1921. Serial No. 494,538. 4 Claims. (Cl. 126—225.)

1. A stove comprising a cylindrical body, an ash-pit below the latter, a grate above the ash-pit, vertical grated flues for facilitating the combustion, an annular collecting chamber for the burnt gases, adjustable means whereby air required for the combustion is introduced through the ash-pit and means for feeding the stove with fuel.

1,428,783. INDIVIDUAL-PACKAGE DISPLAY CARD. LEO H. JÜNKER, Pelham, N. Y. Filed June 25, 1921. Serial No. 480,369. 10 Claims. (Cl. 40—126.)

10. A display device comprising a base simulating a portion of a package of merchandise, and a tongue projecting upwardly from said base and simulating an article extending into said merchandise.



1,428,784. WELL-TOOL GRAB. ARTHUR H. KRUGER, Tulsa, Okla. Filed Nov. 24, 1920. Serial No. 426,233. 1 Claim. (Cl. 294—102.)

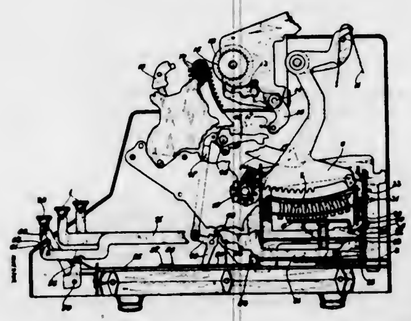
In a device of the class described, a casing tapered to form a restriction at its lower end, a cone fitting said tapered end and provided with a serrated bore, said cone being divided into symmetrical portions forming gripping jaws, an upwardly extending resilient yoke connecting oppositely disposed jaws, a similar shorter yoke connecting the other of said jaws, a bridge rigidly secured between the arms of said first yoke, said shorter yoke straddling said bridge, and detachable means for rigidly locking said shorter yoke to said bridge.

1,428,785. COMBINED CAR-DOOR LOCK AND OPENER. ARTHUR T. KUEHNER, Elkridge, Md. Filed Aug. 7, 1920. Serial No. 401,884. 3 Claims. (Cl. 292—207.)

1. The combination with relatively fixed and movable members, of a fixed element carried by one of said members, and a lever pivoted upon the other of said members and provided at a point spaced beyond the pivotal center thereof with an operating foot having a curved heel portion extending in a direction around said element and a diverging toe portion having a cam face rising above the

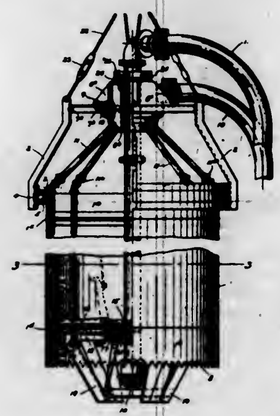
element to coact therewith throughout the length of said face whereby the lever may be swung for shifting the movable member away from the fixed member, the heel and toe portions forming a crotch therebetween normally abutting said element.

1,428,786. MECHANICAL PROCESS OF WEAVING. EDOUARD LAMBERT, Paris, and RENÉ PERNIN, La Plaine St.-Denis, France. Filed May 21, 1920. Serial No. 383,245. 22 Claims. (Cl. 139—66.)



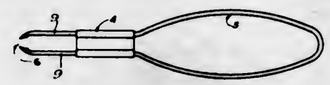
1. In a power loom comprising a series of warp threads, shed forming mechanism, picking mechanism, beating up mechanism and a series of spools of thread, the combination with such elements of a rotary device turning always in the same sense for inserting the threads, and having two series of means for gripping the threads from the spools, means for serving threads and means coacting with said first mentioned means for inserting such severed threads into the fabric during the weaving process.

1,428,787. ADDING MACHINE. HARRY LANDSIEDEL, Norwood, Ohio, assignor to The Dalton Adding Machine Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Feb. 16, 1921. Serial No. 445,434. 36 Claims. (Cl. 235—60.)



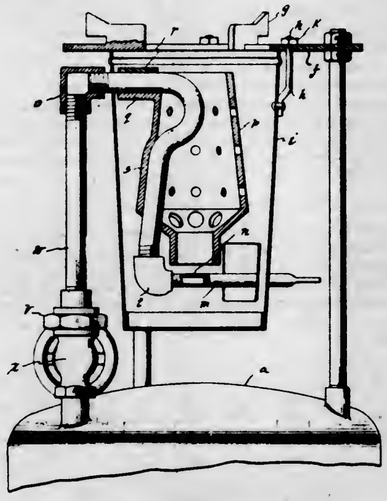
1. In an adding machine, the combination with a differential carriage, and escapement mechanism controlling movement of the carriage from lower to higher denominational order positions in the machine, of a tabulating device operable to disable the escapement mechanism to permit the carriage to be moved free from the control of the escapement mechanism, an element movable by the

tabulating device to engage the carriage, means in connection with said element to limit movement thereof to



stop movement of the carriage, and means for restoring said element to its starting position after the carriage has been stopped thereby.

1,428,788. EXCAVATING MACHINE OF THE ROTARY TYPE. LEE LARSEN, Tampico, Mex. Filed June 1, 1920. Serial No. 385,848. 3 Claims. (Cl. 262—7.)

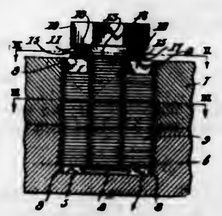


1. An excavating machine of the type described, comprising a cylinder provided with means for dredging its way down into the ground, rotatably connected to means which support said excavating machine, said cylinder being gradually extended by sections to the desired height of the column to be constructed, to form a casing inside which said column can be built up; a combined swivel box support, said support having passageway for water supply; a water supply piping system for loosening the material to be excavated; a suction pipe line for conveying the excavated material, said water and suction systems being combined with said swivel box support; a suction pipe provided with means to separate the excavated material, said suction pipe at the same time serves as bearing and pivot on which said cylinder can turn; a rotatable cutting apparatus connected up to said cylinder and suction pipe with freedom of turning around together with said cylinder on said suction pipe.

1,428,789. CHERRY PITTER. GUY O. LAWSON, Elmira Heights, N. Y. Filed July 27, 1922. Serial No. 577,973. 4 Claims. (Cl.. 146—5.)

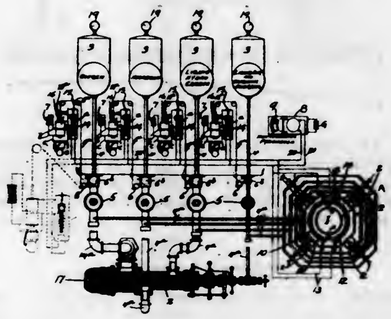
1. A fruit pitting implement having substantially parallel laterally spaced jaws provided with upturned reduced extremities.

1,428,790. FIRE POT. FREDERICK L. LINDHORST, Detroit, Mich., assignor to Detroit Torch & Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 16, 1921. Serial No. 515,500. 10 Claims. (Cl. 158—32.)



1. In a fire-pot, the combination of a grid, a chimney supported below the grid, a burner shell supported in the chimney, a separate and detachable preliminary heating tube supported in the burner shell, and a burner supported below the burner shell and arranged to project fuel oil into the burner shell.

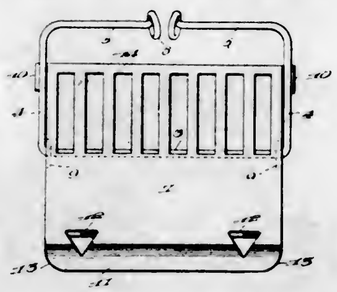
1,428,791. WELL-CASING-CAPPING DEVICE. JAMES W. LOY, Burnett, Calif. Filed Dec. 21, 1921. Serial No. 523,808. 8 Claims. (Cl. 166—15.)



1. In a device of the character referred to, in combination, a pair of clamping elements adapted to be clamped around a casing and having provision therebetween to receive a closure element, and a closure element adapted to be moved to interlocked position between said elements and to cover the space therebetween, whereby to enclose the end of said casing.

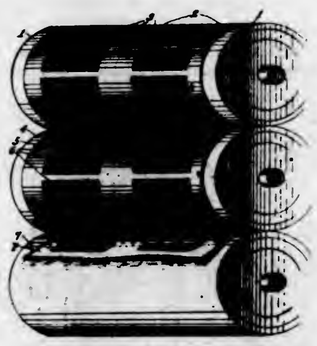
1,428,792. JOINT OR CONNECTION. ANTONI LYSIAK, Manchester, Mass. Filed July 11, 1921. Serial No. 483,784. 4 Claims. (Cl. 151—32.)

1. In combination with a pair of members arranged in contiguous relation and having coincident square openings with the walls of the openings formed with segmental threaded portions substantially midway between the corners of the openings, a bolt having a stem of octangular form and provided with a continuous thread formed to be threaded into said openings in engagement with the segmental threaded portions, and substantially triangular members hinged to the outer end of the bolt so as to swing into and out of the corner portions of the adjacent opening whereby said opening is completely closed and accidental rotation of the bolt prevented.



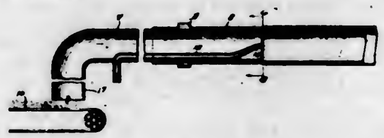
1,428,793. FUEL-CONTROL SYSTEM. FREDERICK L. MCGAHAN, Los Angeles, Calif.; Viola K. Walker, administratrix of said Frederick L. McGahan, deceased, assignor to The Purposed Mind Development Security Association of the World, a Trust Company. Filed Oct. 14, 1918. Serial No. 258,126. 4 Claims. (Cl. 158—36.)

1. The combination of a furnace, a plurality of tanks adapted to feed fluid fuel to said furnace, a pyrometer in said furnace comprising a resistance element, a series of marginal relays connected in parallel with each other and with the said resistance element, a plurality of circuits each comprising a solenoid and normally open contacts, and means for closing said contacts when the temperature of the furnace reaches a predetermined point.



1,428,794. CALF WEANER. BERT W. MYRE and JOHN BROWN, Elkhart, Kans. Filed Sept. 16, 1921. Serial No. 501,161. 3 Claims. (Cl. 119—132.)

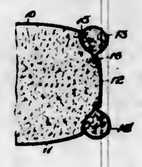
1. A calf weaner comprising a mounting yoke having means for engagement with the calf's nose, a shield plate pivoted near its middle on the cross bar of the yoke, and a stop carried by the plate and abutting against the side



arm of the yoke to limit the swinging movement of the plate.

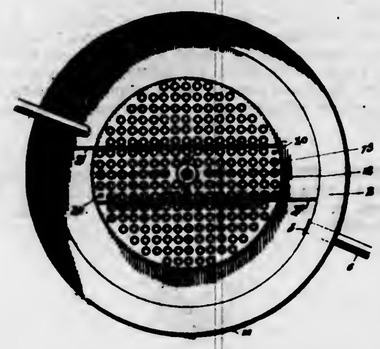
1,428,795. PRINTING DEVICE. CHARLES P. MEZGER, Glenburnie, Md. Filed Nov. 17, 1921. Serial No. 515,847. 1 Claim. (Cl. 101—217.)

The combination with an offset printing press including a blanket-cylinder and a plate, the latter having thereon a design in relief, of a blanket on said blanket-cylinder, said blanket including a relatively thick impression-transferring portion which has substantially sharp edges defining its outline, this outline being the same size and shape as that of the said design, for the purpose of reproducing an impression which is exactly the size and shape as that of said design and eliminating ink-stains beyond the said impression.



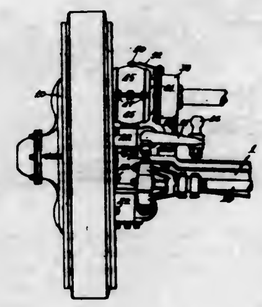
1,428,796. METHOD AND APPARATUS FOR FILLING ROLL EDGES. DAVID MICON, Benton Harbor, Mich. Filed Mar. 15, 1920. Serial No. 366,106. 7 Claims. (Cl. 226—93.)

1. The method of filling tubes of textile material which consists in inserting a filling tube into one end of the tube to be filled and moving the filling tube to substantially the opposite end of the tube to be filled, supplying a pressure fluid to an intermediate portion of the filling tube and in



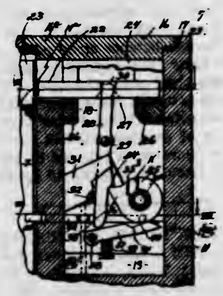
the form of a small jet directed towards the open discharge end of said filling tube, thereby producing a suction through the inlet portion of the filling tube, supplying a filling material to the filling tube in rear of the said jet, and gradually withdrawing the filling tube from the tube to be filled, whereby the filler material will be first drawn into the filling tube and then forced into the tube to be filled.

1,428,797. MATTRESS. DAVID MICON, Benton Harbor, Mich. Filed May 15, 1920. Serial No. 381,591. 8 Claims. (Cl. 5—13.)



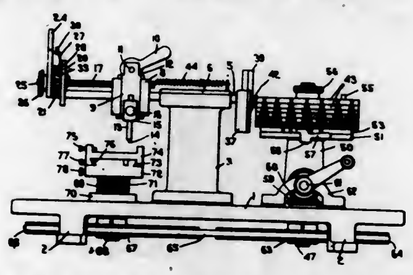
1. A mattress comprising a tick having a top, a bottom and a border, strips of material formed into separate rolls with the edges of each strip stitched together and to an edge of the border, one of said rolls having an intermediate portion stitched to the edge of the top and the other roll having an intermediate portion stitched to the edge of the bottom, and filling for the tick and the rolls.

1,428,798. CLARIFIER. OSCAR M. NELSON, New Orleans, La. Filed Apr. 11, 1919. Serial No. 289,462. 1 Claim. (Cl. 127—9.)



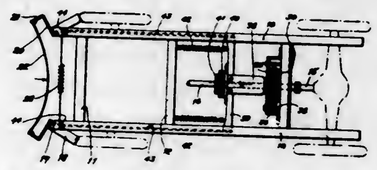
In a clarifier, a pan having an inlet and an outlet at opposite sides thereof, a steam drum in the pan spaced from the walls thereof and having a series of vertical pipes extending through the top and bottom thereof, an inlet and an outlet for the drum oppositely disposed and arranged at the center thereof, a baffle between the inlet and outlet of the drum spaced from the inlet and disposed adjacent thereto to effect lateral movement of the incoming steam against the tubes and toward the drum periphery, vertically disposed baffles one of which extends from a side wall of the pan and between the inlet thereof and the center of the pan and across the drum and spaced from the opposite side wall of the pan and a second of which extends between the outlet of the pan and the center of the pan and from said opposite side wall and across the drum and spaced from the first named side wall of the pan.

1,428,799. UNIVERSAL-JOINT CASING. BOUDEWIJN B. NEUTEBOOM, Detroit, Mich., assignor, by mesne assignments, to Winther Motors, Inc., Kenosha, Wis., a Corporation of Delaware. Filed June 3, 1918, Serial No. 237,962. Renewed May 25, 1922. Serial No. 563,677. 3 Claims. (Cl. 180—43.)



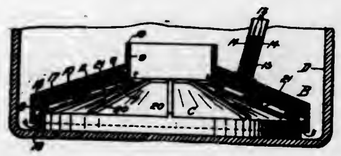
1. In combination with a pair of elements connected by a universal joint, and a structure having parts wherein the respective elements are journaled, the parts being capable of relative movement according to the angular movement between the elements, of a spherical casing enclosing the universal joint and comprising opposed shells that are spaced apart and are secured against rotation to the aforesaid parts of the structure, an intermediate shell embracing the adjacent ends of the former shells and closing the gap therebetween, the intermediate shell having an aperture, means closing said aperture, and a spring finger carried by the structure for cooperation with said means to hold the intermediate shell against rotation.

1,428,800. SAFETY LEVER SWITCH LOCK. JOHN OSCAR NORRIS, Pittsburg, Kans. Filed May 23, 1921. Serial No. 471,823. 4 Claims. (Cl. 90—128.)



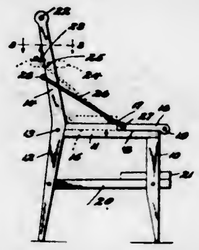
1. A switch lock, comprising a table provided with a pair of notches, a frame pivotally mounted on said table and provided with a channel, a switch lever pivoted to said frame for movement in a vertical plane and adapted to engage one of the notches of the table when in a vertical position and the channel of the frame when in a horizontal position, a casing mounted on said frame, and formed with a recess, a lock mechanism depending from the top of the casing into said recess and having a watertight joint therewith and adapted to lock the switch lever in its vertical position, and means to prevent operation of said lock mechanism when it is in unlocked position and the switch lever is out of its vertical position.

1,428,801. ROSE-ENGINE-TURNING MACHINE. CHARLES B. OULTON, Attleboro, Mass. Filed Apr. 23, 1920, Serial No. 375,975. Renewed Aug. 1, 1922. Serial No. 579,061. 14 Claims. (Cl. 82—14.)



1. A rose engine lathe comprising a horizontal base and a vertical work actuating mandrel, and a vertical rosette shaft arranged in parallelism with said mandrel, means for detachably securing a plurality of rosettes to said rosette shaft, means for rotating said mandrel and said shaft in synchronism, a tool slide, a tool holder mounted thereon, a follower on said slide, adapted to engage a rosette and means for selectively positioning said follower to engage different rosettes and means for yieldingly holding said follower in engagement with the rosette.

1,428,802. AUTO BRAKE. ROKO P. PESUSICH, New York, N. Y. Filed June 18, 1921. Serial No. 478,499. 2 Claims. (Cl. 180—83.)



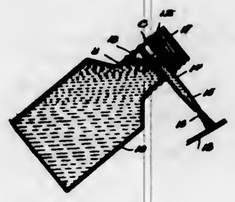
1. In an automobile having a chassis frame and a motor driven shaft transmitting movement to the rear wheels, a pair of opposed bell-cranks pivoted on said frame at the front thereof, a flexible bumper strap connecting between said bell-crank at their front extending members, a spring connecting between their rear members, a brake disc on said shaft, a spring actuated brake lever engageable therewith, a spring retracted sliding detent plate adapted to hold said lever out of engagement, and means slidable in said chassis frame operatively engaged by said bell-cranks for releasing said detent consequent to flexing said strap.

1,428,803. ELECTRICAL DEVICE FOR HEATING LIQUIDS AND THE LIKE. HERBERT JAMES PRESTON, Sydney, New South Wales, Australia. Filed Mar. 19, 1921. Serial No. 453,816. 3 Claims. (Cl. 219—41.)

1. An improved electric heating device comprising in combination a hollow truncated double walled metal cone body, flanges at base and top of said body, hermetically sealed together, a cone shaped mica element situated therein, a high resistance wire wound radially thereon, a metal tube secured to the cone body through which pass the ends of said wire and insulating cones arranged one on each side of the resistance wire within the said cone body substantially as and for the purpose herein set forth.

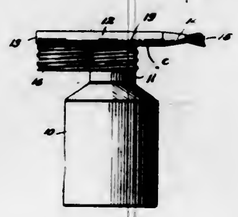
1,428,804. COMBINATION CHAIR. STEVE PLESEC, San Francisco, Calif. Filed Sept. 15, 1921. Serial No. 500,758. 3 Claims. (Cl. 155—42.)

1. A stepladder chair comprising forward and rear legs, upper and lower connecting braces therefor, a lower step secured to the lower braces between said front legs and projecting forwardly thereof, a two-part seat for the chair carried by said upper braces, hinge conections between the forward part of said seat and said upper rails whereby an interrupter portion is adapted to be formed in the seat for permitting use of said lower step, the hinged seat portion being adapted for rearward swinging movement for use as a second step, opposite sides for the chair back at the upper ends of the rear legs, a combined upper step and back panel pivoted between said sides above the seat and link connections between said panel and the hinged seat section to cause both of the same to assume their chair or stepladder formation at will, the point of connection between the link and hinged seat and panel sections, being respectively, forwardly of the hinged seat section and below the pivot of the panel section for holding the seat and panel sections in locked position when swung rearwardly with said sections being simultaneously shifted by the link connection.



1,428,805. WRENCH. LYMAN GEORGE REYNOLDS and ARTHUR LYTLE HOLMAN, Toronto, Ontario, Canada. Filed Sept. 8, 1921. Serial No. 499,159. 1 Claim. (Cl. 81—59.)

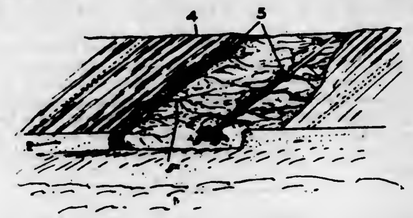
A wrench comprising a handle, a head pivotally connected to the handle and having an arc-shaped lower portion provided with ratchet teeth, a plunger slidable in a longitudinal orifice in the handle and having a toothed upper end, one of the faces of the tooth being bevelled, a spring



normally holding the toothed upper end of the plunger in engagement with one of the ratchet teeth on the head and a lever pivotally mounted in the handle and the inner end thereof engaging a slot in the plunger.

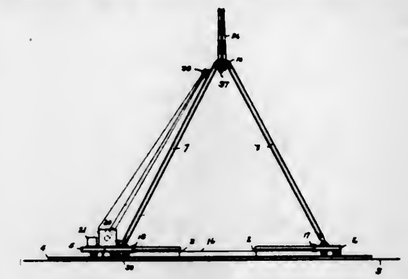
1,428,806. CLEANING DEVICE. WILLIAM H. ROSE, Jersey City, N. J. Filed May 16, 1921. Serial No. 470,170. 3 Claims. (Cl. 15—133.)

1. In a device for removing spots and stains from cloth, a receptacle having an opening for the passage of fluid, two coaxial caps for said opening rigidly connected together and each being adapted to be secured to the container over said opening, one of said caps being a fluid tight stopper for the opening and the other cap having an aperture therein for the passage of fluid and a delivery tube secured thereto, said tube having a stiff brush at its outer end and being adapted to convey liquid from the receptacle to the brush.



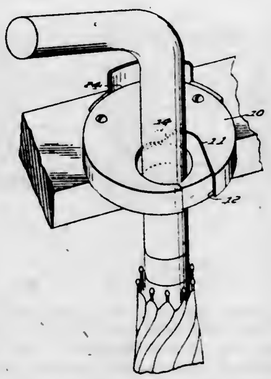
1,428,807. CLEANING DEVICE. WILLIAM H. ROSE, Jersey City, N. J. Filed Apr. 26, 1922. Serial No. 556,663. 2 Claims. (Cl. 15—133.)

1. A cleaning device comprising in combination a receptacle for cleaning fluid having a projecting neck surrounding a discharge opening, a fluid delivery tube closed at one end and having a stiff brush secured thereto at the other end in the path of fluid which is discharged, a cap adapted to detachably fit said projecting neck rigidly connected at its base to the side of said tube near the closed end of said tube projecting laterally therefrom, an opening being provided connecting the interior of the cap and tube, a second similar cap rigidly connected at its base to said tube on the same side as and closely adjacent to said first cap said last mentioned cap being so constructed as to form a liquid tight closure when in place on said neck.



1,428,808. METHOD FOR PREVENTING THE UNDERMINING OF WATER-WASHED BANKS. OLIVER STAUFFER SCHIEFELE, Conestogo, Ontario, Canada. Filed Nov. 10, 1921. Serial No. 514,347. 4 Claims. (Cl. 61—35.)

1. A method for preventing the undermining of water washed banks consisting of first stripping live tree trunks and planting them in a recumbent position parallel with the surface of the bank and at an acute angle to the bank



base and then forming a protecting wall in front of the lower portion of such tree trunks.

1,428,809. BOAT CRANE. FRANK R. ZIMMERMAN, Superior, Wis., assignor to Superior Iron Works Company, Superior, Wis., a Corporation of Wisconsin. Filed Aug. 26, 1921. Serial No. 495,690. 4 Claims. (Cl. 212—3.)

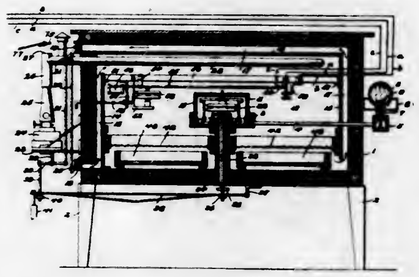
1. The combination with a boat of the character described of a foldable, traveling crane carried transverse the deck of the boat, collapsible means for raising and lowering the crane at either end thereof, said crane having pivotally adjustable portions at the ends thereof for extending beyond the sides of the boat, substantially as described.

1,428,810. UMBRELLA LOCK. LEE SHOEMAKER, Portland, Oreg. Filed Apr. 26, 1921. Serial No. 464,708. 4 Claims. (Cl. 70—14.)

4. A device for the purpose described having a casing provided with an elongated opening for the reception of an

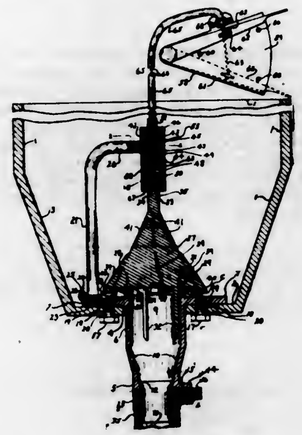
umbrella or cane handle and provided with an entrance throat, a disk revolubly mounted in the casing and having a throat registrable with that of the casing and an adjacent jaw for closing the throat of the casing, a spring for yieldingly holding the disk in its normal position, a spring arm carried by the casing, and a cam carried by the disk for engagement with the said arm when the disk is moved to its throat closing position, said casing having a key socket intersected by said spring arm, in combination with an identifying key for reception by said socket, and a key locking tongue carried by the said disk for engagement with a notch in the key when the disk is in its normal position.

1,428,811. COMPOSITION FOR BUILDING BLOCKS. ROBERT C. SHEAFFER, Lancaster, Pa. Filed July 16, 1921. Serial No. 485,397. 2 Claims. (Cl. 106—24.)



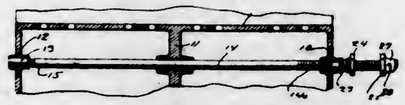
1. A composition for producing building blocks comprising the following ingredients mixed in the proportions named: ashes 100 lbs., cement 60 lbs., and cork 1 lb.

1,428,812. COMBINATION CARBURETOR CHOKER AND SWITCH MECHANISM. MEYER ABRAHAM SIMON, St. Louis, Mo. Filed Dec. 8, 1921. Serial No. 521,072. 8 Claims. (Cl. 123—180.)



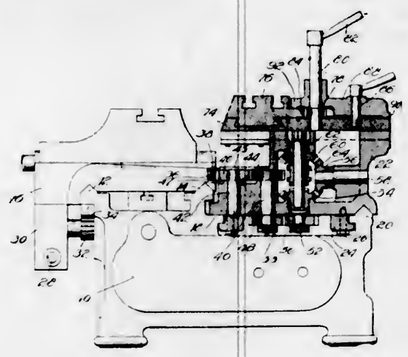
1. The combination with a carburetor choke mechanism of a simultaneously co-operating switch member adapted to control an electrical heating resistor disposed in the path of flow of the fuel in an internal combustion engine.

1,428,813. INCUBATOR. WILLIAM W. SMITH, Hawthorne, Calif. Filed Feb. 17, 1920. Serial No. 359,277. 2 Claims. (Cl. 119—40.)



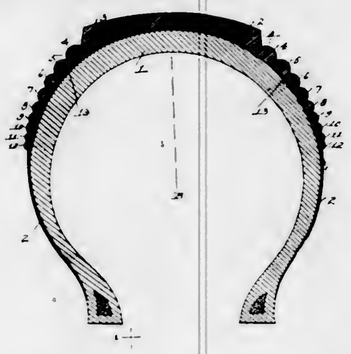
1. An incubator comprising an egg chamber, a partition forming an inlet conduit extending upwardly along one side and subjected to the temperature of the egg chamber, a partition forming an outlet conduit extending upwardly along another side and across the top and subjected to the temperature of the egg chamber, closures at the induction end of the inlet and the eduction end of the outlet conduits, a thermostat within the chamber, means connecting the thermostat and closures whereby the closures are actuated in synchronism, a heating element without the chamber, a heat transmitting element extending from the heating element into the chamber, brackets positioned within the chamber, a second thermostat organization seated upon the removable as an entirety from said brackets, electrical contacts forming a part of said removable thermostat organization, a source of electrical energy, a damper adapted to vary the effective interaction of the heating and heat distributing elements and tending to remain closed, electrically actuated means including some of said contacts which open the damper, means to lock the damper in open position, and electrically-actuated means including others of said contacts to release the lock.

1,428,814. SANDING DEVICE. CHARLES SPENCER, Hamilton, Ontario, Canada. Filed Feb. 28, 1922. Serial No. 539,954. 34 Claims. (Cl. 291—37.)



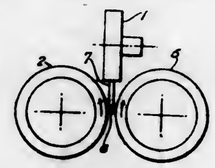
1. In a sanding device, the combination with a sand container having a discharge orifice in the bottom thereof, of a cap associated with said orifice and movably supported in spaced relation thereabove, and means for raising and lowering said cap.

1,428,815. BUSHING REMOVER. RUFUS K. STARKEY, Hennessey, Okla. Filed May 7, 1921. Serial No. 467,606. 3 Claims. (Cl. 29—88.2.)



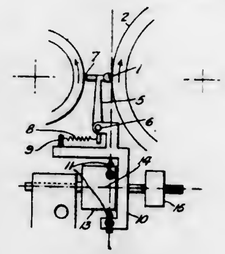
1. A device for removing or replacing bushings in one of a pair of alined openings, comprising a member adapted to slidably engage in one of said openings and forming a guide, a bar slidably directed through said member and maintained thereby in alinement with the other of said openings, said bar being provided upon one end thereof with means whereby it may be rotated and adapted upon the other end thereof for the interchangeable reception of a bushing remover or replacer, and means mounted upon the first named end of the bar for shifting the bar longitudinally through said member.

1,428,816. LATHE. GUSTAF DAVID SUNDSTRAND, Rockford, Ill., assignor to Rockford Tool Company, Rockford, Ill., a Corporation of Illinois. Filed June 11, 1920. Serial No. 388,211. 16 Claims. (Cl. 82—25.)



1. In a lathe, in combination, a front tool carriage, a rear tool carriage, a tool slide on said rear tool carriage, a rack extending along said front carriage, and transmission mechanism entirely mounted on and supported by said rear tool carriage and including a gear meshing with said rack, for reciprocating said rear tool slide upon longitudinal sliding movement of said front carriage.

1,428,817. TIRE. HERBERT H. SWAN, Grand Rapids, Mich., assignor to Grand Rapids Tire and Rubber Corporation, Grand Rapids, Mich., a Corporation of Delaware. Filed Sept. 26, 1921. Serial No. 503,146. 2 Claims. (Cl. 152—14.)



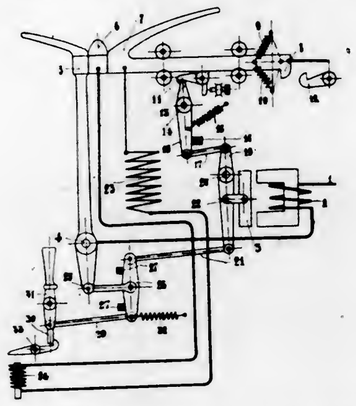
2. A tire having an inner body portion and an outer rubber portion united therewith, the outer portion having a peripheral tread and at the side thereof a plurality of concentric ribs cross-sectionally convexing outward and extending longitudinally in the tire's circumferential direction, each rib extending laterally further from the central plane of the tire which is perpendicular to its rotative axis than, and being of less cross-sectional area than, the rib nearer the tire's periphery, the outer portion having also a base from which the ribs extend integrally therewith, said base beneath the ribs diminishing in thickness from the tread toward the rotative axis of the tire.

1,428,818. PRODUCTION OF SOUND RECORDS. ADRIAN FRANCIS SYKES, New Barnet, England. Filed Nov. 16, 1920. Serial No. 424,420. 5 Claims. (Cl. 274—32.)

1. In means for producing sound records, the combination of a cutting tool adapted to cut two blanks simultaneously and means for actuating the tool in accordance with sound waves.

1,428,819. MANUFACTURE OF SOUND RECORDS. ADRIAN FRANCIS SYKES, New Barnet, England. Filed Nov. 30, 1920. Serial No. 427,373. 8 Claims. (Cl. 274—3.)

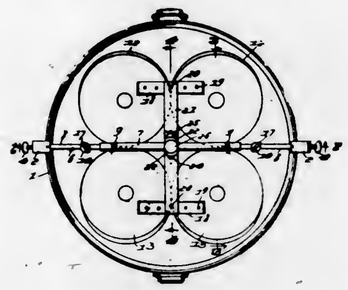
1. A method of making a sound record, which consists in producing from a master sound record a record having a sound groove which is a definitely distorted inverse of the groove on the master record.



1,428,820. PROCESS FOR THE EXTRACTION OF PROTEIDS AND LACTOSE FROM WHEY. DAVID THOMSON, London, England. Filed Dec. 12, 1921. Serial No. 521,875. 4 Claims. (Cl. 99—11.)

4. A process of separating the protein substances from whey which consists in adding alkali to the whey and removing the resultant precipitate, thereafter subjecting the whey to repetitions of the step of adding alkali and removing the resultant precipitate until the point of neutrality is reached, then adding more alkali to render the whey definitely alkaline to about P_H 10.5, evaporating the final solution and coagulating the remaining proteid, removing the latter, and crystallizing out the lactose substantially as herein described.

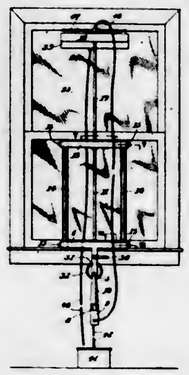
1,428,821. EXTRA-QUICK-ACTING CIRCUIT BREAKER. EDOUARD VEDOVELLI, Paris, France, assignor to La Societe la Metallurgique Electrique, Paris, France. Filed Dec. 22, 1920. Serial No. 432,512. 7 Claims. (Cl. 200—109.)



7. In a quick-acting, circuit-breaking mechanism, the combination of a fixed contact; a pair of movable contact elements disposed at opposite sides of and normally engaged with the fixed contact; a circuit wherein both contact elements are included; a magnet in said circuit; spring means tending to move one of the contact elements away from the fixed contact; means for holding said contact element against such movement; means

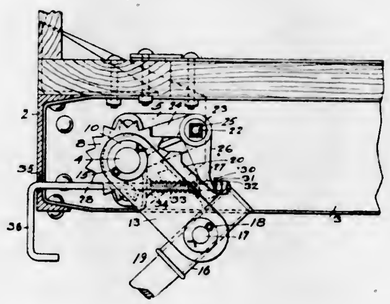
controlled by the magnet for releasing said holding means to permit the movement of said contact element: a balance beam connected to the other contact element for moving the same away from the fixed element; a

catch normally locking the beam against operation; means for operating said beam when unlocked; and means for automatically releasing the catch after the movement of the first contact element has commenced.



1,428,822. WASHING-MACHINE AGITATOR. ARCHIE L. WALLING, Akron, Ohio. Filed Mar. 13, 1922. Serial No. 543,301. 4 Claims. (Cl. 259—100.)

1. An agitator of the character indicated, a rocking shaft, hangers adjustably depending therefrom, a plurality of suction cups carried by and connected to the hangers, said cups being arranged in pairs, said hangers having arms engaging between and secured to the flanges of said cups, said arms being substantially triangular in cross section, whereby the suction cups may be supported at an acute angle, and means for rocking the shaft and oscillating the suction cups.

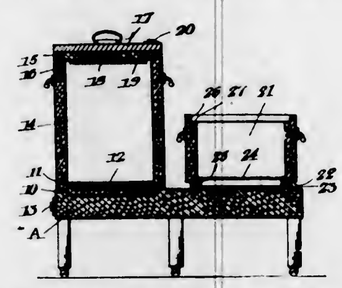


1,428,823. WINDOW-WASHING APPARATUS. JOHN WOJNARSKI, Chicago, Ill. Filed July 23, 1921. Serial No. 487,009. 4 Claims. (Cl. 15—103.)

1. In a window washing apparatus, a frame including a casting with an upper horizontal plate portion and a lower depending vertical portion connected by an intermediate vertical portion, said horizontal plate portion being adapted to rest upon the sill of a window frame and having a vertical shaft journaled therein, said shaft having its lower end journaled in the upper end of said vertical depending portion, a horizontal shaft journaled through the intermediate portion of the casting and having its inner end rotatably geared to the vertical shaft beneath said plate portion, a second plate spaced from and disposed above the first named plate portion, side upright bars rigidly connecting said plates, said vertical shaft being journaled in the second named plate and projecting upwardly beyond the same, a brush carrying plate slidable

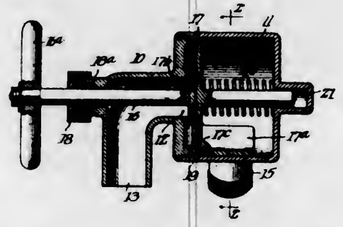
upon the upper end portion of said shaft and operatively connected to the latter whereby rotation of said vertical shaft will cause vertical reciprocation of the brush carrying plate, means to rotate said horizontal shaft, and a guide bar having its lower end fixed in the second named plate and projecting upwardly through said brush carrying plate.

1,428,824. RATCHET DEVICE. HARRY T. ANDERSON, Butler, Pa., assignor to Standard Steel Car Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed July 15, 1921. Serial No. 485,139. 7 Claims. (Cl. 74—54.)



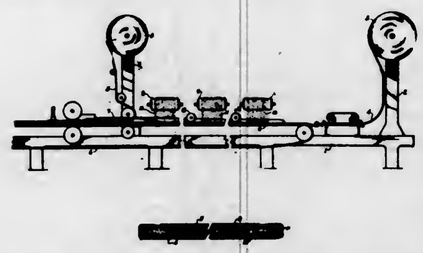
1. In a ratchet device, the combination of a shaft, a ratchet-wheel mounted thereon, a swinging member carried by said shaft, a lever socket mounted to rotate in said member and a ratchet rigidly connected to said socket, whereby the position of said ratchet with reference to said ratchet-wheel may be reversed.

1,428,825. ELECTRIC COOKER. GEORGE HEDLEY BINDON, Ottawa, Ontario, Canada. Filed Jan. 24, 1921. Serial No. 439,531. 9 Claims. (Cl. 219—35.)



1. A cooker having a base of heat non-conducting material and a removable body of heat non-conducting material in engagement with the base and adapted to be

lifted therefrom, a heat retaining and storage member on the base within the body extending above the plane of

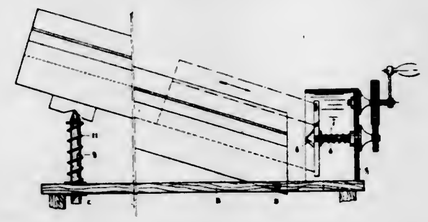


contact between the base and the body, and an electrical resistance on the member, as and for the purpose specified.

1,428,826. FAUCET. EDWARD BITTEL, Forest Park, Ill. Filed Mar. 1, 1920. Serial No. 362,330. 3 Claims. (Cl. 251—4.)

2. In a faucet of the type described, a cylindrical mixing chamber, an outlet in one end wall thereof, laterally arranged inlets in the side wall of said chamber, a circular plate slidably and rotatably mounted within said chamber and provided with a rearwardly projecting flange adapted to close said inlets, means also carried by said plate for closing said outlet, said plate being provided with a cam seat formed in one of its faces, and a stationary cam designed for cooperation with said seat whereby upon rotation of said plate to open either or both of said inlets said plate will also be moved longitudinally within said cylinder to thereby open said outlet.

1,428,827. COMPOSITION WALL BOARD AND METHOD OF MAKING THE SAME. HARRY E. BROOKBY, Evanston, Ill., assignor to United States Gypsum Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 12, 1921. Serial No. 514,731. 8 Claims. (Cl. 154—1.)

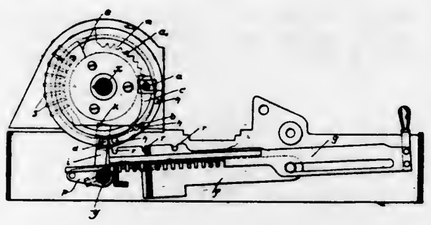


7. The method of fabricating composition wallboard comprising the provision of a cover sheet, the depositing of a layer of plastic calcined gypsum thereon, the depositing on such layer of a core of plastic diatomaceous earth mixture, the depositing upon the core of a layer of plastic calcined gypsum and the laying of a cover sheet upon said last layer.

1,428,828. PHONOGRAPH-NEEDLE BUFFER. THOMAS AHEARN, Ottawa, Ontario, Canada. Filed July 30, 1920. Serial No. 400,134. 3 Claims. (Cl. 274—25.)

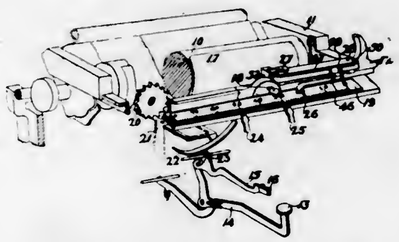
1. In a sound reproducing machine, a sound member, a buffing member pivoted to the sound box, and a resilient contact member adjustably supported from the buffing member.

1,428,829. DEVICE FOR TRANSFORMING ICE INTO SNOW. JAMES ANDERSON, Paris, France. Filed Oct. 11, 1921. Serial No. 507,099. 6 Claims. (Cl. 83—62.)



1. An ice-shaving apparatus, comprising an inclined ice-supporting trough; an ice-shaving device at the foot thereof; and means acting to automatically adjust the inclination of the trough in accordance with the weight of a block of ice on the trough.

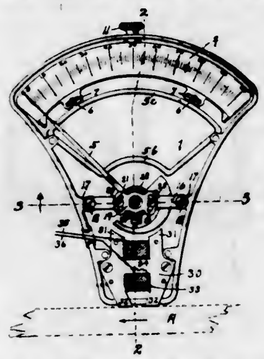
1,428,830. SHEARS. EUGENE N. ARNOT, San Francisco, Calif. Filed June 9, 1920. Serial No. 387,691. 1 Claim. (Cl. 30—13.)



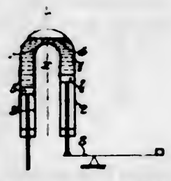
A cutting tool of the character described comprising as a dominating member a longitudinal metal strip and as a subordinate member an L-shaped cutter pivoted to the metal strip and adapted to co-operate with the side edge thereof to produce a cutting effect, the cutting edge of the cutter adapted to overlie the flat surface of the metal strip with the other bend of the L abutting against the side of the strip so as to preserve the single strip character of the tool when in an inactive position.

1,428,831. LOCKING DEVICE FOR CALCULATING MACHINES. WILHELM AUGUSTIN, Berlin-Charlottenburg, Germany, assignor to Bing-Werke, vormals Gebr. Bink Aktien-Gesellschaft, Nurnberg, Germany. Filed May 15, 1922. Serial No. 561,039. 8 Claims. (Cl. 235—73.)

1. In a calculating machine of the class described, the combination with a crank shaft and a series of register actuators thereon including relatively stationary members and coacting selector members adjustable with relation thereto to control the register actuation operation, of a plurality of setting members adapted to coact with the selector members aforesaid, means for shifting the setting members into coacting relation to the selector members and simultaneously releasing the same for adjustment by the setting members, and locking means normally holding the parts of the register actuators in the adjusted position to be operated by the shaft, said means being shiftable into inoperative position as an incident to the operation of the shifting means for the setting members aforesaid, whereby to permit of selective setting of the adjustable members.



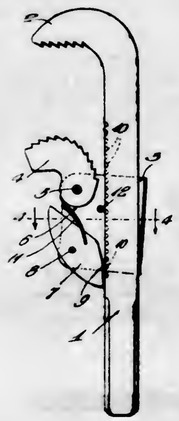
1,428,832. TYPEWRITING MACHINE. HARRY BATES, New York, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed June 28, 1919. Serial No. 307,341. 9 Claims. (Cl. 197—190.)



1. In a typewriting machine, the combination with a travelling carriage and a revoluble platen therein, of a letter-space scale, a slide upon the carriage, a block upon the slide, a pointer upon the block, a screw engaging the block and adapted to drive it, a ratchet wheel fast to the screw, a pawl for the ratchet wheel, and a finger-piece for driving the pawl.

1,428,833. MAGNETIC BALANCE. THEODORE S. BINDSCHEDLER, Detroit, Mich., assignor of one-half to Alvah B. Frederick, Detroit, Mich. Filed Sept. 9, 1918. Serial No. 253,181. 9 Claims. (Cl. 175—183.)

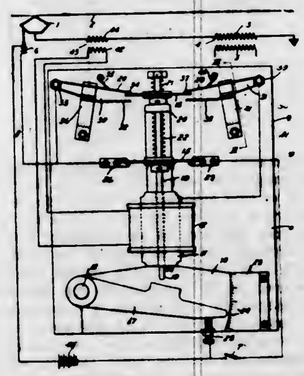
9. Means for determining the penetration of magnetic flux through materials to be tested comprising a substantially H-shaped electro-magnet having its coil wound on the central bar to receive alternating current, the work to be tested being placed adjacent the air gap between two poles so as to constitute a path for magnetic flux, and an indicator influenced by the varying magnetic flux at the other two poles, said pairs of poles when alternating current passes through said coil constituting an electro-magnetic balance.



1,428,834. ELECTRIC RESISTANCE FOR REGULATING THE CANDLEPOWER OF ELECTRIC INCANDESCENT LAMPS. GRAVERS JACOBSEN BJERRE, Copenhagen, Denmark. Filed May 4, 1921. Serial No. 466,650. 5 Claims. (Cl. 219—50.)

1. An electrical resistance comprising a bent tube, a granular resistance, conducting terminals contacting with said resistance and means to move at least one of said terminals to vary the cross-section of the resistance at the bend of said tube.

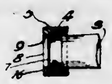
1,428,835. WRENCH. CARL O. BORKMAN, Victor, Colo. Filed Sept. 1, 1921. Serial No. 497,562. 3 Claims. (Cl. 81—134.)



1. A wrench comprising a handle having a laterally disposed fixed jaw at its outer end, a carrier slidably mounted on said handle, a movable jaw pivotally connected at its inner end to said carrier, a locking pawl or lever fulcrumed between its ends on said carrier, co-acting means between the lever and handle for holding the carrier in various adjusted positions, and unitary means carried entirely by said lever and operatively engaged with the movable jaw for maintaining the latter in various positions prior to engaging it with the work, for holding it in engagement with the work, for rendering the aforesaid co-acting means effective, and for swinging the jaw away from the work when the outer end of the lever is pressed toward the handle to render the aforesaid co-acting means ineffective.

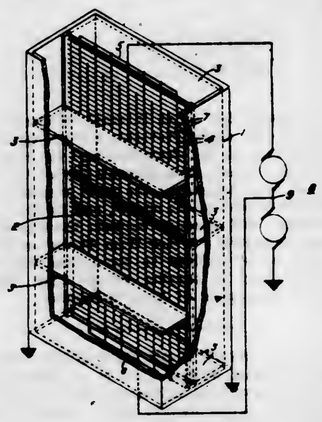
1,428,836. POWER-DRIVEN HAIR CLIPPER. JOHN CAMPBELL, Minneapolis, Minn., assignor of one-half to Augustus S. Dowdall, Minneapolis, Minn. Filed July 6, 1920. Serial No. 394,107. 5 Claims. (Cl. 30—1.)

2. A substantially flat hair cutting implement having in combination a handle portion, a toothed comb secured thereto and extending longitudinally thereof, and a reciprocating cutting mechanism secured to said handle and extending longitudinally thereof, comprising a stationary toothed member and a movable toothed member, the teeth of said members being disposed oppositely to the teeth of said comb.



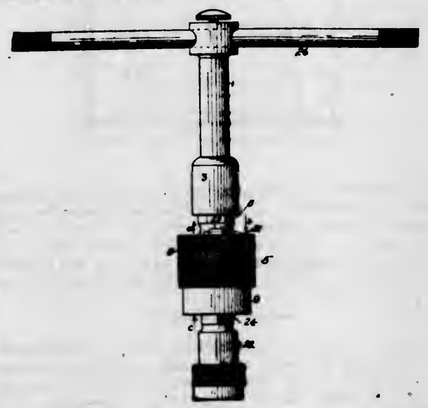
1,428,837. RELAY. ANDREW H. CANDEE, Pittsburgh, and LLOYD J. HIBBARD, Wilkinsburg, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 7, 1917. Serial No. 184,804. 12 Claims. (Cl. 175—335.)

12. In an electric circuit, the combination with an electromagnet, a control source of electromotive force and a switch for connecting the electromagnet in circuit with the control source of electromotive force, of a relay energized from the main circuit for opening the control circuit through the switch when an overload obtains on the main circuit and for completing an auxiliary control circuit in shunt relation to the switch when the overload is removed from the main circuit.



1,428,838. HAMMER. MORTIMER D. DAVIS, Springfield, Mass., assignor of one-half to George L. Cassidy and John J. Murray, both of Springfield, Mass. Filed Mar. 4, 1922. Serial No. 541,212. 2 Claims. (Cl. 145—29.)

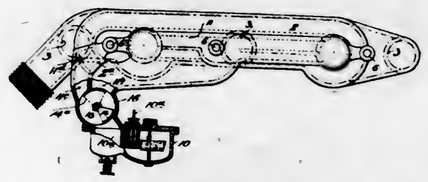
1. A protector for hammer comprising in combination, a sleeve arranged for mounting on the hammer head, a flanged edge on the sleeve adapted to coact with the face



portion and cover the outer edges thereof, and means for reenforcing the flange.

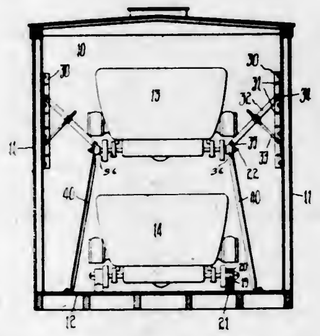
1,428,839. IONIZING ELECTRODE FOR PRECIPITATING APPARATUS. CHARLES LE G. FORTESCUE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 25, 1919. Serial No. 279,205. 11 Claims. (Cl. 183—7.)

1. In a system of precipitation, a source of energy therefor, a collecting electrode formed as a treating chamber, a reticulated discharge electrode, and means whereby said discharge electrode may be charged with potentials of different values substantially simultaneously.



1,428,840. COMBINATION SOCKET WRENCH. WILLIAM H. GATES, New Haven, Conn. Filed Feb. 4, 1922. Serial No. 534,074. 2 Claims. (Cl. 81—60.)

1. A combination socket wrench of the character described, comprising a handle having a socket recessed end,



a forked stud located therein, a ratchet head having a stem adapted to be inserted in the recessed end of the handle, said stem having an opening therein adapted to frictionally engage the stud, said ratchet head having a socket recess at its opposite end and a spring pin located therein to connect with interchangeable sockets.

1,428,841. COMBINED INTAKE AND EXHAUST MANIFOLD. ERNEST W. GRAEF, Caldwell, N. J., assignor to Henry J. Gaisman, Woodmere, N. Y. Filed July 12, 1917. Serial No. 180,223. 14 Claims. (Cl. 123—122.)

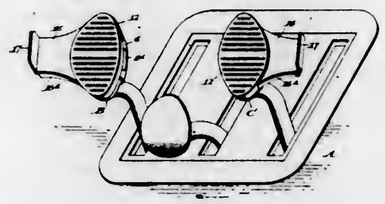
1. The combination of an internal combustion engine, with a carburetor, means providing a plurality of passages for mixture between the carbureter and the engine intake port or ports, means to heat mixture flowing to the engine through one of said passages, the other passage permitting cold mixture to pass to the engine, and throttle means to close and open said passages between the engine and the carbureter to control the flow from the carbureter to the engine adapted to deliver to the engine through said passages mixture of varying volume and temperature according to the extent of throttle opening.

1,428,842. SYSTEM OF AUTOMOBILE DECKING. GEORGE M. GRAHAM, New York, N. Y., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed May 1, 1920. Serial No. 378,282. 15 Claims. (Cl. 105—368.)

1. In means for supporting an automobile in a railway car, the combination of means disposed substantially in transverse planes adapted to suspend the automobile from the walls of the car, and independent bracing means connecting the automobile to the floor of the car and adapted to prevent longitudinal movement of the automobile relative to the car.

1,428,843. PEDAL ATTACHMENT FOR AUTOMOBILES. FREDERICK C. GRANT and FRIEDA Z. GRANT, Chicago, Ill. Filed July 28, 1920. Serial No. 399,547. Renewed July 3, 1922. Serial No. 572,740. 15 Claims. (Cl. 74—81.)

1. In a pedal attachment of the character described, the combination of a main plate bent to engage one edge of a pedal, an extension plate slidably mounted on said



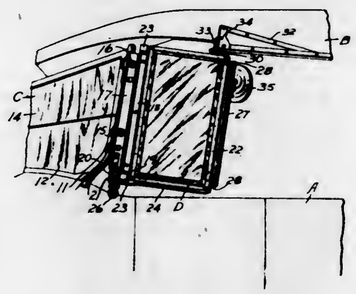


plate and adapted to engage the opposite edge of the pedal and means for clamping said plates to pedal.

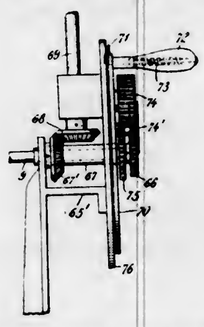
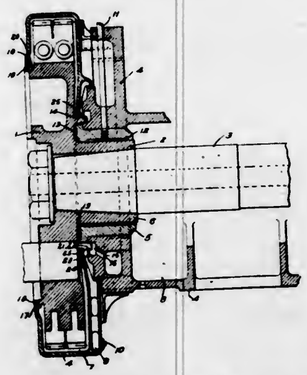
1,428,844. AUTOMOBILE WIND DEFLECTOR. JOSEPH P. GRAY, Los Angeles, Calif. Filed June 1, 1921. Serial No. 474,125. 2 Claims. (Cl. 296—84.)



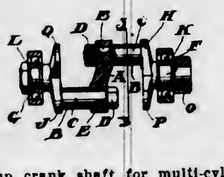
1. In combination with an automobile having a windshield with supporting standards therefor, a support secured to one of said standards, a wind deflector secured to said support at one side by ground-in joints, a handle spaced from the free side of said deflector and secured thereto, an arcuate bracket secured at the upper edge of said deflector, said bracket having spaced holes therein, a frame secured to the automobile top and having a socket for registration with a hole, a detachable pin for insertion in said socket and one of said holes to lock the deflector in adjusted position, a plate on the lower edge of said deflector and having holes therein, and means adjacent the lower joint to lock said deflector in adjusted position.

1,428,845. COMBINED PHONOGRAPH AND MOVING-PICTURE MACHINE. ROBERT D. GRAY, Ridgewood, N. J. Filed June 5, 1920. Serial No. 386,899. 2 Claims. (Cl. 88—16.2.)



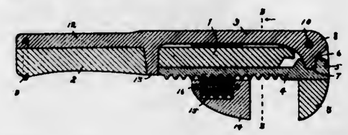
2. In an apparatus of the class described, the combination of a motion picture machine, a sound record machine, means for actuating said machines in synchronism, means for altering the timed relation of the two machines without permanently varying the speed relation, and means for indicating the extent to which the timed relation has been altered from the original setting, said means including a differential connected to the actuating means

and manually operable to accelerate or retard one of said machines, and a graduated stationary dial co-



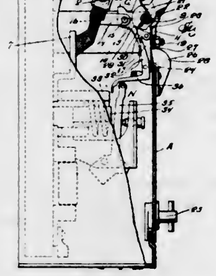
operating with the manually operable floating member of the differential to indicate the change in position thereof from the original setting.

1,428,846. GEAR CASE FOR JACKSHAFTS. HAROLD A. HOUSTON, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 6, 1922. Serial No. 534,381. 8 Claims. (Cl. 74—56.)



1. The combination with a shaft, a gear, a journal bearing therefor, and a casing, of a plurality of lubricating means to separately lubricate the teeth of said gear and said journal bearing, and means for maintaining separation of the lubricating fluids.

1,428,847. BUILT-UP CRANK SHAFT. FRANCIS A. JIMERSON, Athens, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed May 27, 1922. Serial No. 564,100. 2 Claims. (Cl. 74—38.)

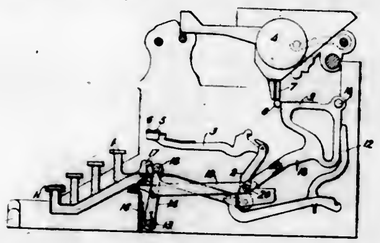


1. A built up crank shaft for multi-cylinder engines, comprising a center web having sleeve portions integral therewith and extending outwardly in opposite directions at each end of the web to form the bearing portions of the crank pins, shaft ends having end webs carrying crank pins integral therewith and adapted to be inserted through said sleeve portions of the center web, and means for securing the crank pins to the center web.

1,428,848. COMBINATION TOOL. ALBIN J. JOHNSON, Duluth, Minn., assignor of one-half to Carl Hanson, Duluth, Minn. Filed Mar. 24, 1921. Serial No. 455,228. 2 Claims. (Cl. 81—87.)

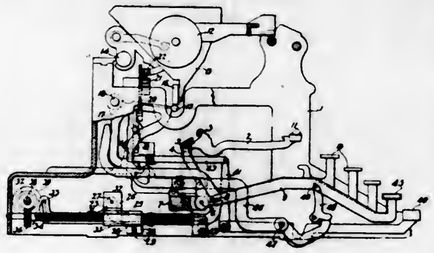
1. A wrench comprising in combination a main body portion having a fixed jaw upon one end thereof, a slidable jaw carried by the body portion, slidable means intermediate of the two jaws, separable therefrom and conactively uniting the same, and an arm-like member pivotally mounted in the body portion adjacent the fixed jaw and engaging the slidable means.

1,428,849. SAFETY PANEL BOX. HUBERT F. KRANTZ, Brooklyn, N. Y., assignor to Krantz Manufacturing Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Aug. 23, 1918. Serial No. 251,079. 7 Claims. (Cl. 200—50.)



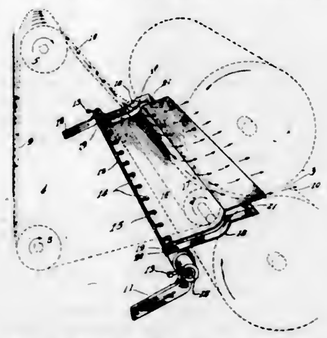
1. A panel box having a movable door, a switch mechanism movable into "on" and "off" positions, the switch mechanism including toggle links movable into made and broken positions, and the door having a part adapted when the door is opened to directly engage one of the toggle links to operate the toggle.

1,428,850. TYPEWRITING MACHINE. ALFRED G. F. KUBOWSKI, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 6, 1920. Serial No. 415,015. 3 Claims. (Cl. 197—108.)



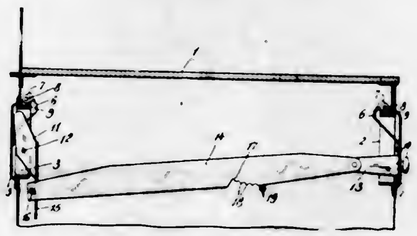
1. In a typewriting machine, the combination with a carriage, a platen, types having upper and lower case characters thereon, key-levers for driving said types to print, a lock to engage said key-levers, said lock forming

part of a line-locking mechanism and normally out of the paths of said levers, and case-shifting means for determining whether said types shall print on said platen in upper or lower case, of a cam-member movable by said



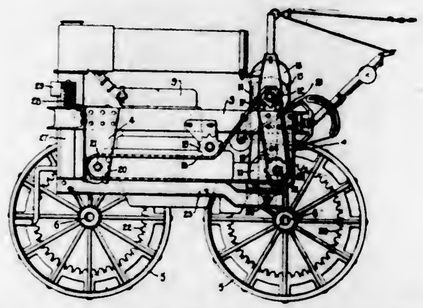
case-shifting means and effective on said lock driving case-shifting movements, to move it into the paths of said levers, but releasing said lock, to permit the latter to return to normal position, when said case-shifting means is in either of its extreme positions.

1,428,851. TYPEWRITING MACHINE. ALFRED G. F. KUROWSKI, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 28, 1921. Serial No. 440,665. 6 Claims. (Cl. 197—27.)



1. In a typewriting machine, the combination with a key-lever, of an arm slidably mounted on said lever, a bracket pivotally supporting said arm, and means for adjusting said bracket.

1,428,852. PAPER-FINISHING MACHINE. WILLIAM F. MCCARTHY, Springfield, Mass. Filed Feb. 7, 1921. Serial No. 443,207. 12 Claims. (Cl. 92—74.)

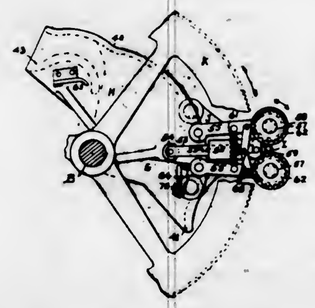


1. A finish feeder in combination with a set of calenders, a flat plate extending the length of one of the calender rolls having its feeding edge brought adjacent to the finishing point of the calenders against the roll, and means for adjustably holding the plate in position, and whereby the rough stock will be received thereby and slid thereon, ironed and fed from the plate to the calenders.

1,428,853. STOVE AND RANGE. SILAS MCCLURE, Beaver Dam, Wis. Filed Jan. 28, 1921. Serial No. 440,572. 7 Claims. (Cl. 129—190.)

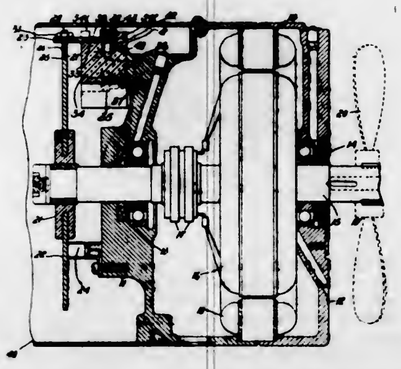
1. In a stove or range having draft openings in opposite walls, doors for closing the openings, and means arranged between the doors and connected to one door and abutting the other door when the first named door is opened to open said second named door.

1,428,854. FARM TRACTOR. JOHN M. MEYERS, Janesville, Wis., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Dec. 17, 1919. Serial No. 345,634. 14 Claims. (Cl. 180—17.)



1. In a tractor, a suitable main frame; driving wheels whereby said main frame is supported; two oppositely disposed supporting members depending from said main frame; a supplemental frame one end of which is pivotally supported from said main frame through said supporting members; two oppositely disposed supporting members connected with the other end of said supplemental frame and extending upwardly therefrom and terminating above said main frame; two springs associated one with each of said last mentioned supporting members and the lower ends of which are supported by said main frame, and through which springs said supplemental frame is supported from said main frame; an engine carried by said supplemental frame; and power transmitting mechanism through which said driving wheels are driven from said engine.

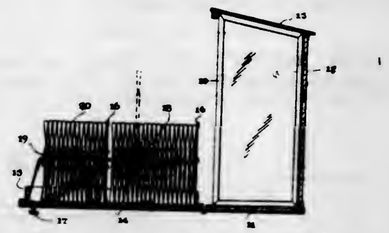
1,428,855. APPARATUS FOR MANUFACTURING GLASS ARTICLES. WILLIAM J. MILLER, Swissvale Borough, Pa. Filed Sept. 23, 1919. Serial No. 325,617. 19 Claims. (Cl. 49—19.)



8. In a paste mold machine, a revolving support, a fixed gear axially alined with said support, pairs of pipe

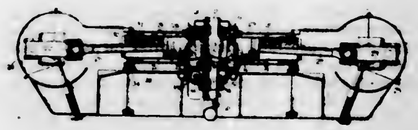
rotating rollers moving with said support, gears carried by said rollers and meshing with said fixed gear to rotate said rollers, and means for resiliently pressing said rollers into engagement with the blow pipes.

17. In a glass machine, a rotary mold support, a fixed cam member, a partible mold mounted on said support, shafts associated with the mold part in such a manner that the rotation of said shafts opens and closes the molds, a depending sleeve fitting down over each shaft, means for locking said shafts to their respective sleeves and means associated with said sleeves to rotate the same and engaging said fixed cam tracks.



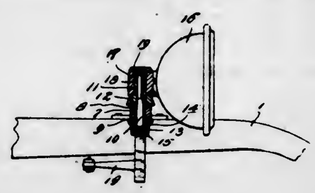
1,428,856. SPARK-GAP APPARATUS. LESLIE O. PARKER, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 13, 1918. Serial No. 234,131. 8 Claims. (Cl. 250—38.)

2. A spark-gap apparatus comprising the combination with a rotatable toothed disc electrode, of a relatively stationary electrode adjustable radially and circumferentially with relation to said rotatable electrode, and a fixed insulating block supporting said stationary electrode and mounted at a distance from the axis of said rotatable electrode.



1,428,857. DISPLAY CABINET. GEORGE PIVAR, New York, N. Y., assignor to Joseph Frankenthaler, Benjamin Frankenthaler, and Solomon Frankenthaler, New York, N. Y., composing the Firm of Frankenthaler & Frankenthaler. Filed Mar. 2, 1922. Serial No. 541,648. 2 Claims. (Cl. 211—16.)

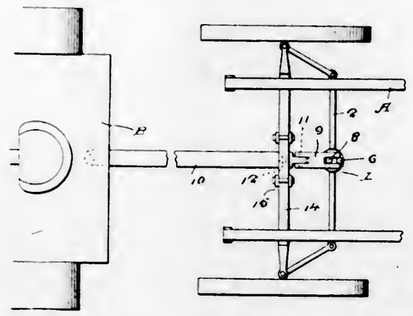
1. In a show case, a bottom, a door having its lower edge hinged to the bottom, shelves projecting at right angles to the door, a dividing and bracing rod extending



through the shelves and having one end attached to said door, and a keeper slidably mounted on said rod.

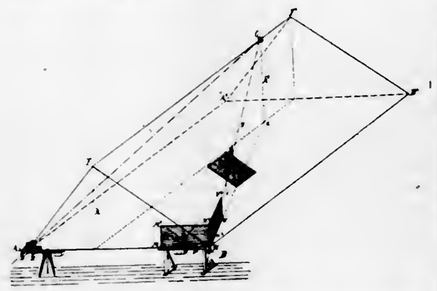
1,428,858. INTERNAL-COMBUSTION ENGINE. FINLEY R. PORTER, Port Jefferson, N. Y., assignor to Knight American Patents Company, Chicago, Ill., a Corporation of Delaware. Filed Oct. 31, 1916. Serial No. 128,732. 24 Claims. (Cl. 123—53.)

1. In a four-cycle multiple cylinder internal combustion engine, a pair of horizontally opposed cylinders adapted to function simultaneously, a rotary valve and its casing located between the inner ends of said cylinders, a pair of crank shafts and their casings located at the outer ends of said cylinders and pistons working in said cylinders, connected to their crank shafts through the outer ends of said cylinders.



1,428,859. DIRIGIBLE HEADLIGHT FOR MOTOR VEHICLES. ETHAN T. RAMSAY, Reading, Pa. Filed May 23, 1922. Serial No. 562,940. 1 Claim. (Cl. 240—62.)

In dirigible headlight construction, brackets secured to the side bars of the chassis of the motor vehicle and extending outwardly from said bars, vertical sleeves on the outer ends of said brackets, respectively, a shaft journaled in each sleeve and projecting above and below the same, a sleeve surrounding the top portion of each shaft, an annular flange formed on the lower end of the second named sleeve, anti-friction bearings between said flange and the first mentioned sleeve, a bearing collar threaded onto the lower portion of said shaft below the first named sleeve and having its upper end enlarged, anti-friction bearings between the enlarged end of said collar and the lower end of the adjacent sleeve, a headlight carrying bracket formed with a vertical bore that receives the second named sleeve, a clamping collar threaded on the

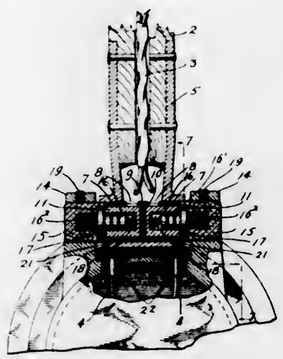


upper end of said shaft and engaging said bracket to hold the latter upon the second named sleeve and connections between the lower ends of said shafts and the tie rod of the steering gear of the motor vehicle.

1,428,860. TOWING DEVICE. FRANK REINSCHMIDT, Crookston, Minn. Filed Apr. 19, 1921. Serial No. 462,593. 1 Claim. (Cl. 280—33.5.)

A towing device comprising a clamp consisting of upper and lower sections hingedly connected at one end thereof, its opposite end provided with apertures for the insertion of a connecting bolt, a serrated semicircular groove formed within each section and adapted to receive the connecting rod of the steering mechanism, an upwardly extending stud disposed upon the top of the upper section and projecting therefrom, a bar forked at its ends one end being adapted to receive said stud, a bracket provided with upwardly extending arms and adapted to be clamped upon the front axle of the towed vehicle, a stud projecting downwardly from the lower side of said bracket, a lever having a reduced end hingedly connected to the opposite forked end of said bar and provided near its reduced end with an aperture adapted to receive the last mentioned stud, a projection extending downwardly from the lower part of said bar adjacent its hinged end, a coil spring having its ends secured to said projection and lever respectively and means for fastening the opposite end of said lever to the towing vehicle.

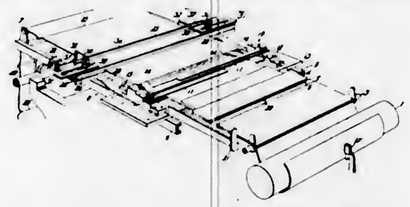
1,428,861. PROCESS AND APPARATUS FOR DETERMINING THE POSITION OF AN INACCESSIBLE POINT. EMILE JOSEPH AUGUSTIN SCHULTZ, Paris, France. Filed Oct. 22, 1918. Serial No. 259,241. 11 Claims. (Cl. 33—67.)



3. Means for determining the altitude and distance away of an object comprising two observation stations a known distance apart, and sighting means at one station comprising a sighting disk pivoted on an axis perpendicular to a straight line joining said stations, and means for measuring the angle made by said disk with the horizontal plane, said disk having projections on its face, and a wire around the margin of said disk carried by said projections, by means of which the ease and accuracy of the sighting is facilitated.

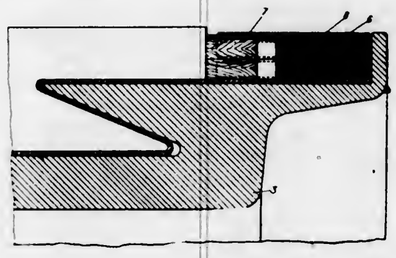
1,428,862. VULCANIZER IGNITER. HARRY A. SHEETZ, Jr., New York, N. Y. Filed Sept. 10, 1919. Serial No. 322,814. 4 Claims. (Cl. 44—39.)

1. A disc-shaped fuel element adapted to be placed in the receptacle of a portable vulcanizing apparatus, in combination with a frictionally ignitable element mounted thereon, and capable of igniting the said fuel element.



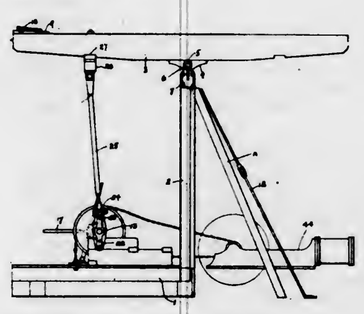
1,428,863. ELECTRICAL CONNECTION. HERBERT M. SMITH, Farmington, Conn. Filed Jan. 6, 1921. Serial No. 435,309. 11 Claims. (Cl. 173—324.)

7. In an electrical connection, two relatively movable metallic members having portions provided with alining openings, a metallic bushing within the opening in one of said members and insulated therefrom, a removable shouldered pivot pin having an enlarged portion within the opening in said other member and a reduced metallic portion projecting into said bushing, a metallic shoulder connected to said reduced portion, a resilient contact embracing said reduced portion and bearing against the end of said bushing and said shoulder, means for connecting conductors to said bushing and contact respectively, said bushing being closed at its inner end, and a spring within said bushing engaging its inner end and the end of said metallic reduced portion.



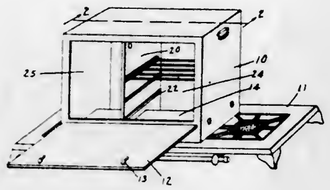
1,428,864. TYPEWRITING MACHINES. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed June 18, 1920. Serial No. 389,805. 20 Claims. (Cl. 197—126.)

1. In a typewriting machine, the combination with a traveling carriage and a displaceable platen, of a carbon-paper-carriage reciprocable on the traveling carriage, and through which a fan-folded web may be threaded, slitters



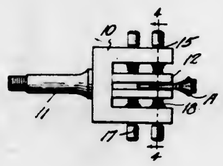
for said web, and a smoothing device for smoothing the web as it approaches the slitters.

1,428,865. COMMUTATOR CYLINDER. CHARLES W. STARKER, Pittsburgh, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 14, 1918. Serial No. 211,774. 5 Claims. (Cl. 171—206.)



1. In a dynamo-electric machine, conducting bars and alternately disposed non-conducting bars constituting a hollow commutator cylinder, and a supporting sleeve located within said cylinder, a plurality of said conducting bars being uniformly spaced and projecting from one end of said cylinder, and conductors mounted on said supporting sleeve and connecting the ends of equi-potential projecting bars, said conducting bars and said conductors being disposed at the same distance from the center.

1,428,866. PUMPING APPARATUS. JOHN R. SUMAN, Houston, Tex., assignor to Lucey Manufacturing Corporation of Tennessee, Chattanooga, Tenn., a Corporation of Tennessee. Filed June 4, 1921. Serial No. 475,017. 4 Claims. (Cl. 74—14.)

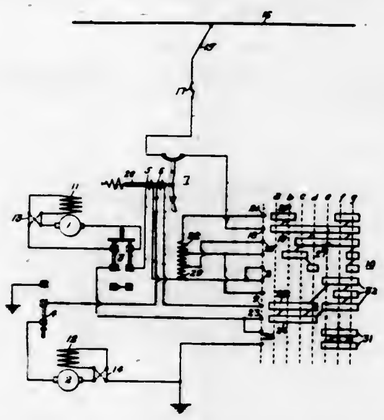


1. In a device of the character described, a shaft, means to rotate said shaft, a pair of crank arms on said shaft, a Samson post, a walking beam pivoted thereon, a pump rod attachment on the outer end of said beam, a crossyoke secured midway between the pivot and the end of said pump rod attachment and pitmen connecting the ends of said yoke and said crank arms.

1,428,867. OVEN. HERBERT C. TAYLOR, Greensburg, Ind. Filed Dec. 5, 1921. Serial No. 519,945. 6 Claims. (Cl. 126—275.)

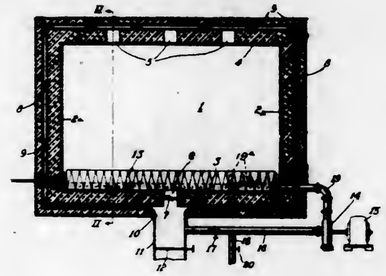
1. The combination with an oven having an open bottom, and means for heating said oven, of a nonconducting partition wall disposed within said oven hingedly mounted upon a member thereof, which may be swung within said oven to form a partition, a horizontally disposed flame projecting member mounted in said oven, and aprons mounted on said wall in position to extend beyond said member when said wall is in operative position.

1,428,868. RING CHUCK. JOHN R. UECKERT, Dallas, Tex. Filed Apr. 14, 1921. Serial No. 461,404. 5 Claims. (Cl. 279—55.)



1. In a ring chuck, a jaw having a centrally extending shank, a pair of plates loosely mounted within the jaw, a plurality of screws mounted in each side of the jaw and provided with points, said plates having spaced recesses receiving the points of the screws, said plates being adapted to receive and clamp an article therebetween, and coil springs extending between the sides of the jaws and the plates for holding said plates in engagement with an article while they are being shifted and adjusted by the screws.

1,428,869. PROTECTIVE DEVICE. GEORGE M. WOODS, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 9, 1919. Serial No. 288,678. 6 Claims. (Cl. 175—294.)



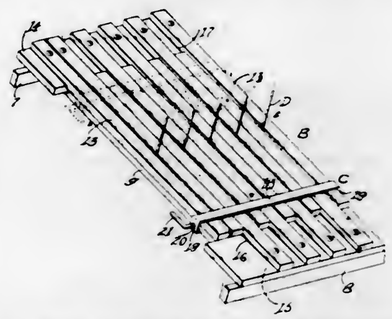
5. The combination with a plurality of electrical translating devices and means for connecting the same in a circuit in series and in parallel relation, of a circuit interrupter comprising a plurality of electromagnetic devices having a cumulative magnetic pull and each connected to

receive the current passing through a different one of said devices when the latter are connected in parallel and all

of which may be placed in series with the circuit when said devices are operated singly and in series.

1,428,870. OVEN. JAMES C. WOODSON, Mansfield, Ohio, assignor to Westinghouse Electric Products Company, a Corporation of Michigan. Filed Oct. 29, 1920. Serial No. 420,393. 3 Claims. (Cl. 34—19.)

1. In a ventilated oven, the combination with a set of walls enclosing a chamber and having ventilated openings, heat-insulating material located between said walls, and heating means for said chamber, of a second set of walls located outside of said first mentioned walls and having a ventilating opening located on the side of said oven opposite to said first mentioned ventilating openings, heat-insulating material between said walls, spacing blocks of relatively small area for spacing said sets of walls apart, the ventilating openings and the space between the sets of walls being so connected as to permit of supplying substantially all of the heat-radiation losses of the oven from the heated fluid flowing through the said ventilating openings and said space.

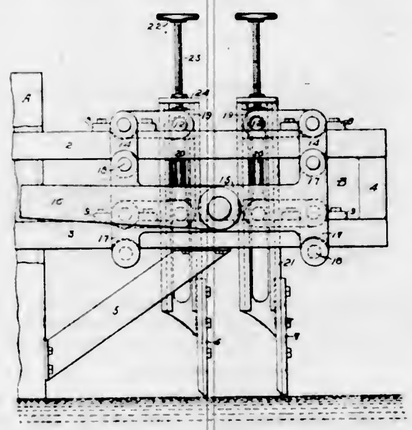


1,428,871. VALVE GRINDER. ANGELO ALDI and JOSEPH ALDI, Southington, Conn. Filed Apr. 17, 1922. Serial No. 554,077. 3 Claims. (Cl. 51—29.)

1. A valve grinder, comprising a shank provided at its lower end with a valve-gripping means, the outer end of the shank flattened and twisted, a two-part handle into which the said stem extends, the two parts being connected together by a nut having a transverse slot through which the shank extends, a tubular plug in the inner end of the han-

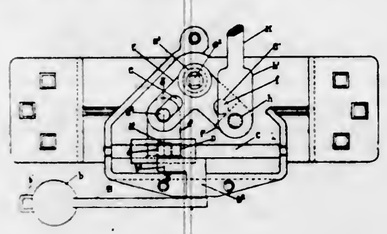
dle, forming a guide for said shank, a spring between the said tubular plug and nut, and a plug inserted into the outer end of the handle.

1,428,872. CANDY-DIPPING DEVICE. ISAAC ANDERSON, Oakland, Calif. Filed Apr. 22, 1921. Serial No. 463,524. 4 Claims. (Cl. 91—6.)



1. A device of the character described comprising, a supporting frame for holding a plurality of sticks to be dipped, said frame including end sills and spaced connecting split bars having depressions for receiving therein the sticks to be dipped, a dipping frame including interlocking strips and adapted to be positioned on said supporting frame, and clamping means secured on said last mentioned frame whereby the sticks positioned in said supporting frame are withdrawn therefrom, for the purpose specified.

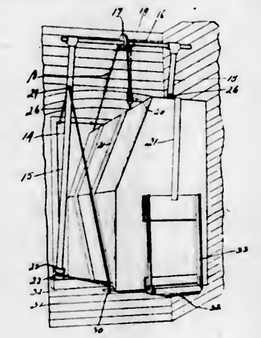
1,428,873. PADDLE PROPELLER. BENJAMIN F. BADDELEY, San Francisco, Calif., assignor of forty-nine per cent to J. Charles King, San Francisco, Calif. Filed Jan. 2, 1920. Serial No. 348,822. 6 Claims. (Cl. 115—66.)



1. A paddle propeller comprising a frame, two pair of superposed cranks journalled in the frame, each of said cranks comprising a pair of widely separated crank webs connected by a long crank pin, a pair of interspaced vertically disposed arms connecting the crank pins and journalled thereon, a paddle blade secured to the lower ends of the arms and connecting the arms, and a common

connecting member for each end of the cranks to insure unitary movement of the cranks, said connecting member

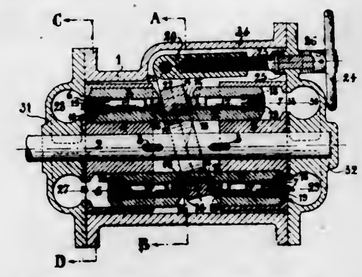
comprising a straight bar with a T-shaped head formed on each end thereof and a connecting rod attached to the center portion of said member.



1,428,874. MANUALLY-OPERATED SWITCH STAND. OLIVER H. BARBON, Cincinnati, Ohio. Filed Nov. 25, 1921. Serial No. 517,669. 5 Claims. (Cl. 246—411.)

5. In combination with a switch stand of the character indicated, a switch throwing crank, a renewable element adapted to constitute an extension of one arm of said crank, a connecting rod pivoted to said renewable element, and a frangible part of said renewable element adapted to connect said renewable element with the end of said arm of said switch throwing crank so that when an abnormal strain is put upon the switch it will be transmitted through said connecting rod and break said frangible part.

1,428,875. PIANO HOIST. SAMUEL B. BILGER, Buckingham, Pa. Filed Jan. 14, 1921. Serial No. 437,197. 2 Claims. (Cl. 254—142.)



1. A piano hoist comprising in combination an elevator jack adapted to rest upon the floor of a building and engage the inner face of a wall thereof in the region of a window, a boom adapted to rest upon the window frame and project upwardly and outwardly therefrom, attaching brackets for holding the boom to the window frame, suspension cables attached to the elevator jack and passing through the boom, said cables having knots tied therein for preventing outward movement of the boom, the ends of said cables being provided with loops for

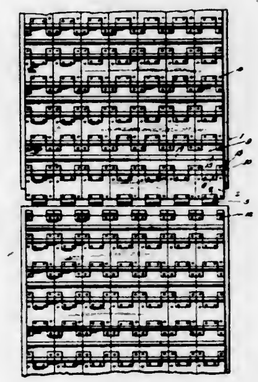
receiving the ends of a bar, a shive wheel on said boom, a hoisting cable provided with a block and passing over

said shive wheel and having one end fastened to the boom, and means on the elevator jack for actuating the hoisting cable.

1,428,876. PUMP OF VARIABLE CAPACITY. ARTHUR BOLLINCKX, Brussels, Belgium. Filed Nov. 5, 1921. Serial No. 513,200. 2 Claims. (Cl. 103—162.)

1. In a rotary pump of the type comprising a casing with end-covers having distribution chambers formed therein, an annular series of double pistons slidably mounted in two opposed annular series of cylinders formed in a pair of rotary bodies having their opposed ends adjacent the end-covers of the casing, lateral apertures in the wall of the distribution chambers adjacent the rotary-bodies, and means for causing the pistons to be influenced during rotation of said bodies by inclined guiding surfaces in such a manner as to be reciprocated within their cylinders, the combination of: guiding surfaces constituted by the flat annular faces of a stationary adjustably inclined solid guide-ring having a diametral axis situated centrally between the adjacent end faces of the rotary bodies, hand-operated means for effecting the adjustment of said ring, double pistons having the ends of the single pistons facing respectively each of the two annular faces of the stationary guide-ring provided with self-adjusting friction-blocks in direct frictional contact with said annular faces, said blocks having the shape of spherical caps fitting a correspondingly-shaped adjustable portion of the pistons, substantially as described.

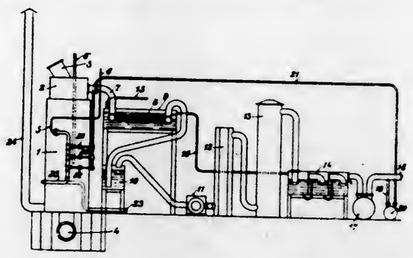
1,428,877. CLAMP. WILLIAM B. BOWMAN, Chicago, Ill., assignor of one-half to Gustav Hoffman, Chicago, Ill. Filed Feb. 2, 1920. Serial No. 355,683. 3 Claims. (Cl. 294—115.)



1. A clamp comprising a handle; a frame on said handle; clamping jaws freely slidable longitudinally in

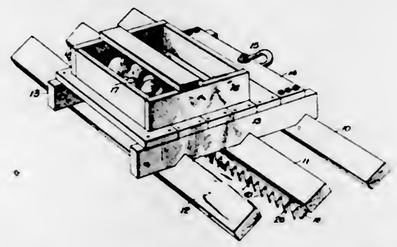
said frame and pivotally connected together; means for forcing said jaws apart and limiting their movement when sliding outwardly, and for forcing said jaws

together by contact thereagainst; and means for automatically locking said jaws as they are forced inwardly and together, substantially as described.



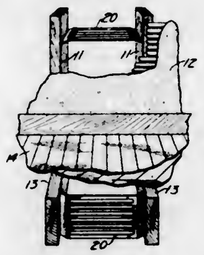
1,428,878. CONVEYER BELT. EDWARD J. BRENNAN, Chicago, Ill. Filed Aug. 4, 1921. Serial No. 489,735. 6 Claims. (Cl. 198—193.)

5. A conveyer belt comprising a foundation of flexible sheet material, and mutually connected wear plates upon the surface of the foundation, certain of the plates being resilient and having their intermediate portions outwardly bulged to provide transverse ribs capable of expansion and contraction through the inherent resiliency of the plates to compensate for stretching and contraction of the foundation and to serve also as means for accumulating and retaining the material to be handled upon the belt.



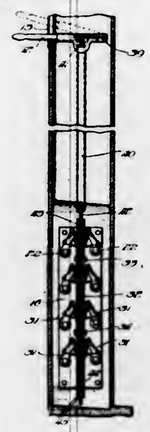
1,428,879. APPARATUS AND METHOD FOR THE PRODUCTION OF A GASEOUS MIXTURE OF $CH_4 + H$. LÉON COLSON, Paris, France. Filed Dec. 12, 1918. Serial No. 266,489. 4 Claims. (Cl. 48—128.)

1. Apparatus for completely gasifying combustible carbon matter by the action of steam in the presence of lime at a suitable temperature comprising in combination: a furnace, a retort heated by burners, a heat exchanger for lowering the temperature of the gases from the retort, means for absorbing the ammonia from the gases, means



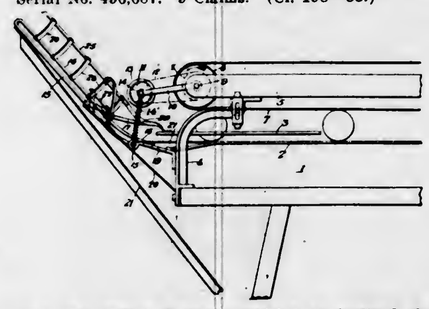
for absorbing carbonic acid and means for inducing the flow of gases through the apparatus and suitable conduits connecting the individual parts of the apparatus.

1,428,880. SOIL-WORKING IMPLEMENT. BENJEW H. DE MOTT, Millington, N. J. Filed May 27, 1921. Serial No. 472,980. 2 Claims. (Cl. 55—22.)



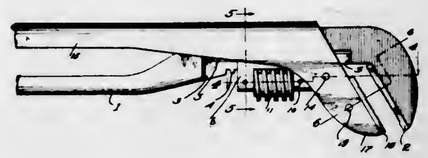
1. A soil working implement in the nature of a levelling drag having soil engaging beams, and an angle bar having one portion secured vertically along one of said beams and having its other horizontal portion provided with a lengthwise series of inclined slits extending inwardly from its free edge and with downturned triangular extensions adjacent to said slits disposed at right angles to the said horizontal portion of the bar, forming soil entering teeth projecting below the beams.

1,428,881. FIRE STOP. RALPH M. DYAR, Grosse Pointe Farms, Mich. Filed Aug. 30, 1921. Serial No. 496,983. 7 Claims. (Cl. 20—4.)



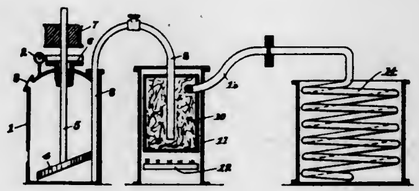
1. In a fire stop for obstructing wall and floor passages in a frame building, a plate of greater length than the space which it is to occupy, having bent portions so formed within the edges of said plate that the effective length thereof will be reduced sufficiently to allow it to be placed between the building members enclosing the passage to be obstructed, and that said plate may be expanded to be secured in position by the straightening of said bent portions.

1,428,882. VENTILATOR AND THE LIKE. EDGAR M. DYER, Chicago, Ill. Filed June 1, 1920. Serial No. 385,555. 5 Claims. (Cl. 98—31.)



1. A ventilator for the purpose specified, comprising in combination a rectangular frame, two series of plates extending across said frame, the plates of one series lying opposite to the plates of the other series, a horizontal pivotal member for each plate, journals for the ends of said pivotal members in the side portions of the frame, whereby as the pivotal members of one series are rocked in one direction and the pivotal members of the other series are rocked in the other direction the upper portion of each plate approaches towards or recedes from the lower portion of the next higher plate of the series, a swinging operating finger on the end of each pivotal member, a vertical operating bar between the fingers of one series and the fingers of the other series, a slotted link pivoted to said operating bar for each finger, a pin on each finger working in the slot of the corresponding link, and a spring connection between each finger and the corresponding link, tending to move the finger towards the outer extreme of movements as permitted by the pin and slot connection thereof, for the purpose specified.

1,428,883. CAN-FEEDING APPARATUS. KENNETH W. EMERSON, Honolulu, Hawaii. Filed Aug. 29, 1921. Serial No. 496,687. 9 Claims. (Cl. 198—33.)

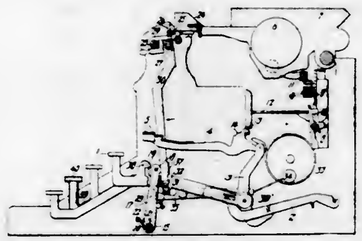


1. A can feeding device comprising an inclined chute to receive and advance the cans in end to end stacked relation, an abutment at one side of the lower end of the chute to engage the edge of the lowermost can, and a driven friction wheel above the end of the chute to engage and rotate said lowermost can about its point of engagement with the abutment to bring the can into rolling position at the entrance of a runway.

1,428,884. COMBINATION PLIERS. ROBERT B. FERGUSON, Howell, Mich., assignor to G. E. Harpham, Los Angeles, Calif. Filed May 13, 1920. Serial No. 381,008. 4 Claims. (Cl. 81—79.)

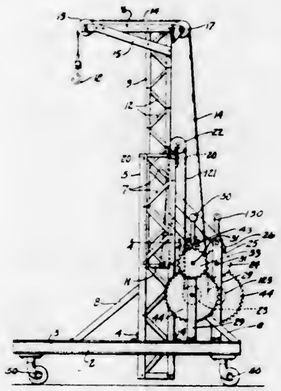
1. In combination pliers, a solid one-piece handle having a gripping jaw extending outwardly at an angle from the upper end thereof, a rack formed on one side thereof, the handle being provided with a pair of oppositely disposed grooves, a movable member riding in the said grooves, a worm rotatably mounted in the said movable member, and engaging the rack, and a second handle U-shaped in cross-section fitting over the first-named handle and pivotally mounted upon the said movable member.

1,428,885. METHOD OF FORMING A LIQUID FUEL. ALBERT HAYES, New York, N. Y., assignor, by mesne assignments, to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed June 5, 1919. Serial No. 302,066. 9 Claims. (Cl. 44—9.)



1. The process of making a fuel of non-stratifying character which comprises subjecting a vaporized mixture of a heavy hydrocarbon oil and alcohol containing small proportions of a light hydrocarbon and ether, to the action of a finely divided zinc or nickel catalyst at a temperature below about 300 degrees C.

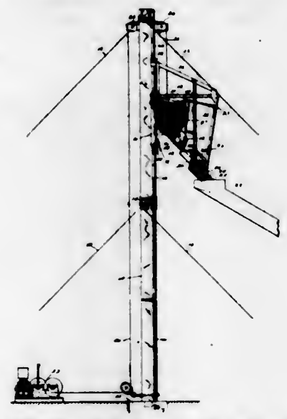
1,428,886. TYPEWRITING MACHINE. WILLIAM F. HELMOND, Hartford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 25, 1919. Serial No. 279,081. 3 Claims. (Cl. 197—110.)



1. In a typewriting machine, the combination with a keyboard including a plurality of keys, of locking means to lock said keys against operation at the end of a line of writing, said locking means having an operating arm located adjacent one end of the typewriter frame, a movably mounted controller bar for said locking means, said bar having a part capable of being brought into contact with said operating arm so as to move the same and render said locking means effective, a lock-release

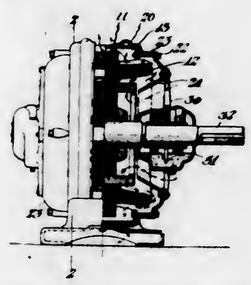
key in said keyboard, and means rendered effective on depression of said key for moving the contacting portion

of said bar toward the adjacent end of said typewriter frame, thereby separating it from said operating arm and permitting said locking means to release said keys.



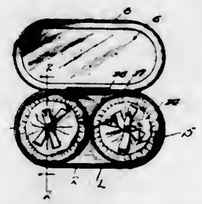
1,428,887. PORTABLE CRANE. ETHAN N. HESCOCK, Westfield, N. J., assignor to New Jersey Foundry & Machine Company, a Corporation of New Jersey. Filed Aug. 1, 1921. Serial No. 488,874. 4 Claims. (Cl. 212—142.)

1. The combination in a portable crane of a base, traction means to permit the base to be moved to any desired location, a fixed mast formed of an angle irons and spacing members, wheels mounted on the angle irons of the fixed mast, an extension mast formed of angle irons and spacing members, the angle irons of the extension mast cooperating with the wheels mounted on the fixed mast, and means to raise and lower the extension mast.



1,428,888. HOISTING APPARATUS. WILLIAM H. INSLEY and ALVIN C. RASMUSSEN, Indianapolis, Ind., assignors to Insley Manufacturing Company, Indianapolis, Ind., a Corporation of Indiana. Filed Jan. 6, 1921. Serial No. 435,325. 6 Claims. (Cl. 214—95.)

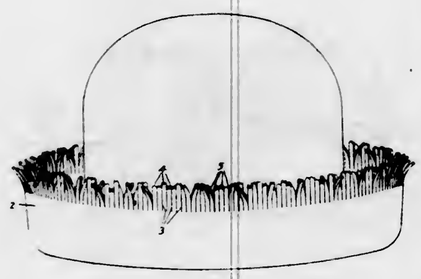
1. An apparatus for handling building materials comprising a mast, an arm carried by said mast near its upper end and provided with a depending frame, a chute hopper supported by said frame, an elevator bucket carried by the mast and provided with means for control of material therefrom, a bridge pan supported by the depending frame normally out of line of movement of the bucket upon links pivoted to the depending frame, and means controlled by the vertical movement of the bucket for



projecting and retracting the bridge pan, said means comprising a lever projected into the path of movement of the bucket and a connection between said lever and pan.

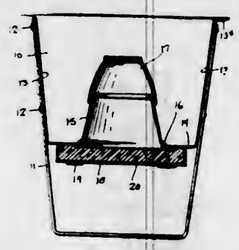
1,428,889. DYNAMO-ELECTRIC-MACHINE CONSTRUCTION. CARL E. JOHNSON, Los Angeles, Calif., assignor to U. S. Industries, Inc., a Corporation of California. Filed Feb. 19, 1921. Serial No. 446,275. 8 Claims. (Cl. 171—252.)

1. In a dynamo electric machine the combination of an assembly of stator punchings; clips on the periphery of said assembly projecting down on either side of said punchings and holding them together; a retaining member encircling said clips and preventing them from becoming disengaged from said punchings, and means for supporting said retaining member.



1,428,890. PARTITION FOR VANITY CASES. WILLIAM G. KENDALL, Newark, N. J. Filed June 29, 1920. Serial No. 392,852. 2 Claims. (Cl. 132—83.)

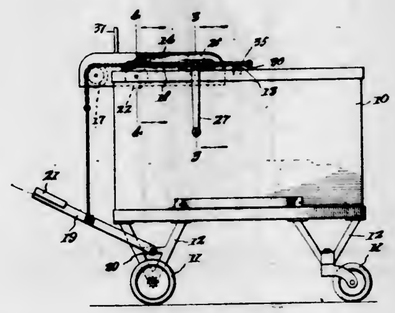
1. The combination with a vanity case, of a partition for the same comprising resilient article embracing mem-



bers each of substantially semiannular form, the said members being disposed together with their convex sides in contact and united to each other and having their concave sides presented in opposite directions and toward the ends of the said case.

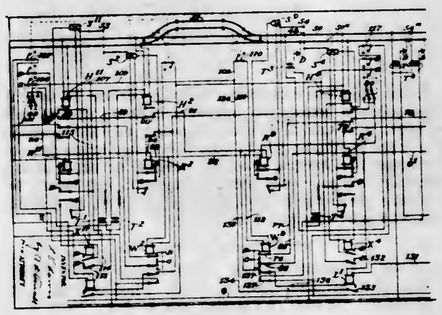
1,428,891. FRINGED HAT. LOU KRAUSE, New York, N. Y., assignor to Slyt Edge Company, Inc., a Corporation of New York. Filed Mar. 29, 1922. Serial No. 547,929. 3 Claims. (Cl. 2—110.)

1. A soft felt hat the brim of which is cut and dentated so as to form a pointed fringe of narrow flexible tongues of substantial thickness relative to their width, substantially as and for the purpose set forth.



1,428,892. APPARATUS FOR MOLDING ICE CAKES. WARREN LATHAM, Spokane, Wash. Filed Aug. 9, 1921. Serial No. 490,830. 2 Claims. (Cl. 62—110.)

1. An apparatus for molding ice-cakes, comprising a container, an opening in the bottom of the container, a wall surrounding such opening and extending upwardly into the container, a flexible body, loosely mounted on said wall and extending upwardly into the container and an insulation on the outside of the bottom of the container extending over the opening in the bottom of the container.

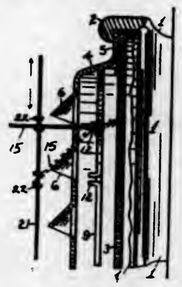


1,428,893. MOP-WRINGER. SIMEON C. LAWLOR, Chicago, Ill. Filed Mar. 18, 1919. Serial No. 283,408. 2 Claims. (Cl. 15—262.)

1. In wringing apparatus, the combination with a frame adapted to be mounted on a tank and a roller journaled between the side walls of the frame, a carriage movably sustained by the frame, a roller journaled in the carriage and movable therewith toward and away from the first roller, cable connections, and means for actuating the same for shifting the carriage in one direction, a link pivoted to the carriage, a lever pivoted to the link, and

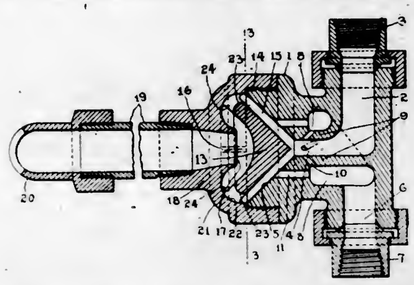
means engaging the lever for enabling manual shifting of the carriage in the opposite direction.

1,428,894. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. LLOYD V. LEWIS, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Aug. 15, 1919, Serial No. 317,830. Renewed Feb. 27, 1922. Serial No. 539,765. 32 Claims. (Cl. 246—33.)



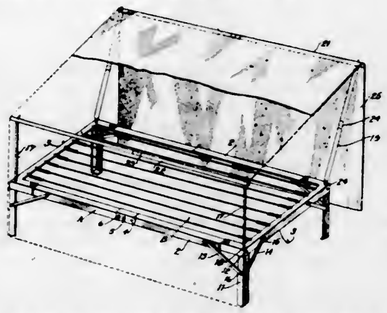
27. In combination, a section of railway track, a track circuit for the section including a relay connected across the track rails, a transformer the secondary of which is connected across the rails of said section in multiple with said relay, and means for supplying alternating vehicle governing current to the primary of said transformer.

1,428,895. HEADLIGHT SCREEN. EDWIN W. LODGE, Norfolk, Va., assignor of one-fourth to Frederick D. Cock, Hampton, Va. Filed Jan. 31, 1922. Serial No. 533,075. 1 Claim. (Cl. 240—45.2.)



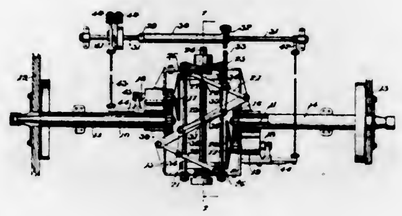
A head light screen, and in combination with a ring, of fixed downwardly projecting slats formed therewith, an inner ring in the rear of the first named ring having slit portions in its periphery for bending into lugs or ears, of

movable slats across the diameter of the inner ring having pins upon the ends thereof, and bearing means for the



pins on the slats formed by opening said slits, and cam locking and unlocking means for operating said movable slats.

1,428,896. STEAM-ATOMIZING FUEL-OIL BURNER. JAMES MCDONALD and GEORGE P. HAYNES, New York, N. Y., assignors to Todd Shipyards Corporation, New York, N. Y., a Corporation of New York. Filed July 30, 1921. Serial No. 488,735. 6 Claims. (Cl. 158—75.)

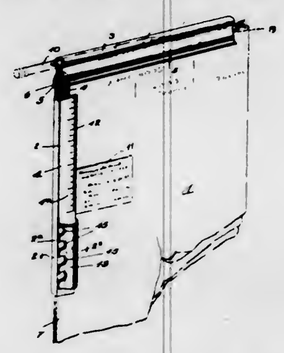


1. An atomizer comprising a body portion having an axial passage, means for introducing liquid fuel to said passage, a conoidal element opposed to said passage, means for impinging jets of fluid in angular tangents upon the liquid fuel leaving the axial passage to direct it in a whirling film over said conoidal element, and means for directing other jets of fluid against said film, to break it into tiny particles prior to delivery.

1,428,897. COMBINATION AUTO BED AND TENT. SIGFRID A. MILLER, Oakland, Calif. Filed Oct. 19, 1920. Serial No. 418,041. 4 Claims. (Cl. 5—5.)

4. A bed of the character described comprising side bars, end bars bent at each end to overlap the contiguous ends of the side bars, supporting legs pivotally connected to the end bars, a bracket secured to each of said legs, said brackets having an upwardly turned extension, and upright members having tubular lower ends adapted to extend through the end rails and engage the extensions on the brackets so as to support the upright member and secure the said legs against pivotal movement.

1,428,898. FRICTION TRANSMISSION. WILLIAM NAGLE, San Francisco, Calif. Filed July 6, 1921. Serial No. 482,677. 12 Claims. (Cl. 74—26.)



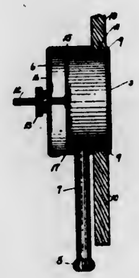
1. A variable speed vehicle axle carrying traction wheels at its opposite ends; gear means for separately driving said wheels; a single drive shaft; and front and rear sets of friction gears located in advance and in rear of the axle, and interposed between the drive shaft and the said gear means, each set being composed of two friction elements, one of which is arranged to move radially in adjustment across the center of the other friction element to vary the speed and change the direction of rotation of the latter.

1,428,899. CASTER. ALBION K. NIXON, San Francisco, Calif., assignor of one-half to Albert Casper, Vallejo, Calif. Filed July 27, 1921. Serial No. 487,935. 7 Claims. (Cl. 16—21.)

7. In a device of the character described a swivel head, a pair of bearing arms carried thereby, a bearing pin supported by the arms, a roller journaled thereon, a track ring surrounding the roller and having a track surface on its inner side for the reception of the roller, and an exterior track surface for engagement with a surface to be rolled upon, an annular recess formed in each side of the track ring, a circular plate forming a closure for each side of the track ring and adapted to be received by said recesses, said plates being eccentrically journaled upon the bearing pin, and means for maintaining said plates out of frictional engagement with the roller and the track ring.

1,428,900. NEWSPAPER CLAMP. SOLOMON OPPENHEIMER, Washington, D. C. Filed Nov. 5, 1921. Serial No. 513,070. 3 Claims. (Cl. 24—66.)

1. A device for holding a newspaper, said device comprising hingedly connected elongated clamping members, said clamping members being adapted to receive and hold adjacent angularly disposed sides of a newspaper.



1,428,901. AUTOMOBILE RADIATOR. THOMAS F. PAYNE, Pittsburgh, Pa. Filed Apr. 18, 1918. Serial No. 229,315. 6 Claims. (Cl. 257—130.)

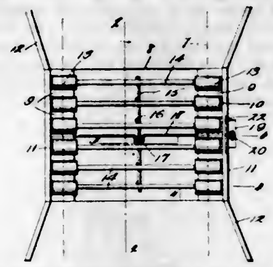
1. An automobile radiator, comprising upper and lower tanks and a plurality of intermediate detachable radiator units, said tanks being provided at their rear sides with inwardly directed extensions projecting beyond said radiator units and provided with horizontally aligning apertures, each of said radiator units having a plurality of narrow tubes and headers to which the tubes are integrally united, said headers being provided with horizontally projecting tubular nipples adapted to extend through said aligning apertures, said nipples being provided with lateral openings and having their outer ends threaded to receive lock nuts.

1,428,902. AUTOMOBILE CLOCK. WILSON E. PORTER, New Haven, Conn., assignor to New Haven Clock Co., New Haven, Conn., a Corporation. Filed Aug. 22, 1921. Serial No. 494,061. 1 Claim. (Cl. 58—56.)

The combination with an automobile cowl having a circular opening, of a stem-winding and stem-setting automobile clock installed in the said opening and having a cylindrical case provided upon the center of its closed back with a single, fixed threaded stud, carrying upon its flange a fixed, downwardly-extending tube for receiving and protecting the winding- and setting-stem of the clock, and furnished at its open end with a clamping flange to engage with the exposed face of the said cowl; a combined mounting-cup and dust-guard fitting over so much

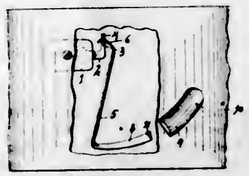
of the said case as projects from the opening in the said cowl, centrally perforated for the passage through it of the said stud and formed in the lower edge of its flange with a slot for the downward passage through it of the said fixed tube; and a nut applied to the said stud for drawing the flange of the case and the open edge of the cup into engagement with the opposite faces of the cowl, and normally closing the perforation in the said combined mounting-cup and dust-guard.

1,428,903. SHIFTING HITCH. JOHN C. PORTERFIELD, St. Clairsville, Ohio. Filed July 21, 1921. Serial No. 486,357. 1 Claim. (Cl. 280—33.10.)



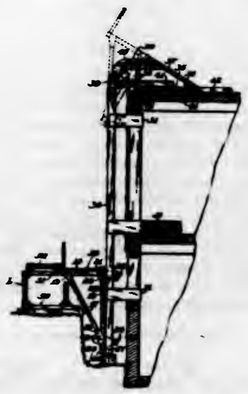
A shifting hitch adapted to be secured on a tractor comprising a bracket including a pair of vertically spaced front plates and a transverse guide rod having its bent ends secured between said plates; a clevis having a solid body with a forwardly extending tongue engaging between said plates, shoulders being formed adjacent the tongue and provided with a pair of rearwardly extending arms, a roller pivoted between said arms and normally engaging said guide rod, and means having connection with said clevis for shifting the same along said guide rods; said shoulders being adapted to transmit a forward thrust delivered on the clevis to said front plates, thereby releasing engagement between said roller and said guide rod.

1,428,904. GATE. HOMER S. RAND, Plainville, Kans. Filed Mar. 16, 1920. Serial No. 366,262. 4 Claims. (Cl. 39—6.)



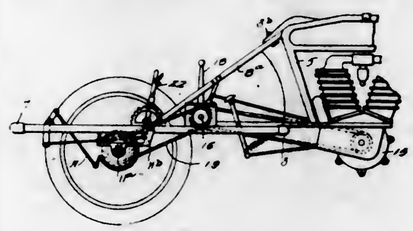
1. A stock gate comprising a pair of spaced longitudinally extending side bars having a plurality of transverse

upwardly opening bearings therein, the bearings in said bars being oppositely disposed a roller mounted in each



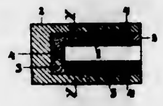
bearing to be partially exposed to form treads, and a plank connecting each pair of oppositely disposed rollers.

1,428,905. INDICATOR OF SPEED FOR CENTRIFUGAL SEPARATORS. LUDVIK RASCH, Christiania, Norway. Filed Feb. 26, 1920. Serial No. 361,476. 2 Claims. (Cl. 264—14.)



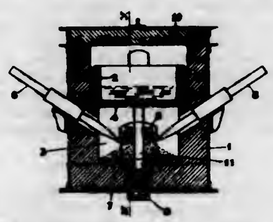
1. In a speed indicator for a cream separator, a bearing consisting of an arm fastened to the inner side of the wall of the casing by means of a suitable block and provided with a sharp edge at a right angle to the casing, a tongue projecting upwards from the edge, a wing, having a saddle resting upon the said edge and provided with an aperture for receiving the mentioned tongue, and arranged so as to oscillate in the space between the drum and the wall of the casing, an arc fastened to the lower end of the wing, and a depression forming an opening arranged in the wall of the casing so as to allow the arc to swing outside the casing.

1,428,906. HOISTING APPARATUS. ALVIN C. RASMUSSEN and CARL G. SCHMID, Indianapolis, Ind., assignors to Insley Manufacturing Company, Indianapolis, Ind., a Corporation of Indiana. Filed July 11, 1921. Serial No. 483,704. 6 Claims. (Cl. 214—121.)



1. As an article of manufacture, a hoisting platform provided at its upper and lower ends with laterally projected guide-engaging members, said guide engaging members at the lower end being arranged in pairs, one of each pair being normally at a higher level than the other of said pair, and the members of each pair being laterally spaced for the reception of the guide member between the same.

1,428,907. MOTOR VEHICLE. CLARENCE J. REIGH, Juniata, Pa. Filed Apr. 16, 1920. Serial No. 374,460. 1 Claim. (Cl. 180—27.)

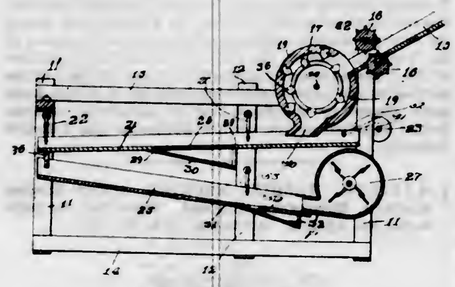


In combination with a motor cycle frame, a supplemental frame on which said motor cycle frame rests extending rearwardly therefrom, rear wheels, an axle for said wheels on said supplemental frame, a brace means extending below said frames and journaling the axle below said frames, said brace means being connected to the motor cycle frame at a distance above the supplemental frame, means on the supplemental frame driven by the rear wheel drive of the motor cycle, means to drive said axle from said means, a carrier body on the supplemental frame, and said brace means extending through the floor of said carrier body.

1,428,908. ELECTRIC FURNACE. IVAR RENNERFELT, Djursholm, Sweden. Filed Mar. 3, 1921. Serial No. 449,388. 2 Claims. (Cl. 204—64.)

1. In an electric furnace, the combination of an elongated crucible with a plurality of strings of carbonaceous resistance material located lengthwise along the crucible, electrically insulating material separating the strings from each other and means for conducting electric energy to the resistances.

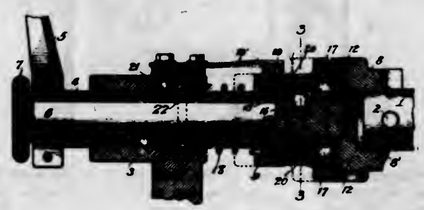
1,428,909. ELECTRIC FURNACE. IVAR RENNERFELT, Djursholm, Sweden. Filed Aug. 12, 1921. Serial No. 491,815. 4 Claims. (Cl. 204—64.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. In an electric furnace having an upper chamber, a lower chamber, with poorly heat conducting walls, a heat conducting partition between said chambers and means for heating the lower chamber electrically the combination with each other of at least two electrodes projecting into the lower chamber, for the purpose of generating an electric arc in the lower chamber.

1,428,910. METHOD OF OPERATING ELECTRIC FURNACES. IVAR RENNERFELT, Djursholm, Sweden. Filed Aug. 12, 1921. Serial No. 491,837. 3 Claims. (Cl. 204—64.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

3. The method of operating an electric furnace consisting in supplying first two-phase current heating a charge by means of freeburning arcs and then supplying three-phase current heating the charge by means of arcs in contact with the surface of the charge and changing the relative distance between the arcs.



1,428,911. THRASHING MACHINE. JAMES E. SANDERS, Chattanooga, Tenn. Filed Jan 15, 1920. Serial No. 351,714. 1 Claim. (Cl. 130—24.)

In a device of the class described a frame; a first screen shoe, all portions of which lie in a common plane, the shoe comprising imperforate end portions and a foraminous intermediate portion, the shoe being downwardly inclined toward one end of the frame; means for suspending the shoe from the frame for longitudinal swinging movement; means for imparting longitudinal swinging movement to the shoe; a second screen shoe suspended from the frame and located below the first shoe, the second shoe being downwardly inclined toward the other end of the frame and being provided with a foraminous bottom portion and with an outlet; a blower discharging into the second shoe toward the first specified end of the frame, the outlet being located between the blower and the foraminous bottom portion of the second shoe, one end of the second shoe underriding the blower; means for connecting the second shoe to the first shoe to move therewith; and a guard carried by the first shoe and receiving material from the foraminous intermediate portion of the first shoe, the guard discharging on the second shoe independently of the foraminous bottom portion of the second shoe and being located directly below the foraminous intermediate portion of the first shoe and the foraminous bottom portion of the second shoe, thereby to limit updraft from the blower through the foraminous intermediate portion of the first shoe, and to promote a down draft through the foraminous bottom portion of the second shoe.

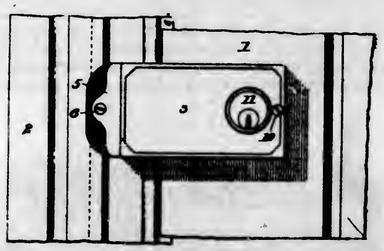
1,428,912. ENGINE STARTER. JOHN SCHAEFER, Chicago, Ill., assignor of one-half to William Steele, Chicago, Ill. Filed Jan. 30, 1922. Serial No. 532,540. 4 Claims. (Cl. 123—185.)

4. An engine starting mechanism, comprising a tubular shaft carrying a manual actuating means, a central shaft arranged in said tubular shaft and having an end formed for operative engagement in one direction with an engine shaft, a journal bearing supporting the shafts in a rotary and longitudinally adjustable manner, a clutch collar slidingly mounted on the tubular shaft and formed in its interior with an annular channel, the inner ends of the clutch collar and central shaft having coacting cam formations adapted to impart longitudinal movement to the clutch collar in a reverse rotation of the central shaft, the tubular shaft having a radial opening in its wall, the central shaft having a peripheral recess in line with said opening, clutch member movable in said opening and adapted in one position of the clutch collar to be held in positive engagement with the recess in the central shaft and in the other position of the clutch collar to move into the annular channel of said collar and out of positive engagement in said recess, a spring tending to force said clutch collar in an inward direction, and a pawl adapted to engage the tubular shaft and hold the parts in their forward position.

1,428,913. AEROPLANE MOTOR FUEL. WALTER T. SCHREIBER, Baltimore, Md., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed June 25, 1918, Serial No. 241,794. Renewed Aug. 11, 1919. Serial No. 316,838. 5 Claims. (Cl. 44—9.)

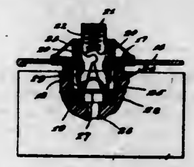
5. A fuel, the constituents of which are homogeneously blended and will not separate out at low temperatures, comprising a light petroleum distillate, a lower alcohol, benzol, and at least 4 per cent of a fourth constituent which has the property of high volatility and of preventing the separation of the benzol.

1,428,914. OPHTHALMIC MOUNTING. ELMER L. SCHUMACHER, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Sept. 5, 1919. Serial No. 321,928. 7 Claims. (Cl. 88—47.)



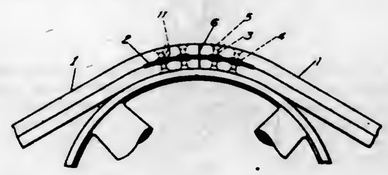
1. The process of forming a combination metallic frame consisting in forming a metallic frame with a lens receiving groove, coating the frame with a non-metallic material, and subsequently removing the material from the groove of the frame to form a lens receiving groove of standard dimensions.

1,428,915. LOCK. PAUL SEWERIN, New York, N. Y. Filed Jan. 17, 1921. Serial No. 457,787. 1 Claim. (Cl. 70—46.)



The combination with a lock casing, of a bolt therein, separate key-actuated cylinder locks to be arranged on opposite faces of a door, one of said locks being mounted in the casing and the other connected to said casing but spaced therefrom, a slide operatively connected to said

bolt, a tumbler carried by said slide, roll backs corresponding to said locks and mounted in the casing so that either of them may actuate said tumbler, one of said roll backs

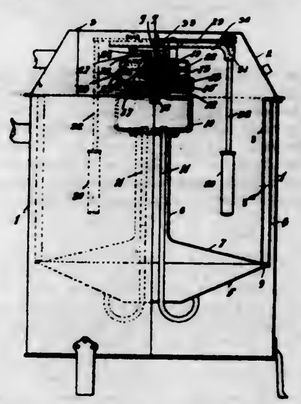


being directly connected to the lock which is mounted in the casing, and a connecting bar extending between the other roll back and the lock which is spaced from the casing.

1,428,916. DETACHABLE TRAY FOR HIGH CHAIRS. CLORA J. SNIDEMAN, Wabash, Ind., assignor to Wabash Sanitary Company, Wabash, Ind., a Corporation of Indiana. Filed Apr. 15, 1921. Serial No. 461,577. 4 Claims. (Cl. 155—127.)

1. In combination, a high chair having side arms, a tray having portions which overlie said side arms and are detachably fastened thereto, and fastening means at opposite edges of the tray for attaching said tray to said side arms, each of said fastening means including a cup countersunk in each of said side arms and held against lateral displacement thereby and a spring-pressed plate mounted in said cup, and a finger engaged member which cooperates with said cup and extends through the tray and projects above the tray in a position to be engaged by the fingers and for releasing the fastening device to permit detaching of the tray.

1,428,917. BELT SPLICE. FRANK F. SNYDER, Torrance, Calif. Filed Apr. 10, 1922. Serial No. 550,980. 2 Claims. (Cl. 24—38.)

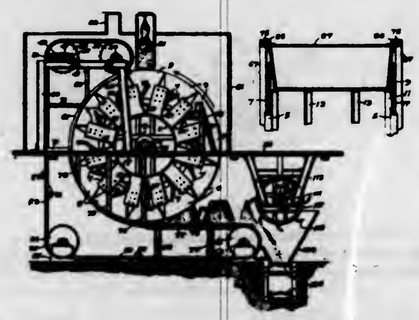


1. In a belt of the class described, a belt-splice with two ends joined together, in combination with a curved plate spliced between the two ends of the said belt, pins positioned through the said two fitted ends of the belt and the plate, riveted heads integral with both outer ends of the said pins flush with the outer surface of the belt, shoulders positioned on the said plate and extending into the said belt-splice adapted to receive the said pins, as set forth.

1,428,918. MOUSE AND RAT TRAP. EDWARD G. SPIETH, Amherst, Nebr. Filed Nov. 8, 1921. Serial No. 513,629. 2 Claims. (Cl. 43—69.)

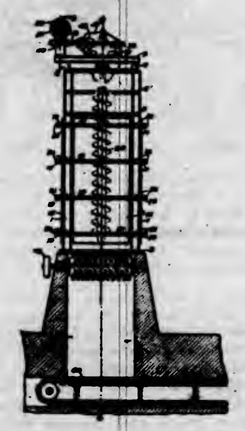
1. An animal trap comprising a receptacle having a removable cover, a tiltable platform horizontally disposed in an opening of the cover, a T-shaped member disposed beneath said platform, the horizontal portion of said T-shaped member being provided with flattening portions, integral tongues struck out from the platform and engaging over the flattened portions of the horizontal portion of the T-shaped member, the ends of the horizontal portions of the T-shaped member extending beyond the sides of the opening in the cover and having bearings in struck down loops carried by the cover and an adjustable counterweight threaded on the vertical portion of the T-shaped member.

1,428,919. WASHING MACHINE. ALBERT EDWARD STATHAM, Birmingham, England. Filed Dec. 19, 1921. Serial No. 523,554. 3 Claims. (Cl. 68—37.)



1. A washing machine or boiler comprising a container for the water and articles to be washed or boiled, a stirrer working in the liquid, a steam turbine for operating the stirrer, a steam chest located under the turbine casing, and a hollow cone or tubular member located centrally of the casing and surmounted by the said steam chest, substantially as set forth.

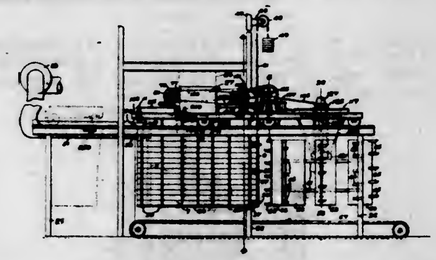
1,428,920. APPARATUS FOR MANUFACTURING ACID PHOSPHATE OR SUPERPHOSPHATE. THOMAS J. STURTEVANT, Wellesley, Mass., assignor to Sturtevant Mill Company, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 19, 1921. Serial No. 462,758. 17 Claims. (Cl. 71—1.)



2. An apparatus for manufacturing acid phosphate, comprising, in combination, a series of containers for

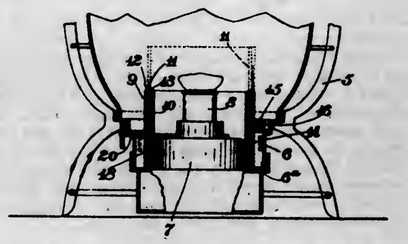
receiving a semi-liquid mixture of ground phosphate rock and acid, means for advancing the containers continuously

with a sufficient length of travel to allow the mixture to solidify during transit, and means for discharging the solidified mixture from the container during transit.



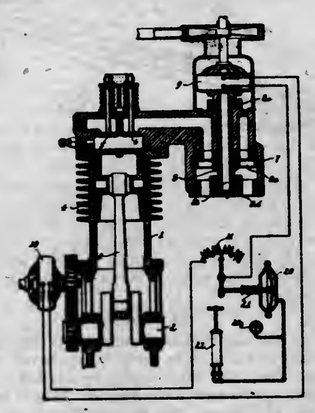
1,428,921. APPARATUS FOR MANUFACTURING ACID PHOSPHATE OR SUPERPHOSPHATE. THOMAS J. STURTEVANT, Wellesley, Mass., assignor to Sturtevant Mill Company, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 26, 1921. Serial No. 464,649. 21 Claims. (Cl. 71—1.)

2. An apparatus for manufacturing acid phosphate, comprising, in combination, a den, means to admit a mixture of ground phosphate rock and acid into the upper end of the den, a disintegrator at the lower end of the den, and means for feeding the materials, after change from molten to spongy mass form, to the disintegrator, said feeding means having provision for sustaining the materials above the disintegrator.



1,428,922. APPARATUS FOR MANUFACTURING ACID PHOSPHATE OR SUPERPHOSPHATE. THOMAS J. STURTEVANT, Wellesley, Mass., assignor to Sturtevant Mill Company, Boston, Mass., a Corporation of Massachusetts. Filed May 24, 1921. Serial No. 472,174. 36 Claims. (Cl. 71—1.)

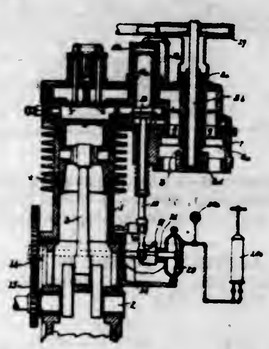
5. An apparatus for manufacturing acid phosphate, comprising, in combination, a den having a fixed floor and rear wall, a movable roof and side walls, and means to move the roof and side walls away from the floor and rear



wall to expose a block of acid phosphate formed within them, a disintegrator, and means to feed the disintegrator toward the rear wall of the den to excavate the block.

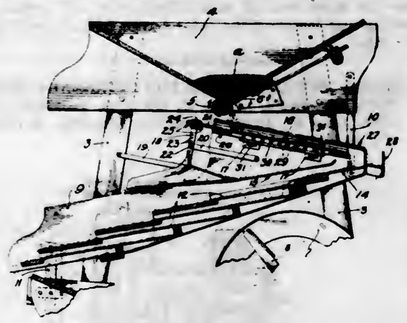
1,428,923. LANTERN. MERRILL H. TERRY, Columbus, Ohio. Filed July 5, 1921. Serial No. 482,409. 2 Claims. (Cl. 240—39.)

1. In a lantern, the combination with the fount receiving ring, of a pair of spaced concentric cylinders mounted on said ring, a cylindrical color screen between said concentric cylinders, a stationary wiper cylinder of fabric for the inner side of said color screen and means for raising and lowering the color screen in the direction of its axis.



1,428,924. SUPERCHARGER FOR INTERNAL-COMBUSTION ENGINES. CARL C. THOMAS, Baltimore, Md. Filed June 29, 1920. Serial No. 392,795. 2 Claims. (Cl. 60—13.)

1. The combination of a supercharger, an engine having an exhaust-driven turbine arranged to drive that super-



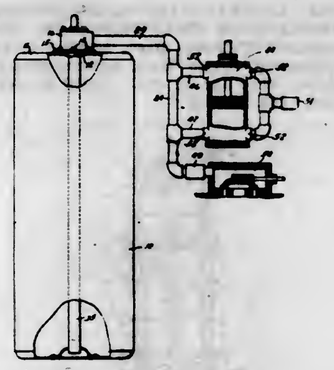
charger, an electric motor also arranged to drive the supercharger, and means controlled by the atmospheric pressure for automatically regulating the action of the motor.

1,428,925. SUPERCHARGER FOR INTERNAL-COMBUSTION ENGINES. CARL C. THOMAS, Baltimore, Md. Filed June 29, 1920. Serial No. 392,797. 4 Claims. (Cl. 60—13.)

1. The combination with an internal combustion engine provided with a cylinder and with means for the exhaust of products of combustion from that cylinder, of a turbine, a duct connecting the said cylinder to the said turbine, means controlling flow through said duct arranged to permit flow from said cylinder direct to the turbine during the early portion of the working stroke, a super-charger driven by said turbine, and means controlled by varying atmospheric pressure arranged to regulate flow through said duct to the turbine.

1,428,926. GRAIN SEPARATOR. PATRICK H. VAUGHN, Morris, Minn. Filed Mar. 1, 1920. Serial No. 362,367. 4 Claims. (Cl. 130—15.)

1. In a grain separator, the combination with a feed-hopper, of a sieve-equipped shoe, means for vibrating the shoe, a screening sieve mounted in the shoe between the upper sieve of said shoe and the hopper, and means for vibrating the screening sieve from the shoe either in the same direction therewith or in an opposite direction in respect thereto.

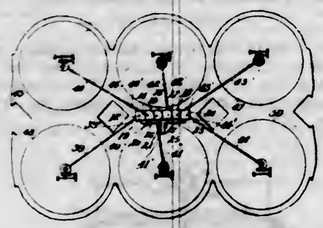


1,428,927. INTERMITTENT-FEEDING MECHANISM. MATTHIAS J. VINIK, New York, N. Y. Original application filed Jan. 29, 1914, Serial No. 815,162. Divided and this application filed Nov. 9, 1917. Serial No. 201,136. 17 Claims. (Cl. 88—18.3.)

1. A moving picture machine provided with an intermittent feeding device for the film, comprising a continuously driven shaft, a shaft to be rotated intermittently, a star wheel secured on one of the said shafts and having, at least, five radial slots, a star wheel pin rotating with

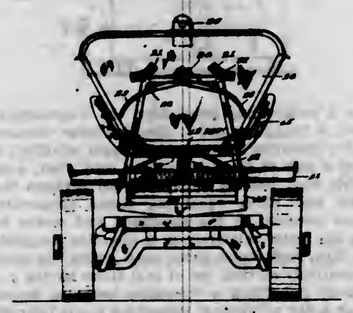
the other shaft, and means moving one into and out of the path of the other to connect and disconnect the star wheel and the pin.

1,428,928. AUTOMATIC SAFETY VALVE. WILLIAM B. SMITH WHALEY, Malden, Mass., assignor to American Whaley Engine Company, Boston, Mass., a Corporation of Massachusetts. Filed Dec. 5, 1917. Serial No. 205,706. 9 Claims. (Cl. 137—21.)



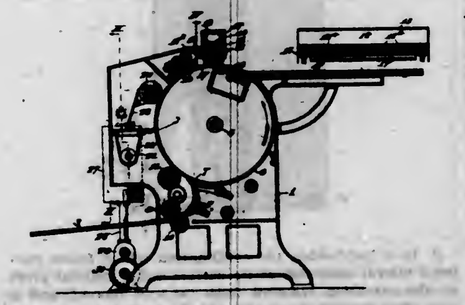
9. In a valve, a casing having a chamber therein provided with a set of valve ports communicating therewith and surrounded by valve seats, a pair of adjacent valves movable in the same direction to uncover said seats surrounding said ports communicating with said chamber for admitting and delivering a gas to and from said chamber at points distant one from the other, and means for admitting a gas to said chamber from a source of supply.

1,428,929. DEWATERING AND SETTLING TANK FEEDER. JOSEPH R. WILKINSON, ENOCH A. BARNARD, and LIONEL E. BOOTH, Anaconda, Mont., assignors of forty-two and one-half per cent to said Wilkinson, forty-two and one-half per cent to said Barnard, and fifteen per cent to said Booth. Filed May 25, 1917. Serial No. 170,940. 2 Claims. (Cl. 183—3.)



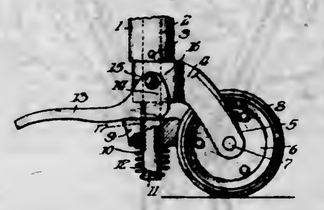
1. In apparatus for ore concentration, the combination of a plurality of settling tanks and apparatus for feeding pulp thereto free of gases by means of hydrostatic pressure, said means comprising a vessel and partitions for dividing it into a plurality of compartments, the said partitions terminating below the upper edge of the vessel, means for distributing the pulp into said compartments, an outlet at the bottom of each compartment, means for normally maintaining in one of the compartments a substantially constant level, means for regulating the ratio

of flow of pulp into the other compartments and the flow out through the outlets at the bottom to maintain an



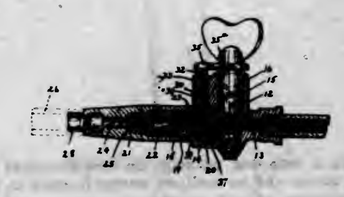
overflow of pulp into the constant level compartment from the other compartments and connections between the different outlets and the different settling tanks.

1,428,930. MULTIPLE-SECTION DUMP BODY. HAROLD A. WORCESTER, Troy, Ohio, assignor to Insley Manufacturing Company, Indianapolis, Ind., a Corporation of Indiana. Filed Dec. 2, 1919. Serial No. 341,966. 4 Claims. (Cl. 298—10.)



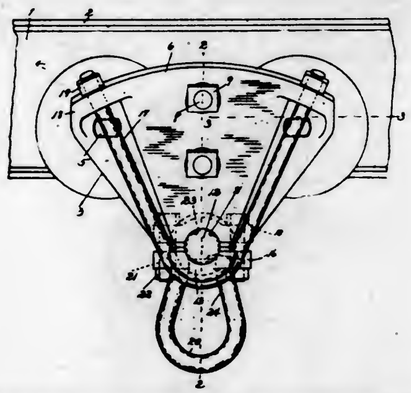
1. In a dump-body vehicle, the combination with the vehicle frame, and a rolling dump body, of a pair of lock-bolts arranged to act along lines inclined both to the vertical and horizontal, and means coacting with said bolts to connect the rolling body with the main frame to resist both vertical and rolling displacement of the rolling body upon the main frame.

1,428,931. MEANS FOR PREVENTING OFFSET FROM FRESHLY-PRINTED SHEETS. HOWARD M. BARBER, Stonington, Conn., assignor to C. B. Cottrell & Sons Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 27, 1920. Serial No. 361,798. 7 Claims. (Cl. 101—416.)



1. An enclosed casing, a rotary cylinder for passing a freshly printed sheet therethrough, a talc powder feeding roll spaced from said cylinder, and a scraper engaging said roll for distributing the powder along the sheet as it passes between the roll and cylinder.

1,428,932. CASTER LOCK. MATTHEW F. BAYER, Kenosha, Wis., assignor to Simmons Company, Kenosha, Wis., a Corporation of Delaware. Filed Feb. 5, 1920. Serial No. 356,885. 16 Claims. (Cl. 16—33.)

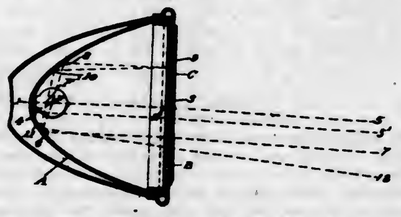


15. In a device of the class described, the combination of an upright stem, a bracket having a hub at one end pivoted on the stem and a caster wheel rotatably mounted at the other end, a collar on the stem and movable axially thereof to engage the periphery of the caster wheel, a spring on the stem exerting a tension to hold the collar away from the caster wheel and a lever having a bifurcated end, the two parts of which are pivoted at opposite sides of the bracket hub and provided with cam faces engaging the collar for moving same axially of the stem into engagement with the periphery of the caster wheel.

1,428,933. GAS COCK. JOHN E. BEAN, Jr., Merrimac, Mass. Filed Feb. 16, 1921. Serial No. 445,387. 3 Claims. (Cl. 137—69.)

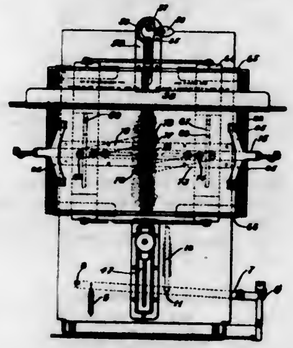
3. In combination, a gas-cock body having a projecting externally threaded outlet nipple, and an annular groove surrounding the inner portion of the nipple; an internally threaded sleeve adapted to be secured upon the nipple and to enter said groove, the sleeve forming a part of a gas-delivering conduit; a plug valve controlling the gas duct through the body; and safety means embodied in a cam-shaped ear projecting laterally from the valve, a spring-pressed detent movable in the body, and normally projected into the path of said ear, said detent being adapted to enter the annular groove and engage an orifice in the sleeve, and an annular spring-pressed stop movable in said groove and normally in the path of the detent, the arrangement being such that when the sleeve is in place on the nipple, and the valve is open, the sleeve is locked by the cam-shaped valve ear and the detent, and when the valve is closed, the detent assumes its normal position, engages the valve arm to lock the valve in its closed position, and releases the sleeve to permit removal of the latter from the nipple.

1,428,934. TROLLEY. WILLIAM E. BEE and WILLIAM E. SIMPSON, Detroit, Mich., assignors to Palmer-Bee Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 28, 1921. Serial No. 448,472. 15 Claims. (Cl. 105—154.)



3. In a trolley, the combination with a frame having a bearing, of a member mounted in said bearing, and a rod upon said frame and engaging said bearing, constituting a reinforcement therefor.

1,428,935. REFLECTING TELESCOPE. LOUIS BELL, West Newton, Mass. Filed Aug. 3, 1918. Serial No. 248,107. 7 Claims. (Cl. 88—32.)

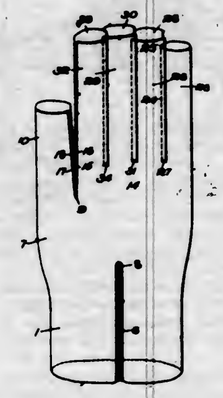


1. In a reflecting telescope an unsymmetrical paraboloidal mirror and an auxiliary mirror inclined to the axis of collimation of said unsymmetrical mirror and capable of rotation in said axis.

1,428,936. PROJECTION AND DISTRIBUTION OF LIGHT. LOUIS BELL, West Newton, Mass., assignor to Edward N. Goding, trustee, Newton, Mass. Filed Oct. 3, 1919. Serial No. 328,146. 3 Claims. (Cl. 240—48.4.)

1. In a light projector, a substantially parabolic reflector having a source of light in its focus, a transparent lens for the front of said reflector having curvature about a vertical axis and an inwardly faced reflecting surface on the outside of said lens in the upper face thereof for distributive dispersion of the reflected rays.

1,428,937. BOOK-HOLDING COPYHOLDER. THOMAS H. BISHOP, Rochester, N. Y., assignor to The Line-A-Time Mfg. Co., Inc., Rochester, N. Y., a Corporation of New York. Filed Oct. 16, 1920. Serial No. 417,374. 8 Claims. (Cl. (Cl. 120—29.)



4. In a bookholding copyholder, the combination with a frame, a copyplate and a line indicator thereon and means for operating one of said elements relatively to the other, of a pair of standards on the copy plate, a pair of extensible book holding clips arranged between the line indicator and plate, equalising beams supporting the clips and mounted on the standards, and means for adjusting the latter relatively in a direction longitudinally of the clips, comprising slides upon which the standards are respectively carried, one of said slides having a coarse adjustment embodying a releasable clamping means and the other a fine adjustment embodying a cam lever pivoted to the plate and cooperating with such slide.

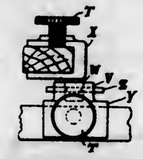
1,428,938. COPYHOLDER. THOMAS H. BISHOP, Rochester, N. Y., assignor to The Line-A-Time Co., Inc., Rochester, N. Y., a Corporation of New York. Filed Oct. 16, 1920. Serial No. 417,375. 6 Claims. (Cl. 120—29.)

3. In a copyholder, the combination wth a frame having a lateral extension at its bottom and a vertical pivot on the extension removed from the end thereof, and a copy plate movable on the frame, of a two-part transverse lever carried by the frame to actuate the copy plate, the parts of the lever being pivoted together on a vertical axis coincident with the aforesaid pivot, a side arm for supporting the frame disposed across the end of the extension on the frame and itself provided with an offset extension turning on the pivot of the frame extension to permit the side arm to fold across the frame, and an operating lever pivoted to the side arm and operatively connected to the actuating lever.

1,428,939. KNITTED GLOVE AND METHOD OF MAKING THE SAME. GEORGE P. BOSWORTH, Central Falls, R. I., assignor to Hemphill Company, Central Falls, R. I., a Corporation of Massachusetts. Filed May 26, 1919. Serial No. 299,789. 23 Claims. (Cl. 66—4.)

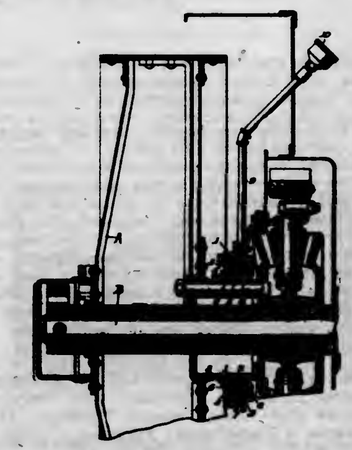
2. A knitted glove blank having a wrist including interrupted circular series of loops connected by floating yarns.

1,428,940. ORNAMENTED CANDLE. JESSE E. BRINKER and CLAUDE P. MCNEIL, Whiting, Ind., assignors to Standard Oil Company, Whiting, Ind., a Corporation of Indiana. Filed July 20, 1921. Serial No. 486,046. 10 Claims. (Cl. 87—21.)



4. The method of ornamenting candles which comprises immersing a candle in a molten colored dip for a period such that the coating of dip slips on withdrawal of the candle, immersing the dipped candle into a second molten colored dip and withdrawing it therefrom.

1,428,941. CONCRETE MIXER. THOMAS BYRNE, Jr., Chicago, Ill. Filed Dec. 27, 1920. Serial No. 433,180. 3 Claims. (Cl. 214—44.)

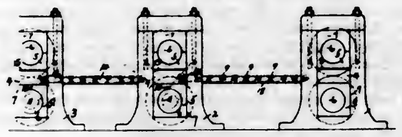


1. In a portable concrete mixing apparatus adapted for use in parallelism with and closely adjacent the desired line of deposit of the mixed material, a framing, a mixing drum, a track above said drum adapted to support material supplying cars, an inclined receiving track extending from one end of said first named track, and an inclined discharge track extending from the opposite end of said first named track, all carried by said frame whereby to be moved therewith to different points along the line of the work, for the purpose specified.

1,428,942. BATTEN MOLD PARTICULARLY FOR USE IN SHIPBUILDING. ISAIAH CLERVE GORDON COOPER, Newcastle-upon-Tyne, England. Filed Feb. 17, 1920. Serial No. 359,312. 3 Claims. (Cl. 33—176.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

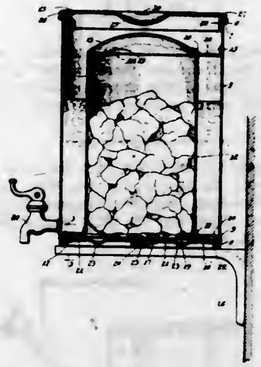
1. As an article of manufacture, a batten mold comprising in combination more than five battens, and one less hinge pivot element than there are battens, means to clamp said hinge pivot elements adjustably on a pair of battens.

1,428,943. SEALING DEVICE FOR ROTARY STRUCTURES. DAVID P. DAVIES, Racine, Wis., assignor to J. I. Case Threshing Machine Company, Racine, Wis., a Corporation. Filed May 23, 1921. Serial No. 471,620. 5 Claims. (Cl. 64—22.)



1. The combination, with a rotary element, of a ring having radial channels and a grease groove communicat-

ing with said channels, and a sealing ring mounted in said ring.

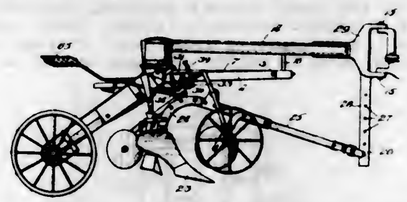


2. The combination, with a rotary element, of a ring surrounding the same, said ring embodying a grease groove, a sealing ring in said ring, means within which said first mentioned ring is mounted, and means for supplying grease thereto to form sealing means.

1,428,944. CONTINUOUS ROLLING MILL. HENRY J. DAVIS, Niles, Ohio. Filed Feb. 7, 1921. Serial No. 442,981. 1 Claim. (Cl. 80—56.)

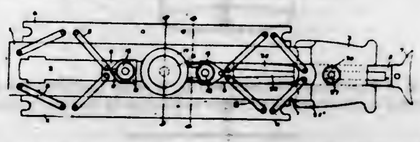
In a device of the class described, a continuous rolling mill, a chuck between the boxes carrying the rolls for the purpose of spacing said rolls and giving support to the ends of a drive journal which drives a conveyor, a spacer between said chuck and the upper boxes, shims positioned between the channel in which the boxes are positioned and the boxing, substantially as described for the purpose set forth.

1,428,945. WATER COOLER. GEORGE F. DENNE, Chicago, Ill. Filed May 16, 1921. Serial No. 469,814. 4 Claims. (Cl. 220—13.)



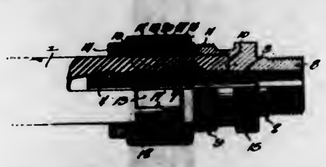
4. A water cooler comprising an outer shell open at its top, an apertured bottom wall therefor, an ice container shell closed at its top and positioned with its lower edge around the aperture in said bottom wall, the lower open edge of said ice container and the bottom wall being disposed in substantially the same horizontal plane whereby a water chamber the full height of said ice container is provided outside the latter, a cock communicating with the lower portion of the water chamber, a loose cover closing the top of the water chamber, and a secured closure for the lower open end of said ice container and cooperating with said bottom wall to close the same.

1,428,946. MANUFACTURE OF CALCIUM ARSENATE. CROMWELL B. DICKEY, Milwaukee, Wis., assignor to Pittsburgh Plate Glass Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 7, 1920. Serial No. 401,980. 9 Claims. (Cl. 23—13.)



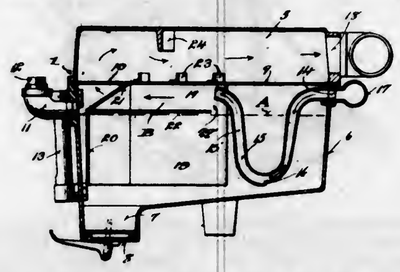
2. The process of producing calcium arsenate largely or substantially free from soluble arsenic compounds which consists in producing a reaction between the soluble arsenic compound and calcium hydrate in a suspension in water containing 1 to 5% of salt.

1,428,947. TILLAGE IMPLEMENT. HARRY S. DICKINSON, Moline, Ill., assignor, by mesne assignments, to Moline Plow Company, Incorporated, Moline, Ill., a Corporation of Virginia. Filed Dec. 9, 1919. Serial No. 343,674. 26 Claims. (Cl. 97—36.)



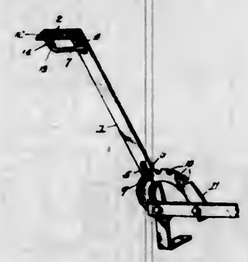
1. In an implement, the combination of a main frame, wheels supporting the main frame, a subframe pivoted to the main frame, means for connecting the subframe to an overlapping portion of a tractor, soil working units connected to the main frame, and means for concurrently lowering said units and raising the subframe with respect to the main frame, substantially as described.

1,428,948. GAUGE, MORE PARTICULARLY FOR USE FOR GAUGING TAPERED HOLES. BENJAMIN DRAPER, Liverpool, England. Filed Nov. 1, 1919. Serial No. 335,088. 3 Claims. (Cl. 33—98.)



1. An instrument for purposes as specified, comprising a stationary part, and a movable part operating therein, a movable gauge part connected with said stationary part and said movable part, and adapted to be operated by said movable part in such a manner as to be used in connection with conical parts of machinery or work; substantially as herein set forth.

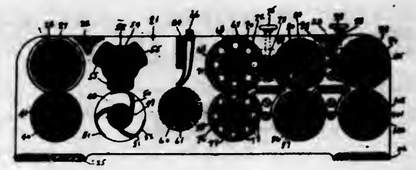
1,428,949. HOSE COUPLING. JOSEPH P. EASTMAN, Manitowoc, Wis., assignor to Eastman Manufacturing Company, Manitowoc, Wis., a Corporation. Filed Aug. 1, 1919. Serial No. 314,650. 2 Claims. (Cl. 285—86.)



1. The combination with a flexible element, of a sleeve disposed therein, said sleeve having an outwardly projecting ridge to bulge out the outer surface of the element and having one end extending outwardly beyond the end of the element, a coupling member disposed on said sleeve, and extending over the end of the element and having an annular shoulder abutting the end of said element, a bendable compression band on said element on the other side of the bulge from said coupling member, one end portion of said band having a plurality of kerfs, and a clamping member disposed around the element and over the band, means for threadedly engaging said clamping member with the coupling member, said clamping member having an inclined shoulder for engaging the compression band to bend the same into the tubular element when said clamping element is moved toward the coupling member, whereby said shoulder produces endwise compression on the end of the flexible element and forces the same into firm contact with the sleeve and coupling member.

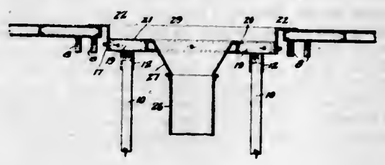
1,428,950. APPARATUS FOR CLEANING AIR AND OTHER GASES. HENRY N. EDENS, New Holstein, Wis. Filed Oct. 20, 1919. Serial No. 331,938. 6 Claims. (Cl. 183—8.)

1. An apparatus for cleaning gas comprising a closed casing, one portion forming a liquid reservoir, means for connecting the portion of the casing above the liquid level with vacuum creating means, and a gas passageway in said casing and having a return bend therein below said liquid level, a liquid inlet port opening into said passageway through the outer wall of said return bend, one end of the passageway being in communication with a source of gas supply, the other end being above the liquid level and opening into that portion of the casing thereabove.



1,428,951. HAND LEVER. CONRAD ESPING, Moline, Ill., assignor, by mesne assignments, to Moline Plow Company, Incorporated, Moline, Ill., a Corporation of Virginia. Filed Nov. 4, 1919. Serial No. 335,725. 7 Claims. (Cl. 74—39.)

1. A hand lever comprising a lever bar having a laterally projecting hand piece provided with an opening therethrough, a latch rod having a lateral hand piece provided with a bent end insertable through the hole in the lever hand piece, and a spring surrounding the bent end of the latch rod serving to bias it to a latched position.

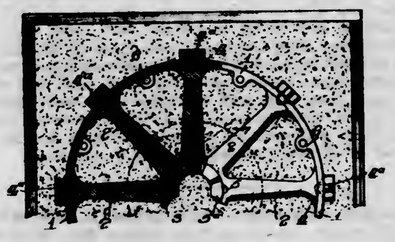


1,428,952. BLANK-CUTTING MACHINE. WILLIAM FUHR, Chicago, Ill. Filed Jan. 23, 1922. Serial No. 531,045. 13 Claims. (Cl. 93—58.)

1. In a cutting machine of the character described, the combination of rotary cutting rolls comprising a series of blades removably secured to the face of one of said rolls, acting to cut interconnected blanks from stock fed continuously therebetween, cutting-off rolls beyond said cutting roll for severing the blanks from each other, and

blank cleaning mechanism comprising a rotary brush operating on said blanks subsequent to the cutting operation.

1,428,953. FLOOR FORM. LESLIE H. GARLINGHOUSE, Aspinwall, Pa., assignor to Blaw-Knox Company, a Corporation of New Jersey. Filed July 31, 1920. Serial No. 400,465. 16 Claims. (Cl. 25—131.5.)



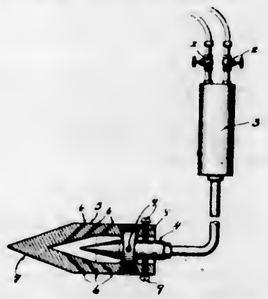
5. In floor form apparatus for column supported floors and the like, the combination of a column form, a drop head form, and a floor form part proper, all supported for independent taking down.

9. In floor form apparatus for column supported floors and the like, the combination of a floor form proper, a drop head form, and filler means around the drop head form detachably secured thereto for vertical compensating adjustment.

12. In floor form apparatus for column supported floors and the like, the combination of a pair of substantially counterpart panels, each consisting of a frame of commercial sections a portion of which is bent to provide a semi-circular recess and a sheet metal plate therefor having a corresponding recess.

1,428,954. WHEEL AND PROCESS OF MAKING SAME. WILLIAM R. GILMORE, Benton Harbor, Mich., assignor to Superior Steel Castings Company, Benton Harbor, Mich., a Corporation of Michigan. Filed Oct. 10, 1919. Serial No. 329,826. 5 Claims. (Cl. 22—178.)

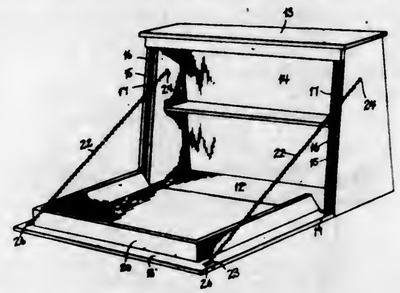
1. The process of forming cast metal wheels which consist in casting the spokes, rim and hub integral the spokes and rim being cast solid and at the time of casting,



forming separated recesses in the exterior of the rim at the points where the spokes connect with said rim, so as to reduce the internal stresses at these points.

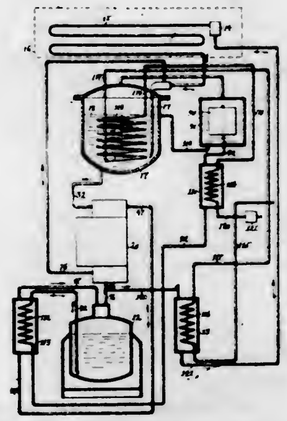
1,428,955. GLASS-FASTENING DEVICE. MEYER GROSSMAN, Philadelphia, Pa. Filed Jan. 19, 1921. Serial No. 438,325. 3 Claims. (Cl. 85—1.)

1. A repairing device for fractured glass panes comprising a relatively thin flat element of sufficient cross-sectional area to resist the tension necessarily applied thereto in use to perform its function, whereby one end of said element may be inserted through the fissure of a fractured pane without unduly spacing the edges of the fissure and with the ends of the element protruding beyond the sides of the pane, the entering end of the element being free from projections or extensions and formed to enter the fissure with a minimum amount of resistance, a clamping device to be applied over the entering end of the element to engage one side of the pane and overlap the margins of the fissure, a separable means to engage the entering end of the element to prevent withdrawal of the element from its associated clamping device, a second clamping device applicable over the following end of the element to engage the other side of the pane and overlap the margins of the fissure, and a means cooperating with said following end of the element to tension the same and thus bind the pane between the clamping devices.



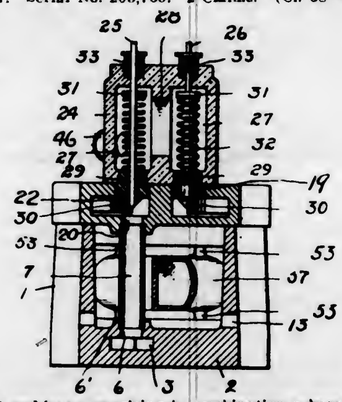
1,428,956. SOLDERING-IRON ATTACHMENT FOR ACETYLENE-TORCH HEADS. WILLIAM C. HACKMAN, Milwaukee, Wis., assignor of one-half to Max Zinke, Milwaukee, Wis. Filed Aug. 12, 1921. Serial No. 491,756. 1 Claim. (Cl. 158—26.)

A soldering iron attachment for acetylene torch heads comprising a torch head, a forwardly vented shell iron chambered and having a tapered nose fitted over the nose of said torch head, said nose terminating adjacent the forward end of the chamber for introducing air to the soldering iron chamber about the torch head, said shell having a thick wall with two pairs of openings therein, each pair of openings lying in a different plane, and a bolt in each of said openings, whereby said shell may be adjusted in all directions with respect to said head.



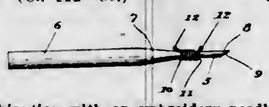
1,428,957. COMBINED WALL CABINET AND DRESSING TRAY. EDWIN O. HALL, Bangor, Me. Filed May 29, 1920. Serial No. 385,244. 1 Claim. (Cl. 45—51.)

A combined wall cabinet and dressing tray comprising a body adapted to be hung upon a wall and including bottom, back, end and top members, the bottom, end and top members forming an open front, a cover member formed to close said front and hinged to the said bottom member, means being provided for supporting the cover member flush with the bottom member, and a three-sided curb attached to the cover member and obstructing the outer edge and ends of the latter leaving the inner edge unobstructed, the said bottom and cover members constituting the bottom of a dressing tray, the back and end



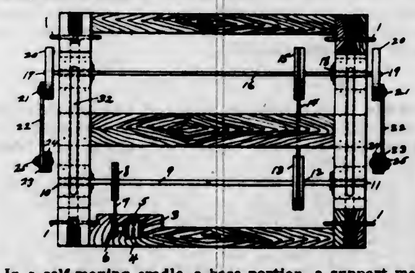
members and the three-sided curb collectively constituting a confining wall surrounding the tray bottom when the cover member is flush with the bottom member, the cover member and curb being adapted to support and confine a baby in a recumbent position, and the bottom member being adapted to support toilet articles beside the baby, when the cover member is lowered, the said curb being formed to enter the body member when the cover member is raised to close the said front.

1,428,958. REFRIGERATING APPARATUS. CHARLES W. HAPGOOD, Boston, Mass. Filed Nov. 18, 1918. Serial No. 262,948. 10 Claims. (Cl. 62—119.)



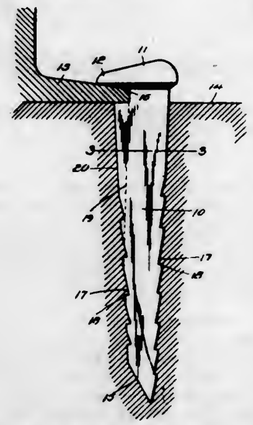
1. In a refrigerating apparatus, in combination, a still, an absorber, a condenser, and an expansion chamber connected together for the flow of refrigerant from the still through the condenser and expansion chamber into the absorber, means for connecting the still with the absorber to permit the weak liquor in the still to be forced into the absorber by the gas pressure in the still, a pump having a liquid inlet connected with said absorber for the flow of strong liquor to the pump, a liquid outlet connected with the still, a gas inlet connected with the still, and a gas outlet connected with the absorber for the flow of gas from the pump into the absorber to admix with the weak liquor therein.

1,428,959. SADIRON. LOUIS HOFFMAN, Duluth, Minn., assignor, by mesne assignments, to Steam Pressing Iron Company, a Corporation of Delaware. Filed Nov. 24, 1917. Serial No. 203,765. 2 Claims. (Cl. 68—26.)



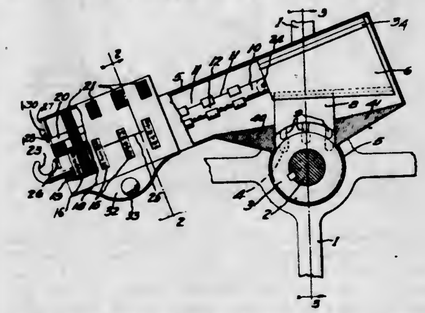
1. A sad-iron comprising in combination a base portion having a distributing chamber formed therein with openings leading from the chamber to the bottom face of the iron, an upper portion having a steam generating chamber formed therein above said distributing chamber, means providing a passageway opening at its upper end into said generating chamber and leading into said distributing chamber, a heating device interposed between said two chambers for supplying heat to both, a housing above said generating chamber, means for supplying water to said housing, means for feeding water from said housing to said distributing chamber directly through said passageway, and other means for feeding water from said housing to said generating chamber, the arrangement of said generating chamber being such with respect to the opening from said housing and the passageway to the distributing chamber that the water admitted from the housing to the generating chamber is compelled to traverse substantially the full effective length of the generating chamber before escaping to the distributing chamber.

1,428,960. EMBROIDERY NEEDLE. LEE D. HOVER, Chicago, Ill. Filed Jan. 7, 1921. Serial No. 435,701. 1 Claim. (Cl. 112—80.)



The combination with an embroidery needle, of a gage therefor comprising a pair of intertwined coils fitting over the needle, and rotatable relative to each other to vary their combined length.

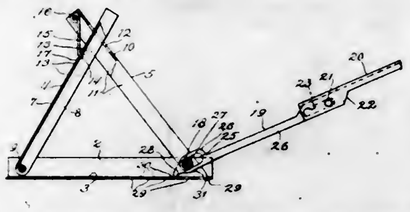
1,428,961. SELF-MOVING CRADLE. ANTHONY HUDOBA, Struthers, Ohio. Filed Oct. 12, 1921. Serial No. 507,360. 1 Claim. (Cl. 5—57.)



In a self-moving cradle, a base portion, a support member carrying a motor, a shaft secured to said base portion, a pulley mounted on said shaft and driven by said motor, a second pulley secured to said shaft, a second shaft and a pulley attached thereto registering with said second pulley on first shaft, a belt functioning on said pulleys, drive wheels attached to the end of second shaft, wrist pins secured to said drive wheels, link members secured to said wrist pins and to a vertical actuating beam secured to a cradle body portion, substantially as described for the purpose set forth.

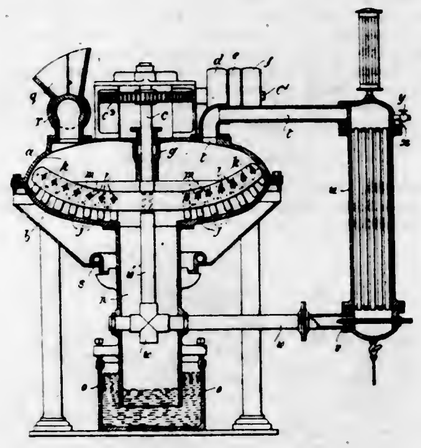
1,428,962. RAILWAY SPIKE. ERICK KARRIO, Hancock, Mich. Filed May 27, 1921. Serial No. 472,976. 1 Claim. (Cl. 85—21.)

A rail spike including a stock and an overhanging head, the forward and rear sides of said stock being tapered toward the tie penetrating end and said tie penetrating end sloping away from the overhanging portion of the head, the side of the stock next to the overhanging portion of the head being recessed to provide a seat for the rail flange, and the tapering forward and rear faces of the stock having V-shaped grooves, with cutting edges, and the portion of the stock next the recess formed with a longitudinally directed channel having tie penetrating edges.



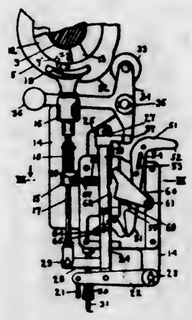
1,428,963. COMBINATION STEERING-WHEEL LOCK. PAUL KISH, Detroit, Mich. Filed Aug. 13, 1921. Serial No. 491,966. 3 Claims. (Cl. 70—129.)

3. In a combination steering wheel lock for automotive vehicles, a steering shaft, an annular member keyed thereto having a series of recesses in the outer cylindrical face thereof, a steering wheel rotatably mounted on the said annular member, a lock casing secured to the steering wheel, a locking block having a series of pins in the face thereof adapted to engage in the recesses of the annular member, a bolt movable longitudinally in the



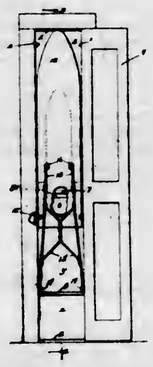
casing, a series of permutation tumblers rotatably mounted on the bolt and adapted to lock the bolt from longitudinal movement and means carried by the bolt for moving the locking block and pins into or out of engagement with the recesses in the annular member upon movement of the bolt longitudinally in one direction or the other.

1,428,964. SUPPORT FOR VEHICLES. HAROLD F. KLOCK, Elgin, Ill. Filed July 2, 1921. Serial No. 482,200. 7 Claims. (Cl. 254—129.)



1. In a mechanism of the class described, the combination of a base, a pair of oppositely inclined crossed bars flexibly connected with said base and adapted to be adjusted to different inclined positions with respect to each other, and means for connecting said crossed bars in fixed relation to each other in any position into which they are adapted to be adjusted.

1,428,965. APPARATUS FOR CARRYING OUT THE PREPARATION OF CATALYTIC MATERIAL EMPLOYED FOR THE PROMOTION OF SYNTHETIC CHEMICAL REACTIONS. HOWARD LANE, Ashford, England. Filed Oct. 27, 1919. Serial No. 333,455. 5 Claims. (Cl. 23—28.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. Apparatus for carrying out the preparation of catalytic material employed for the promotion of synthetic chemical reactions comprising an air-tight pan a dished bottom to the said pan, an inlet opening to said pan, a central outlet in the said dished bottom which outlet depends into a coating medium receptacle, a movable curved rake disposed within the pan and operable from the exterior of the pan, said rake being formed so that when moved in one direction it causes the material in the pan to move away from the outlet but when moved in another direction it causes the material in the pan to move to the outlet opening.

1,428,966. SAFETY DEVICE. WILLIAM J. MARTIN, Toledo, Ohio. Filed Mar. 21, 1917. Serial No. 156,270. 20 Claims. (Cl. 192—116.)

6. A clutch control mechanism including a movable member, an actuator therefor, a trip for rendering the actuator inoperative, there being means for re-setting the trip, a latch coacting for holding the member from actuator operation, and control means actuable separately from the member for releasing the latch.

1,428,967. CABINET IRONING BOARD. FRANK W. MAZSICK, North Milwaukee, Wis. Filed Apr. 5, 1921. Serial No. 458,652. 1 Claim. (Cl. 68—10.)

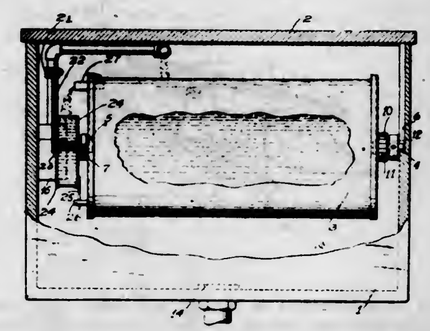
An ironing board cabinet, an ironing board pivoted to the side walls of said cabinet, a pair of links pivoted to the lower face of said board, a pair of braces pivoted to said links and to the side walls of the cabinet, each of said braces being provided with a strengthening member having its ends rigidly affixed to said brace and bowed inwardly at its intermediate portion, said portions being rigidly connected together.

1,428,968. COMBINATION PEN AND PENCIL HOLDER AND CALENDAR. HARRY J. MELLON, Pittsburgh, Pa. Filed Feb. 24, 1921. Serial No. 447,380. 2 Claims. (Cl. 40—108.)

1. A device for the purpose set forth comprising a cylindrical body portion provided with indicia and further having a part thereof polygonal and a part formed with a spiral groove, a rotatable and longitudinally shiftable retaining element mounted on and having means travelling in said groove to shift said elements and further having a narrow polygonal shaped portion at one end, and further having a pair of slots and an opening, a sleeve mounted on said body portion and having indicia visible through one of said slots, and a locking sleeve for said element, said sleeve having indicia visible through the other of said slots and having a cylindrical portion extending into said element and further having at one terminus of said cylindrical portion a narrow polygonal

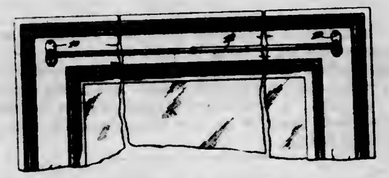
shaped portion associated with the polygonal shaped portion of said element to prevent rotative movement of the element relative to the sleeve until the polygonal shaped part of the sleeve is cleared of the polygonal shaped portion of said element without withdrawing the entire sleeve from said element, said locking sleeve further having an additional polygonal shaped portion associated with the polygonal part of said body portion, and said indicia on the body portion visible through said opening.

1,428,969. BOTTLE. JAMES JOSEPH MIDSON, South Brisbane, Queensland, Australia. Filed Oct. 26, 1920. Serial No. 419,613. 3 Claims. (Cl. 215—44.)



1. A closure for bottles, comprising, in combination, a bottle having a plurality of raised portions around its neck, said portions tapering from approximately the center thereof toward the upper end of the bottle neck, and a stamped cap provided with radial recesses opening at its interior and adapted to slip over the raised portions, said cap forming when rotated in one direction a gas-tight joint, the raised portions and recesses having abutting vertical walls adapted to form a positive stop for limiting rotation of the cap relative to the bottle.

1,428,970. METHOD OF MAKING BEAM HEADS. FRANK MOSSBERG, Attleboro, Mass., assignor to Mossberg Pressed Steel Corporation, Attleboro, Mass., a Corporation of Massachusetts. Filed Dec. 3, 1919. Serial No. 342,220. 2 Claims. (Cl. 29—159.)

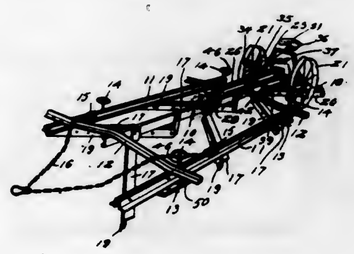


1. The method of forming a beam or reel head, which consists in cutting sheet metal into disk form, turning the outer edge of said disk off at substantially a right angle to the plane of said disk forming the bottom wall of a groove, turning the edge of said first turned portion outwardly forming one side flange of the groove, and attaching a ring to the edge of said disk forming the other side flange of the groove.

1,428,971. APPLIANCE FOR FLUSHING CLOSETS. HORACE FALK NEUMEYER, Macungie, Pa., assignor to Hobart G. Biehn, Quakertown, Pa. Filed Nov. 17, 1921. Serial No. 515,849. 4 Claims. (Cl. 4—5.)

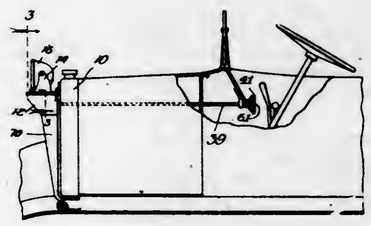
1. In an appliance for flushing closets, the combination of a main tank, a rotatable tank mounted within said main tank, and having a relatively large discharge opening, a pull bar operatively connected with the rotatable tank and arranged to rotate the same when pulled, a gravity tank mounted adjacent the rotatable tank and filled from said tank, an inlet conduit arranged to discharge into the rotatable tank, a valve in the path of the inlet conduit, and weight operated means controlling said valve, said means being attached to and its operation determined by the weight of water in the gravity tank, and means operatively connecting the gravity tank with the rotatable tank.

1,428,972. CURTAIN ROD AND ROD SUPPORT. WILLIAM ALLAN NEWELL, Ogdensburg, N. Y., assignor to The Newell Mfg. Co. Inc., Ogdensburg, N. Y., a Corporation of Maine. Filed June 9, 1921. Serial No. 476,283. 3 Claims. (Cl. 156—22.)



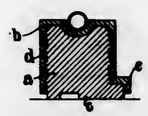
2. A curtain fixture comprising a bracket having a flat base presenting a face lying in a single plane, a substantially L-shaped hook mounted in said base and having a straight limb disposed parallel to said face, a rod having an enlarged finishing ferrule at its end, a perforation in said rod adapted to snugly receive said straight limb, and spaced from the end of said rod a distance equalling the distance of the straight limb from said face.

1,428,973. ROAD LEVELER. JOHN NORTHON, Clare, Mich. Filed Apr. 8, 1921. Serial No. 459,541. 8 Claims. (Cl. 37—5.)



3. In a road scraper having a frame including a center beam, a reach pivotally connected at its forward end to the said beam to swing in a vertical plane, an axle pivoted at its center to the rear end of the reach, wheels on the ends of the said axle, a lever fulcrumed on the reach

and having connection with the axle at one side of the reach to control swinging movement of the former, a seat

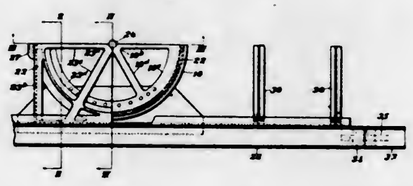


and frame supported on the axle, and means supported by the reach and engaging the rear end of the said beam for raising and lowering the latter.

1,428,974. CONTROL MECHANISM FOR LAMPS. ERNEST M. OLSON, Chicago, Ill. Filed Oct. 20, 1921. Serial No. 508,959. 4 Claims. (Cl. 240—61.)

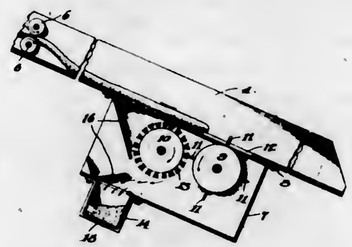
1. In a control mechanism for lamps, means for simultaneously rotating a lamp in a horizontal plane and inclining the same downwardly, said means comprising a circular turn-table carrying the lamp, means for rotating the turn-table, a stationary pinion, and a segmental toothed rack mounted on the lamp engaging with the stationary pinion.

1,428,975. PACKING RING FOR ROTATING BODIES. CHARLES ALGERNON PARSONS, Newcastle-upon-Tyne, and STANLEY SMITH COOK, Wallsend-upon-Tyne, England, said Cook assignor to said Parsons. Filed May 3, 1920. Serial No. 378,572. 3 Claims. (Cl. 288—3.)



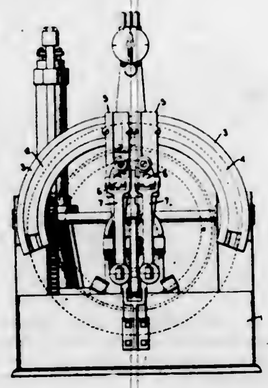
3. A packing ring section consisting of graphitic material such as carbon associated with a metal reinforcement, said metal having a coefficient of expansion substantially the same as that of the graphitic material.

1,428,976. METALLIC PACKING. FRANK E. PAYNE, Glencoe, Ill. Filed Dec. 7, 1918. Serial No. 265,674. 6 Claims. (Cl. 154—45.5.)



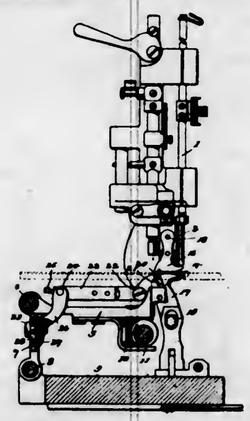
1. A packing comprising a flexible, compressible core consisting of a plurality of metallic strands, and a metallic wrapping therefor to render said core impervious to fluid pressure and forming the wearing surface therefor.

1,428,977. TRAVELING AUTOMOBILE TURNTABLE. JOHN R. PILLOW, Butler, Pa., assignor to A. B. Collner, Clarion, Pa. Filed Nov. 1, 1920. Serial No. 420,902. 4 Claims. (Cl. 104—44.)



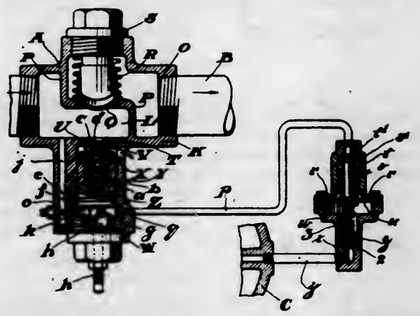
1. A traveling automobile turn table comprising in combination, a circular base, mobility wheels carrying and fully supporting said base, a rectangular turret revolubly mounted upon said base, and automobile carriers carried by said turret and fully supported thereby.

1,428,978. COTTON SAMPLER. WILLIAM COLUMBUS PITTS and ROBERT H. HAINES, Memphis, Tenn. Filed Jan. 21, 1921. Serial No. 438,971. 2 Claims. (Cl. 73—21.)



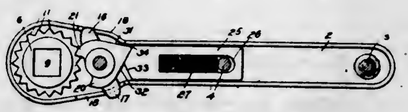
1. In a cotton sampler, the combination with a chute disposed in an inclined position for the conveyance of compressed cotton having a slot in the bottom thereof, of a casing arranged beneath he chute and embracing the slot, a roll mounted for rotation within the casing directly beneath the slot, spike membersw projecting from the periphery of said roll and movable through the slot to engage the cotton passing through the chute for removing small portions therefrom, a second roll in the casing carrying brushes for removing the cotton from the spike members, a removable sample box attached to the casing for receiving the portions of the cotton, inclined converging walls formed in one end of the casing, one of said walls forming a guide for directing the cotton samples into the sample box and means for imparting movement to the rolls.

1,428,979. TIRE-STRIPPING MACHINE. EDWARD D. PUTT, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed May 25, 1920. Serial No. 384,095. 3 Claims. (Cl. 18—2.)



1. In a machine for the purpose of stripping tires, a tire stripping element movable over the core, said element comprising a part to engage the bead of the tire and an independently movable part over which the edge of the tire may run.

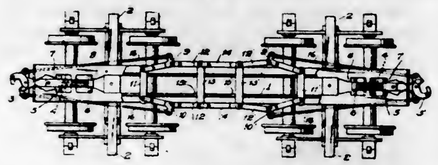
1,428,980. TRIMMING MECHANISM FOR SEWING MACHINES. WILLIAM ERASTUS RAYNOR, Utica, N. Y., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed July 17, 1918. Serial No. 245,272. 2 Claims. (Cl. 112—122.)



2. The combination of a feeding mechanism including a feed dog, a feed bar supporting the same, a pivoted feed rocker to which said feed bar is connected, means for vibrating the feed rocker, means whereby the throw of the feed rocker may be varied and a trimming mechanism including toggle trimming members, one of which is provided with a tooth, the other with a recess with which said tooth meshes, the inner face of said feed rocker having a seat formed thereon provided with vertical slots, a bracket mounted on said seat, screws passing through the slots into the bracket, whereby the same is adjustably secured to the feed rocker, so that the bracket may be moved toward and from the pivot of the feed rocker, the upper end of said bracket being above the feed bar connection to the feed rocker and a link connected to the upper end of the bracket and to one of the toggle trimming members.

1,428,981. COMPRESSOR UNLOADER. SNOWDEN B. REDFIELD, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Aug. 15, 1921. Serial No. 492,568. 9 Claims. (Cl. 230—24.)

2. A compressor unloader comprising a valve casing having a main valve chamber adapted to be connected in the discharge line of the compressor, a main discharge valve controlling the outlet from said chamber to the discharge line, a vent to atmosphere from said chamber, and an automatic differential relief device controlling said vent to atmosphere, consisting of a piston having an enlarged head and a spring pressed relief valve movable on said piston, both the spring pressed relief valve and the piston head being subjected to fluid pressure from the main valve chamber for actuating the piston and valve together and thereby preventing the loading of the compressor until an element of time has elapsed after starting.

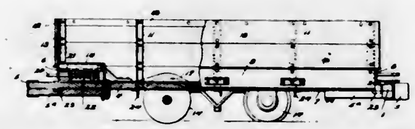


1,428,982. RATCHET WRENCH. FRANKLIN T. REESE, Pittsburgh, Pa. Filed Jan. 22, 1921. Serial No. 439,111. 2 Claims. (Cl. 81—63.)

1. A ratchet wrench comprising a casing having a handle portion and a head portion formed of two similar sections provided with abutting lateral flanges to form a housing, a ratchet member trunnioned in the head portion, a rivet passing through the head portion for binding the sections together, a pawl cooperating with the ratchet pivoted on said rivet and having a nose projecting into the handle portion, a slidable plunger having an elongated recess mounted in the handle portion and bearing against the said nose, a second rivet binding the handle portion of the sections together and passing through one end of the recess, a coil spring having one extremity abutting the last named rivet and its opposite extremity bearing against the end of the recess for urging the plunger into contact with the nose, said last named

rivet serving as a limiting stop for the plunger, the cross-sectional dimension of the plunger corresponding substantially to that of the handle portion whereby the casing not only houses but serves as a guide therefor.

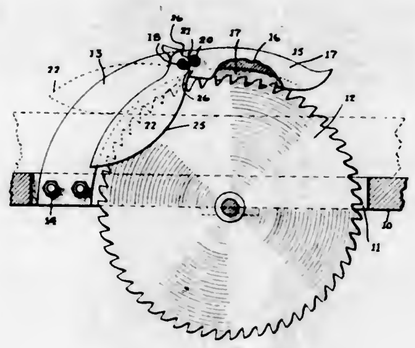
1,428,983. PULL MECHANISM FOR RAILWAY CARS. CHARLES V. ROTE, Lancaster, Pa., assignor of one-half to E. W. Brown, Lancaster, Pa. Filed Sept. 19, 1921. Serial No. 501,635. 10 Claims. (Cl. 213—41.)



1. The combination with a railway car frame, having a draft coupler at each end, of two toggles each having both members pivotally connected to the car frame, the connection between one of said members and the frame being movable in the direction of the length of the frame and the connection of the other member to the frame being fixed, a rigid connection between the said movable members of the toggles, and a connection between each toggle and the adjacent coupler.

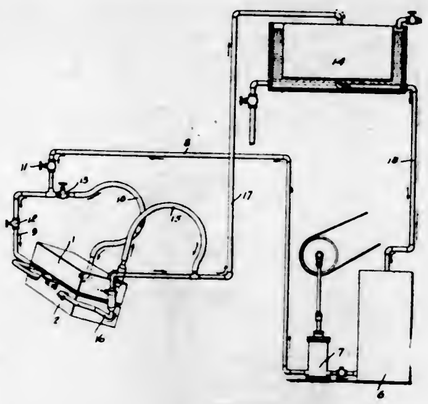
1,428,984. MANUFACTURE OR PRODUCTION OF CHLORINATED PRODUCTS OF TOLUENE AND DYESTUFFS THEREFROM. JULIUS SCHMIDLIN, Bergen, near Frankfort-on-the-Main, Germany, assignor to Leopold Cassella & Co., Gesellschaft mit Beschränkter Haftung, a Corporation of Germany. Filed Mar. 12, 1915. Serial No. 13,949. 1 Claim. (Cl. 260—65.)

As a new article of manufacture the new triphenylmethane dyestuff derived from tetrachloro-benzaldehyde and orthocresotinic acid being in a dry state a reddish brown crystalline powder, being in the form of its sodium salt soluble in water with a yellowish brown color, soluble in caustic soda with a deep blue color and in concentrated sulfuric acid with a claret red color, and dyeing wool in an acid bath a red or reddish brown, depending on the condition of the wool, which color, by afterchroming, turns into a beautiful greenish blue shade distinguished by its fastness to washing, milling and potting.



1,428,985. MINE CAR. CARL SCHOLZ, Charleston, W. Va. Filed Oct. 25, 1921. Serial No. 510,321. 15 Claims. (Cl. 105—364.)

1. A mine car body having an underframe construction comprising horizontal channel irons, a floor interposed therebetween, the said irons extending a substantial distance above the level of the floor, the flat side of the channels being on the inside of the body.



1,428,986. SAW GUARD. OTTO B. SMITH, Glen Morris, N. Y. Filed Dec. 10, 1921. Serial No. 521,344. 5 Claims. (Cl. 143—159.)

1. The combination with a circular saw or the like, of a member arranged behind and in alignment with the saw, said member curving upward over the saw edge, rearwardly extending wings pivoted on said member and adapted to overlap the sides of the saw, and a hood

pivoted on the upper end of said member and extended forwardly therefrom over the saw edge, said hood being supported at its pivoted end only and disposed so as to leave the front edge of the saw exposed to view.

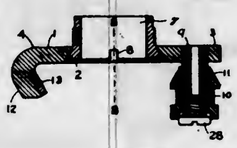
1,428,987. METHOD OF CASTING. HARRY A. SCHWARTS, Defiance, Ohio. Filed June 8, 1921. Serial No. 475,968. 5 Claims. (Cl. 22—212.)

1. The hereindescribed method of casting, consisting in introducing molten metal into a mold, and maintaining the mold within a constant range of temperature.

1,428,988. LATCH LEVER. JOHN P. SEAHOLM, Moline, Ill., assignor, by mesne assignments, to Moline Plow Company, Incorporated, Moline, Ill., a Corporation of Virginia. Filed Aug. 13, 1921. Serial No. 491,951. 5 Claims. (Cl. 74—39.)

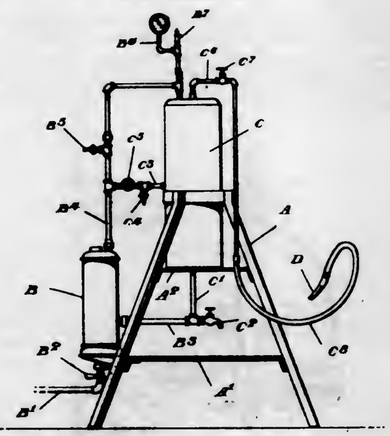
1. A latch lever comprising a lever member having an opening therein, two handle mounting members having

shoulders abutting against the lever member and tongues extending through said opening and bent against the lever



member and a handle member mounted between said mounting members and extending through said opening.

1,428,989. CAR ROOF. WILLIAM H. SLATTEN, Chicago, Ill. Filed Feb. 19, 1921. Serial No. 446,253. Renewed Feb. 23, 1922. Serial No. 538,704. 2 Claims. (Cl. 108—5.4.)

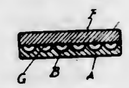


1. In a car roof, the combination of a plurality of transversely arranged channel members disposed in gaps of the sub-roof and having upstanding flanges, a plurality of transversely extending sheet metal sections having downturned marginal flanges adapted to contact with the upstanding flanges of the channel members, said downturned flanges having vertical extension flanges in spaced relation to provide narrow receiving channels, and cap pieces of a channel shape and having downturned flanges adapted to fit the channels formed by the aforesaid flanges.

1,428,990. OBJECTIVE CHANGER OR THE LIKE FOR MICROSCOPES. ROBERT ALEXANDER SLOAN, Oxton, England. Filed Nov. 20, 1918. Serial No. 263,311. 4 Claims. (Cl. 88—39.)

1. The improved device for attaching microscope objectives or the like, comprising a nose piece adapted to be rigidly secured to the microscope nose and having an undercut inclined abutment at one end and a fastening device at the other end, and an adaptor for the objective adapted to be pressed by the said fastening against the nose piece and towards the abutment so as to engage therewith, with means for limiting the movements of the adaptor; substantially as set forth.

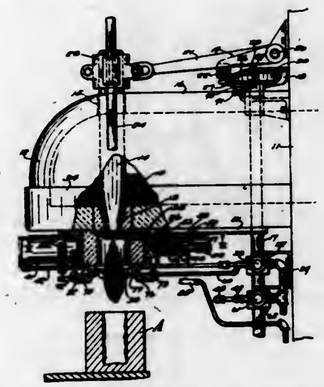
1,428,991. PROCESS OF AND APPARATUS FOR THE MOLLIFICATION AND DISINTEGRATION OF AGGLUTINATE ELEMENTS. THOMAS MICHAEL SLOUGH, New Orleans, La. Filed Mar. 14, 1922. Serial No. 543,805. 3 Claims. (Cl. 144—2.)



1. The process of removing cane seats from chairs which consists in, first, subjecting the retaining spline to the mollifying action of steam and simultaneously subjecting the glue in which the spline is embedded to the liquefying action of the steam, and, second, peeling the spline from the chair by interposing a pointed tool having a passage for steam directing the steam to the very point of separation of the spline from the seat.

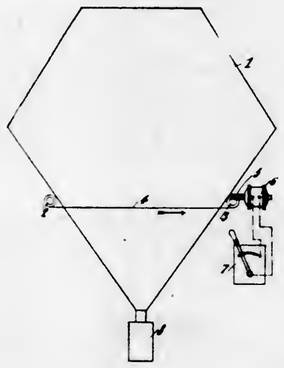
1,428,992. CAN-CLOSING MACHINE. EARL D. SMITH, Delphi, Ind. Filed Apr. 29, 1922. Serial No. 557,481. 7 Claims. (Cl. 113—24.)

1. The process of automatically closing cans which consists in feeding said cans to a support; raising said cans successively into a gripping contact between said support and a compressible friction generating surface with a force sufficient to prevent said cans from rotating on their axes during the crimping operation; and while so held against rotation on their axes revolving a plurality of crimping rollers around and in contact with the rims of said cans to effect air tight closures, substantially as described.



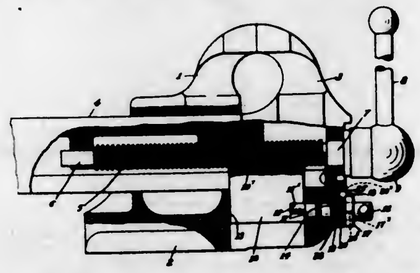
1,428,993. ART OF CORE MAKING. WILLIAM A. SMITH, Lynn, Mass. Filed Sept. 2, 1921. Serial No. 498,108. 7 Claims. (Cl. 22—13.)

1. In the art of core making the method herein described comprising the moulding of core sections from a



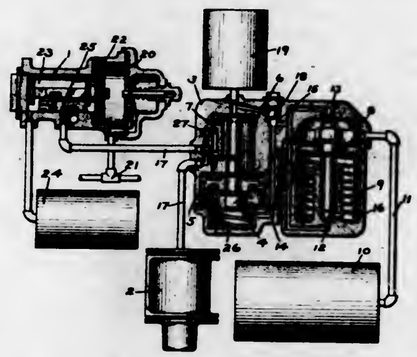
prepared core sand, treatment of that portion of their exteriors which contact in assembling with an ordinary powdered talc, and the subsequent baking of the assembled product, all substantially as described and for the reasons specified.

1,428,994. APPARATUS FOR AND METHOD OF PRODUCING CHARGES OF MOLTEN GLASS. LEONARD D. SOUBIER, Toledo, Ohio, assignor to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Dec. 20, 1920. Serial No. 431,848. 16 Claims. (Cl. 49—55.)



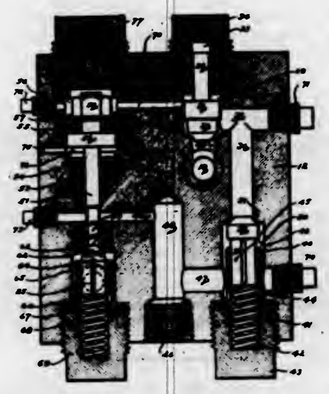
16. In gob forming apparatus, the combination of a container for molten glass having an outlet opening through which the glass issues, means to periodically sever the glass at a point adjacent said opening, means to subject the issuing glass to a reduced pressure without mechanical contact with the glass during the initial portion of each period after the glass is severed, and a regulator operating periodically within the container to exert an expelling force on the glass after it has been subjected to said reduced external pressure.

1,428,995. METHOD OF AND APPARATUS FOR TAKING AND REPRODUCING CINEMATOGRAPHIC PICTURES WITH MUSICAL ACCOMPANIMENT. OTTO SPRINGEFELD and LUDWIG CZERNY, Berlin, Germany. Filed Mar. 8, 1921. Serial No. 450,800. 1 Claim. (Cl. 88—16.2.)



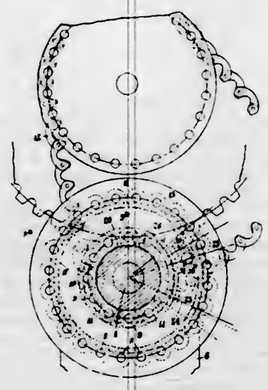
A method of recording a scene or the like and music accompanying it by means of a cinematograph, which consists in having an orchestra play the said music while the operator of the cinematograph records the said scene upon the film, while simultaneously moving across the field of the lens of the cinematograph, a member having the music played by the orcheatra recorded thereon in suitable notation, the speed of movement of the said member being regulated according to the tempo of the said music so played by the said orchestra, so that the film of the cinematograph has a continuous series of pictures relating to said scene and an adjacent continuous series of pictures recording the notation on the said member.

1,428,996. VISE. LEROY S. STARRETT, Athol, Mass., assignor to Athol Machine Company, Athol, Mass., a Corporation of Massachusetts. Filed Dec. 13, 1920. Serial No. 430,202. 10 Claims. (Cl. 81—36.)



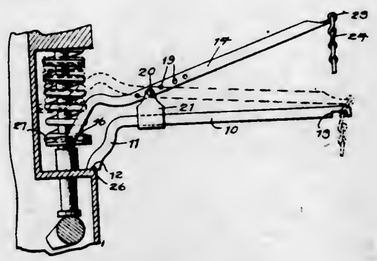
1. In a vise having a fixed and a movable jaw and a screw for adjusting said movable jaw, a threaded member movable into and out of engagement with said screw, a wrist pin for moving said threaded member into and out of engagement, a spring-controlled mechanism for moving said threaded member into engaged position and a releasable detent for holding said spring-controlled mechanism against operating movement.

1,428,997. FLUID-PRESSURE BRAKE. THOMAS H. THOMAS, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Oct. 20, 1921. Serial No. 509,084. 5 Claims. (Cl. 303—63.)



1. The combination with a brake cylinder and a valve device for normally controlling the supply of fluid to the brake cylinder, of a main reservoir, an emergency reservoir, an emergency valve device for supplying fluid from the emergency reservoir to the brake cylinder, and means operated upon a predetermined reduction in main reservoir pressure for effecting the operation of said emergency valve device.

1,428,998. VALVE FOR CAKE-FORMING PRESSES. RUSSELL A. TRACE, Dayton, Ohio, assignor to Buckeye Iron & Brass Works, Dayton, Ohio, a Corporation of Ohio. Filed Apr. 25, 1921. Serial No. 464,230. 13 Claims. (Cl. 138—16.)

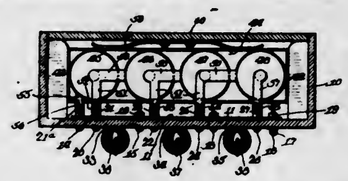


1. In a former, an inlet valve, an outlet valve, means for actuating said valves, means for cutting off a low pressure supply at a predetermined point, means for preventing back pressure from prematurely cutting off the low pressure supply, and means for applying high pressure to the former head.

1,428,999. GRADUALLY VARIABLE POWER-TRANSMISSION GEAR OR DRIVE. JAMES WALLACE TYGARD and ELIZABETH ANN TYGARD, London, England. Filed Nov. 29, 1921. Serial No. 518,741. 13 Claims. (Cl. 74—61.)

1. A variable power transmission gear comprising a rotary element, a plurality of concentric sets of transmission engaging members arranged around the axis of the rotary element, the engaging members of the several sets being capable of displacement into and out of a position in which they may be engaged by a transmission connection as the rotation of the element progresses so that the transmission of power may be transferred from a set of transmission engaging members situated on a circle of one radius to a set of transmission engaging members situated on another circle of another radius.

1,429,000. VALVE-SPRING COMPRESSOR. PAUL L. VARBLE, Carrollton, Ill. Filed Apr. 2, 1921. Serial No. 458,076. 4 Claims. (Cl. 29—86.3.)

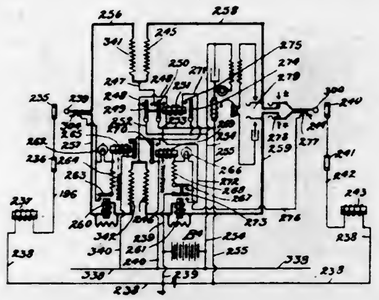


1. In a valve spring compressor for the valve springs of internal combustion engines, a pair of pivotally connected handle members one of which is provided at one end thereof with a spring seat engaging member, the other of said handle members being reversible and adapted at either end thereof for engagement with the casing of the engine.

1,429,001. PROCESS FOR TRANSFORMING ALKALI-METAL MONOCHROMATES INTO BICHROMATES OR CHROMIC ACID. GERHARD NICOLAAS VIS, Paris, France. Filed July 10, 1919. Serial No. 309,933. 3 Claims. (Cl. 23—13.)

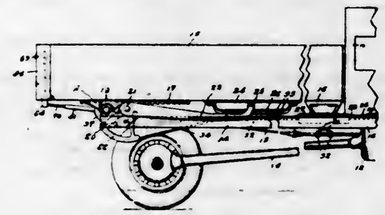
2. The method consisting in subjecting a solution of alkali metal monochromate to the action of carbonic acid, separating the alkali metal bicarbonate formed from the resulting solution containing alkali-metal bichromate, treating the latter solution with slaked lime to form calcium chromate and solution of alkali-metal monochromate, and treating said calcium chromate with alkali-metal bisulfate to produce alkali-metal bichromate.

1,429,002. TESTER FOR ELECTRICAL DEVICES. WILLIAM WEINBERG, Chicago, Ill. Filed Sept. 20, 1920. Serial No. 411,540. 7 Claims. (Cl. 175—183.)



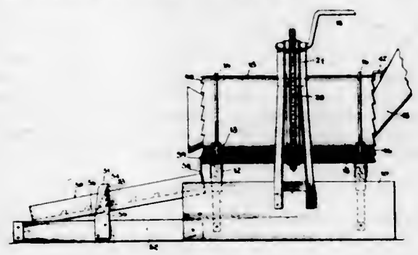
1. A testing apparatus of the character described, comprising a casing, a plurality of cells connected in series within said casing, a conductor plate secured to said casing, one of the terminals of the cells at one end of said series being provided with a spring finger to directly connect said conductor plate electrically therewith, and a plurality of pairs of contact posts, one of the posts of each pair being mounted on said conductor plate and the other posts of said pairs engaging with spring fingers electrically connected respectively with terminals of said cells having varying differences of potential between the same and s... first mentioned terminal.

1,429,003. TELEPHONE-EXCHANGE SYSTEM. NORMAN T. WHITAKER, New York, N. Y., assignor of one-fourth to Harry F. Löwenstein, Washington, D. C. Filed Apr. 4, 1916, Serial No. 88,832. Renewed Feb. 2, 1922. Serial No. 533,673. 11 Claims. (Cl. 179—84.)



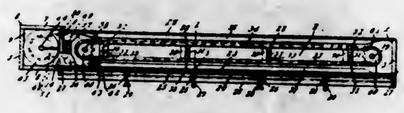
11. In a telephone exchange system, a central office, substations, means for interconnecting said substations

and means associated with said interconnecting means operable upon the connection of a third substation with



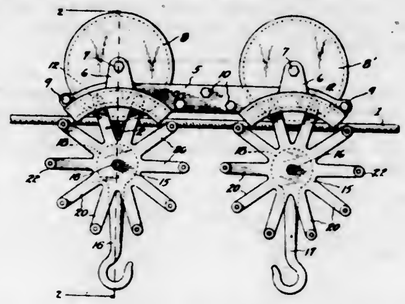
any one of a pair of substations already connected to signal a plurality of said connected substations independently of said talking apparatus.

1,429,004. DUMPING TRUCK. OLAF M. WICK, Valley City, N. Dak. Filed June 15, 1920. Serial No. 389,007. 9 Claims. (Cl. 294—14.)



1. In a mechanism of the character described a frame, a revoluble shaft thereon, a tilting body having a pivot coincident with the axis of the shaft, a transmission device revolubly mounted on the shaft, means to hold it against rotation, means therein for rotating said shaft in either direction, a gate element on said body, load moving rollers thereon, a gear train associated with the rollers for operation thereof, and telescopic drive means between said transmission device and train.

1,429,005. PLACER MACHINERY. WILLIAM RILEY WILCOX, Manhattan, Nev. Filed Apr. 1, 1922. Serial No. 548,616. 6 Claims. (Cl. 83—86.)

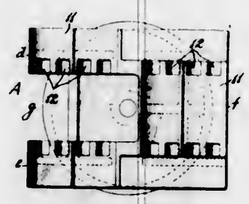


1. In a machine of the character described, a rotating drum, a spiral rib secured to the inner periphery of said drum and a combined pulverizer and scrubber operating in said drum and comprising a plurality of chains having interconnected links, a plate secured to said drum and constituting a track, and a traveler mounted on said track and having swivelled connection with one of the chains of said pulverizer and scrubber.

1,429,006. DUST COLLECTOR. ADOLPH JOHN WILHARM, Ashland, Wis. Filed Oct. 13, 1920. Serial No. 416,596. 1 Claim. (Cl. 183—69.)

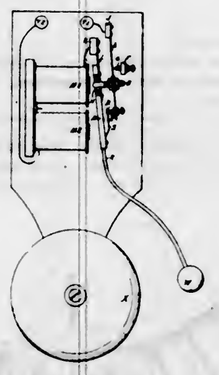
In a device of the class described, a casing having an outlet and comprising oppositely disposed foraminous walls; means for discharging a blast of dust-laden air into the casing, between the foraminous walls; a brush; means located between the walls for mounting the brush for movement in an orbit along the walls; and means for flexing one of the said walls to cooperate with the brush.

1,429,007. TROLLEY. MELVEN G. WILSON, Seattle, Wash., assignor of one-half to Victor J. Thurlow, Seattle, Wash. Filed Mar. 7, 1921. Serial No. 450,114. 1 Claim. (Cl. 104—182.)



The combination with a cable provided with transverse supporting bars, of a trolley adapted for travel along said cable comprising paired, longitudinally extending frame rails, sheave wheels mounted between said rails at their ends for travel along said cable, said rails being provided at their opposite end with inwardly facing, arcuatee channels formed about centers substantially below the cable and opening at their ends in the direction of the cable, paired stepping wheels mounted between said rails at their opposite ends, each wheel comprising a plurality of radial arms provided with sheave rollers at their ends arranged circularly on the same radii as said arcuate channels and adapted to move therein and to suspend said wheels thereby below said cable; said arms being of such length and spaced to receive the cross bars between the same as the trolley moves thereover and hangers suspended from between paired wheels wherefrom loads may be suspended and carried along said cable.

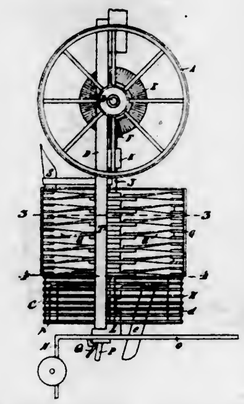
1,429,008. TRUCK FOR RAILWAY VEHICLES. WILLIAM E. WOODARD, Forest Hills, N. Y., assignor to Franklin Railway Supply Company, a Corporation of Delaware. Filed Dec. 23, 1921. Serial No. 524,341. 16 Claims. (Cl. 105—189.)



1. In a lateral motion railway vehicle truck, a bolster having three bearing surfaces for centering rockers, two

of said surfaces being on one side of the center line of the bolster and spaced apart and the third surface being

on the opposite side and arranged opposite the space between the other surfaces.



1,429,009. ELECTROMAGNETIC CONTACT DEVICE. VALENTINE C. WYNNE, Albany, N. Y.; Mary Wynne administrator of said Valentine C. Wynne, deceased. Filed Jan. 6, 1919. Serial No. 269,801. 5 Claims. (Cl. 200—90.)

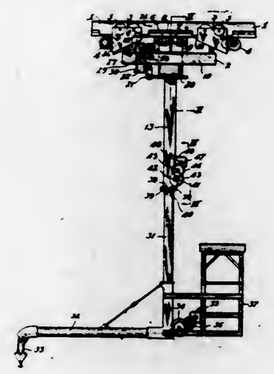
5. In a device for making and breaking the operating electrical contacts of electromagnetically operated apparatus, the combination of an electro-magnet; two spring members independently mounted; a main armature, actuated by said magnet in the operation of the device, mounted on one of said spring members; an auxiliary armature also actuated by the magnet in the operation of the device and mounted on the other spring member; contact members for making and breaking the actuating electric circuit, one of said members being adjustable, carried by and with the spring members; means for arresting the forward movement (that is, toward the magnet) of the auxiliary armature, and an adjustable stop for limiting the backward movement of the spring member carrying said armature; means for adjusting the relative position of the acted-on end or face of the auxiliary armature with regard to the spring member on which it is mounted, and means for electrically insulating said armature from the said spring member.

1,429,010. MACHINE FOR DIGGING POTATOES. OTTO LUDVIG ZEUTHEN, Bagsværd, Denmark. Filed Feb. 3, 1921. Serial No. 442,079. 4 Claims. (Cl. 55—58.)

1. A potato digging machine comprising a wheel frame, a plowshare supported by said frame, a skeleton cylinder fixed on said frame and adapted to receive potatoes released by said plowshare, said fixed cylinder being open at its rear end, a longitudinal shaft supported on said frame and driven from the supporting wheels thereof, a rotary skeleton cylinder supported on said shaft and provided with an open forward end which registers with the open rear end of said stationary skeleton cylinder,

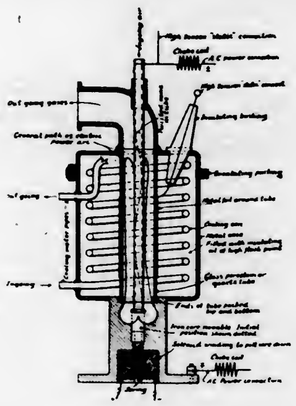
a series of oblique blades supported by said shaft within said stationary cylinder and operative to pass the potatoes through the rear end opening of said stationary cylinder into said rotary cylinder.

1,429,011. ANIMAL TRAP. GUS GEORGE ANDERSON, Miami, Ariz. Filed Aug. 26, 1921. Serial No. 495,582. 2 Claims. (Cl. 43—92.)



2. In a trap of the character described, a base, a bait plate, a U-shaped member having its terminals secured to the base and its bridge portion extending across the bait plate adjacent one end thereof, a U-shaped wire having its legs extending through the bait plate and adjacent one side of the bridge portion of the first named U-shaped member and its bridge portion being disposed above the bait plate and upon the opposite side of the bridge portion of the first named U-shaped member, whereby to support the bait plate by the leg portions of the last named U-shaped wire existing between its bridge portion and top surface of the bait plate, the bridge portion of the U-shaped wire serving as a keeper, and the leg portions of the U-shaped wire being extended forwardly upon the bottom surface of the bait plate to its other end and then brought upwardly and bent forwardly to serve as a means for holding a bait upon said bait plate.

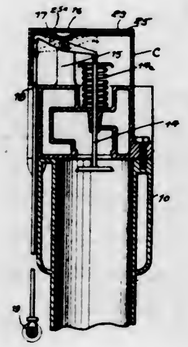
1,429,012. HOISTING AND CONVEYING DEVICE. DONALD S. ANDREWS, Cleveland, Ohio, assignor to Andrews Crane Corporation, Cleveland, Ohio, a Corporation of Delaware. Filed July 2, 1921. Serial No. 482,004. 3 Claims. (Cl. 212—17.)



1. In a hoisting and conveying device, the combination of an overhead support; a trolley adapted to travel upon

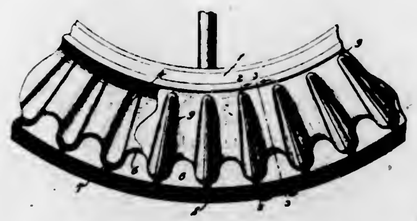
said support; a depending and contractible mast rotatably mounted upon said trolley; a laterally extending boom

mounted upon a movable portion of said mast; means for contracting and extending said mast; and means for rotating same.



1,429,013. FURNACE FOR OXIDATION OF ATMOSPHERIC NITROGEN. ARCH U. AVERA, Florence, Ala. Filed Mar. 26, 1921. Serial No. 455,893. 8 Claims. (Cl. 204—31.)

1. The method of oxidizing atmospheric nitrogen which consists in exposing the same to the effect of an electric arc and a static charge simultaneously.

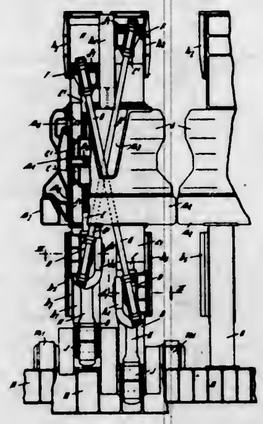


1,429,014. HEAD COVER FOR INTERNAL-COMBUSTION ENGINES. GEORGE O. BLANCHARD, Napoleonville, La. Filed Jan. 19, 1921. Serial No. 438,464. Renewed July 22, 1922. Serial No. 576,872. 4 Claims. (Cl. 123—90.)

1. In combination with an internal combustion engine embodying overhead valves and operating mechanism therefor embodying rocker arms mounted upon the head of the engine, a casing secured to the engine head and enclosing the valve gearing carried thereby, a conduit connecting said casing with the interior of the engine base

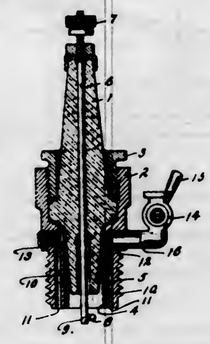
and means within the casing for collecting oil from the vapors from the base and depositing the same upon said rocker arms.

1,429,015. INNER TUBE FOR TIRES. GEORGE W. BOLSER, Cleveland, Ohio. Filed Apr. 12, 1921. Serial No. 460,685. 2 Claims. (Cl. 152—13.)



1. The combination with a tire casing, of an inner tube provided with a series of pleats or folds extending in accordion fashion around the tube when the latter is deflated, said pleats or folds being adapted to flatten outwardly against the inner wall of the casing when the tube is inflated, an outwardly projecting bead formed on the outer surface of said pleats or folds and adapted to engage the inner surface of the tire casing to prevent creeping of the tube within the casing.

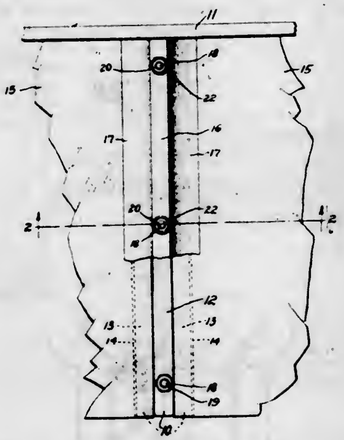
1,429,016. INTERNAL-COMBUSTION ENGINE. GEORGE J. CARTER, Bromborough, and LAUCHLAN GRANT MCFARLANE, Liverpool, England. Filed Oct. 22, 1918. Serial No. 259,251. 2 Claims. (Cl. 121—117.)



1. In an engine of the class described, a pair of cross heads arranged side by side, operating means therefor, slipper plates extending from the outer sides of the cross heads, and two pair of columns between which the cross heads slide, the columns of each pair having outer

guide surfaces for said slipper plates, the inner sides of each pair of columns being spaced far enough apart to

permit access to be had to the cross heads and their operating means.

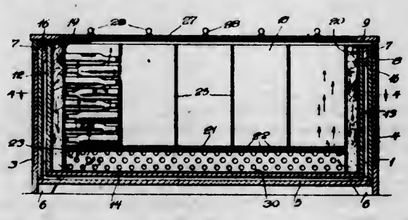


1,429,017. SPARK PLUG. HOLLEY CARTMILL, Spokane, Wash. Filed Dec. 9, 1920. Serial No. 429,477. 1 Claim. (Cl. 123—169.)

The combination with a spark plug and its attaching shell formed with an inner bore surrounding the sparking end of the plug, said shell having a chamber in its wall formed with a restricted mouth opening into the engine cylinder and adapted to receive an explosive mixture whereby a blast of gas occurs past the sparking end of the plug with an explosion in said chamber.

1,429,018. SKYLIGHT CONSTRUCTION. STEPHEN E. CIBULAS, Bridgeport, Conn. Filed Mar. 23, 1921. Serial No. 454,678. 2 Claims. (Cl. 108—168.)

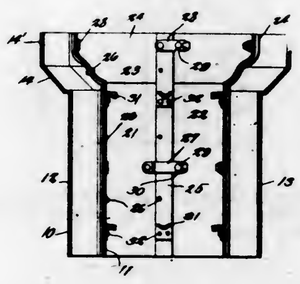
1. A glass holding structure comprising a supporting bar of relatively heavy sheet metal bent upon itself at substantially its mid width to form an inverted U-shaped vertical longitudinally extending rib, the sides thereof extending laterally away from each other at the lower edge of the rib and the free edges then extending upwardly to form seats for the glass, an inverted V-shaped clamping bar of relatively heavy sheet metal on the upper side of the glass and arranged with its free edges cooperating with the seats to secure the panes of glass therebetween, resilient means above the clamping bar secured to the



supporting bar and tending to press the two bars together to hold the glass, and means for varying the pressure of the resilient means.

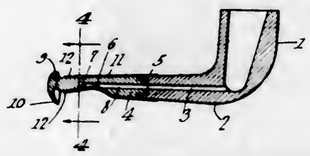
1,429,019. PUTTY GUN. VERNON WILLIAM JAMES COFFIN, Toronto, Ontario, Canada. Filed Feb. 11, 1922. Serial No. 535,942. 3 Claims. (Cl. 18—3.5.)

1. A putty gun comprising a cylinder, a piston operable within the cylinder, a head adapted to bear against the window sash and pane to form a triangular putty receiving space and having a slotted opening through which the putty is adapted to be forced into such space, and a guiding member carried by the slotted head and having a portion having a flat surface bearing against the face of the window sash.



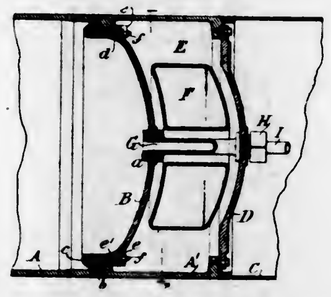
1,429,020. REFRIGERATOR. RILL K. COMBS, Marion, Ohio. Filed Mar. 29, 1922. Serial No. 547,791. 1 Claim. (Cl. 62—87.)

In a refrigerator for bottled goods and the like an outer casing, an inner removable container spaced from the



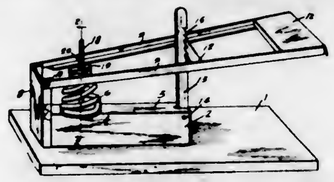
side walls of the casing to provide an ice receiving compartment, said container having imperforate side walls arranged to terminate a short distance below the top of said outer casing, whereby an air passage is provided between the ice compartment and the interior of the inner container, the inner container having a perforate bottom, and perforated flanges integral with said side walls and depending below said bottom, whereby the side walls are supported and a free circulation of air is permitted between the ice compartment and the interior of the inner container.

1,429,021. CONCRETE-CULVERT FORM. HENRY B. COX, Cordele, Ga. Filed Feb. 5, 1920. Serial No. 356,379. 1 Claim. (Cl. 25—127.)



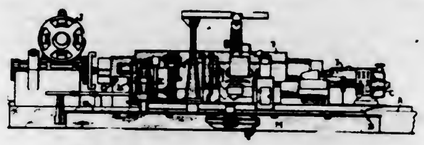
A concrete culvert form comprising inner and outer shells, each shell comprising a plurality of sections disposed with their edges extending in the direction of the axis and in abutting relation, latches bridging the coacting edges of the sections of the shells for holding the sections assembled, and brace engaging members projecting inwardly from the sections of the inner shell, said members including lugs secured to the inner faces of the sections and having transversely concaved upper portions adapted to receive the extremities of cross braces between the inner sections of the shell to hold the same outwardly braced against collapsing.

1,429,022. TOBACCO PIPE. WILLIAM R. DALES, Philadelphia, Pa. Filed Nov. 15, 1920. Serial No. 424,176. 4 Claims. (Cl. 131—12.)



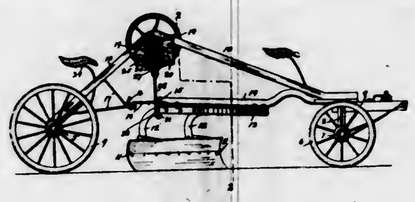
1. In a tobacco pipe the combination with the bowl and stem, of a mouth piece having a transverse recess terminating the smoke passage in the mouth piece, and a soft rubber sleeve fitted snugly upon and extending longitudinally of the mouth piece and having a portion normally cotracted within the recess to close said recess and the inner end of the smoke passage, that portion of the sleeve between the end of the stem and the recess being adapted to expand and continue the smoke passage when the stem is subjected to suction by the user.

1,429,023. AIR FLASK FOR TORPEDOES. WILLIAM DIETER, Newark, N. J., assignor to Vittlea Development Corporation, a Corporation of Delaware. Filed June 18, 1921. Serial No. 478,773. 5 Claims. (Cl. 114—20.)



1. The combination with an air flask body having an internal flange, and its head having an external flange, of clamps applied to the outer side of the head and bearing against the internal flange, the bearing ends of the clamps and the bearing faces of said flange being beveled.

1,429,024. SPRING COMPRESSOR. HOWARD H. DOUGLASS, Los Angeles, Calif. Filed Jan. 26, 1921. Serial No. 440,202. 5 Claims. (Cl. 29—87.1.)



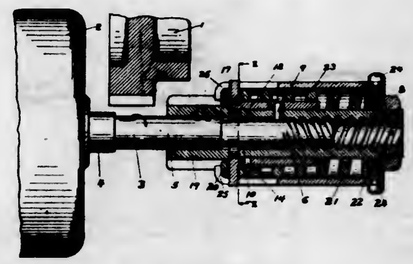
1. A spring compressor including a base for supporting a spring, a lever connected to said base so as to engage said spring for compressing the latter and a ratchet bar pivotally mounted on the base and adapted to engage a part of said lever when the same is depressed to compress a spring positioned on said base.

1,429,025. ELECTRICALLY-DRIVEN GRINDING MACHINE. HOWARD W. DUNBAR and ALBERT TURNER, Worcester, Mass., assignors to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 1, 1920. Serial No. 427,544. 13 Claims. (Cl. 191—34.)

1. A grinding machine comprising a base having ways, a table reciprocable thereon, a grinding wheel rotatively mounted on the table, a motor on said table for rotating the wheel, and means for conveying current to said motor in all operative positions of the table, comprising a trolley system including conductors extending parallel with said ways and a collector arm cooperating therewith, one of said cooperating members being mounted on the base and the other connected to the table to move therewith.

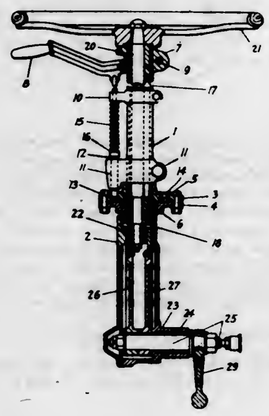
1,429,026. ROAD GRADER. CHARLES D. EDWARDS, Albert Lea, Minn. Filed Apr. 22, 1921. Serial No. 463,533. 6 Claims. (Cl. 37—49.)

1. In a road grader, the combination with a frame having arched side bars and bearing brackets secured to the crowns thereof and depending therefrom, of a scraper and draw bar connections between the same and the main frame structure, and means for vertically adjusting the opposite ends of said scraper blade, comprising crank arms and operating devices mounted on said bearing brackets below the crowns of said frame bars.



1,429,027. ARTICLE RETAINER. HAROLD FULTON, Elyria, Ohio. Filed June 21, 1920. Serial No. 390,552. 1 Claim. (Cl. 24—12.)

As a new article of manufacture, an article retainer comprising a member formed from a rectangular blank of sheet material of elongated form and uniform width and thickness throughout its length, said blank being bent on its central portion to form parallel side members connected at one end by a loop portion forming a cylindrical pocket, the opposite ends of the side member being turned toward one another and connected, a plurality of inwardly directed partition members struck out from one side plate, a plurality of spring clamping members between said partition members and struck out from said first mentioned plate, said spring clamping members having portions depending into the spaces provided between said partition members to grip articles placed therein, a spring gripping member struck out from one of said plates and extending into said cylindrical pocket to grip an article inserted therein, and means carried by one of said plates for attaching the article holder removably to an article of clothing.

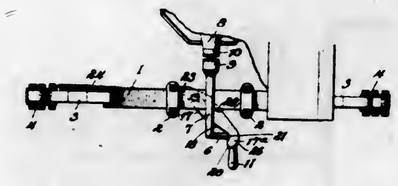


1,429,028. DRIVING MECHANISM. CLARENCE F. GILCHRIST, Toledo, Ohio, assignor to The Electric Auto-Lite Company, Toledo, Ohio, a Corporation of Ohio. Filed July 22, 1918. Serial No. 246,189. 7 Claims. (Cl. 74—7.)

1. In a starting mechanism for internal combustion engines, the combination of an engine member; a driving shaft having a threaded portion; an internally threaded sleeve having threaded engagement with said shaft; a pin in said sleeve adjacent an end thereof; a second sleeve having a slot therein, inclined relative to the axis of the shaft, in which the pin is adapted to have movement, said second sleeve having radial circumferentially spaced lugs at one end thereof; a pinion slidably mounted on said shaft, having a ring at one end theerof; a spring mounted on said sleeves and adapted to exert pressure on said radial lugs; and a casing, one end of which is cut to form axially extending fingers between which the lugs are adapted to have axial movement, the ends of said fingers being in-turned over said ring to engage the

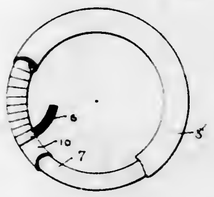
teeth of the pinion, said slot forming a camming surface for the pin whereby the spring is compressed when the pinion has full enmeshment with the engine member.

1,429,029. STEERING GEAR FOR MOTOR-PROPELLED VEHICLES. KENT S. GINGERICK, Urbana, Ohio, assignor to Rial T. Parrish, Dayton, Ohio. Filed May 1, 1922. Serial No. 557,526. 4 Claims. (Cl. 74—79.)



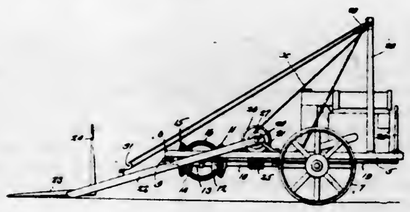
1. In a device of the type described, the combination with a rotatable steering column, of an eccentric member fast within said column, a steering shaft rotatable in said eccentric member and adapted to be moved from one extreme position to another by it, a transverse shaft, a pair of segmental gears fixedly secured to said shaft, and a pinion secured on the lower end of the steering shaft for engagement with one or the other of said segmental gears when the eccentric member is turned by the steering column.

1,429,030. SAFETY CRANK CATCH. FREDERICK W. GOEDEKE, Evansville, Ind., assignor of one-half to Herman Mueller, Evansville, Ind. Filed July 19, 1921. Serial No. 485,894. 4 Claims. (Cl. 123—185.)



1. A safety crank catch for automobiles, comprising a yieldable dog pivoted for movement in a substantially horizontal plane and in the path of the crank, the free end of the dog being adapted to be moved by the normal operation of the crank between points which lie upon opposite sides of the normal vertical position of the crank, the crank

passing beyond the free end of the dog at one of said points, and means for automatically returning the dog to

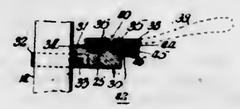


the other point in its limit of travel, said dog adapted to stop the reverse movement of the crank at this last-named point.

1,429,031. PUNCTURE-HEALING TUBE. PAULLI HARDER, Copenhagen, Denmark. Filed Mar. 22, 1922. Serial No. 545,846. 1 Claim. (Cl. 152—18.)

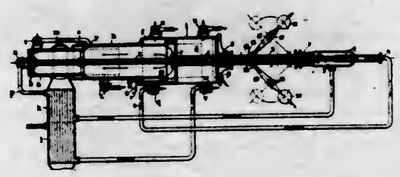
An inner tube for pneumatic tires comprising an unbroken annular inner elastic tubular member, a layer of plastic puncture healing material completely enveloping the entire outer area of said inner tubular member, and a spirally wrapper strip of fabric arranged about the healing material and forming a fabric layer completely enveloping the puncture healing material and constituting a substantially non-extensible closed container therefor, and an outer elastic tubular member enveloping the fabric layer and in direct contact with the entire outer area thereof.

1,429,032. SHOCK LOADER. THOMAS R. HARRINGTON, Platte City, Mo. Filed Oct. 25, 1921. Serial No. 510,189. 2 Claims. (Cl. 214—131.)



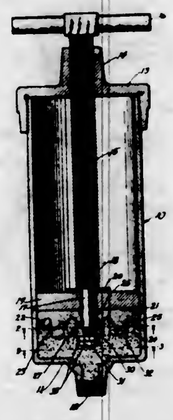
1. In combination with a tractor and the drive shaft thereof, a loading device including a frame, a shaft on the frame and connected with the drive shaft of the tractor to receive motion therefrom, a transversely extending shaft on the frame, means for transmitting motion from the drive shaft to the transversely extending shaft, a pivoted loading arm carried by the frame, a drum on the transversely extending shaft, and a flexible member operating over the drum and having connection with the pivoted loading arm for moving the same.

1,429,033. RAILWAY-RAIL FASTENING. ORAN P. HARRIS, Richmond, Ind., assignor of one-half to William M. Parker, Hollandsburg, Ohio. Filed Jan. 7, 1922. Serial No. 527,738. 1 Claim. (Cl. 85—2.4.)



A railway rail fastening comprising a round shank having a head on its lower end with its upper portion threaded, spring arms secured at their lower ends to the lower portion of said shank and projecting upward parallel therewith, a body member slidably mounted on said shank with its lower end adapted to spread said arms apart, a head integral with and extending at right angles from the upper end of the body and having a rail engaging lug, and a tooth extending down parallel with the body and a nut threaded on the upper portion of the shank to retain said body in place.

1,429,034. ANTIGLARE DEVICE FOR MOTOR VEHICLES. WILLIAM E. HASELTINE, Ripon, Wis. Filed Dec. 5, 1921. Serial No. 519,859. 4 Claims. (Cl. 296—97.)

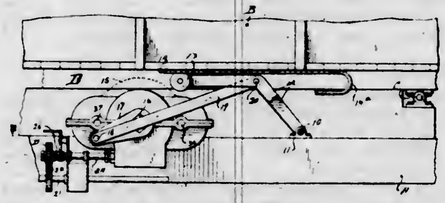


1. A device of the kind described, comprising, an antiglare panel, a bracket adapted for attachment to the windshield frame of a motor vehicle, said panel being pivotally mounted in said bracket to swing on a horizontal axis, an operating member mounted on a fixed part of the motor vehicle, a member connecting the panel with said operating member, and a braking device associated with the operating member for holding it in the desired position.

1,429,035. APPARATUS FOR PRODUCING NITRIC OXIDE. HERBERT ALFRED HUMPHREY, London, England. Filed Dec. 18, 1918. Serial No. 267,369. 6 Claims. (Cl. 23—1.)

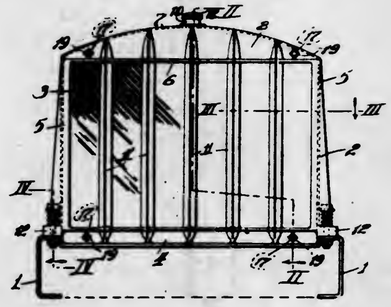
1. Apparatus for the production of nitric oxide, comprising in combination a cylinder of differential diameters and having admission and exhaust ports, and a movable piston of corresponding diameters within said cylinder and adapted to control the said ports.

1,429,036. PLUNGER. WILLIAM CARL IFTIGER, Los Angeles, Calif. Filed Mar. 15, 1921. Serial No. 452,481. 9 Claims. (Cl. 74—108.)



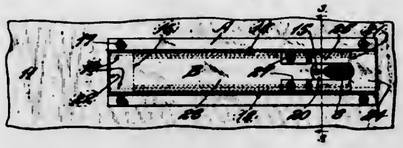
1. In a plunger, a carrier, a relatively thick disc of flexible material thereupon, which flexible disc is provided with a plurality of concentrically arranged grooves extending partially through the disc.

1,429,037. CLIP. JOSEPH WARREN KESSEL, Brooklyn, N. Y. Filed Jan. 25, 1921. Serial No. 439,839. 1 Claim. (Cl. 24—11.)



In a device of the character described, a relatively long arm having a spherical head formed at one end thereof, said head having a cut out portion, a roller supported by the head within the cut out portion, said roller having a plurality of teeth formed on the periphery thereof, the teeth extending beyond the surface of the spherical head to bite into a supporting element.

1,429,038. ELEVATING MECHANISM FOR AUTOMOTIVE TRUCKS. ROY A. KLEIN, WARREN H. BURTIS, and LEE U. EVERLY, Salem, Oreg. Filed Mar. 20, 1920. Serial No. 367,392. 8 Claims. (Cl. 298—21.)

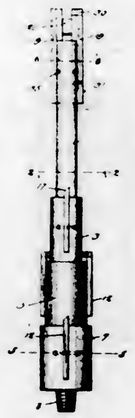


1. An automotive truck including a supporting frame, a body pivoted to the supporting frame for tilting movement, means for tilting the body comprising a pair of arms operatively pivoted to the frame beneath the body, their free ends having sliding engagement with the under side of the body, a crank shaft mounted on the frame and having cranks, and links connecting said cranks to the pivoted arms.

1,429,039. COMBINED SUPPORT AND GUARD. VALENTINE C. KLOEPPER, St. Louis, Mo. Filed Feb. 28, 1920. Serial No. 362,085. 5 Claims. (Cl. 180—68.)

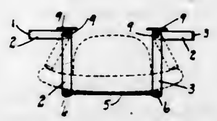
1. The combination of a vehicle radiator and a guard therefor, said guard being arranged forwardly of said radiator and being provided with a plurality of integrally formed forwardly projecting portions drawing means for securing said radiator to said guard, and a horizontally extending bushing carried by said radiator for the reception of said drawing means.

1,429,040. SLOT CLOSURE. ALFRED M. LANE, St. Louis, Mo., assignor to Monarch Metal Products Company, St. Louis, Mo., a Corporation of Missouri. Filed Jan. 13, 1921. Serial No. 437,052. 4 Claims. (Cl. 74—81.)



1. A device for closing a slot in which a lever operates comprising a base plate having a slot adapted to register with the slot for said lever and a cover plate adapted to move with said lever, said base plate being adapted to be secured in position and having rebent flanges along its opposite sides forming slideways for said cover plate, said cover plate having an elongated notch formed in one end adapted to receive said lever, and a detachable locking member mounted on said cover plate and extending across the mouth of said slot for holding said lever therein.

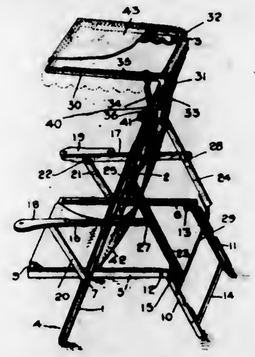
1,429,041. DRILLING BIT. WILLIAM A. LEGATE, Guthrie, Okla., assignor of one-half to Garnet C. Sandidge and Chester R. Damon, both of Guthrie, Okla. Filed May 5, 1921. Serial No. 466,925. 3 Claims. (Cl. 255—73.)



1. A device of the class described comprising parts of successively decreasing diameters, and provided with longitudinal seats which open laterally through said parts and through the ends thereof; cutters insertable endwise into the seats and dove-tailed therein against outward move-

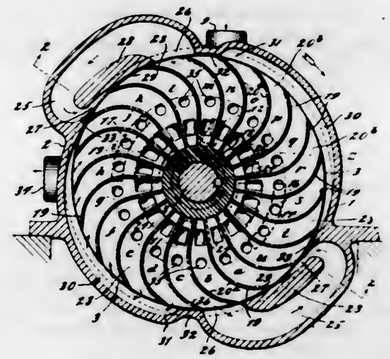
ment in a direction at right angles to the axis of the device, the cutters projecting beyond the ends of said parts

and projecting laterally beyond said parts; and means for holding the cutters against longitudinal movement.



1,429,042. ADJUSTABLE BRACKET AND SHELF. SIGMUND LISKOW, Cincinnati, Ohio, assignor of one-half to Henry Sway, Cincinnati, Ohio. Filed Aug. 1, 1921. Serial No. 488,982. 2 Claims. (Cl. 45—13.)

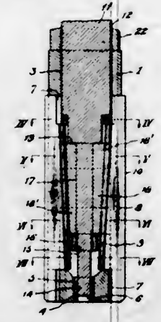
2. A device of the character described formed of two sections, each section comprising an elongated arm provided with end extensions and means for detachably connecting the two arms together to form a shelf or bracket and means for suspending the same upon an article rendering the two sections capable of swinging opposite directions, and said connecting means between the arms capable of being swung out of the way, or of being swung to connect said sections.



1,429,043. COLLAPSIBLE CAMP CHAIR AND CANOPY THEREFOR. ANDREW MARTIN, Toronto, Ontario, Canada. Filed Dec. 12, 1921. Serial No. 521,855. 1 Claim. (Cl. 155—139.)

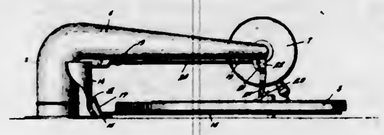
A collapsible camp chair, comprising a back frame member, a seat frame member pivotally mounted intermediately of its width between the sides of the back frame member and comprising two portions pivotally connected together at their opposing ends, one of such portions forming the seat frame proper and the other portion forming the rear supporting strut resting upon the ground, a strut member pivotally connected to the back frame member above the seat frame proper and engaging the supporting strut at its opposite or free end, arm bars pivotally connected to the strut members carried by the back frame, bars pivotally connected at one end adjacent to the free ends of the arm members and at the opposite end to the back frame at the pivot connecting the back frame and seat frame, and

looped guides secured to the sides of the back frame through which the arm bars freely extend.



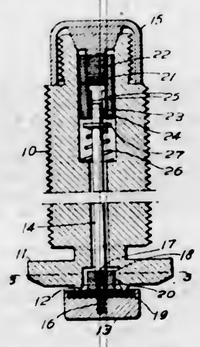
1,429,044. TURBO DISPLACEMENT MOTOR. LEWIS HALLOCK NASH, South Norwalk, Conn. Filed Feb. 23, 1921. Serial No. 447,285. 18 Claims. (Cl. 60—108.)

1. In combination, a casing adapted to contain a liquid, a rotor in the casing and having a plurality of chambers each having an orifice, a passage in the casing having an outlet at its rear portion discharging liquid through said orifices into said chambers successively, and said passage having an inlet at its forward portion into which inlet the liquid supplied to said chambers at said outlet is discharged from said chambers into said passage to supply liquid through said outlet to following chambers.



1,429,045. EXPANSIBLE REAMER. GEORGE NIEDERMAYER, Cleveland, Ohio, assignor to The Tell Machine & Tool Co., Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 25, 1919. Serial No. 333,321. 2 Claims. (Cl. 77—75.5.)

1. In an expansible reamer, the combination of a hollow body member formed with radial slots and having an open interiorly threaded end; blades mounted and adapted to slide in said slots; an actuating member in said body member formed with longitudinally inclined slideways, the inner ends of said blades being formed with inclined bearings adapted to seat and slide in said slideways; and a rod having threaded engagement with the interiorly threaded end of said body member, said actuating member being rotatably mounted upon said rod but longitudinally fixed

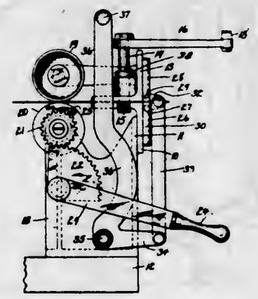


relatively thereto, said actuating member being removable with said rod through said open threaded end of said body.

1,429,046. NONSET AUTOMATIC STOP. CLEARENCE B. O'NEILL, Clymer, Pa. Filed Nov. 18, 1921. Serial No. 516,171. 3 Claims. (Cl. 192—116.)

1. In combination with the tone arm, turn-table and music tablet supported on the turn-table, a lever supported adjacent to one end of the tone arm and carrying a pivoted foot contacting with the music tablet, said music tablet having a recessed portion lying within the path of travel of the pivoted foot, a brake arm, means for connecting the lever and brake arm, and said pivoted foot adapted to contact with the walls of the recessed portion to cause the operation of the lever and connecting means between the lever and brake arm.

1,429,047. TIRE VALVE. MARSHALL J. PAYNE, Staunton, Va., assignor to The Payne Valve Corporation, Staunton, Va. Filed Sept. 30, 1921. Serial No. 504,308. 4 Claims. (Cl. 152—12.)

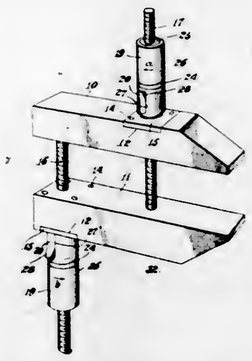


3. The combination of a tubular tire stem having a valve seat in its interior end, a valve movable to and from such seat, a valve stem passing through the tire stem, means positively to seat the valve comprising a radially movable member loosely connected with the stem to allow movement of said member under centrifugal force independently of the stem, a rotary cap engaging said member to move the same radially of the wheel, and means to prevent rotary movement of the stem and said member when said cap is rotated.

1,429,048. HOISTING AND LOCKING MECHANISM FOR PLOWS. ALFRED M. SCHLAGEL, Montgomery County, near Dayton, Ohio, assignor to Rial T. Parrish, Dayton, Ohio. Filed Oct. 21, 1921. Serial No. 509,243. 5 Claims. (Cl. 97—50.)

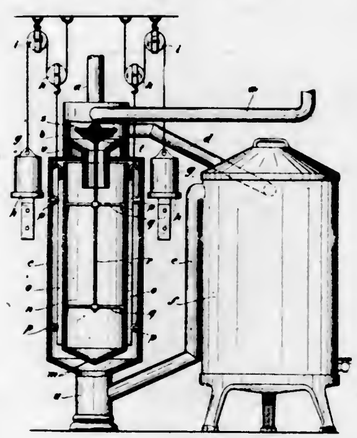
1. In a device of the type described, the combination with a plow beam, a plow carried thereby, of elevating mechanism for said plow beam, a driving gear, a rotatable shaft transverse to said gear, an inner crank fast on said shaft, an outer crank also fast on said shaft, a connecting element between the outer crank and the plow elevating mechanism, a crank pin in the inner crank, movable into engagement with the driving gear, a push element adapted to force said crank pin into engagement with the driving gear, a lever, and means actuated by said lever, adapted to engage and force the push element inwardly a sufficient distance to press the crank pin into engagement with the driving gear, whereby the inner crank may be turned by the latter to actuate the plow elevating mechanism through the outer crank.

1,429,049. PAPER-FOLDING MACHINE. HARRISON A. SELFRIDGE, New Haven, Conn. Filed July 23, 1921. Serial No. 486,966. 4 Claims. (Cl. 270—61.)



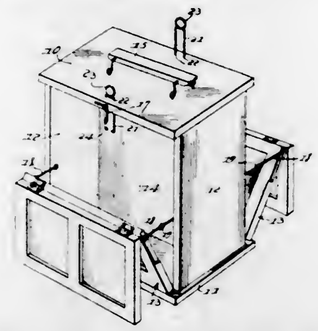
1. A paper folding machine, comprising a fixed clamping-member, a movable clamping-member above the same, each having a horizontal clamping-face and a vertical wall, means for feeding a strip of paper between the clamping-members, a slide connected with the outer face of the vertical wall of each of said clamping-members, and means for moving the said slides up or down beyond the meeting faces of said clamping-members.

1,429,050. HAND SCREW. SEYMOUR SYLVESTER, Brooklyn, N. Y. Filed Sept. 1, 1921. Serial No. 497,754. 4 Claims. (Cl. 144—301.)



1. In a tool of the character described, the combination of adjustably mounted clamping jaws, a spindle fixed

to each jaw and adapted to move freely in an opening in the other jaw, and means carried by said jaws and capable of free axial and rotary movement and screw ad-



justment about said spindles, whereby the clamping jaws may first be moved unobstructedly toward each other and then receive further adjustment about said spindles, to be forced into closer proximity with each other.

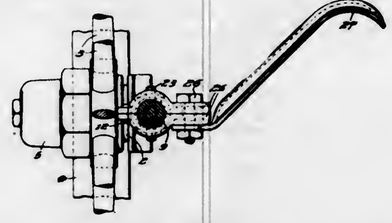
1,429,051. APPARATUS FOR COLLECTING RAIN WATER FOR DOMESTIC AND OTHER PURPOSES. KURT VONGEHR, Tilsit, Germany. Filed May 18, 1922. Serial No. 561,992. 1 Claim. (Cl. 137—9.)

In an apparatus for collecting rain water, a clear-water reservoir, a drain adjacent thereto and connected thereto by an overflow-pipe, said drain having an upstanding casing *c*, a preliminary receiving-chamber on top of said casing *c* and having a discharge-opening leading therefrom, said discharge-opening having a valve-seat, a gravitating counter-balanced receptacle mounted in said casing *c* and means for guiding it therein, said receptacle having a leak-opening at its lower end, a rod affixed to said receptacle and extending up through the valve-seat surrounding the discharge-opening and provided with a valve at its upper-end adapted to seat on said valve-seat, said valve being provided with a leak-opening, and a pipe leading from the preliminary receiving-chamber at a point above the valve-seat to said clear-water reservoir.

1,429,052. DISK-RECORD CABINET. STEPHEN S. WARD, San Diego, Calif. Filed Feb. 24, 1922. Serial No. 538,931. 2 Claims. (Cl. 211—16.)

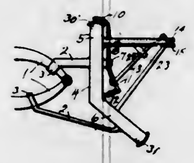
1. A portable record cabinet having a frame comprising top, bottom and end walls, and movable side walls hinged at their lower edges to the bottom wall and limited in outward swinging movement to positions at an outward and upward inclination to the plane of the adjacent sides of the frame, and means for securing said doors in their closed positions, and retainers slidingly mounted in the walls of the frame for positioning at their inner ends in the paths of outward movement of the records.

1,429,053. WRENCH. WILLIAM H. WARD, Ashtabula, Ohio. Filed June 4, 1919. Serial No. 301,627. 1 Claim. (Cl. 81—91.)



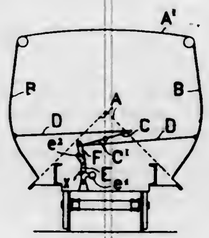
A wrench comprising a pair of plates, a jaw having a shank mounted between said plates and rigidly secured thereto, a second jaw having a shank pivotally supported between said plates, and a handle formed with a disk like head and pivotally supported between the plates with the pivot concentric with the head, the two jaws being formed with recesses in their shanks concentric to the head and embracing the latter on opposite sides of its center.

1,429,054. AGRICULTURAL IMPLEMENT. WILLIAM C. WARREN and GEORGE L. KIER, Philadelphia, Pa., assignors to S. L. Allen & Co., Inc., a Corporation of Pennsylvania. Filed May 28, 1921. Serial No. 473,455. 3 Claims. (Cl. 280—96.1.)



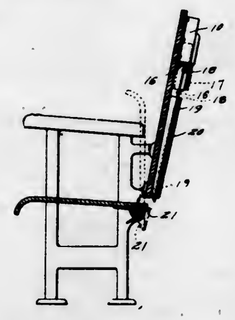
1. In a machine of the class described, the combination with a vertically extending hanger, of an axle-support-

ing housing comprising a pair of oppositely disposed members arranged to form a socket for the reception of said hanger, anti-friction means contained in and forming a bottom to said socket and cooperative with the hanger,



means operative to retain the hanger in the socket, and a substantially horizontally extending cylindrical stub axle removably positioned adjacent the lower extremity of said housing.

1,429,055. AUTOMATIC SAFETY FENDER FOR MOTOR VEHICLES. CHARLES W. WILLIAMS, Jr., Montclair, N. J. Filed Apr. 18, 1922. Serial No. 555,429. 9 Claims. (Cl. 293—41.)



2. In a motor vehicle, an expansible frame, said frame being anchored intermediate its edges to a support to permit it to expand in opposite directions, a spring actuated catch to hold said frame in its closed position, a pivoted lever connected to said catch and adapted to release it when said lever is pressed.

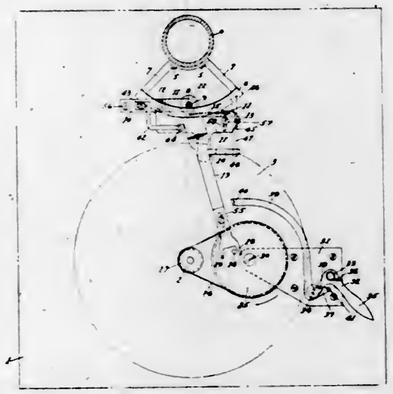
1,429,056. SELF-DISCHARGING CAR. WILHELM WINTER and GERHARD IMMAND, Essen, Germany, assignors to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Mar. 28, 1921. Serial No. 456,371. 6 Claims. (Cl. 105—255.)

1. In combination with a car body having hinged flaps, a toggle joint means for controlling the simultaneous opening of said flaps, means to give to said first named means a locked position past the dead center of said toggle, said toggle joint means comprising a lost motion connection for releasing the lock of said toggle without thereby giving the said flaps an oscillatory movement.

1,429,057. INDICATING DEVICE FOR THEATER SEATS. DAVID R. ALLEN and JOHN FRANEK, Omaha, Nebr. Filed Sept. 3, 1920. Serial No. 408,063. 2 Claims. (Cl. 116—114.)

1. A chair having a signalling element above the seat, said element having a casing provided with a housing and an opening above the housing, a signal opposite the opening, a shutter slidable in the casing over said opening, a spring in the housing connected to the casing and shutter to urge the latter to closed position, and a means to operate the shutter.

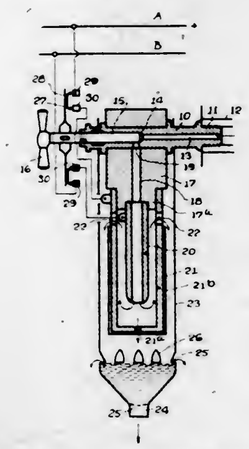
1,429,058. MOISTENER FOR STAMPS, ENVELOPES, TAPE, ETC. CHARLES WILLIAM BEISER, Brooklyn, N. Y. Filed June 7, 1921. Serial No. 475,694. 6 Claims. (Cl. 91—54.4.)



1. A moistener consisting of an ornamental figure or statuette hollow to provide a water reservoir and having a hollow head portion with a protruding tongue part, a wick secured to the tongue portion and depending into the reservoir, the end of the wick resting on the tongue portion and exposed and accessible at its upper surface.

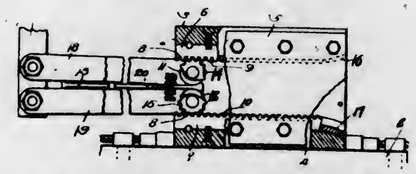
1,429,059. NONSET AUTOMATIC STOP MECHANISM. ISAAC BELLOCH, New York, N. Y. Filed June 21, 1921. Serial No. 479,174. 13 Claims. (Cl. 192—116.)

1. In a phonograph, a tone arm, a braking mechanism including an oscillatable arm, means for oscillating said arm, and additional means for moving said arm comprising a lever, arm actuating means controlled by said lever and cam mechanism controlled by said tone arm for pivoting said lever.



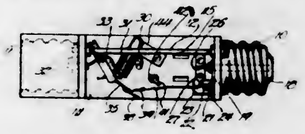
5. In a phonograph, a tone arm, a turn-table, a brake therefor and a non-set automatic tripping mechanism for

said brake comprising a rack secured to the tone arm, a pinion operated thereby, a shaft secured to said pinion, a ratchet secured to said shaft, a pawl and carrier rotated thereby when said pinion is rotated in one direction, a second pinion freely rotatable on said shaft and rotated in one direction by said carrier, resilient means preventing rotation of said second pinion in the opposite direction, an arm having a hub frictionally engaged between the pawl carrier and said second pinion, said shaft carried mechanism being adapted to move said arm



in one direction only, means for moving said arm in said one direction independently of said mechanism, comprising a lever pivoted so that at times one end is depressed by said rack, a resilient device controlled by the other end, said resilient device being in the path of movement of said arm only when the opposite end of the lever is depressed by said rack, a means for moving said arm in the opposite direction, and a brake tripping mechanism in the path of movement of said arm and adapted to be tripped upon a sufficient movement of said arm in said opposite direction.

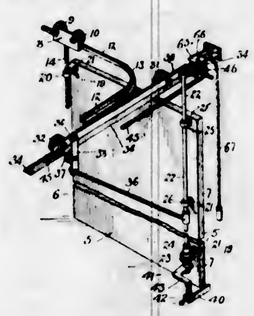
1,429,060. WATER-HEATING FAUCET. OTTO F. BRUMAN, Zurich-Enge, Switzerland, assignor to Fosta A.-G., Zurich, Switzerland. Filed Apr. 13, 1921. Serial No. 461,079. 7 Claims. (Cl. 219—40.)



1. A water heating attachment for faucets comprising an insulating body directly connected to the faucet barrel, said body having a bore extending through it and connecting with the bore of the faucet barrel, a cup-shaped electrode suspended from the insulating body and provided with ports near its upper end, and a shorter and second electrode having a bore extending therethrough enclosed in and spaced apart from the cup-shaped electrode, said electrode being directly connected with the insulating body so as to register with the bore thereof.

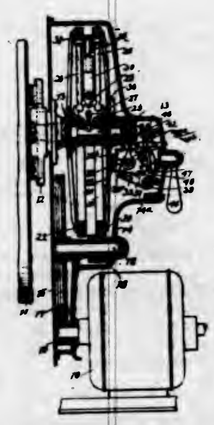
1,429,061. APPARATUS FOR ROLLING METAL. JAMES ROBERT COE, Waterbury, Conn., assignor to The American Brass Company, Waterbury, Conn., a Corporation of Connecticut. Filed June 12, 1920. Serial No. 388,423. 11 Claims. (Cl. 80—31.1.)

1. In an apparatus for rolling metal, the combination of two juxtaposed rollers having rolling surfaces completely surrounding their body portions, two relatively fixed tracks having opposing faces, said tracks engaging the body portions of said rollers so as to contact with said rolling surfaces, and means for maintaining the plane passing through the axes of said rollers substantially at a right angle to a plane medial to said tracks.



1,429,062. CIRCUIT-INTERRUPTING MECHANISM. MARTIN V. CORNICA, Chicago, Ill. Filed Apr. 20, 1921. Serial No. 462,884. 2 Claims. (Cl. 200—90.)

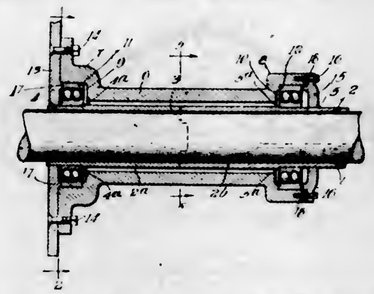
2. An attachment for electric light circuits having a plug at one end and a socket at the other, and comprising in combination an electrical conductor connecting one element of said plug with one element of said socket, a pair of electric make and break contacts, and the coil of an electromagnet included in the second conductor connecting another element of said plug with another element of said socket, a plate supporting one of said electric make and break contacts, and means to hold said plate frictionally in electrical contact with a conducting portion of the circuit included between the second element of the plug and socket, an extension from said plate, an armature for said electromagnet having a pair of fingers, one finger adapted to engage said extension when the armature is attracted, the other finger adapted to engage said extension when the armature is released, the weight of the armature being sufficient to move said plate to unite said electrical contacts when one finger engages said extension, the armature being positioned diagonally to the axis of the structure so that gravity will act upon the armature when the device is either in a vertical position or in one of its horizontal positions.



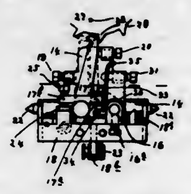
1,429,063. DOOR. ANTHONY L. CRESCI, Vineland, N. J. Filed Oct. 6, 1919. Serial No. 328,709. 3 Claims. (Cl. 20—19.)

1. A sliding door mounted adjacent to a doorway wall and adapted to open along a side wall, a track extending along the side wall, a trolley hanger mounted on said track and hingedly connected with the door, a guide located in a fixed position between the side wall and the

door when in the open position, an arm having an angular extension adapted to extend around the edge of the door into engagement with the said guide, and means for securing the said arm in a fixed position upon said hanger.



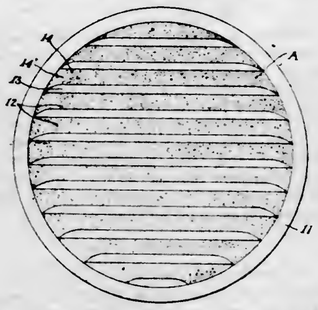
1,429,064. WASHER-DRIVE MECHANISM. ARTHUR R. CURTIS, Cleveland, Ohio. Filed Nov. 18, 1918. Serial No. 262,964. 16 Claims. (Cl. 74—50.)



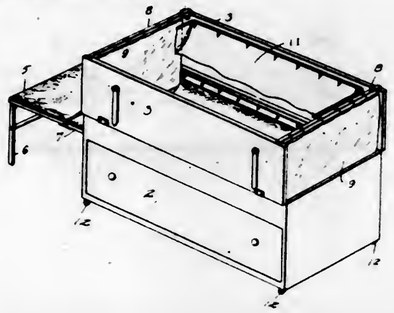
1. The combination with a shaft to be rotated, of a pair of driving members adapted to be rotated in opposite directions and to be successfully clutched to said shaft so as to reverse the direction of rotation of said shaft at intervals, a clutch device having a pair of expansible clutch members within said driving members and adapted to be expanded into engagement therewith, and means comprising a rocking member carried by said device for causing one clutch member to be expanded and the other to be substantially simultaneously contracted.

1,429,065. HUB FOR LOOSE PULLEYS, CLUTCHES, HANGER BEARINGS, AND THE LIKE. WILLIAM F. DAGGETT, Chicago, Ill. Filed Dec. 18, 1919. Serial No. 345,803. 19 Claims. (Cl. 64—36.)

1. A device of the class specified having a central space or chamber, ball bearings at the ends of said space or chamber, a transversely split sleeve in said space or chamber to permit individual removal of the sleeve sections and ball bearings, said ball bearings being mounted as complete units upon said sleeve sections and interposed between the same and the inner walls of said space or chamber, and means for closing the ends of said space or chamber, said sleeve passing through said closing means.

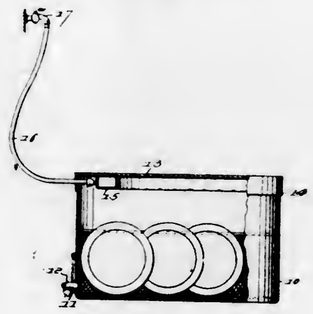


1,429,066. ESCAPEMENT DEVICE FOR TYPEWRITING MACHINES. LOUIS P. DISS, Ilion, N. Y. Filed Oct. 1, 1920. Serial No. 414,083. 13 Claims. (Cl. 197—82.)



1. In a letter spacing escapement for typewriting machines, the combination with a spring tensioned carriage and a toothed escapement member operatively connected thereto, of a movable holding dog, a stepping spacing dog arranged to stop the carriage at the end of its letter space movements, a spring placed under reactive tension by the movements of the carriage and adapted to actuate said spacing dog, and to effect initial retraction of the holding dog on the instant of the type reaching the platen.

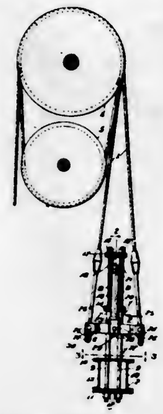
1,429,067. NONGLARING DEVICE FOR LAMPS. FREDERICK J. DOLE, New York, N. Y. Filed Nov. 15, 1917. Serial No. 202,119. 4 Claims. (Cl. 240—48.4.)



1. A non-glaring device comprising a plurality of horizontal louvres arranged one above the other and each provided with an outwardly and downwardly inclined dimmed upper face, and an upwardly and outwardly inclined freely transparent lower face disposed at an angle of about 60 degrees to the plane of the device.

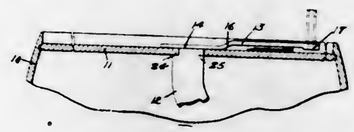
1,429,068. STEAMER TRUNK. MARIA H. P. DROSTE, Manati, P. R. Filed Apr. 7, 1921. Serial No. 459,289. 3 Claims. (Cl. 190—2.)

1. A bed-forming trunk comprising a rectangular body having a drawer receiving space located in a plane below the upper edges of said body, a drawer received by the space, leaves hinged to the upper edges of the sides of the body to close the top of the latter when in a position and to form sides of a bed when in another position, a bed-forming means carried by the walls of the body above said space, and drapery poles engaging said leaves to support them in their second named position.



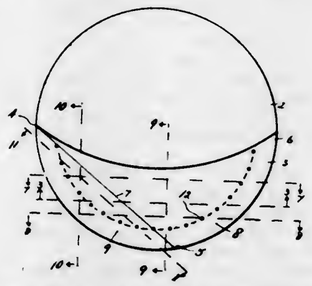
1,429,069. DISHWASHER. FLORENCE H. DUNN, Kansas City, Mo. Filed Aug. 10, 1921. Serial No. 491,274. 1 Claim. (Cl. 141—9.)

A dish washing apparatus consisting of a receptacle provided near its bottom with an outlet, a lid removably fitted upon the receptacle and formed on its under face with an annular distributing nozzle of π diameter slightly less than the diameter of the cover, the said nozzle being formed with perforations on its under face for the discharge of a cleansing agent in the direction of the bottom of the receptacle and from the vicinity of the walls thereof, and a flexible tubular member connected with said nozzle and adapted for connection with a spigot in the manner and for the purpose specified.



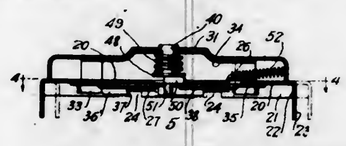
1,429,070. SUSPENSION DEVICE FOR EQUALIZING THE STRAIN ON ELEVATOR CABLES. JOSEPH E. EVANS, Bedford, Ind., assignor of one-fourth to Oliver N. Clifford, St. Louis, Mo., and one-fourth to Jasper O. Gyger, Bedford, Ind. Filed May 29, 1919. Serial No. 300,726. Renewed Jan. 23, 1922. Serial No. 531,314. 19 Claims. (Cl. 187—1.)

1. A suspension device for connecting an elevator car to a group of cables arranged to engage a supporting pulley, said device comprising a plurality of intercommunicating cylinders secured to the car, a corresponding plurality of pistons arranged in said cylinders, and equalizing bars



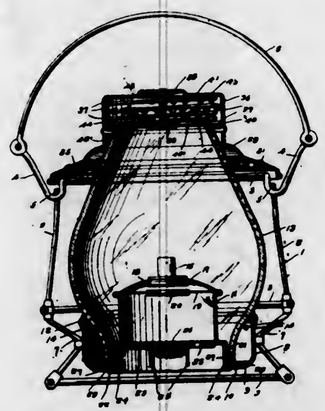
pivotally connected at their centers to said pistons and at their opposite ends to separate cables, said bars being arranged transversely of a vertical tangential plane passing through the periphery of said supporting pulley.

1,429,071. AGITATOR HANDLE. CHARLES E. FARRINGTON, Philadelphia, Pa. Filed Feb. 28, 1920. Serial No. 362,097. 6 Claims. (Cl. 74—33.)



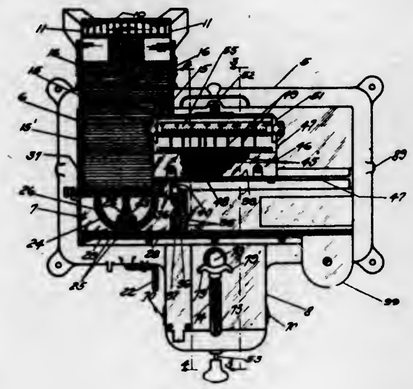
1. A handle for actuating a rotatable element, comprising an arm having a threaded aperture at one end and a crank-pin having a threaded end for engagement with said aperture so that said pin may be detachably secured to said arm, said arm having in one face an open recess in which said pin may be nested and clamped against a flat surface when unscrewed from said aperture.

1,429,072. PRISM FOR HEMOGLOBINOMETERS. KARL FUCHS, Ateo, N. J. Filed May 19, 1921. Serial No. 470,867. 5 Claims. (Cl. 88—14.)



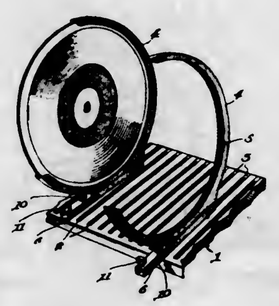
1. A prism for hemoglobinometers including a primary prism portion and a secondary prism portion separated by a line of demarcation, the primary prism portion increasing in thickness from a knife edge toward said line of demarcation and the secondary prism portion increasing in thickness in parallelism with said line of demarcation.

1,429,073. BAG FASTENER. FRANZ A. FULLER, Newark, N. J., assignor to The J. E. Mergott Company, Newark, N. J., a Corporation of Delaware. Filed Dec. 3, 1920. Serial No. 427,945. 4 Claims. (Cl. 70—2.)



3. The combination in a bag fastener comprised of engaging elements fixed respectively on the frames of a bag, one of said elements carrying a longitudinal slide having means for engaging the other element, of a post rotatably mounted in the sliding member, said post having an opening receptive of a key whereby it may be rotated, a plate slidable in the element carrying the slide, said plate being moved thereby, an internal cam in said element above said plate, an offset lug on said post operable in said cam, said cam limiting the movement of said lug, a stop on said plate engageable by said lug over which the lug rides when rotated, means for pressing said post towards said plate and means carried by said plate engageable with the other of said fixed elements.

1,429,074. RAILROAD LANTERN. EDWARD D. GRIFFITH, Tucson, Ariz. Filed July 23, 1920. Serial No. 398,381. 1 Claim. (Cl. 240—38.)



A lantern having a burner, a globe therefor, a plate provided with an inclined wall to rest on the upper end of said globe and having openings therethrough, deflecting elements secured to said wall and disposed over and partly closing said openings, a cap over said plate, an expansive spring intermediate said cap and plate, said cap being closed at its top and having draft openings through its side walls, deflectors integral with and struck out from said plate to provide the first mentioned openings, said deflectors extending over and above said deflecting elements, and resilient fastening members extending from said cap through said plate intermediate the first mentioned openings and being deflected in opposite directions and in contact with the lower surface of said plate.

1,429,075. LINOTYPE-BAR CUTTING OR BROACHING MACHINE. ARTHUR J. HARDER, Chicago, Ill. Filed Jan. 7, 1920. Serial No. 350,033. 15 Claims. (Cl. 90—25.)

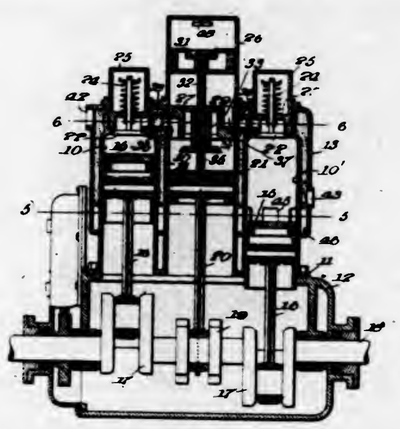
1. In a broaching machine for slugs, a longitudinally operable broaching die, a slug carriage, means for stepping said carriage transversely of said broaching die upon each operation of said die, and means for determining the length of each step of said carriage.

1,429,076. RECORD HOLDER. NIMROD A. HELSLEY, Grafton, W. Va. Filed Apr. 3, 1922. Serial No. 549,031. 7 Claims. (Cl. 211—16.)

1. In a device of the class described, a horizontally extending base member, and a plurality of individual record holders each independently and slidably mounted on said base member, each holder comprising two relatively movable parts.

2. In a device of the class described, a horizontally extending base member, a plurality of individual record holders each independently and slidably mounted thereon, each holder comprising two members pivoted together, and means for normally urging one of said members toward the other.

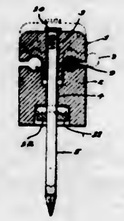
1,429,077. ILLUMINATED SIGN. JOSEPH HOTCHNER, San Francisco, Calif. Filed Dec. 19, 1919. Serial No. 346,162. 5 Claims. (Cl. 40—130.)



1. An illuminated sign comprising a sign body, illuminated characters carried thereby, a trough in the upper and lower portion of the sign body, supports above and below

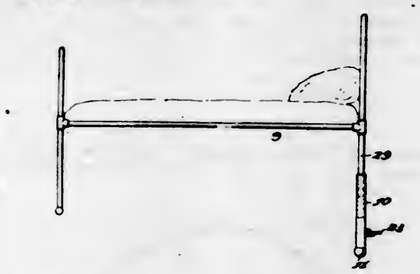
the sign, a sign panel carried by each support, means to detachably hold other sign panels in place against the sup-

port and at an angle to the face of the sign body, and lamps in each trough for illuminating the detachable sign panels.



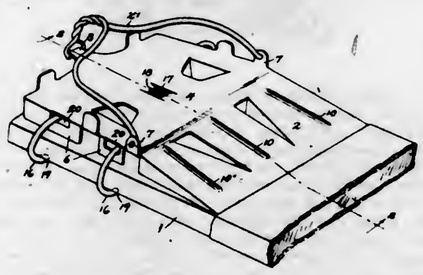
1,429,078. TWO-CYCLE INTERNAL-COMBUSTION ENGINE. JOB HUTCHINSON, Brooklyn, N. Y. Filed Mar. 30, 1920. Serial No. 369,937. 26 Claims. (Cl. 123—59.)

1. In a two-cycle motor, the combination with an internal combustion cylinder having exhaust ports in the wall thereof and a single diameter power piston working in said cylinder, of a charge compressing pump adjacent said cylinder proportioned and arranged to deliver a charge under pressure to said cylinder, said delivery being begun while the exhaust ports are being opened, continued during the period when they are being closed, and continued after they are closed.



1,429,079. SPLIT INSULATOR. CHARLES W. KETTRON, Macomb, Ill., assignor to Illinois Electric Porcelain Company, Macomb, Ill., a Corporation of Illinois. Filed Feb. 4, 1916. Serial No. 76,111. 6 Claims. (Cl. 173—314.)

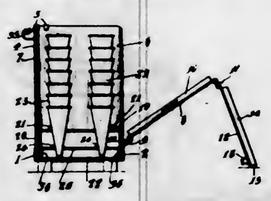
5. An insulator formed of sections, a fastening device loosely inserted through and normally holding the sections in associated relation, the fastening device having a smooth surface construction, and retention means adjustably and frictionally held on said fastening device and operating to primarily hold all the parts of the in-



sulator intact on the fastening device prior to the application of the insulator, the retention means being shifted on the smooth surface of the fastening device by engagement thereof with the surface against which the insulator is applied.

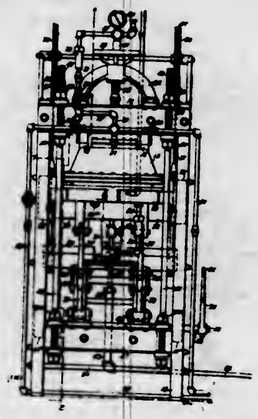
1,429,080. HOSPITAL BED. AMBROSE M. KIRBY, St. Louis, Mo. Filed Nov. 12, 1921. Serial No. 514,531. 3 Claims. (Cl. 5—41.)

2. A device of the character described comprising a frame in combination with a hospital bed to which said frame is attached, a pair of hollow standards in which the post of the bed is telescopically mounted, a ratchet bar forming a part of the frame, a sliding ratchet mounted on the ratchet bar and cables leading from the sliding ratchet to the posts of the bed for elevating the bed when pressure is applied to the sliding ratchet, substantially as specified.



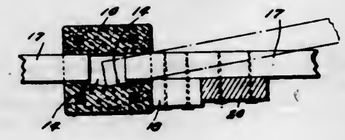
1,429,081. ATTACHMENT FOR IRONING BOARDS. MAXEMILIAN E. KOEHLER, Washington, D. C. Filed June 4, 1921. Serial No. 474,925. 3 Claims. (Cl. 68—27.)

1. An attachment for holding an iron on an ironing oard, comprising a metal body portion inclined at its



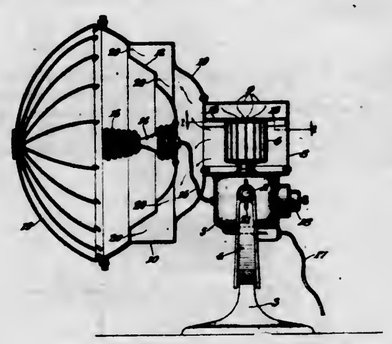
forward end and merging into a substantially horizontal portion, a clamp comprising a spring and two oppositely disposed hook members attached to the spring and extending through openings formed in the body portion, whereby to form a clamp to secure the attachment to an ironing board.

1,429,082. SANITARY CASE. SAMUEL A. KORNAWEET, Los Angeles, Calif. Filed Apr. 14, 1921. Serial No. 461,273. 3 Claims. (Cl. 211—25.)



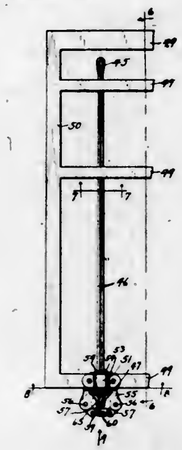
2. In a sanitary case, a receptacle having a lid, hangers having hooks at their upper ends engaging over the upper margins of the end walls of the receptacle and having laterally extending hooks at their lower ends, and a tray having perforations engaged by the lower hooks.

1,429,083. HAT-MACHINE PRESS. JAMES LAKE, Jr., Brooklyn, N. Y., assignor to James Lake's Sons, New York, N. Y., a Corporation of New York. Filed Jan. 6, 1919. Serial No. 269,876. 5 Claims. (Cl. 223—31.)



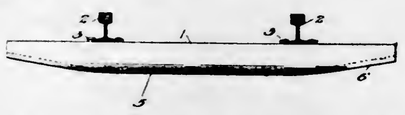
1. A press as characterized comprising a plurality of standing side frames disposed in spaced relation each of said frames having vertical guides on the inner faces thereof; a rigid cross head fixedly mounted on said standing frames adjacent the upper ends thereof; a movable cross head extending between said frames and engaging the guide members thereof; a plurality of suspension rods operatively connecting said fixed and movable cross heads, and screw nuts engaging said rods for raising or lowering the same to establish the working distance between said cross heads; a liquid press fixedly mounted and dependent from the first mentioned cross head; a movable mold carrying table, said table engaging the standing frames in guided relation; elevating means for said table embodying a plurality of toggle levers, said levers being pivotally connected and operatively engaging said second mentioned cross head and said table, the points of engagement for said levers with said table and said second mentioned cross head being at opposite sides of the center of said cross head and table for distributing the strain applied by said pressure member; manual means for placing the said toggle levers in rigid locked position between said cross head and table, said means embodying a rocking shaft supported on said second mentioned cross head and laterally disposed thereto; a hand lever for rocking said shaft; articulated means operatively connecting said rocking shaft and the pivotal joint of said toggle levers to place said toggle levers in locked straight line position between said table and cross head supporting same; and a plurality of bracket members integrally formed on said toggle levers adjacent the pivotal connection thereof for arresting the movement of said toggle levers at a point where said pivotal connection has slightly passed the vertical plane incorporating the pivotal connections of said levers with said table and cross head supporting the same to automatically lock the toggle joints to prevent the collapsing thereof by the pressure applied on said table by said press.

1,429,084. FENCE. JOSEPH E. LOEFFLER, St. Louis, Mo. Filed Apr. 19, 1921. Serial No. 462,496. 4 Claims. (Cl. 256—24.)



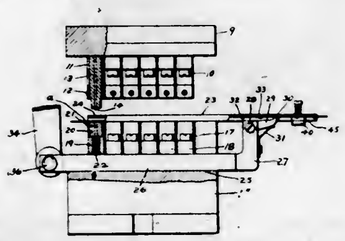
1. In a fence, posts provided with horizontally disposed seats, the side walls of which are divergent, and longitudinal rails, the lengths of which are less than the distance from the center of one post to the adjacent side of the next post to permit said rails to be placed in position, substantially as described.

1,429,085. HEATING APPARATUS. ALEXANDER MCGARY, New York, N. Y. Filed Feb. 28, 1921. Serial No. 448,678. 10 Claims. (Cl. 219—42.)



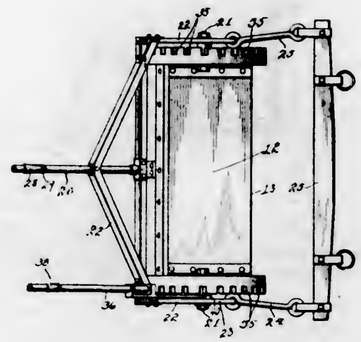
1. An electrical heating apparatus having in combination, a supporting frame, an electric motor mounted to swing on said frame, a reflector carried with the motor, an electrical resistance heating element operatively positioned in the reflector, a fan driven by the motor and positioned to drive a current of air past the heating element and out from the reflector.

1,429,086. NECKTIE HOLDER. MATHIAS MAGNUSON, Chicago, Ill. Filed Sept. 27, 1920. Serial No. 413,198. 8 Claims. (Cl. 211—14.)



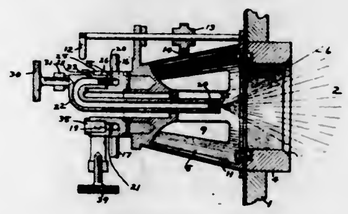
3. A neck tie holder comprising a single piece of bent wire forming a tie hook, a pair of clamping jaws, a connecting stem, and an arm on each jaw; and resilient means connected with said arms tending to hold the jaws together.

1,429,087. RAILWAY TIE. JOHN NEIMEYER, Trenton, Ohio. Filed Sept. 12, 1921. Serial No. 500,156. 7 Claims. (Cl. 238—30.)



1. A wooden railway tie having beveled underfaces at its ends, and grooves in said faces merging with the bottom of the tie, said grooves forming lateral ribs merging with the bottom of the tie.

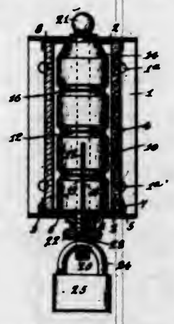
1,429,088. MACHINE FOR MAKING SNAP FASTENERS. HENRY S. NORMAND, Waterbury, Conn., assignor to Consolidated American Fastener Companies, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 8, 1916. Serial No. 135,744. 11 Claims. (Cl. 79—3.)



11. In a machine of the character described, the combination of opposed dies for forming a series of bulges or cups in a metal strip, a guide for the metal strip located between the dies, and means co-operating with one of said dies tending to press the strip up against said guide and prevent hindrance from the bulges or cups to the advance of said strip during the feed stroke of the reciprocating pawl.

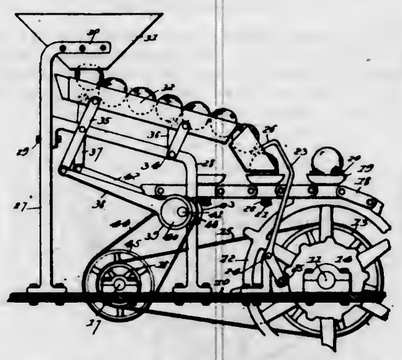
1,429,089. ROTARY SCRAPER. CHARLES R. OLBERG, Alhambra, Calif., assignor of one-half to Francis R. Schanck, Chicago, Ill. Filed Nov. 28, 1919. Serial No. 341,255. 20 Claims. (Cl. 37—40.)

1. A scraper comprising a bowl; a bail pivoted to the bowl; arms on the bail extending downwardly below the pivot of the latter; and draft means attached to the lower ends of said arms.



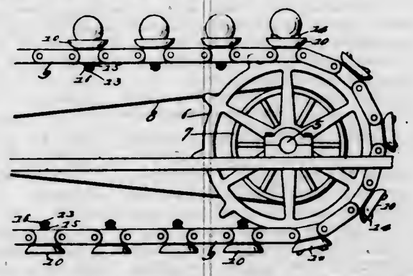
1,429,090. FUEL BURNER. HAYLETT O'NEILL, Larchmont, and ERNEST FANDRICH, Schenectady, N. Y. Filed June 1, 1918. Serial No. 237,707. 7 Claims. (Cl. 110—22.)

4. Apparatus for supplying fuel to a combustion chamber through an opening therein, comprising a plurality of fuel supply conduits for supplying different kinds of fuels, a coupling member at the end of each conduit to one of which a tuyere-bearing pipe may be connected for discharging the desired kind of fuel, and means for supporting said coupling members in proximity to said opening.



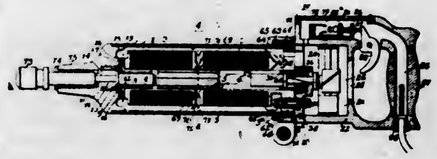
1,429,091. LICENSE HOLDER. JOSEPH OFFMAN, Connellsville, Pa., assignor of one-half to Abraham I. Daniels, Connellsville, Pa. Filed Nov. 23, 1921. Serial No. 517,228. 8 Claims. (Cl. 40—10.)

8. A license holder for vehicles comprising a transparent license casing permanently closed at one end and having a removable closure at the other, a core mounted in said casing and filling it except for a space between it and the casing sufficient to receive the license, said core having a plurality of longitudinally spaced peripheral grooves, longitudinal slots intersecting said grooves, and pivoted



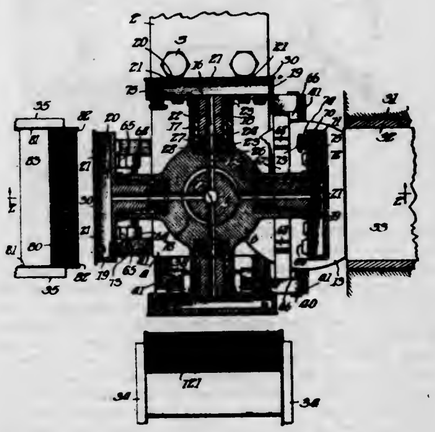
spurs mounted in said grooves at their points of intersection with said grooves and operable to engage a license when an attempt is made to withdraw it.

1,429,092. FRUIT-TRANSFERRING DEVICE. GEORGE R. PARANTEAU, Ventura, Calif. Filed Mar. 16, 1921. Serial No. 452,871. 7 Claims. (Cl. 198—218.)



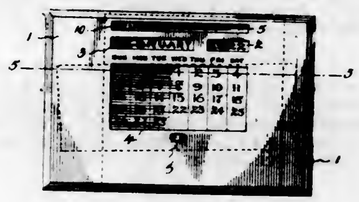
1. In a fruit transferring device including a chute having sides mounted for reciprocation, means for reciprocating the said sides oppositely, and means for delivering fruit to the chute.

1,429,093. CONVEYER FOR FRUIT. GEORGE R. PARANTEAU, Ventura, Calif. Filed Mar. 16, 1921. Serial No. 452,872. 3 Claims. (Cl. 198—144.)



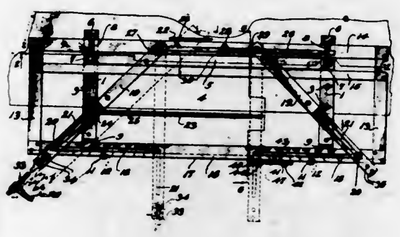
1. In a fruit conveyer, a sprocket chain, a sprocket wheel over which the chain is run, cups carried by links of the chain, a supplemental cup having its sides omitted in each of the first mentioned cups, the said first mentioned cups and links having apertures therein, shanks on the supplemental cups extending through the apertures of the first mentioned cups and links, and means for holding the inner ends of the shanks normally inside of the inner surfaces of the links.

1,429,094. ELECTRIC HAMMER. LOUIS PAULERO, Petersburg, Va., assignor to American Electric Tool Company, Incorporated, Petersburg, Va., a Corporation of Virginia. Filed Dec. 5, 1917. Serial No. 205,503. 23 Claims. (Cl. 172—126.)



1. In an electric hammer, a reciprocating plunger, electromagnetic means for reciprocating the plunger, and rotatable means for forcing a current of air around the plunger and said electromagnetic means.

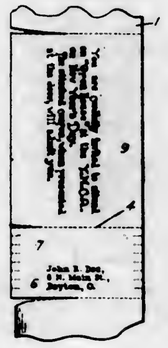
1,429,095. SEALING OR LABELING MACHINE. FRANK M. PETERS and WARREN H. HUNGERFORD, Chicago, Ill., assignors to Peters Machinery Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 23, 1919. Serial No. 332,715. 11 Claims. (Cl. 216—55.)



1. In an apparatus of the class described, the combination of a sticker blank magazine and a holder for an article, a sticker blank carrier movable from a position adjacent the magazine to a position adjacent the carrier, and an auxiliary sticker blank magazine adjacent the path of the carrier and intermediate of the first mentioned magazine and the article holder.

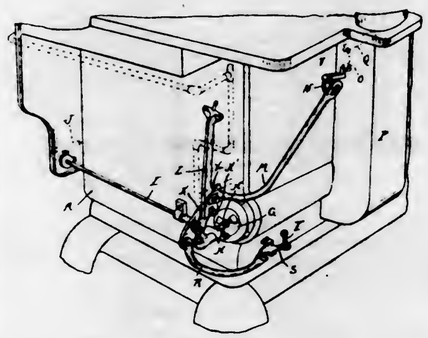
1,429,096. CALENDAR. PHILIP C. PETHICK, New Haven, Conn. Filed Feb. 25, 1922. Serial No. 539,159. 8 Claims. (Cl. 40—109.)

1. In a calendar of the class described, a body having apertures and separate year, month and day index members for selectively displaying indices representing respectively years, months and days, also code and guide numbers or characters provided respectively on said year and day index members and which code and guide numbers or characters are automatically obtained and provided to operate as determining factors only in the adjustment of the calendar; said index members being capable of determinable adjustment under guidance of said code and guide numbers or characters whereby the calendar is adjustable to present a precise reading without any omission or addition therefrom or thereto.



1,429,097. DADO AND MITER ATTACHMENT FOR SAW TABLES. FRANCIS V. PHILLIPS, deceased, by Kate Phillips, administratrix, Orlando, Fla. Filed May 12, 1921. Serial No. 468,899. 7 Claims. (Cl. 143—168.)

1. A dado and miter attachment for a saw table comprising a base frame having end bars, longitudinally extending bars connecting said end bars, rollers rotatably mounted above said end bars, a sliding carriage having end bars and longitudinally extending bars connecting its end bars with one of the longitudinally extending bars of the sliding frame extending beneath the rollers of the base frame and one of the longitudinally extending bars of the base frame positioned between certain of the longitudinally extending bars of the sliding frame, roller elements carried by one of the longitudinally extending bars of the base frame and engaging one of the longitudinally extending bars of the sliding frame, gauging elements adjustably connected with the sliding frame, and clamping means for holding a board upon the sliding frame and in engagement with the gauging elements.

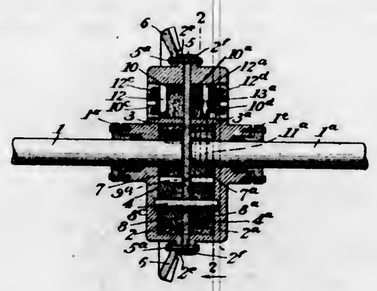


1,429,098. COMBINATION TICKET AND IDENTIFYING MEANS. EDWIN G. PICKERING, Dayton, Ohio. Filed Feb. 9, 1921. Serial No. 443,509. 1 Claim. (Cl. 283—18.)

An identifying device made of a strip of paper scored to form a ticket section and an identifying section divided into a plurality of spaces, each one of which is equal in

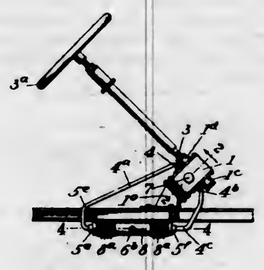
width to the single space of a typewriter, and printed matter on each section.

1,429,099. COMBINATION GAS AND COAL RANGE. WILLIAM V. ROBINSON, Owosso, Mich., assignor to The Independent Stove Company, Owosso, Mich., a Corporation of Michigan. Filed May 16, 1921. Serial No. 470,133. 9 Claims. (Cl. 126—36.)



1. A combination gas and coal range comprising an oven having a slotted side wall, a gas burner having a hollow arm pivotally mounted outside of the oven chamber and adapted to be swung inward or outward through said slot, and means for supplying a combustible gaseous mixture to said hollow arm.

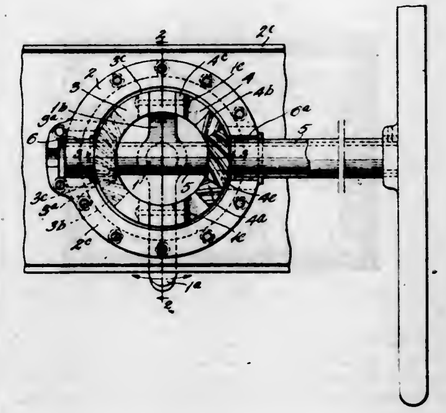
1,429,100. DIFFERENTIAL GEAR. DAVID E. ROSS, Lafayette, Ind., assignor to Ross Gear and Tool Company, Lafayette, Ind., a Corporation of Indiana. Filed Apr. 23, 1917. Serial No. 163,940. 10 Claims. (Cl. 74—99.)



1. A differential gear having adjacent pump chambers and ports connecting the said chambers so as to make a closed circuit for fluid between them; intermeshing inner and outer rotary gears in said pump chambers; axle sections respectively connected to pump-gears in adjacent chambers; and fluid filling said chambers whereby the said

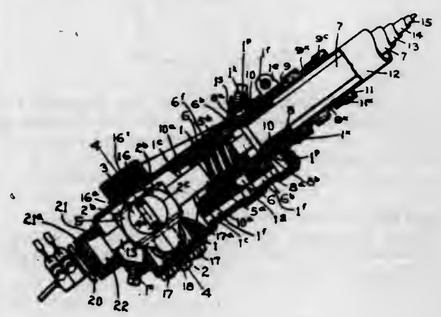
gears are normally held against relative rotatorial displacement, but the outer gear of either pump may be

permitted an orbital movement relative to the inner gear, substantially as specified.



1,429,101. STEERING GEAR. DAVID E. ROSS, Lafayette, Ind., assignor to Ross Gear and Tool Company, Lafayette, Ind., a Corporation of Indiana. Filed Apr. 26, 1917. Serial No. 164,745. 3 Claims. (Cl. 188—23.)

1. In a fluid controlled steering gear, a cylinder having a longitudinal slot; a piston in said cylinder closing said slot; a sleeve slidably mounted on the cylinder and covering the slot therein and movable with the piston to exclude dust from the interior of the cylinder; means connected with said piston and extending through the slot in the cylinder and the sleeve and adapted to be connected with the steering members of a vehicle; manually operable means for forcing fluid; and means for conducting fluid from said operable means to and from the cylinder at opposite ends of the piston.

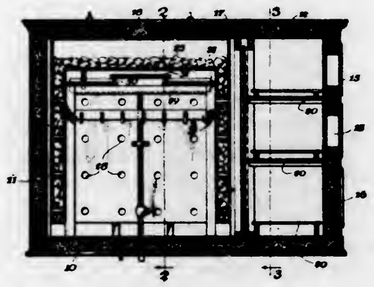


1,429,102. STEERING GEAR. DAVID E. ROSS, Lafayette, Ind., assignor to Ross Gear & Tool Company, Lafayette, Ind., a Corporation of Indiana. Filed Mar. 7, 1921. Serial No. 450,464. 10 Claims. (Cl. 74—79.)

1. In a steering gear, a rocker shaft, a steering shaft member approximately at right angles thereto, a pair of oppositely disposed toothed segments attached to the inner end of the rocker shaft and lying on opposite sides of the axis of said shaft, and also on opposite sides of the axis

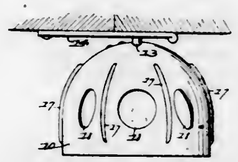
of the steering shaft, and gears on the steering shaft member respectively meshing with the related one of said segments.

1,429,103. STEERING GEAR. DAVID E. ROSS, Lafayette, Ind., assignor to Ross Gear & Tool Company, Lafayette, Ind., a Corporation of Indiana. Filed Nov. 4, 1921. Serial No. 512,878. 28 Claims. (Cl. 74—79.)



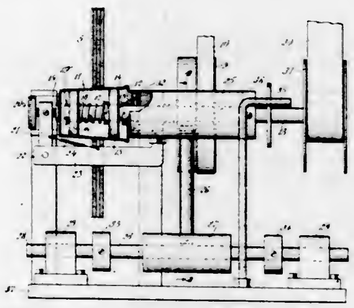
1. In a steering gear the combination of a casing, a slidable actuating member therein having a threaded portion, a rotatable nut mounted in said casing engaging the threaded portion of the actuating member, a steering shaft for operating the nut, means for preventing longitudinal movement of the nut in the casing, a rocker shaft journaled in the casing at substantially right angles to the actuating member, an arm on the rocker shaft projecting beside the actuating member, a disk mounted in said arm, and means on the actuating member engaging said disk whereby when the nut is rotated the actuating member is reciprocated and the rocker shaft rocked, substantially as described.

1,429,104. REFRIGERATOR. EDWARD H. ROY, Louisville, Ky. Filed Apr. 26, 1922. Serial No. 556,728. 4 Claims. (Cl. 62—68.)



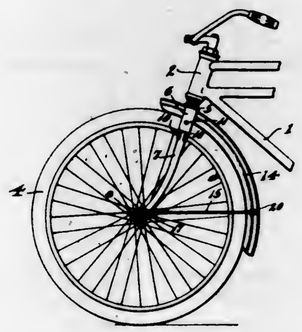
1. In a refrigerator, a casing, a grill work dividing said casing into a plurality of compartments having free air communication with each other, an ice box in one of said

compartments having hollow walls forming ice receiving spaces, a series of shelves in the other compartment to divide the same into a plurality of small compartments



each having the grill for its back air vent tubes passing through the walls of said ice box to afford communication between the interior and exterior thereof, and independent access means to the several compartments and ice box.

1,429,105. PADLOCK PROTECTOR. ALLEN W. RUDY, Dalton, Ohio. Filed Aug. 3, 1921. Serial No. 489,440. 4 Claims. (Cl. 70—16.)

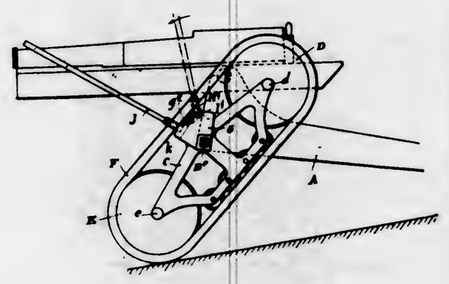


1. A padlock protector consisting of a domed or bell shaped housing for receiving the padlock and provided at its closed end with means for engaging the staple with which the shackle of the padlock is engaged.

1,429,106. GLASS-GRINDING MACHINE. EDWARD A. RYON, Pittsburgh, Pa., assignor to Fred. W. Siemens, Wellsboro, Pa. Filed July 22, 1919. Serial No. 312,479. 8 Claims. (Cl. 51—237.)

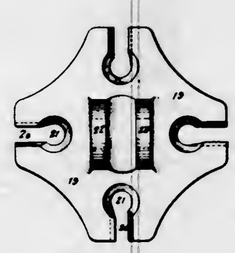
1. In a glass banding machine, a cutting member, a swinging support movable toward and away from said cutting member and a rotatable work holder pivotally mounted on said swinging support and thereby adjustable to vary the angle of the face of the work with respect to the face of the cutting member, and yieldable means at the side of the cutting wheel for engaging and supporting the work as it is pressed against the cutting wheel.

1,429,107. BICYCLE. GEORGE W. SAGE, Jr., Port Chester, N. Y. Filed Oct. 26, 1920. Serial No. 419,583. 6 Claims. (Cl. 208—97.)



1. In a bicycle fork, the combination with a transverse head and a steering post upstanding therefrom, of fork arms extending downwardly from the head and each comprising telescoping sections of longitudinally tapering form, means for cushioning the movement of one of the sections relative to the other, and means for limiting the extent of telescoping movement of the sections, the telescoping portions of the sections being shaped and proportioned with respect to each other for preventing lateral or edgewise play.

1,429,108. FURNACE-DOOR PEDAL. LOUIS SCHAUMBURGER and HARRY HUGH CLARK, Terre Haute, Ind. Filed Feb. 1, 1921. Serial No. 441,614. 7 Claims. (Cl. 74—81.)



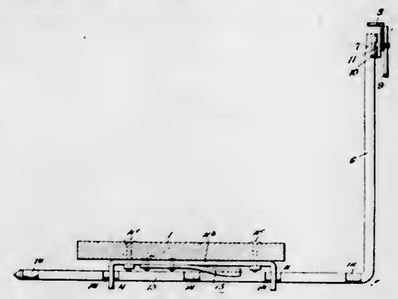
1. In a device of the class described comprising a lever for pivotal connection to a support, means carried by said lever adapted to actuate a valve stem, an arm also carried by said lever extending in close proximity to a floor or deck, a foot pedal carried by said arm, and means for adjusting said foot pedal in planes at right angles to each other and with respect to said arm.

1,429,109. TRAIL-CARRIAGE GUN MOUNTED ON ENDLESS TRACKS FOR VARYING THE HEIGHT OF THE LINE OF FIRE OF THE GUN. EUGÈNE SCHNEIDER, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint-Stock Company of France. Filed July 10, 1922. Serial No. 573,877. 7 Claims. (Cl. 89—40.)

7. A trail gun carriage comprising an endless track truck, an axle mounted on said truck, a trail secured to said axle and providing a fixed bearing point on the ground, and means secured to said truck for turning the truck in a substantially vertical plane about said axle.

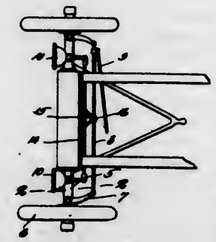
1,429,110. INSULATOR. HALLER D. SEAVEY, Greenfield, Mass., assignor to Maxwell Engineering and Manufacturing Company, New York, N. Y., a Corporation of New York. Filed July 3, 1918. Serial No. 243,198. 1 Claim. (Cl. 173—318.)

An anchor for an insulator connecting loop, said anchor comprising an anchor plate having means projecting at right angles to the plane of the plate and substantially from the center of the latter for establishing connection between the anchor and a hanger, said plate having two pairs of sockets lying in the same plane and spaced around said centrally projecting means, and being of a shape to receive the enlarged heads of a connection loop, the margins of the plate having radial slots which form lateral passageways leading to said sockets to permit the lateral insertion of the shanks of the connector loop to said sockets, substantially as described.



1,429,111. CLAMPING DEVICE FOR ARTIFICIAL ARMS. OSKAR SEMELEDER, Vienna, Austria. Filed Mar. 15, 1921. Serial No. 452,538. 7 Claims. (Cl. 3—12.)

1. A clamping-device for attaching implements to artificial limbs, comprising a relatively stationary bearing member, a relatively movable bearing member, a resilient member interposed between and bearing against said

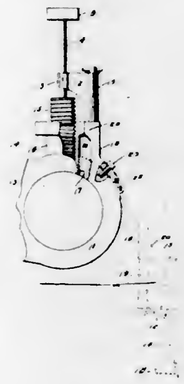


bearing members, and a flexible, inelastic member passing through said bearing members and bent upon itself to form a loop disposed beneath said movable bearing member.

1,429,112. AUTO LUGGAGE CARRIER. EUGENE SHEER, Lincoln, Ill. Filed July 26, 1921. Serial No. 487,678. 2 Claims. (Cl. 224—29.)

2. In an article carrier, the combination of bearings, a rod arranged in the bearings, an upstanding portion formed on the rod and having a square end, an angle arm secured to the square end of the upstanding portion, a spring interposed between the arm and upstanding portion, and a washer slightly smaller at its lower end in diameter arranged adjacent the square end of the upstanding portion, and means for moving the spring from its normal position.

1,429,113. HEADLIGHT. CHRISTOPHER C. SOMERS, Bend, Oreg. Filed Feb. 2, 1921. Serial No. 441,891. 1 Claim. (Cl. 240—62.)

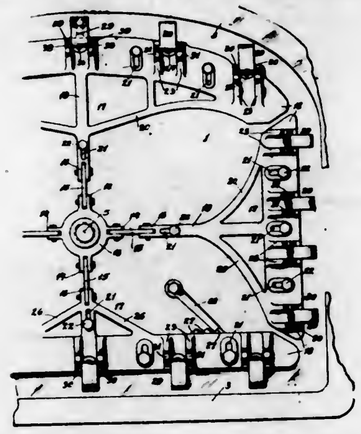


In combination with the connecting rod connecting the front wheels of a motor vehicle, lamp supporting brack-

ets, lamp supporting arms mounted in the brackets for pivotal movement therein, each of said arms having a lower right angled portion, an operating rod having its ends connected with the right angled portions of the arms, a triangular shaped extension formed integral with the operating rod at a point intermediate the ends thereof, arms having openings, forming a part of the extension, a pin extending through the connecting rod and having its ends disposed within the openings whereby movement of the connecting rod produces a relative movement of the operating rod.

1,429,114. CONVERSION OF FATTY ACIDS WITH SEVERAL DOUBLE LINKAGES OR OF THEIR GLYCERIDES INTO OLEIC-ACIDLIKE FATTY ACIDS OR THEIR SOAPS. CARL STIEPEL, Berlin, Germany, assignor to Persapol Gesellschaft mit beschrankter Haftung, Hanover, Germany. Filed Sept. 14, 1920. Serial No. 410,212. 2 Claims. (Cl. 87—12.)

2. A process for the conversion of fatty acids with at least two double linkages, or of their glycerides, into oleic acid-like fatty acids, or their soaps, in which the material is first saponified and thereafter the product is heated, to dryness without evaporation at a temperature between 210° to 250° F., without a material excess of alkali or alkaline earths, and thereafter recovering the fatty acids from the product by means of a mineral acid.

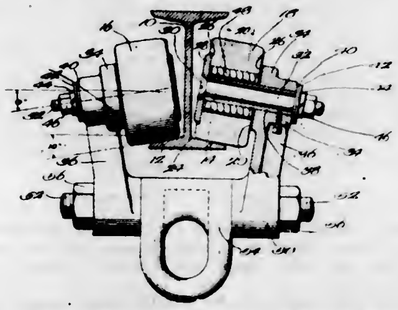


1,429,115. NONDISPLACEABLE GREASE CUP AND BUSHING ANCHOR. LAMONT H. STROUD, Sheridan, Wyo. Filed June 21, 1921. Serial No. 479,231. 1 Claim. (Cl. 184—48.)

In combination with a journal and a grease cup having a feeding stem and a notch, a bracket hinged to the journal and having an upstanding portion, a lug on said portion, means detachably securing the bracket to the journal against swinging movement relative to the latter and to hold the lug in the notch.

1,429,116. FASTENER FOR VAULT CLOSURES. SIDNEY TAYLOR, Galion, Ohio, assignor to E. P. Monroe, Galion, Ohio. Filed Jan. 28, 1921. Serial No. 440,689. 8 Claims. (Cl. 292—45.)

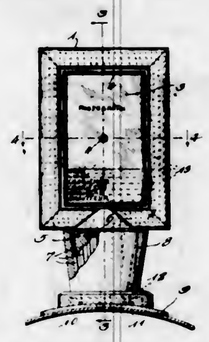
1. In a vault closure, the combination of a door, a spindle projecting through the door, a flange on said spindle at the inner side of the door, packing between said flange and the door, a nut locked on the spindle at the outer side of the door, packing interposed between said nut and the door, a carrier threaded upon the inner end of the spindle, locking plates slidably mounted upon the inner side of the door, and links each pivoted at one end to the carrier and at its opposite end to a locking plate whereby upon actuation of the spindle the links will be caused to move toward a position in parallelism with



the door and the locking plates will be caused to slide outwardly.

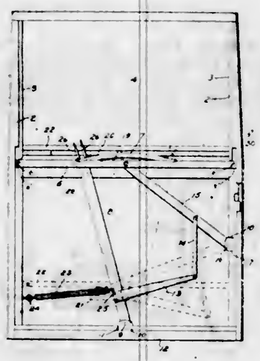
1,429,117. BOLT-RETAINING DEVICE. GEORGE B. THOMAS, Bridgeport, Conn., assignor to The Bryant Electric Company, Bridgeport, a Corporation of Connecticut. Filed June 29, 1920. Serial No. 392,830. 6 Claims. (Cl. 85—1.)

1. A body pierced to accommodate a securing bolt, a bolt passing therethrough, and means in gripping engagement with the wall of the hole through which the bolt passes and engaging said bolt to retain the same assembled with limited freedom of displacement of the bolt with relation to said body.



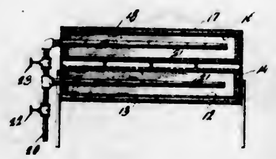
1,429,118. TROLLEY. JOHN S. TOWNSEND, Harvey, Ill., assignor to Whiting Corporation, Harvey, Ill., a Corporation of Illinois. Filed Feb. 4, 1921. Serial No. 442,506. 5 Claims. (Cl. 105—154.)

1. In mechanism of the class described a track, adapted to be traveled by a trolley wheel, having a wheel engage-



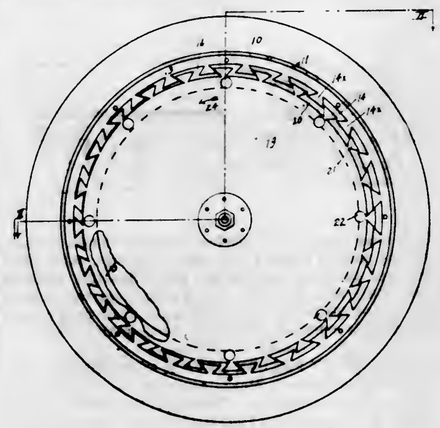
able face inclined downwardly at a definite angle to the horizontal, a support for a wheel which is to travel parallel thereto and a wheel rotatably mounted on the wheel support traveling on said track, the main central part of the circumferential surface of the wheel being cylindrical and at an angle to the horizontal, slightly less than the angularity to the horizontal of the track on which it travels.

1,429,119. CHAUFFEUR'S IDENTIFICATION-TAG HOLDER. EDWARD A. VERA, Chicago, Ill. Filed Aug. 8, 1921. Serial No. 490,602. 4 Claims. (Cl. 40—125.)



2. An identification device comprising an identification card, a pair of flat glass panels, contacting with the front and rear sides of said card respectively, glass frames integral with and extending around said panels, said frames being integrally joined to each other, an attaching plug integral with and extending downward from the lower sides of said frames and re-inforcing wires having their ends embedded in said attaching plug, the intermediate portions of said wires extending through and being embedded in the sides of said frames.

1,429,120. WINDOW REGULATOR. GEORGE W. WELLS, Amesbury, Mass., assignor to Powow Manufacturing Company, Amesbury, Mass., a Corporation of Massachusetts. Filed Oct. 19, 1920. Serial No. 417,040. 3 Claims. (Cl. 74—39.)

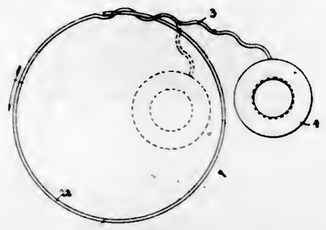


1. In a device of the character described, an arcuate bar, an operating lever movable along said bar, and a spring-tensioned handle lever pivoted to said operating lever and provided with a lateral stud having direct binding engagement with said bar, said handle lever being operable to release and move said operating lever.

1,429,121. HEATING APPARATUS. ROBERT PORTER WISE, Tulsa, Okla. Filed Sept. 25, 1920. Serial No. 412,886. 1 Claim. (Cl. 91—55.)

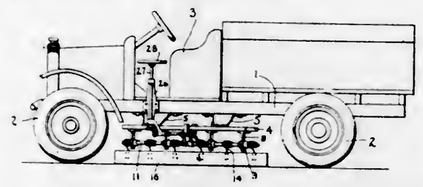
A heating apparatus including superposed heating casings the ends of one of which fall short of the ends of the other, ribs arranged between said casings and extending the full lengths of the longer casing to provide independent channels, a support for canvas rolls supported adjacent said longer casing to feed a length of canvas in each channel, steam inlet pipes each of which is equipped with a lateral perforate extension, said extensions projecting into the casings and extending transversely thereacross to emit the steam in jets.

1,429,122. APPLICATION OF POWER. BYRON L. BEEBE, Wellington, Kans. Filed Jan. 3, 1922. Serial No. 526,823. 4 Claims. (Cl. 301—6.)



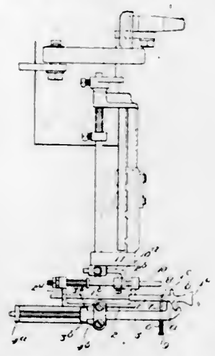
1. In combination, a wheel having a central element rigid with a circular plate; and a rim carrying a ring arranged within a felloe and around the periphery of said plate.

1,429,123. METHOD OF MANUFACTURING CABLE BEADS OR GROMMETS. FRANK H. BEYEA, Akron, Ohio. Filed Sept. 14, 1921. Serial No. 500,650. 5 Claims. (Cl. 152—13.)



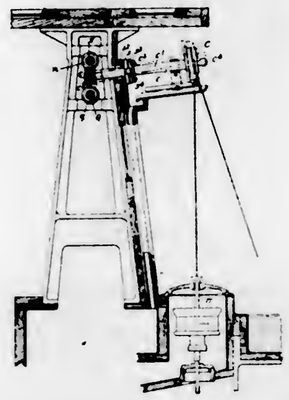
1. A process of manufacturing circular cables or grommets, comprising forming a unit length of wire with a spiralled portion, a straight portion, a spiralled portion and a straight portion in the order named, assembling the wire so shaped upon a carrier, bending the first two said portions of the wire around to form a circle, winding the third portion of the wire about the first two said portions to form the cable and tucking the fourth portion of the wire within the first said portion.

1,429,124. METHOD OF MANUFACTURING CABLE BEADS OR GROMMETS. FRANK H. BEYEA, Akron, Ohio. Filed Sept. 14, 1921. Serial No. 500,651. 6 Claims. (Cl. 152—13.)



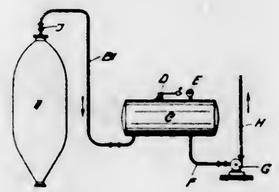
1. A process of manufacturing circular cables or grommets, comprising forming a unit length of wire with a straight portion of sufficient length to form a core wire, and a spiralled portion of sufficient length to cover the core wire, assembling the wire so shaped upon a carrier, drawing out the straight portion to form the core and then wrapping the spiralled portion about the said core until it is covered thereby.

1,429,125. ROAD SCRAPER. DAVID E. BURNS, Grand Rapids, Mich., assignor of one-half to Harold J. McKinley, Grand Rapids, Mich. Filed Apr. 3, 1922. Serial No. 549,080. 13 Claims. (Cl. 37—7.)



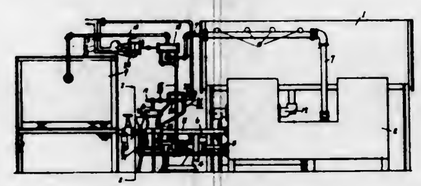
1. A road scraper, comprising a scraper blade, a shaft above the scraper blade, a plurality of springs, each coiled about said shaft and having one end adjustably fastened to the shaft and the other end fastened to the scraper blade, means for rotatably mounting the shaft on a vehicle and manually operable means for turning the shaft.

1,429,126. WEFT FEELER DEVICE FOR LOOMS. CARL A. CARLSON, Everett, Mass., assignor, by mesne assignments, to The Stafford Company, Readville, Boston, Mass., a Corporation of Massachusetts. Filed May 27, 1919. Serial No. 300,099. 20 Claims. (Cl. 139—83.)



1. A weft or filling-feeler for looms, comprising a laterally-movable feeler-member, a deflector-member, both thereof movable forward and rearward in unison, they respectively having surfaces which are kept in contact with each other by spring-tension and one or both of said surfaces beveled or inclined laterally, means for opposing forward movement of said deflector-member, and controller-devices through which a change in the operation of a loom is called as a result of lateral deflection of the laterally-movable feeler-member.

1,429,127. APPARATUS FOR AND METHOD OF MANUFACTURING ARTIFICIAL SILK. JAMES CLAYTON, Babbacombe, England, assignor to The Viscose Company, Marcus Hook, Pa., a Corporation of Pennsylvania. Filed Nov. 6, 1919. Serial No. 336,040½. 3 Claims. (Cl. 18—8.)



1. In apparatus for spinning artificial silk, a rotary spinning device, a setting bath for the artificial silk, a feed roller for drawing the silk from the setting bath and feeding it to the rotary spinning device, and means for driving said feed roller at relatively low speed to facilitate the introduction of the free end of the silk to the spinning device and thereafter at relatively high speed during the normal spinning operation.

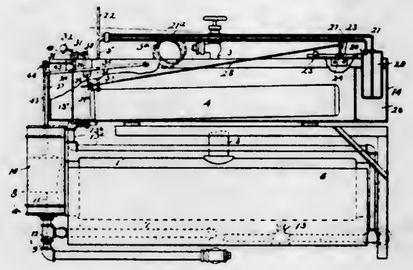
1,429,128. PROCESS FOR THE RECUPERATION OF THE SULPHUROUS ACID AND HEAT FROM WASTE GASES COMING FROM BOILERS FOR CELLULOSE. HANS CLEMM and CARL HANGLEITER, Mannheim-Waldhof, Germany, assignors to Zellstoffabrik Waldhof, Mannheim-Waldhof, Germany, a Corporation of Germany. Filed Mar. 2, 1921. Serial No. 449,264. 1 Claim. (Cl. 92—2.)

An improved process for the recuperation of sulphurous acid and heat from the waste gases of boilers for cellulose, in which the forced over steam and solution is directly introduced, without previous cooling, into the fresh solution, which is contained in a closed pressure vessel.

1,429,129. MEANS FOR REGULATING AND CONTROLLING THE STRENGTH OF LYE SOLUTION. SAMUEL J. DUNKLEY, Oakland, Calif., assignor to Dunkley Company, Kalamazoo, Mich. Filed Aug. 8, 1921. Serial No. 490,754. 4 Claims. (Cl. 23—8.)

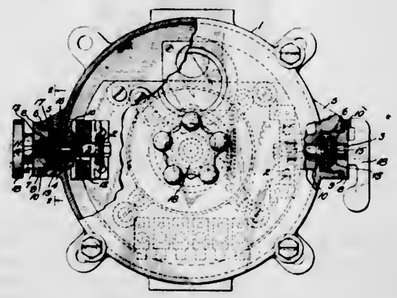
2. In an apparatus of the class described, the combination of the main tank, a mixing tank, means for delivering from the main tank to the mixing tank and return, a regulating valve to control the delivery from the main tank to the mixing tank, electric means for controlling the said valve, a hydrometer acted upon by the solution of the main tank connected to control the said electric means, as specified.

1,429,130. HEATING DEVICE. ALFRED E. DUTTON, Cleveland, Ohio. Filed July 9, 1921. Serial No. 483,469. 6 Claims. (Cl. 219—39.)



2. In a heating device, the combination of a housing having two compartments formed therein, the one compartment communicating at the top with the atmosphere and having an opening at the bottom; a casing in said other compartment communicating at the top with the atmosphere and at the bottom with said first-named compartment, and consisting of two separate plates having oppositely disposed corrugations forming a multiplicity of chambers, and separate end walls; electrical heating means located in each such chamber; and means for forcing air from said first-named compartment through said casing.

1,429,131. PURIFICATION OF METALLIC SOLUTIONS. SAMUEL FIELD, London, England, assignor to The Metals Extraction Corporation, Limited, London, England. Filed June 26, 1919. Serial No. 306,874. 9 Claims. (Cl. 75—18.)



1. The process for the purification of a zinc salt solution from base metallic impurities, which comprises immersing in the solution zinc and another metal in contact, neither of which is identical with the metallic impurity to be precipitated and one of which is lower than zinc in the electrochemical series.

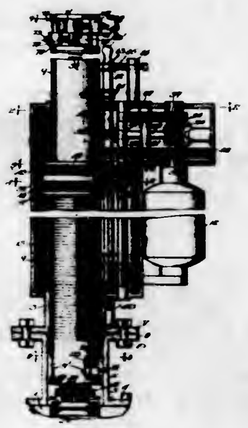
1,429,132. REFRIGERATING SYSTEM. GEORGE A. GASE, East Cleveland, and ERVIN A. SEYMER, Cleveland, Ohio. Filed Feb. 5, 1917. Serial No. 146,597. 13 Claims. (Cl. 62—5.)

1. In a refrigerating apparatus, an absorbing means, liquefied gas containing means, a water tank for cooling the absorbing means, a device for controlling the discharge of water from said tank, and means operatively connected with the said device controlled by the quantity of liquefied gas in the liquefied gas containing means for effecting the operation of said device to permit discharge of the water from said tank.

1,429,133. ELECTRIC-SWITCH CASING. PAUL S. GRIERSON, South Orange, N. J., assignor to Charles Cory & Son, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 14, 1920. Serial No. 410,260. 13 Claims. (Cl. 200—168.)

1. In a circuit making and breaking device, a casing enclosing a switch or transmitter, means exterior to the casing for operating the switch or transmitter, provisions connecting said means with the transmitter, said provisions including opposed valve members, the casing providing a bearing for the said provisions; the said bearing including opposed valve seats cooperating with the said opposed valve members whereby a double acting air and watertight bearing is effected for protecting the said enclosed switch or transmitter.

1,429,134. IRON-BOUND BOX COVER. SHELTON J. GUNN, Gunntown, Fla. Filed Oct. 13, 1921. Serial No. 507,516. 4 Claims. (Cl. 217—56.)



1. The combination with a member adapted to serve as a box cover or bottom, a substantially U-shaped metal

binding strip encircling the end edge of the member, the ends of the strip projecting beyond the sides of the

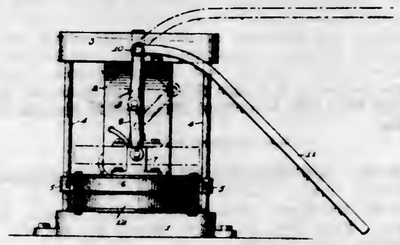
member and having outwardly pointed spurs pushed inwardly therefrom into the body of the said member.

1,429,135. GRINDER. JOSEPH A. GUTENSON, Chicago, Ill. Filed Sept. 26, 1919. Serial No. 326,517. 8 Claims. (Cl. 51—245.)

1. In a device of the kind described and in combination, a rotatable and longitudinally movable spindle, means for supporting the spindle, means for rotating said spindle in either direction, grinding wheels arranged at one end of the spindle, adjustable supporting means for said grinding wheels, a shaft for each grinding wheel extending through the spindle and operatively connected with the grinding wheels, means intermediate the ends of the spindle and movable therewith for driving said shafts, and means operatively connected with said adjustable supporting means and extending to the opposite end of the spindle for independently controlling said supporting means to vary the positions of the grinding wheels relative to each other and the spindle axis, and means for guiding the spindle and maintaining the same against transverse movement in the work.

1,429,136. LIQUID-TESTING DEVICE. CHARLES J. HAGGARTOM, Warren, Pa. Filed Aug. 2, 1920. Serial No. 400,735. 3 Claims. (Cl. 137—18.)

2. A liquid testing device comprising a closed container, provided in one side with a plurality of vertically spaced openings, rotary valves for closing the openings, an actuating rod for the valves, and crank arms between the latter and the rod, whereby when the container is lowered



in the tank and the lower end of said rod engages the bottom, the valves will be opened and vice versa.

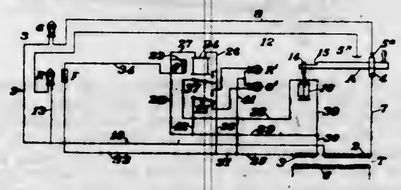
1,429,137. OIL BURNER. NOAH HALE, Chattanooga, Tenn., assignor to Henry Loeb and Henry Hurst, both of Memphis, Tenn. Filed June 17, 1921. Serial No. 478,278. 9 Claims. (Cl. 158—65.)

4. A liquid fuel burner comprising an upper member having ignition openings, a vaporizing coil extending over said openings, a valve to admit fuel thereto, a valve to transmit vaporized fuel therefrom to the interior of the burner, means for initially heating a portion of the coil including a helical auxiliary coil and a valve for admitting fuel thereto, and means for heating the outlet end of the auxiliary coil, each of said coils including a bundle of metallic filaments of varying lengths so as to taper from the outlet end back toward the inlet end of each coil, substantially as set forth.

1,429,138. METHOD AND APPARATUS FOR TREATING SAWS WITH HEAT. ALBERT JOSEPH HARRY, East Cleveland, Ohio. Filed Feb. 17, 1921. Serial No. 445,659. 4 Claims. (Cl. 266—4.)

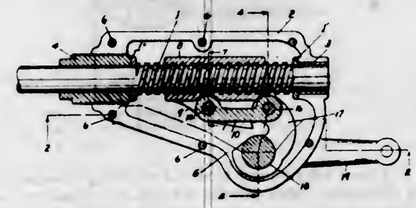
1. A method of treating flat metallic articles such as saws, which comprises subjecting them to a high heat, then substantially immediately subjecting them to a lower heat, and subjecting them to pressure during their subjection to the lower heat.

1,429,139. BUCKLE. JOHN HERBELING, Rochester, N. Y. Filed Nov. 17, 1921. Serial No. 515,998. 7 Claims. (Cl. 24—265.)



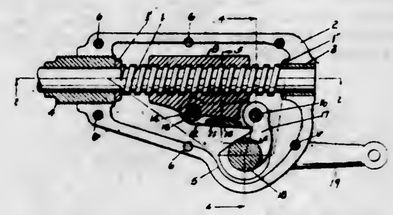
1. A buckle comprising a buckle frame, and belt anchoring means embodying two members, each having a belt engaging portion extending toward the belt engaging portion of the other member, said members having relative movement to permit separation of the belt engaging portions.

1,429,140. METHOD OF TREATING SLUDGE ACIDS. INGENUIN HECHENBLEIKNER and THOMAS C. OLIVER, Charlotte, N. C., assignors to Chemical Construction Company, New York, N. Y., a Corporation of North Carolina. Filed Jan. 7, 1922. Serial No. 527,532. 18 Claims. (Cl. 23—1.)



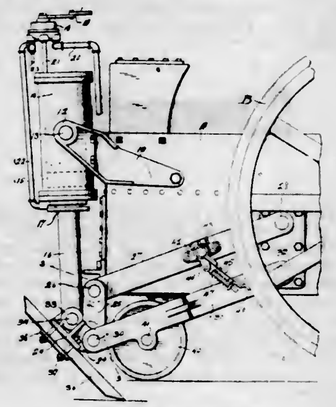
1. The method of treating sludge acids or separated sludge acids which consists in first preheating the sludge acid without concentrating the same to drive off the more volatile impurities, and in then subjecting a body of the preheated weak acid to heat treatment to concentrate the same.

1,429,141. INDICATION MEANS FOR LIGHT SIGNALS. LEMUEL F. HOWARD, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Mar. 2, 1921. Serial No. 449,144. 14 Claims. (Cl. 246—135.)



7. In combination, a signal comprising a lamp, means for indicating illumination of said lamp at a point remote from the lamp, and a cell responsive to the light emitted by the lamp for controlling said indicating means.

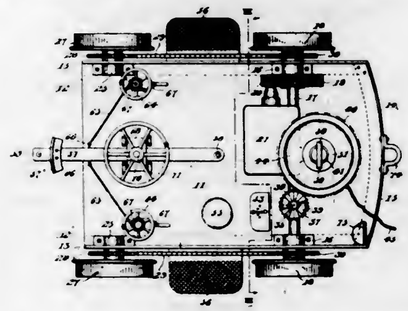
1,429,142. STEERING GEAR FOR AUTOMOBILES. DAVID W. JONES, Chicago, Ill. Filed May 5, 1922. Serial No. 558,735. 3 Claims. (Cl. 74—79.)



1. In a steering gear means for an automobile, the combination of a suitably divided casing, a steering shaft and a screw suitably journaled therein, a transversely disposed rocker shaft suitably journaled in the said casing, an elongated nut on the said screw having elongated parallel guide projections at one side of said nut with opposed parallel faces, a link with its opposite sides parallel adapted to fit between the said guides and be engaged thereby on the said nut and suitably pivoted thereto at the upper end, and a rocker arm on the said rocker shaft with its end embraced by the downwardly projecting ends of the said link, coacting as described for the purpose specified.

1,429,143. STEERING GEAR FOR AUTOMOBILES. DAVID W. JONES, Chicago, Ill. Filed May 5, 1922. Serial No. 558,736. 3 Claims. (Cl. 74—79.)

1. In a steering gear means for an automobile, the combination of a suitably divided casing, a steering shaft and a screw suitably journaled therein, a transversely disposed rocker shaft suitably journaled in the said casing, an elongated nut on the said screw having an elongated guide projection at one side with opposite parallel faces, a double link with opposed parallel portions engaging the said elongated guide projection on the said nut and suitably pivoted thereto at the upper end, and a rocker arm on the said rocker shaft with its end embraced by the downwardly projecting ends of the said link, coacting as described for the purpose specified.



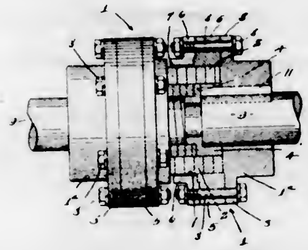
1,429,144. ROAD-SCARIFYING DEVICE. HENRY D. JONES, Galion, Ohio, assignor to The Galion Iron Works & Mfg. Co., Galion, Ohio, a Corporation of Ohio. Filed Oct. 12, 1921. Serial No. 507,276. 11 Claims. (Cl. 37—50.)

2. In a scarifying apparatus, and in combination with a motor driven road engine, a scarifying attachment embodying a pair of spaced parallel members pivoted upon opposite sides of the engine frame, a transversely disposed bar carrying a plurality of picks arranged in inclined relation to the surface travelled over, forwardly extending lugs on the bar pivotally connected with the rear ends of the lower ones of said members, upwardly extending lugs on the bar pivotally connected with the rear ends of the upper ones of said members, other upwardly extending

lugs carried by the bar near the central portion thereof and connected by a shaft, a fluid pressure cylinder rockably mounted at the rear end of the engine frame, a piston operating within the cylinder and having a rod provided with a bearing journally engaging said shaft, and means for supplying and exhausting fluid pressure within the cylinder alternately above and below the piston therein.

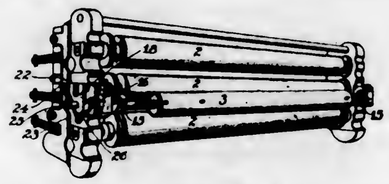
1,429,145. METHOD OF AND MEANS FOR LOCOMOTIVE TRANSPORTATION OF COAL CARS IN MINES. JOSEPH F. JOY, New Bethlehem, Pa., assignor to Joy Machine Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Mar. 20, 1919. Serial No. 283,822. 4 Claims. (Cl. 105—75.)

1. A mine locomotive for towing pit cars including a wheeled body having a drawbar connected thereto for horizontal swinging and vertical movements, means to horizontally swing said drawbar, and means to vertically move said drawbar to raise and support a pit car in tilted position.



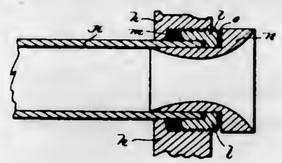
1,429,146. UNIVERSAL POWER-TRANSMITTING ELEMENT. MAXWELL R. KARGE, Phoenix, N. Y., assignor, by mesne assignments, to Charles J. Deckop, Buffalo, N. Y. Filed Jan. 28, 1919. Serial No. 273,548. 3 Claims. (Cl. 64—96.)

3. A flexible universal power transmitting element comprising cylindrical coiled torsion springs wound in opposite directions and arranged one within the other, the springs being connected together at their ends, and couplings mounted on the ends of the springs, each coupling being formed with a socket and an axial stud arranged centrally of the socket forming an annular space in which the ends of the spring extend, the stud extending into the end of the inner spring, and means for clamping the springs onto the stud, substantially as and for the purpose described.



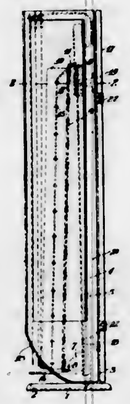
1,429,147. FLEXIBLE COUPLING. MAXWELL ROY KARGE, Phoenix, N. Y. Filed Aug. 19, 1920. Serial No. 404,652. 4 Claims. (Cl. 64—96.)

4. A flexible coupling comprising opposing headers, a coiled spring having its ends secured respectively to the headers, each header comprising a body having means for connection to the shaft, the body abutting against the contiguous end of the spring, a plug inserted in the end coils of the spring, an intermediate clamping ring encircling the end coils of the spring and shrunk thereon, an outer ring adjacent the intermediate ring and having its inner circumferential face spaced apart from the inter-



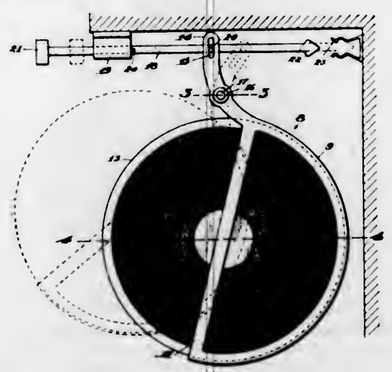
mediate coils of the spring, and means for clamping the body and the rings together, substantially as and for the purpose described.

1,429,148. INK DISTRIBUTOR. HENRY H. KREILING, deceased, by Louise Kreiling, administratrix, Chicago, Ill. Filed Oct. 8, 1921. Serial No. 506,421. 4 Claims. (Cl. 101—359.)



1. In a device of the class described, the combination with an ink roller and a coacting distributing roller, a threaded supporting shaft for said distributing roller, a nut loosely journaled within the distributing roller in threaded engagement with said shaft, said nut being provided with ratchet teeth at one end and a resilient pawl supported inside of said distributing roller for coacting with the teeth on said nut.

1,429,149. HEAT INTERCHANGER. ALMON R. LAWRENCE, Quincy, Mass., assignor to Engineering Development Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 18, 1920. Serial No. 417,605. 2 Claims. (Cl. 257—236.)



1. A heat interchanger having a receiving chamber, liquid conducting tubes passing through said chamber, and a liquid chamber into which said tubes open at one end, those ends of the tubes which open into said liquid chamber and into which the liquid is designed to enter having bores which gradually contract in diameter from their entrance orifices and are subsequently enlarged, on longitudinal lines conforming substantially to the contraction and enlargement of a jet of liquid flowing under a head through an orifice into a tube.

1,429,150. BED. GEORGE R. MCALLASTER, Rochester, N. Y. Filed July 27, 1918. Serial No. 247,058. 12 Claims. (Cl. 5—18.)

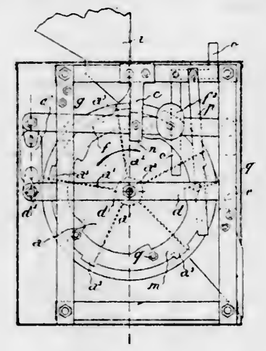
1. In a bed, a support, a bed frame hinged to the support to swing to an upright position, and two screen members hinged to opposite sides of the frame to assume positions below the mattress when the bed is in the position of use and positions to cover the side edges of the mattress when the bed is in an upright position, the lower corners of the screen members being cut away to permit the swinging of the bed frame on its support.

1,429,151. RECORD HOLDER. RODNEY N. MCCLURE, Los Angeles, Calif. Filed Oct. 26, 1920. Serial No. 419,579. 2 Claims. (Cl. 211—16.)

1. In a filing device, a carrier pivoted to oscillate, a push rod connected to the carrier adjacent its pivot adapted on being manually depressed to advance the carrier, and means detachably engageable with said push rod for temporarily holding it in its retracted position and retaining the carrier in its advanced position.

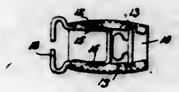
1,429,152. MEANS FOR SECURING TIRES TO RIMS OF VEHICLES. DEMETRIO MAGGIORA, Florence, Italy. Filed Dec. 14, 1920. Serial No. 430,620. 3 Claims. (Cl. 152—5.)

1. In means for securing solid tires to the rims of vehicle wheels, the combination with a rim and a tire, of a ring arranged on the rim between the edges of the tire, said ring being formed of circular segments, each formed of two parts, substantially as set forth.



3. In means for securing solid tires to the rims of vehicle wheels as claimed in claim 1, wherein inclined faces of the two parts, which constitute the segment are adapted to press against the inner sides of the tire for pressing and maintaining the edges of said tire within the curved sides of the rim, after the tire has been mounted, each segment being provided with a flat or curved surface on which is fitted the support of the inner elastic element, the two parts of the segment being closed together by blocks and wedges, the movement of which is controlled from outside of the rim by means of screws, the heads of which co-operate with the rim and are screwed in the blocks, the whole substantially as and for the purposes set forth with reference to the annexed drawings.

1,429,153. COMPOSITION AND FILM CONTAINING MIXTURES OF CELLULOSE ESTERS AND ETHERS. LESTER J. MALONE, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Jan. 7, 1922. Serial No. 527,717. 7 Claims. (Cl. 134—79.)

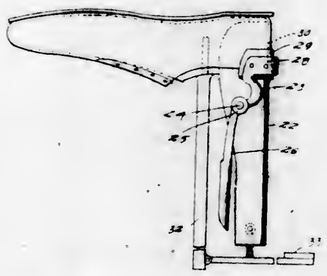


2. A composition of matter including cellulose ether and a cellulose ester dissolved in a liquid comprising pyridine, the combined weight of said cellulosic compounds being more than one-sixth the weight of said liquid.

1,429,154. APPARATUS FOR DELIVERING LIQUID OR GRANULAR MATERIAL IN PREDETERMINED MEASURED QUANTITIES. FERNAND PAUL MARTIN, Paris, France. Filed Dec. 23, 1920. Serial No. 432,806. 4 Claims. (Cl. 249—19.)

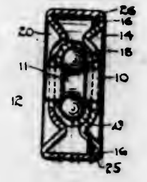
1. Apparatus for delivering liquid or granular material in predetermined measured quantities, comprising a vertically movable drum divided into a plurality of compartments of equal capacity, means for normally holding the drum in elevated position and depressible by a predetermined weight of said material, an escapement mechanism associated with the drum comprising a pair of fixed lugs, teeth on said drum adapted to engage one of said lugs to stop the drum when elevated, and cams on said drum adapted to ride over the other of said lugs for elevating the drum when empty.

1,429,155. BELT BUCKLE. ALPHA H. METCALF, Attleboro, Mass., assignor to H. A. Allen & Co., Attleboro, Mass. Filed Jan. 24, 1922. Serial No. 531,385. 1 Claim. (Cl. 24—78.)



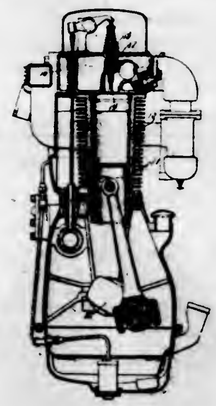
A belt buckle comprising a front plate with side flanges having inturned guide edges, a substantially U-shaped spring frame bail member having lateral projections adapted to engage openings in said side flanges with spring pressure, a portion of said guide edges being folded inwardly to guide said frame to its engaging position, and means in the buckle for holding the adjustable end of the belt.

1,429,156. SAILBOAT. CHARALABOS MORAITIS, Galveston, Tex. Filed June 13, 1921. Serial No. 477,178. 1 Claim. (Cl. 114—102.)



In a sailing vessel including a jib sail and masts carrying booms and mainsails, of a plurality of guide sheaves attached to the vessel along its opposite sides and spaced to correspond to the mainsails, a guide sheave attached to each of said booms, cables attached at one end to said jib sail, means for guiding said cables from the jib sail respectively to the foremost guide sheaves of the vessel at opposite sides thereof, said cables being thence carried alternately around the sheaves of the vessel and the sheaves of the booms, whereby the shifting of the mainsails will correspondingly shift the jib sail.

1,429,157. APPARATUS FOR RELASTING SHOES. HONORE MORIN, New Auburn, Me. Filed Apr. 24, 1920. Serial No. 376,314. 1 Claim. (Cl. 12—15.)

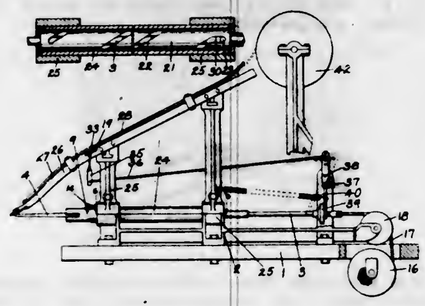


Apparatus of the class described having a post, a horn adjacent said post, a treadle operable to move said horn, said horn having its upper end enlarged, a clamp pivoted to said enlarged end, said horn extending through said clamp, said clamp being manually operable and having its operating end lowermost and disposed below said portion and intermediate the horn and said post, a jaw on said clamp engageable with the horn on the opposite side to said opening end, said upper end of the horn extending above the jaw, and the manual operation of the clamp enabling movement thereof independently of the horn.

1,429,158. SHEET-METAL WHEEL OR ROLLER. FRED S. MORTON, Worcester, Mass. Filed Feb. 19, 1921. Serial No. 446,223. 2 Claims. (Cl. 46—52.)

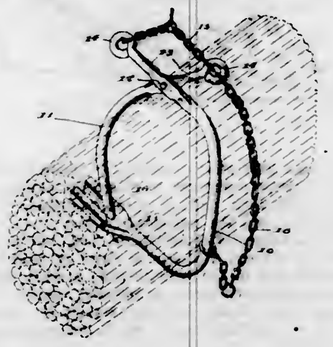
1. As an article of manufacture, a roller or wheel having a pair of hardened ball cases complete in themselves and also having two flanges each provided with a curved inner portion in contact throughout a wide area with the exterior surface of said ball cases and having a conical flange extending outwardly from the exterior of the same at opposite inclinations, one of them having an integral tread extending from the edge thereof backwardly over the edge of the other and provided with a shoulder at that edge for engaging the outer edge of the other flange, the extreme edge of the tread being thinned down and bent over the edge of the opposite flange to hold the parts together.

1,429,159. INTERNAL-COMBUSTION ENGINE. ADOLPH L. NELSON, Indianapolis, Ind. Filed Feb. 14, 1919. Serial No. 276,985. 3 Claims. (Cl. 123—173.)



1. An internal combustion engine comprising a cylinder of the air cooled type throughout its entire length, a cylinder head mounted on the upper end of the cylinder having face contact only therewith, said cylinder head having a vertical bearing for the valve stem and a water jacket in the cylinder head for cooling the head and the parts carried thereby, substantially as set forth.

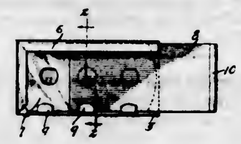
1,429,160. BAG-TYING MACHINE. LEWIS D. NELSON, Union City, Mich. Filed Nov. 10, 1920. Serial No. 423,205. 14 Claims. (Cl. 140—93.)



1. In a machine for tying bag ties having eyes at their ends, the combination of a spindle mounted for longitudinal and rotative movement, means for rotating said spindle as it is moved longitudinally, tie engaging hooks, having disk-like superimposed portions at their inner ends pivotally mounted on said spindle, said disk-like portions being provided with notches registering when the hooks

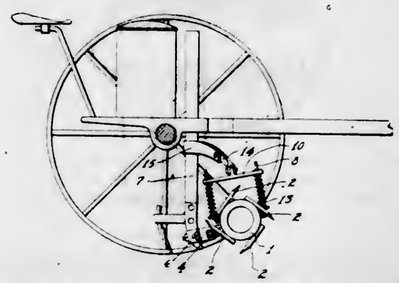
are closed, a catch member sleeved upon the end of said spindle and provided with a pin engaging said notches when they are in registering position, a spring urging said catch member to engaging position, a trip for releasing said catch member on the return stroke of the spindle,

a spring for opening said hooks, a feed chute comprising bars notched at their ends to receive the hooks when they are in their initial position so that the ties are delivered with their eyes engaging the hooks, and a feed means for delivering the ties one by one.



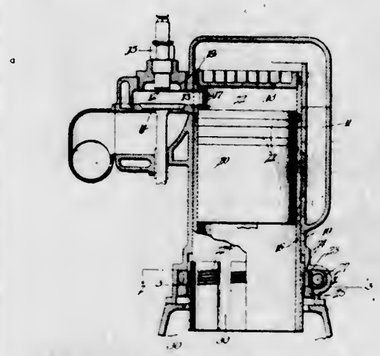
1,429,161. LOG LOADING AND UNLOADING GRAPPLE. OTTO NEWLIN, Wallace, Mich. Filed Apr. 29, 1921. Serial No. 465,448. 1 Claim. (Cl. 294—83.)

A grapple for pulp wood logs comprising a pair of crossed and pivoted outwardly bowed log bundle gripping legs, the portions of the legs above the pivot being provided with chain receiving eyes, the lower end of one of the bowed legs being formed of a single strand, the lower end of the other leg being bifurcated for the reception therein of the end of the first leg whereby the said ends of the legs are prevented from lateral movement with respect to each other, and a releasing chain connected with the bifurcated leg and the eye of the other leg for simultaneously moving the legs away from each other to release a bundle of logs.



1,429,162. CUTTING DEVICE AND RECEPTACLE THEREFOR. SAMUEL ORSELANDER, New York, N. Y. Filed Nov. 29, 1921. Serial No. 518,592. 4 Claims. (Cl. 30—39.)

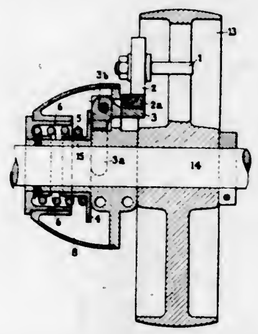
1. A cutting device and receptacle including a back, lugs adjacent one of the side edges of said back and extending rearwardly therefrom, retaining means adjacent the other side edge of the said back, a cover adapted to be associated with said lugs, and retaining means, a



blade adapted to be disposed between said cover and back, said blade being capable of association with said lugs.

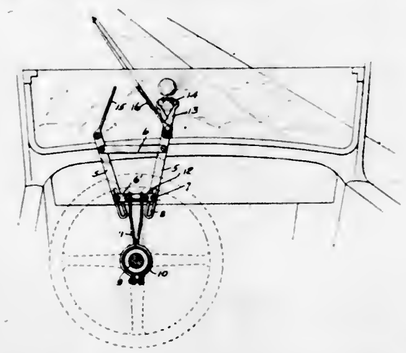
1,429,163. STALK CUTTER. OBEAL D. PEDEN, Roscoe, Tex. Filed Apr. 2, 1921. Serial No. 458,109. 1 Claim. (Cl. 55—61.)

A device of the class described, comprising a frame having a socket therein for receiving a part of an implement, a pair of bearings pivotally supported in the frame, a shaft supported in the bearings, blades carried by the shaft, a pair of arms connected with each bearing, a bracket slidably mounted on each pair of arms, springs on the arms engaging the brackets, a pair of bars, each having one end pivotally connected with a bracket and means for connecting the other ends of said bars with the implement.



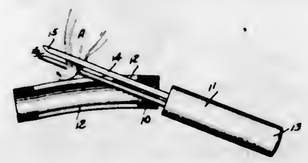
1,429,164. INTERNAL-COMBUSTION ENGINE. JOHN T. RAMSEY, Roanoke, Va. Filed Mar. 22, 1921. Serial No. 454,477. 2 Claims. (Cl. 123—48.)

2. In an internal combustion engine, a sleeve located within the engine cylinder and having a head in one end, a piston operating within the sleeve, means including a ring swiveled within the engine cylinder and engageable with the sleeve for adjusting the latter within the engine



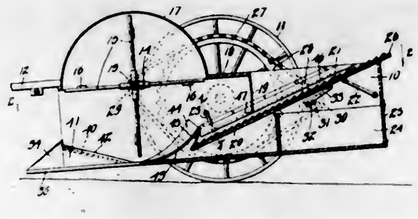
cylinder to regulate the distance of the head from the adjacent end of the piston, a retaining ring located within the cylinder for holding the swiveled ring in position and keys carried by the retaining ring and slidable in grooves formed longitudinally of the sleeve for preventing rotation of the latter.

1,429,165. DEVICE FOR MEASURING AND RECORDING THE POWER CONSUMPTION OF MACHINES. MAX ROCKSTROH, Klein-Sedlitz, near Pirna, Germany. Filed Oct. 23, 1920. Serial No. 419,124. 4 Claims. (Cl. 265—4.)



1. An apparatus of the class described, comprising, in combination, a rotatable driving element, a shaft, a longitudinally movable collar on said shaft, spring means for yieldingly maintaining the collar in normal position, and mechanism interposed between said driving element and collar for moving the latter longitudinally in opposition to said spring means, said mechanism including means for exerting relatively greater leverage on said collar for lighter values of the turning moment exerted by said driving element upon said mechanism.

1,429,166. GUIDE. ISAAC A. ROMMER, Brooklyn, N. Y. Filed Aug. 2, 1921. Serial No. 489,321. 11 Claims. (Cl. 116—31.)



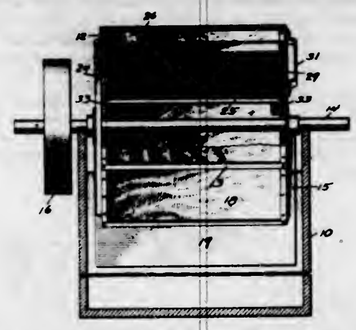
10. A guide including a body portion, a pair of sighting elements carried by said body portion, said body portion being adapted to be attached to a fixed part of a vehicle, said elements co-operating with a second fixed portion of a vehicle to enable an operator to place his head in proper position with respect to said guide, and means carried by said body for hiding those portions of the road way over which the wheels of the vehicle will pass, from the view of the operator.

1,429,167. HAIR CURLER. ARNOLD SCHÄREB, New York, N. Y. Filed Oct. 21, 1921. Serial No. 509,272. 3 Claims. (Cl. 132—39.)

1. A hair curling device comprising a slotted flexible tubular member, and means for wrapping hair in curls within the tubular member through the slot thereof.

1,429,168. BEAN HARVESTER. FRANK VAUGHAN SCOTT, Elizabeth City, N. C. Filed Jan. 2, 1920. Serial No. 348,728. 14 Claims. (Cl. 56—130.)

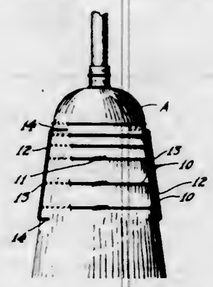
7. In a bean harvester a housing, an inclined agitator-conveyor, a beater positioned to discharge material upon the agitator-conveyor, and an apron positioned to bear upon material upon the agitator-conveyor.



12. A bean harvester comprising a body having a pair of supporting wheels, a beater in front of said wheels, an agitator-screen in the rear thereof, a shaft adjacent to the screen for driving it, a sprocket carried by one of the supporting wheels, sprockets carried by the beater shaft and the agitator-screen shaft, respectively, and a single sprocket chain mounted to engage said several sprockets whereby the beater and the agitator-screen are driven by a common driving means connected with the supporting wheels, substantially as set forth.

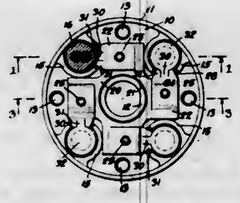
1,429,169. CELLULOSE-ETHER COMPOSITION. PAUL C. SEEL, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Jan. 5, 1922. Serial No. 527,245. 2 Claims. (Cl. 134—79.)

1. A composition of matter comprising cellulose ether and dichlorpropane.



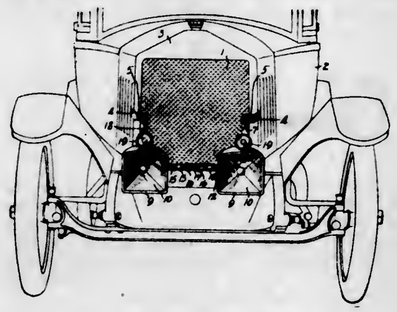
1,429,170. ELECTROPLATING BARREL AND CATCHER. EDWARD A. SEVERANCE, Burlington, Vt. Filed June 30, 1921. Serial No. 481,522. 10 Claims. (Cl. 204—11.)

1. An electro-plating apparatus comprising in combination, a solution tank, anodes disposed within said tank at the side thereof, a rotatable barrel comprising end heads and a textile covering between said heads, said heads rigidly secured to a drive shaft mounted in said tank, cathode bars held within said barrel and in circuit with said shaft, movable brush means mounted on said tank



and adapted to be contacted with said shaft, and a reticulated work catcher removably mounted within said barrel.

1,429,171. BROOM BRACE. ABRAHAM LINCOLN SHIPMAN, Springfield, Ill. Filed Oct. 25, 1921. Serial No. 510,264. 1 Claim. (Cl. 15—170.)

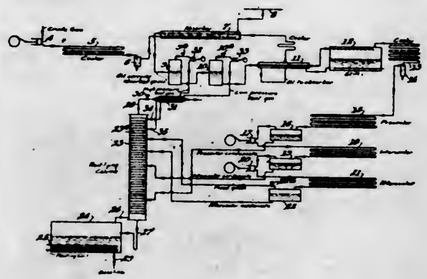


A broom brace comprising a plurality of elongated wire loops of progressively increasing sizes designed to be engaged upon a broom head and each formed of a single length of wire having its ends twisted together, and a pair of wire members connecting the ends of said loops and coiled thereabout for holding said loops in spaced relation, the ends of said pair of wire members extending angularly toward each other for penetrating engagement between the fibers of the broom head.

1,429,172. ELECTRICAL OUTLET BOX. SAMUEL L. SOPENOFF and MORRIS KATCHER, Brooklyn, N. Y. Filed Feb. 24, 1920. Serial No. 360,748. 7 Claims. (Cl. 247—25.)

1. An electric outlet box provided with a clamping plate having a plurality of integral curved spring tongues each provided at its free end with teeth extending in different directions, a knock-out disk extending integrally from one of the said teeth and adapted to be broken off, and adjustable means engaging the said spring tongues to fasten the clamping plate to the outlet box and to place the spring tongues under compression.

1,429,173. AUTOMOBILE HEADLIGHT. BERNHARD STERN, New York, N. Y. Filed July 18, 1921. Serial No. 485,435. 5 Claims. (Cl. 240—57.)

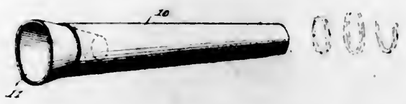


1. The combination with a vehicle, of a pair of upright bars carried thereby and spaced from the forward end thereof, lamps slidable vertically on the bars, a cross piece connecting the lamps, locking members slidable on the cross piece and engageable with the bars, and an expansion spring interposed between the locking members tending to force the same into locking relation with the bars.

1,429,174. NITROCELLULOSE COMPOSITION. ALBERT F. SULZER, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Feb. 23, 1921. Serial No. 447,245. 6 Claims. (Cl. 134—79.)

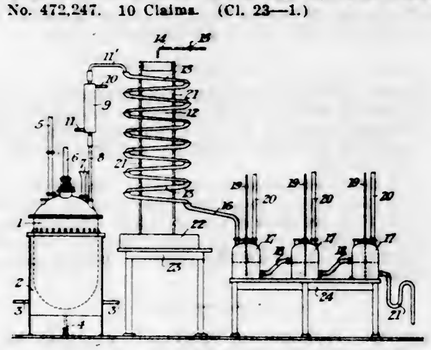
3. A liquid composition of matter for forming film by flowing and drying, comprising 100 parts of cellulose nitrate, 10 to 100 parts of a mono hydroxy aliphatic alcohol having from 4 to 5 carbon atoms, from 1 to 100 parts of ethyl butyrate and sufficient common solvent to make a viscous flowable solution.

1,429,175. PROCESS OF TREATING NATURAL GAS AND PRODUCT THEREOF. HAROLD E. THOMPSON, Clendenin, W. Va., assignor to Carbide & Carbon Chemicals Corporation, a Corporation of New York. Filed Aug. 29, 1921. Serial No. 496,321. 9 Claims. (Cl. 196—25.)



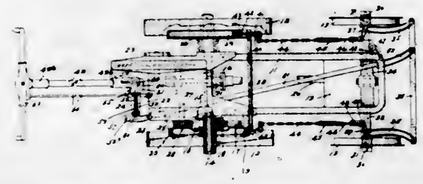
3. Process of forming a liquid of predetermined vapor pressure from a mixture of natural gas hydrocarbons, which comprises separating from the mixture a fraction

having a higher vapor pressure than that desired in the final product, and rectifying the said fraction to produce therefrom a vaporous portion and a liquid portion, the rectification being so conducted that not more than one hydrocarbon of said fraction will occur in substantial quantity in both the vaporous and liquid portions.



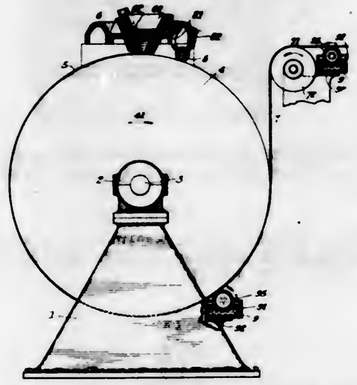
8. A natural gas gasolene having a density not less than 87° Bé. and a vapor tension not substantially greater than 12 lbs., at 100° F.

1,429,176. SMOKE-RING BLOWER. RICHARD TOENNES, Boonville, Mo. Filed Feb. 23, 1921. Serial No. 447,158. 2 Claims. (Cl. 46—37.)



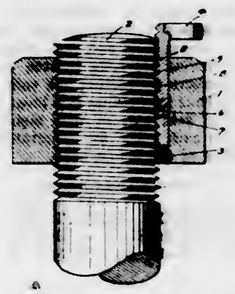
1. A smoke ring blower, comprising a smoke storage tube, a mouth-piece conical in shape positioned in one end of the storage tube with its smaller end lying within the same to form a small blow opening within the tube, and with the larger end of the mouth-piece lying outside of the storage tube to form a flaring mouth-engaging portion adapted to fit over the lips of the user.

1,429,177. APPARATUS FOR NITRIC ACID PURIFICATION. GEORGE H. TOZIER, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed May 24, 1921. Serial No. 472,247. 10 Claims. (Cl. 23—1.)



1. Apparatus for obtaining concentrated and purified nitric acid, comprising a still, a partially refluxing condenser substantially completely resistant to said concentrated acid, and a complementary condenser connected in series.

1,429,178. GARDEN TRACTOR. FREDRICK A. VALENTINE and ROBERT D. VALENTINE, Minneapolis, Minn. Filed Nov. 11, 1920. Serial No. 423,300. 11 Claims. (Cl. 180—18.)

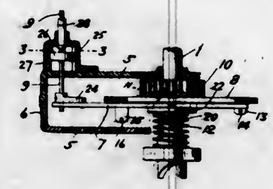


1. A tractor having an oscillatory ground-engaging steering wheel, and a manually actuated rearwardly extended steering handle pivotally mounted at its front end for oscillatory movements transversely of the tractor, and operatively connected to said steering wheel while occupying a position at one side of said tractor and while thus operatively positioned for straight-ahead travel of the tractor.

1,429,179. PROCESS OF TREATING FILMS. WILLIAM R. WEBB, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Nov. 4, 1921. Serial No. 513,647. 11 Claims. (Cl. 18—57.)

1. The process of treating a film containing cellulose ether to lessen the curling tendency thereof, which comprises the steps of applying a solvent thereof to a face of such film and stopping said application before the body of said film is attacked.

1,429,180. NUT LOCK. JOSEPH V. WOODWORTH, Camp Kearney, Calif. Filed June 30, 1921. Serial No. 481,625. 8 Claims. (Cl. 151—23.)



1. In means for locking an object having an internal thread therein to another object having an external thread registering with said internal thread, means for bending the tops of one of said threads over a limited longitudinal area after the said threads have become engaged.

1,429,181. LOCKING DEVICE FOR AUTOMOBILES. GEORGE W. WRIGHT and THOMAS J. PENSION, Philadelphia, Pa., assignors of three-eighths to said Wright, three-eighths to said Thomas J. Pension, and one-fourth to Thomas M. Pension, Philadelphia, Pa. Filed Dec. 13, 1921. Serial No. 521,987. 4 Claims. (Cl. 70—90.)

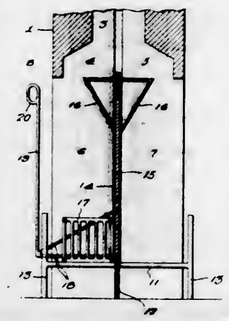
2. In a locking device for automobiles the combination of engine control shafts, a yoke adapted for application

to the shafts, a key shifting lever plate pivoted to the yoke, a gravity latch pivotal in respect to the yoke and adapted to fall past said lever, a rod for actuating the

lever plate and provided with a finger for lifting the latch, a master gear loosely mounted on one of the shafts, a spring pressed key operated by the lever plate, and means for locking the rod against rotation.

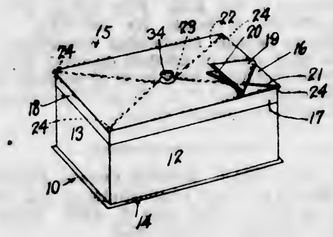
1,429,182. BINDING CLIP. FRANK M. ASHLEY, New York, N. Y. Filed Jan. 4, 1921. Serial No. 434,970. 1 Claim. (Cl. 24—259.)

A clip formed from a single sheet of spring material comprising oppositely disposed jaw members and levers by which said jaws may be opened, said levers having embossed ribs to stiffen the same, said ribs extending below the fulcrum of the levers.



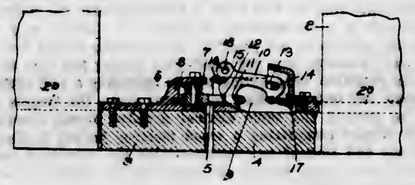
1,429,183. ADJUSTABLE PLUG GAUGE. JOHN BATH, Worcester, Mass., assignor to John Bath & Company, Worcester, Mass., a Corporation of Massachusetts. Filed June 3, 1920. Serial No. 386,258. 8 Claims. (Cl. 33—178.)

1. An adjustable plug gauge, having, in combination, a support, separated gauge members mounted thereon and of different fixed sizes, a plurality of gauge bars adjustably mounted on said support between said members and closely adjacent thereto, and means to adjust said bars radially to sizes intermediate said fixed sizes.



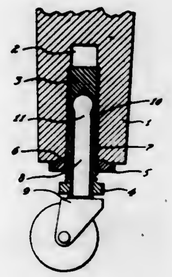
1,429,184. FIREPLACE. JACIE BECKETT, Columbus, Ohio. Filed Dec. 12, 1921. Serial No. 521,602. 2 Claims. (Cl. 126—125.)

1. In combination with a division wall between two rooms having communicating fire places, and an angle branch flue at the top of each fire place communicating with the main flue, of a grate slidably supported in either of the fire places, a vertically slidable plate providing a division between the fire places, means on the plate



and arranged at the outer side of the fire places for moving the plate vertically, and angle deflectors in the respective fire places adjacent to the tops thereof.

1,429,185. NONRESALABLE BOX. ALFRED JOHN BROWN and GEORGE I. PAULSON, Brooklyn, N. Y. Filed July 8, 1919, Serial No. 309,463. Renewed Mar. 8, 1922. Serial No. 542,162. 6 Claims. (Cl. 229—51.)

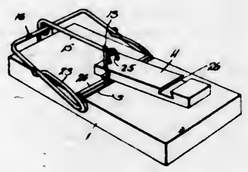


1. A container including a body member, a cover for the body member, a device including interlocking parts and a manipulator, and means connected to the manipulator for mutilating the cover upon the manipulating of the manipulator.

1,429,186. CAR COUPLING. HARRY M. BROWN, New Kensington, Pa. Filed Nov. 7, 1921. Serial No. 513,248. 1 Claim. (Cl. 213—45.)

In a coupler for mine cars, the combination of a coupler head of bull-nose type having a hooded rear portion and a slot through its top in advance of the hooded portion, and a coupling hook pivoted in the coupling head under the hooded portion, the coupling hook, throughout its range of pivotal movement, protruding upwardly through the slot in the coupler head.

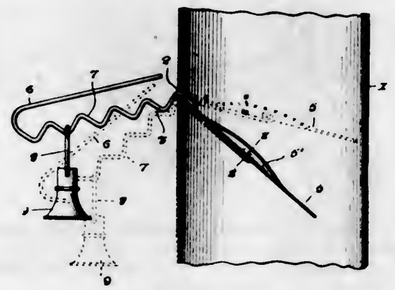
1,429,187. CASTER. CAREY E. BUNKER, Oregon, Mo. Filed Nov. 22, 1920. Serial No. 425,882. 5 Claims. (Cl. 16—19.)



1. In combination with a caster including a roller and a stem, a screw threaded member having a cap placed in the upper end thereof, tongues provided on said cap for engaging the annular groove formed in the stem, a thrust member carried by said cap which receive the upward thrust of the stem, said member being provided with an annular groove, an annular bead received by said groove.

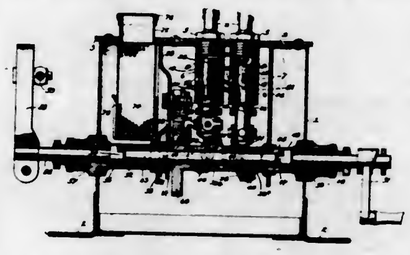
1,429,188. CELLULOSE ETHER SOLVENT AND COMPOSITION. STEWART J. CARROLL, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Apr. 5, 1921. Serial No. 458,740. 6 Claims. (Cl. 134—79.)

5. A viscous flowable film-forming composition, comprising an alkyl ether of cellulose dissolved in a compound solvent containing from 90 to 40 parts by weight of ethylene chloride and 10 to 60 parts by weight of a lower monohydroxy aliphatic alcohol.



1,429,189. RAT TRAP. RAPHAEL CHASSE, Middletown, N. Y.; Russell J. Chasse administrator of said Raphael Chasse, deceased. Filed July 2, 1920. Serial No. 393,512. 3 Claims. (Cl. 43—81.)

1. A rat trap comprising a base, a movable jaw pivotally mounted on said base, a retaining arm for holding said jaw in a set position, a trigger for holding said retaining arm in its set position, and a spring means acting on said movable jaw for resiliently urging the jaw in a given direction, said spring means including a coil spring having one end extending to a point above the trigger so as to protect the same against articles placed thereon, said trigger comprising a wood member having a staple on one end thereof to cooperate with the retaining arm, and a dove tailed slot at the other end in which the bait is securely held.

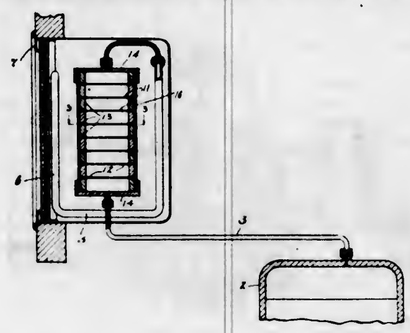


1,429,190. DAMPER. CHARLES B. COALWELL, Pine Island, Minn., assignor of one-half to Cortez A. Mellinger, Pine Island, Minn. Filed Feb. 15, 1921. Serial No. 445,202. 2 Claims. (Cl. 236—45.)

2. A device of the class described comprising a stove pipe adapted to connect the latter with a chimney, said pipe having a hole formed therein and a rod passing through said hole, a damper plate secured to said rod, the part of the rod which passes through said hole is curved to provide a fulcrum for permitting the swinging movement of the damper plate without the rod sliding

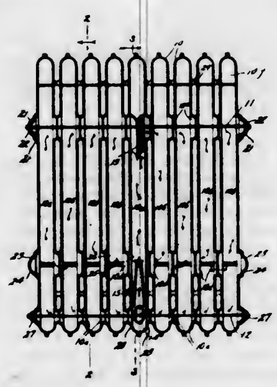
through the opening, said rod having its exterior part of U-shaped formation and the limb of the U being connected with a damper plate and bent to provide a series of depressions, a ring carried by the limb of the U and a weight secured to one end of said ring, said damper plate having upwardly curved portions.

1,429,191. LUBRICATOR. THOMAS E. COLEMAN, Madison, Wis., assignor to Madison-Kipp Corporation, Madison, Wis., a Corporation of Wisconsin. Filed Sept. 2, 1920. Serial No. 407,641. 9 Claims. (Cl. 184—27.)



8. In a force feed lubricator, the combination of a cylinder having intake, exhaust and spill ports formed therein; a sleeve mounted within said cylinder and adjustable lengthwise thereof to control the capacity of the lubricator, said sleeve having ports which correspond to the ports aforesaid; a piston mounted in the sleeve, said piston being provided with a groove or channel in its side wall adjacent its upper end, a second groove or way formed in its opposite wall and extending downwardly to a point below the termination of the first mentioned groove, said last named groove opening into a way or channel formed in the body of the piston; and means for actuating the piston to impart endwise and oscillatory movement thereto to bring the various ports and passages into cooperative relation.

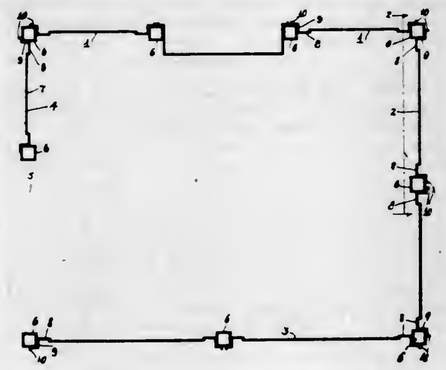
1,429,192. EFFICIENCY INDICATOR FOR EXPLOSION MOTORS. HOWARD H. DAVIS, Cleveland, Ohio. Filed Dec. 3, 1919. Serial No. 342,256. 2 Claims. (Cl. 73—31.)



1. In a device of the character described, the combination with a support of a transparent U-shaped tube sealed at one end and containing a suitable liquid, a cylindrical chamber having terminal caps screwed thereon, a plurality of alternating rings and thin sheet metal disks held tightly compressed by said caps, said disks being

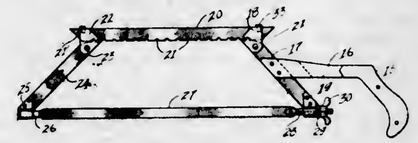
provided with small apertures, the apertures in successive disks being arranged in staggered relation to each other.

a duct connecting the chamber through one of its screw caps with the open end of the U-shaped tube and through the other cap with the cylinder of an explosion motor.



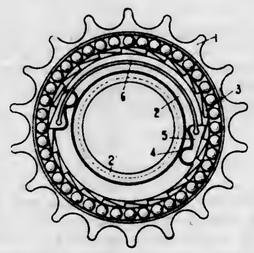
1,429,193. HEATER. ALBERT R. J. DEARDEN, Jersey City, N. J. Filed Apr. 21, 1920, Serial No. 375,561. Renewed Feb. 17, 1922. Serial No. 537,358. 8 Claims. (Cl. 126—91.)

1. A heater including radiator sections, one of which constitutes an uptake flue and others downtake flues, there being a transverse flue establishing communication between the upper ends of said downtake flues and said uptake flue, and a second transverse flue forming a return connection between said downtake flues and said uptake flue below the first-mentioned transverse flue, to form a circulating circuit; and heating means in said uptake flue adjacent to its lower end, below said return transverse flue; together with a nozzle over the heating means and terminating adjacent to the top of the return transverse flue, the upper end of said nozzle and the said return transverse flue jointly presenting members forming an injector to induce a current in said uptake flue.



1,429,194. ELEVATOR-CAB CONSTRUCTION. ROGER W. DISBRO, Cleveland Heights, Ohio, assignor to The W. S. Tyler Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 23, 1919. Serial No. 299,177. 4 Claims. (Cl. 189—2.)

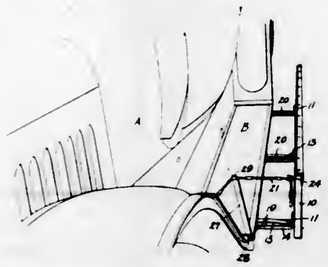
3. In elevator construction, the combination of a series of aligned closed square hollow posts, and a series of flat panels disposed between said posts and in the plane thereof, and said panels having angularly related marginal flanges, such flanges being arranged to engage against the



sides and around the one adjacent edge of said hollow posts.

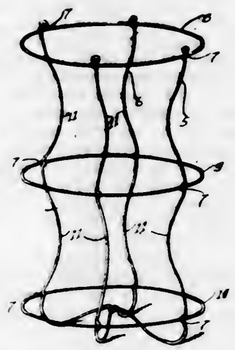
1,429,195. HACK-SAW FRAME. WILLIAM DONALDSON, Tacoma, Wash. Filed July 22, 1921. Serial No. 486,865. 1 Claim. (Cl. 145—34.)

A saw frame including a pair of supporting arms, one of said arms having a handle secured thereto, a loop member secured to each of said arms, a bar longitudinally movable through one of said loop members, said bar having notches in one of its longitudinal edges and recesses in its opposite edge at points near its extremities, said bar terminating in angular extremities provided with notches therein for limiting the angular motion of the arm when arranged in line with the bar, lugs on said arms adapted to be selectively received in the notches of said bar for limiting the longitudinal movement of either of said arms along said bar, and a saw blade detachably secured to said supporting arms and capable of assuming an angular position when the bar and one arm are locked in alignment one with the other.



1,429,196. FREE-WHEEL DEVICE. ANNIBALE DUGHERA, Turin, Italy, assignor to Pier Giuseppe Bellia, Turin, Italy. Filed Apr. 4, 1921. Serial No. 458,240. 3 Claims. (Cl. 192—64.)

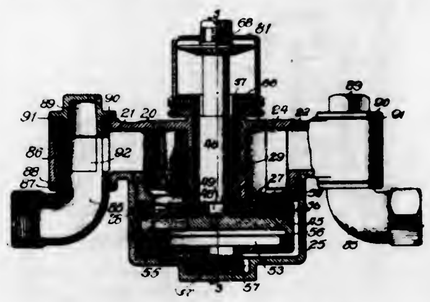
1. A free wheel device, comprising concentric outer and inner rims; a cover ring secured to one rim; a pair



of pawls pivoted on one rim at a comparatively-great angular distance from each other; ratchet teeth on the other rim for driving engagement by said pawls; and an arcuate spring disposed between the cover ring and the inner rim and bearing against both pawls to force them against the ratchet teeth.

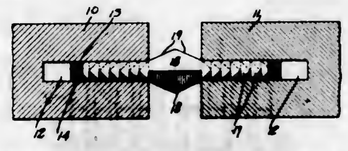
1,429,197. BAGGAGE CARRIER. JAMES H. DYETT, Brooklyn, N. Y. Filed Apr. 21, 1921. Serial No. 463,426. 4 Claims. (Cl. 224—29.)

1. The combination with the running board of an automobile, of a baggage carrier comprising spaced supporting arms laterally movable with respect to the running board, a leaf hingedly connected to said arms, a truss arm pivoted to the running board and a flexible connection between the running board and the free edge of the leaf and engageable with the truss arm to constitute a means for retaining said leaf in various angularly adjusted positions.



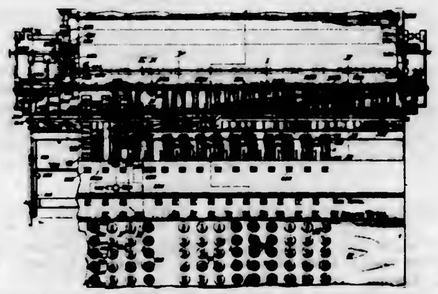
1,429,198. SPRING SHIELD FOR NURSING BOTTLES. ARTHUR J. FAWCETT, Myrtle Creek, Oreg. Filed Apr. 2, 1921. Serial No. 458,148. 3 Claims. (Cl. 215—11.)

3. In a bottle shield, the combination of two substantially U-shaped wires, said U-shaped wires being crossed, notches formed at intervals throughout their length, inwardly curved portions between said notches, and ring members adapted to rest in said notches.



1,429,199. VALVE. JAMES J. FINNEY, Chicago, Ill., assignor of one-fourth to Carl P. Schroeder, one-fourth to Gustav F. Jedlicka, and one-fourth to Raymond D. Bliss, all of Chicago, Ill. Filed Feb. 4, 1918. Serial No. 215,264. 21 Claims. (Cl. 277—69.)

1. A valve structure for fluids comprising a casing having a plurality of inlet passages, and an outlet passage, with means to control said passages, embracing a ported body seat, a ported volume valve element coacting therewith, and a ported inlet proportioning valve element coacting with and operable independently of



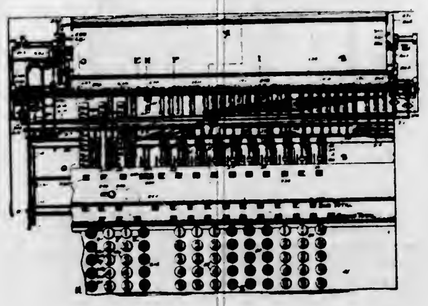
said volume valve elements, and means to operate said valve elements, said valve elements being coaxially disposed, and angularly displaceable about a common, extended axis.

1,429,200. DOWEL PIN. PETER FOTACOS, New York, N. Y. Filed Oct. 29, 1921. Serial No. 511,386. 4 Claims. (Cl. 20—92.)

1. As a new article of manufacture, a self-anchoring dowel pin comprising a longitudinally slotted pin body and a pair of anchoring elements each having anchoring means at one edge and in actuating means disposed centrally of the opposite edge said anchoring elements reversely mounted within the slotted portion of the pin body, and normally lying within the periphery of the pin and the actuating means projecting from diametrically opposite sides of the pin whereby upon advancement toward each other of the members to be joined the said actuating means will be engaged thereby to effect movement thereof toward each other and simultaneously to effect the radial projection of the anchoring means from diametrically opposite sides of the pin body.

1,429,201. ADDING AND RECORDING MACHINE. WILLIAM S. GUBELMANN, Buffalo, N. Y. Filed Jan. 10, 1900. Serial No. 1,004. 298 Claims. (Cl. 235—60.)

5. In a calculating machine, the combination of a plurality of sets of accumulators, movable accumulator con-



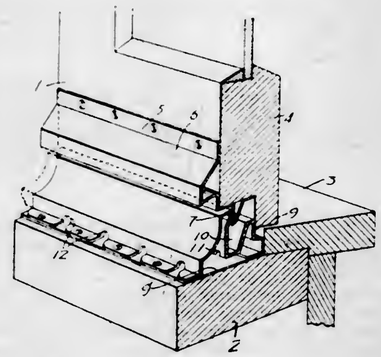
trolling keys provided with mechanism for automatically returning said keys to normal position, whereby any one or any number of the accumulators may be caused to register one or more numbers at a time, and automatic means whereby the accumulations on one set of accumulators may be controlled by the accumulations on another set of accumulators.

38. In a calculating machine, the combination with actuating devices, of a plurality of independently operable groups of totalizer wheels in operative relation thereto, the totalizer wheels of each group being arranged in axial alinement and in progressive denominational order and means for bringing said groups of totalizer wheels into such connection with said actuating devices, that a number registered in one set of totalizer wheels may be transferred to another set of totalizer wheels under control of the set transferred from.

105. The combination of a plurality of sets of accumulators one of which sets is movable independently of another of said sets, actuating means for one of said sets, means whereby a second of said sets is driven by the actuated set simultaneously with the actuation of the latter, and means for turning the accumulators of one of said sets to zero position without affecting the other set.

215. In a calculating machine; the combination of a sub total accumulator and a grand total accumulator; a printing mechanism therefor; depressible keys for controlling said accumulators and said printing mechanism; and means correlated with said accumulators, printing mechanism, and keys, whereby each group of a plurality of groups of items may under the control of said keys be separately totalized on said sub total accumulators and whereby each item of each of said group of items may be printed by said printing mechanism under the control of said keys, and whereby each total of each of said groups of items may be printed by said printing mechanism under the control of said sub total accumulator, and whereby a grand total of all of said totals may be accumulated on said grand total accumulator under the control exercised by said keys for said totalization of said groups of items, and whereby the grand total registered on said grand total accumulator may be printed by said printing mechanism under the control of said grand total accumulator.

1,429,202. ADDING AND RECORDING MACHINE. WILLIAM S. GUBELMANN, Buffalo, N. Y. Filed Apr. 10, 1922. Serial No. 551,298. 49 Claims. (Cl. 235—60.)

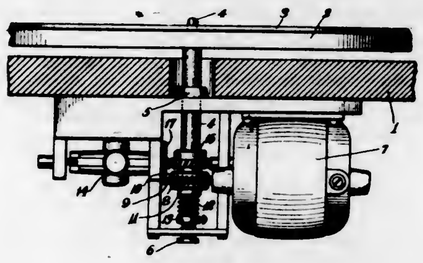


3. In a machine of the class described, the combination of a plurality of accounting devices, and manipulative means under the optional control of the operator for adding or subtracting the amount of one accounting device to the amount standing on another accounting device.

17. A machine for listing items in several successive series and printing the total of each series at the end thereof and a grand total of all of the items at the end of all of the series, comprising printing devices for listing the individual items, a set of accumulator pinions and means for accumulating upon said pinions the individual items of each series listed, a second set of accumulator pinions, means for causing the return of the first mentioned set of pinions to zero position at the end of any series of items and setting up the type to print the total of such series of items and to transfer such total to the second set of pinions and means for causing the subsequent return of the said second set of pinions to zero position and setting up the type to print the grand total of all the series-totals accumulated upon said second set of pinions.

44. In a calculating machine, the combination with toothed actuators, means for controlling the amount of movement of said actuators, two independently operable groups of totalizer wheels in operative relation to said actuators, means for introducing items into one or both totalizers, said means being under control of the operator, and means for transferring numbers from one totalizer to the other; substantially as described.

1,429,203. WEATHER STRIP. JOHANNES HARTSTRA, Grand Rapids, Mich. Filed Nov. 11, 1919. Serial No. 337,164. 2 Claims. (Cl. 20—69.)



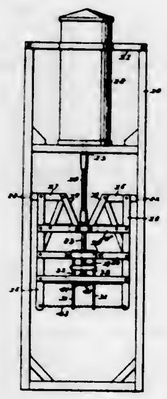
1. A device of the class described comprising an upper section adapted to be affixed to the outer face of a swinging sash and having a pendent water deflecting projection thereon and also having a lower pendent projection with a flat outer face arranged in rear of the first-named projection, a lower section adapted to be fixed upon an outer sill and having a pair of upwardly extended spaced ribs, one to engage the wall of a rabbet at the lower edge of the sash and the other to engage or abut against the flat face of said lower and rear projection, and a trough between said ribs, said trough having drain holes therein.

1,429,204. PHONOGRAPH AND THE LIKE. ROBERT HEAD, New York, N. Y., assignor to The Aeolian Company, a Corporation of Connecticut. Filed Oct. 29, 1917. Serial No. 199,043. 4 Claims. (Cl. 188—187.)

2. In a phonograph, the combination of a turntable shaft, means operative at all times to govern the maximum speed of said shaft, a motor having a speed which is greater than that required to rotate the turntable shaft at its maximum governed speed, and a slip connection mounted on the turntable shaft and forming a drive between the motor and the turntable shaft, said connection being so adjusted as to provide a slippage at all times

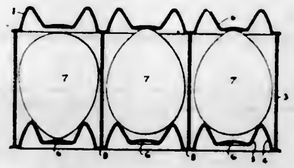
between the motor and the turntable shaft and to compensate for variations in the excess speed of the motor

relatively to the speed of the turntable shaft, due to fluctuations in the speed of the motor.



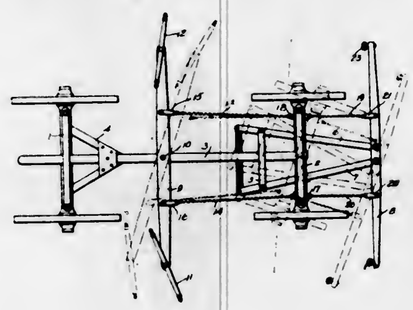
1,429,205. ADVERTISING MACHINE. ROBERT EMMETT HINCHEY, Aurora, Mo. Filed Sept. 29, 1920. Serial No. 413,505. 3 Claims. (Cl. 40—36.)

1. The combination in a one story, two section moving-display advertising machine, of a frame-work supporting an endless-pathway, consisting of a front and rear horizontal card-displaying portion, and two oppositely disposed sections, constituting in themselves, two transverse portions with a narrow space therebetween, a series of card-display carrying-frames supported in said transverse sections to form first and second sets, an endless-chain passed about a large sprocket-wheel mounted on a gear-shaft having a gear, and three small guide-wheels spaced apart in determinate positions, means to continuously rotate the shaft, a gear having operative connection between said shaft and the driving power, a single stiff-pin mounted on said endless chain, adapted to the several tasks of transferring the frames from one set to the other and vice versa, of actuating the means to move said frames in the transverse sections of portions, thereby placing them in position to be transferred, co-operative notches cut in the under edge of the frames for operative engagement while in the horizontal portions, elbow-levers oppositely positioned having arms disposed in timing distances in the transverse path of said actuating-means to effect intermittent bodily movement of all the frames in the transverse portions, while said shaft is turning, substantially as described.



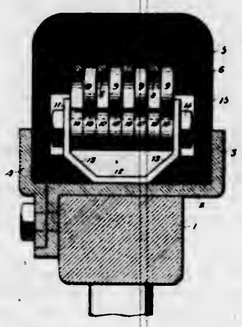
1,429,206. DISTRIBUTOR FOR SPRAYING ANIMALS. JOHN TRUCKENBRODT and NIELS C. JENSEN, Fort Dodge, Iowa. Filed Nov. 8, 1920. Serial No. 422,710. 9 Claims. (Cl. 119—159.)

1. In a distributor for spraying animals, a gate supporting frame, a gate swingingly associated therewith, a tank, a flexible pipe communicating with the tank, a rigid pipe attached to the gate and connected with the flexible pipe, a head attached to the lower end of the rigid pipe and provided with oppositely extending discharge openings, members pivotally attached to the head; means for holding the lower ends of said members seated to close the discharge openings of the head, bars pivotally associated with the gate below the pivotal points of connec-



tion of the gate with its frame, a yoke attached to the bars for engagement with the members attached to head, the parts being associated to effect when the gate is swung the opening of one of the discharge openings which is on the opposite side of the gate from the direction in which it is swung.

1,429,207. PACKING FOR FRAGILE ARTICLES. MORRIS KOPPELMAN and SIMON COOPER, Brooklyn, N. Y., assignors of one-half to said Koppelman, and one-half to Leon Mann, New York, N. Y. Original application filed Apr. 15, 1922, Serial No. 553,139. Divided and this application filed July 17, 1922. Serial No. 575,516. 10 Claims. (Cl. 217—27.)

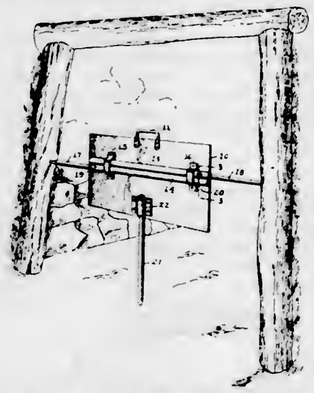


1. A packing for eggs and other fragile globular articles, comprising a sheet having thereon a series of projecting holders each consisting of a round upstanding rim of substantially truncated conical form, an inwardly and downwardly inclined interior part extending to a point near the base of the said upstanding portion, and a central bottom portion, the downward inclination of the said inner portion being approximately tangential to the curve of the article to be placed therein, the space defined by the edge formed by the junction of the upstanding portion and the interior portion being of lesser diameter than the greatest diameter of said article and adapted to hold the latter by contact therewith between its middle and its bottom and the bottom part of the holder being normally below the said bottom of the article.

1,429,208. WAGON-BODY CONSTRUCTION. WESLEY KOUNS, Salina, Kans. Filed Apr. 26, 1921. Serial No. 464,516. 5 Claims. (Cl. 278—1.)

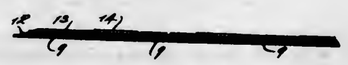
1. A running gear for wagon bodies having a reach bar and front hounds, which comprises a double-tree pivoted to the reach bar between the wheels of the wagon, and a neck-yoke bar attached to the front hounds and extending across the front of the wheels and front axle.

1,429,209. TIRE. VRATISLAV KUBELKA, Brooklyn, N. Y. Filed Jan. 25, 1922. Serial No. 531,666. 6 Claims. (Cl. 152—8.)



4. In a tire construction, the combination with a rim, of a solid tire on the rim having a recess therein, an annular chain of spring links accommodated in said recess, said links being arranged in groups pivotally connected together, brackets straddling the links at their points of pivotal connection, and bolts passed through the brackets and connecting the links, said brackets supported directly in the rim, the links of said chain comprising elongated body portions bent back upon themselves to form spring loops, said loops rolled back to provide eyes receiving the bolts, said elongated body portions of the links bearing directly against the inner surface of the tire body.

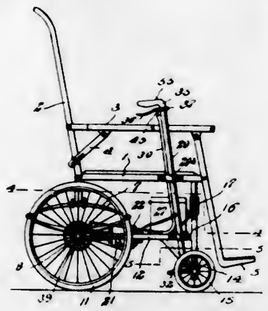
1,429,210. ICE ANCHOR. JOHN P. LACOUR, New York, N. Y. Filed May 27, 1921. Serial No. 473,097. 3 Claims. (Cl. 294—67.)



1. As an article of manufacture, an ice anchor comprising vertical arms provided with spurs at their lower ends, supporting lugs at the upper ends of said arms, and pivotally connected horizontal arms.

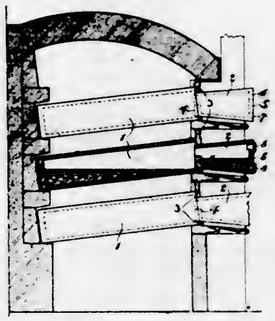
1,429,211. DANGER SIGNAL FOR MINES. ROBERT W. LIGHTBURN, Gans, Pa. Filed Apr. 17, 1922. Serial No. 553,503. 4 Claims. (Cl. 40—128.)

1. In a device of the class described, a plate member, tubular elements secured to the plate and positioned parallel therewith, arms slidable with reference to the tubular elements and movable in opposite directions, and means for securing the arms.



1,429,212. TIRE PROTECTOR. HENRY J. COHRS, Jamaica, N. Y. Filed Apr. 26, 1922. Serial No. 556,756. 1 Claim. (Cl. 152—18.)

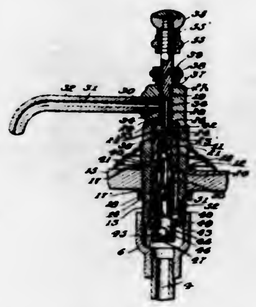
In a tire protector adapted to be embedded in a tire, a layer of fabric, plates carried thereby, spaced one from



the other, a second layer of fabric applied to the first layer and over said plates, said second layer being forced into the spaces between the plates on the first layer and vulcanized thereto, a third layer of fabric vulcanized to the second layer, said third layer being forced into the forced in portions of the second layer, and plates located in the forced in portion of the third layer.

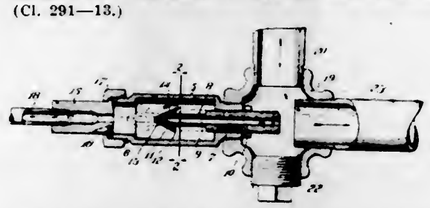
1,429,213. MOTOR CHAIR. HARRY E. GLADISH, Higginsville, Mo. Filed Feb. 27, 1922. Serial No. 539,535. 5 Claims. (Cl. 180—1.)

1. A motor chair comprising an axle housing, a frame connected to and extending said housing and having uprights at its forward corners, a cross-bar carried at the lower ends of said uprights, knuckles pivotally connected to said cross-bar and bearing steering wheels, axle sections in the housing and bearing drive wheels, an electric motor and a storage battery carried on said frame, a connection between the armature shaft of the motor and the axle sections and including equalizing gearing in the housing, a body spring supported on the corner uprights of the frame and the housing, and a one-hand control carried by the frame and including means to swing the steering wheels and means to establish and interrupt an electric circuit including the storage battery and the motor.



1,429,214. CONDENSER. CHARLES ALBERT WETTENGEL, St. Louis, Mo., assignor to American Zinc, Lead & Smelting Company, St. Louis, Mo., a Corporation of Maine. Filed Mar. 4, 1918. Serial No. 220,389. 6 Claims. (Cl. 266—19.)

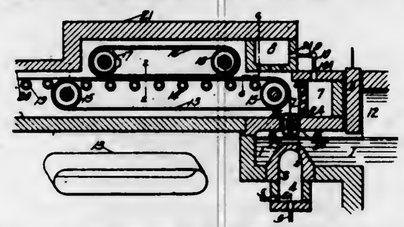
1. A tapering condenser having a fixed head provided at its larger end with an opening for withdrawing the molten metal, and another opening at its larger end through which the zinc bars may be passed into the retort.



REISSUES.

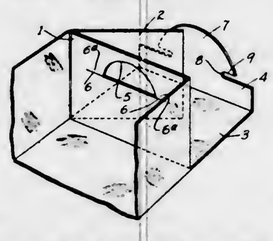
13,430. LIQUID DISPENSER. GABRIEL A. BOBRICK, Los Angeles, Calif., and ARTHUR L. BOBRICK, New York, N. Y. Filed July 18, 1922. Serial No. 575,820. Original No. 1,364,347, dated Jan. 4, 1921, Serial No. 78,814, filed Feb. 17, 1916. 15 Claims. (Cl. 221—103.)

1. A liquid dispenser comprising a reservoir and a hollow body connected thereto and having a hollow piston, a charge-receiving chamber formed at one end of said piston, a discharge chamber formed at the other end thereof, a passage through said piston connecting said chambers, a valve controlling the passage from said reservoir to said receiving chamber, a valve controlling said passage through said piston, an outlet from said discharge chamber, and means carried by said piston for closing communication from said discharge chamber to said outlet when the piston is in its outward position.



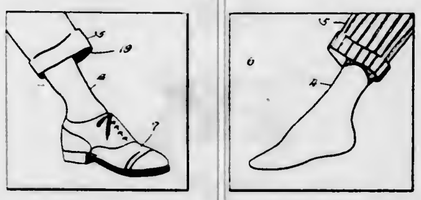
13,451. AIR NOZZLE FOR TRACK SANDERS. ELMER E. BRADLEY, Clinton, Iowa. Filed Apr. 24, 1922. Serial No. 556,341. Original No. 1,280,146, dated Oct. 1, 1918, Serial No. 210,922, filed Jan. 8, 1918. 9 Claims. (Cl. 291—13.)

1. In a device of the class described, a casing having an outlet in one end thereof, a nozzle adjustably secured in said outlet, said nozzle having ports communicating with the bore thereof, with some of the ports being disposed at an angle to the direction of said bore.



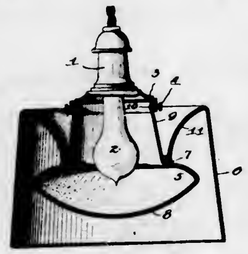
13,452. PROCESS AND APPARATUS FOR MAKING SHEET GLASS. JOHN C. CROWLEY, Cleveland, Ohio, assignor to The Liberty-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed May 8, 1922. Serial No. 559,431. Original No. 1,342,533, dated June 8, 1920, Serial No. 243,981, filed July 8, 1918. 9 Claims. (Cl. 49—17.)

1. In an apparatus for drawing sheet glass, a receptacle for containing a prepared mass of molten glass, means, including an endless metal belt carrier for drawing a continuous sheet of glass from the mass of glass in said receptacle, said metal belt carrier being the means for bending the sheet, the means for supporting and carrying the sheet and the means for flattening the sheet, said metal belt carrier continuously contacting the sheet of glass from the moment that the sheet starts to bend



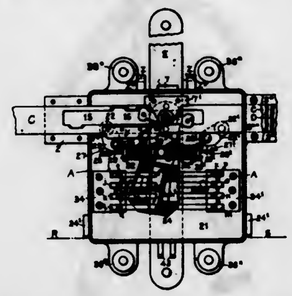
until it is sufficiently flattened and set for the lehr, and means for holding under tension a desired vertical length of the sheet's edge, for maintaining a predetermined width of the sheet drawn.

13,453. FOLDING BOX. EDWARD G. GEREKE, St. Louis, Mo., assignor to Gereke-Allen Carton Company, St. Louis, Mo., a Corporation of Missouri. Filed July 24, 1922. Serial No. 577,230. Original No. 1,364,839, dated Jan. 4, 1921, Serial No. 232,280, filed May 3, 1918. 4 Claims. (Cl. 229—34.)



4. A folding cardboard box having an end wall composed of a plurality of overlapped portions, a flap on one of said portions which is adapted to be folded over the inner side of said end wall during the operation of assembling the box, the inner portion of said end wall having an opening, one of whose edges is extended by a lateral slit so as to form a shoulder on said end wall, and a tongue on said flap adapted to be inserted in said opening and forced through said slit, said tongue having a locking shoulder that snaps into engagement with the shoulder on said end wall formed by said lateral slit when said tongue reaches its final position.

13,454. CHANGEABLE SIGN. THEODORE KELLER, New York, N. Y., assignor of one-half to Max Michel, New York, N. Y. Filed July 3, 1922. Serial No. 572,746. Original No. 1,411,439, dated Apr. 4, 1922, Serial No. 489,776, filed Aug. 4, 1921. 4 Claims. (Cl. 40—135.)



1. A changeable advertising sign consisting of a casing of opaque material and having an open side, lights within said casing, a translucent sheet closing said open side, a representation which is complete in itself but which does not include a representation of the article to be advertised at one side of said sheet and a representation which includes a representation of the article to be advertised and which is supplementary to the first mentioned representation at the other side of said sheet, only one representation being visible from the front when the lights are out and the combination of both representations being visible from the front when the lights are on, the combined representations when viewed together from the front when the lights are on forming a complete clean-cut picture registering as to all its parts whereby the periodic operation of the lights causes two clean-cut pictures to be seen in alternation from the front of the sign, one of said pictures being the representation of something which lacks a feature, said feature which is lacking in the one picture appearing in the other picture, one of which pictures comprises a representation of a thing and the other of which does not comprise the representation of said thing, thereby showing alternately the representation of a thing in operative relation to some other thing and then the representation of one of the things without the other thing.

15,455. ELECTRIC-LIGHT FIXTURE. GUSTAVE E. VILLARET, New York, N. Y. Filed Jan. 10, 1922. Serial No. 528,335. Original No. 1,361,786, dated Dec. 7, 1920, Serial No. 385,528, filed June 1, 1920. 3 Claims. (Cl. 240—92.)

3. An electric light fixture, comprising a globe having an annular shoulder adjacent its lower end, a reflector resting upon said shoulder and intercepting the light from said globe, and a depending flange or shade on the outer periphery of the reflector.

15,456. ELECTRICAL POINT DETECTOR FOR RAILWAYS. GEORGE H. WION, Melbourne, Victoria, Australia, and ALFRED E. HUDD, Liverpool, England. Filed Dec. 24, 1921. Serial No. 524,773. Original No. 1,343,133, dated June 8, 1920, Serial No. 173,659, filed June 8, 1917. 10 Claims. (Cl. 246—158.)

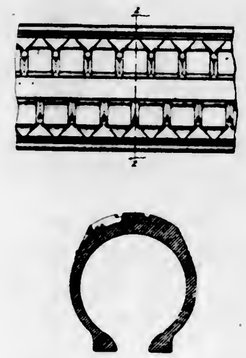
1. Detector apparatus for switch points including intersecting bars, levers to co-act with the bars, and a controller to be moved or oscillated near the point of intersection of the bars, as and for the purposes set forth.

DESIGNS.

61,459. SWEATER. BARNETT BECKENSTEIN, Brooklyn, N. Y. Filed May 22, 1922. Serial No. 2,364. Term of patent 3½ years.

The ornamental design for a sweater, as shown.

61,460. FINGER RING. JOHN M. BENISON, Camden, N. J. Filed July 8, 1921. Serial No. 483,371. Term of patent 3½ years.



The ornamental design for a finger ring, as shown and described.

61,461. DOLL. EDSON B. CARD, New York, N. Y. Filed June 12, 1922. Serial No. 2,631. Term of patent 7 years.

The ornamental design for a doll, as shown.

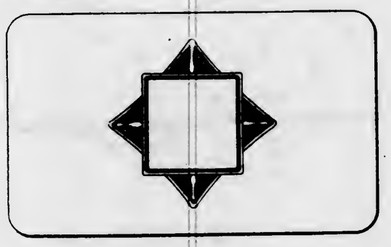
61,462. NONSKID TIRE. JOHN N. CARTER, Trenton, N. J., assignor to Bergougnan Rubber Corporation, Wilmington, Del., a Corporation of Delaware. Filed Jan. 12, 1922. Serial No. 186. Term of patent 14 years.

The ornamental design for a nonskid tire, as shown.

61,463. ASH TRAY OR THE LIKE. RUSSEL A. COWLES, New York, N. Y., assignor to Ansonia Clock Co., Brooklyn, N. Y., a Corporation of Connecticut. Filed Mar. 1, 1922. Serial No. 973. Term of patent 14 years.

The ornamental design for an ash tray or the like, as shown.

61,464. ASH TRAY OR THE LIKE. RUSSEL A. COWLES, New York, N. Y., assignor to Ansonia Clock Co., Brooklyn, N. Y., a Corporation of Connecticut. Filed Feb. 28, 1922. Serial No. 945. Term of patent 14 years.

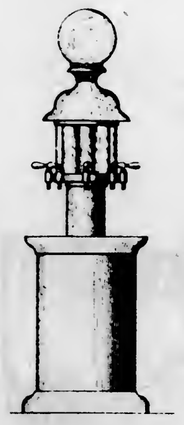


The ornamental design for an ash tray or the like, as shown.

61,465. DOLL. REES DAVIS, Chicago, Ill. Filed Apr. 22, 1922. Serial No. 1,916. Term of patent 3½ years.

The ornamental design for a doll, as shown.

61,466. BUSINESS CARD. STEWART P. FOLTZ, New Castle, Pa. Filed Feb. 14, 1921. Serial No. 445,006. Term of patent 3½ years.



The ornamental design for a business card, as shown.

61,467. PHONOGRAPH CABINET. CICERO HINE, Chicago, Ill., assignor to The Brunswick-Balke-Collender Company, Chicago, Ill., a Corporation of Delaware. Filed Jan. 12, 1922. Serial No. 182. Term of patent 7 years.

The ornamental design for a phonograph cabinet as shown.

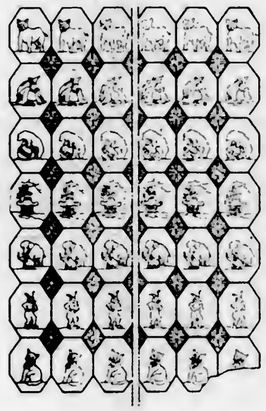
61,468. LUBRICANT-DISPENSING APPARATUS. WESLEY E. KEESEE, Los Angeles, Calif. Filed Oct. 22, 1921. Serial No. 509,743. Term of patent 7 years.

The ornamental design for a lubricant dispensing apparatus, as shown.

61,469. DOLL. IMOGENE KIDDER and LENNA MELTON, Portland, Oreg. Filed Apr. 13, 1922. Serial No. 1,718. Term of patent 3½ years.

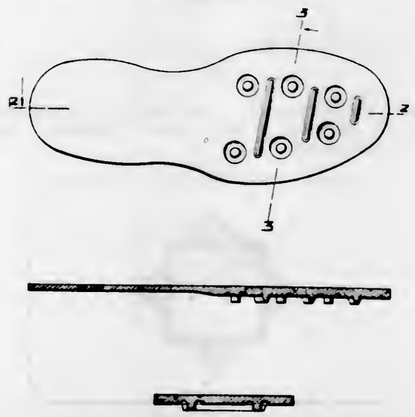
The ornamental design for a doll, as shown.

61,470. ASH TRAY. STEPHEN KRONBURGER, Jersey City, N. J., assignor to Cohan-Epner Co., New York, N. Y. Filed May 5, 1921. Serial No. 467,227. Term of patent 7 years.



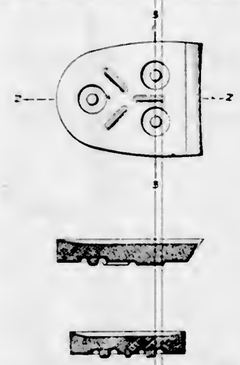
The ornamental design for an ash tray as shown.

61,471. MANIKIN. JOHN EMERY LESTER, Seattle, Wash. Filed Apr. 16, 1921. Serial No. 462,040. Term of patent 3½ years.



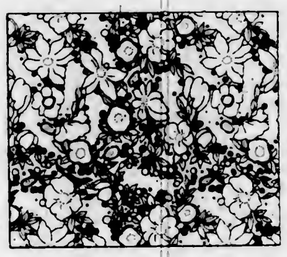
The ornamental design for a manikin, as shown.

61,472. BABY-CRIB COVER. DAVID LEVY, New York, N. Y. Filed May 17, 1922. Serial No. 2,290. Term of patent 3½ years.



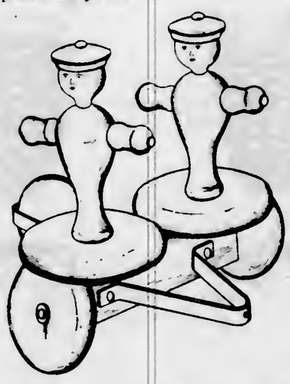
The ornamental design for a baby crib cover as shown and described.

61,473. SOLE. HERBERT T. MASON, North Brookfield, Mass., assignor to Quabaug Rubber Company, Brookfield, Mass., a Corporation of Massachusetts. Filed Dec. 19, 1921. Serial No. 523,567. Term of patent 14 years.



The ornamental design for a sole, as shown.

61,474. HEEL. HERBERT T. MASON, North Brookfield, Mass., assignor to Quabaug Rubber Company, Brookfield, Mass., a Corporation of Massachusetts. Filed Dec. 19, 1921. Serial No. 523,568. Term of patent 14 years.



The ornamental design for a heel, as shown.

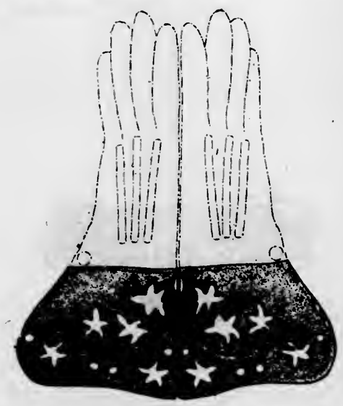
61,475. PAPER OR SIMILAR ARTICLE OF MANUFACTURE. FRANK J. M. MILES, New York, N. Y., assignor to Cheramy, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 15, 1922. Serial No. 714. Term of patent 7 years.

The ornamental design for paper or similar article of manufacture substantially as shown.

61,476. WHEELED TOY. CHARLES HAMILTON PAJEAU, Evanston, Ill. Filed Jan. 14, 1922. Serial No. 201. Term of patent 14 years.

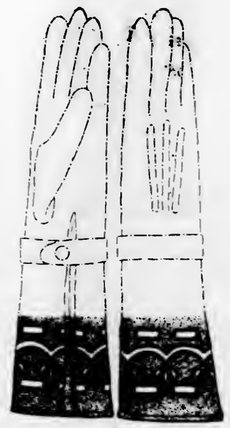
The ornamental design for a wheeled toy, as shown.

61,477. BADGE, PIN, RING, EMBLEM, OR ARTICLE OF SIMILAR NATURE. HENRY W. PETERS, Boston, Mass. Filed Apr. 25, 1922. Serial No. 1,963. Term of patent 7 years.



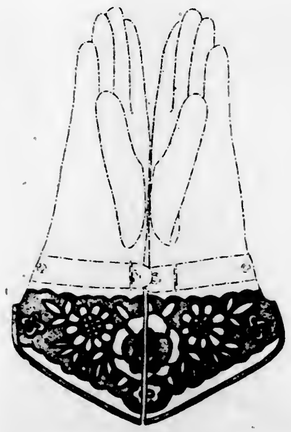
The ornamental design for a badge, pin, ring, emblem, or article of similar nature, as shown.

61,478. DOLL. SAMUEL REICH, New York, N. Y. Filed May 10, 1922. Serial No. 2,174. Term of patent 3½ years.



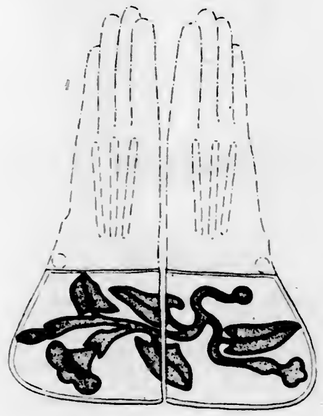
The ornamental design for a doll as shown and described.

61,479. GLOVE GAUNTLET. JEROME RICE, New York, N. Y., assignor to Wimelbacher & Rice, New York, N. Y., a Firm. Filed May 9, 1922. Serial No. 2,144. Term of patent 3½ years.



The ornamental design for a glove gauntlet, substantially as shown and described.

61,480. GLOVE GAUNTLET. JEROME RICE, New York, N. Y., assignor to Wimelbacher & Rice, New York, N. Y., a Firm. Filed May 9, 1922. Serial No. 2,145. Term of patent 3½ years.

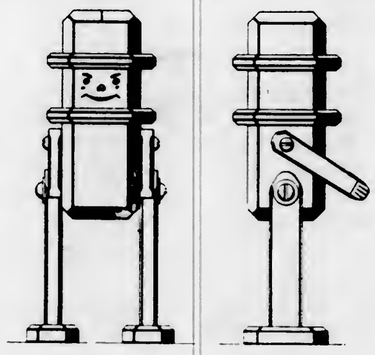


The ornamental design for a glove gauntlet, substantially as shown.

61,481. GLOVE GAUNTLET. JEROME RICE, New York, N. Y., assignor to Wimelbacher & Rice, New York, N. Y., a Firm. Filed May 9, 1922. Serial No. 2,146. Term of patent 3½ years.

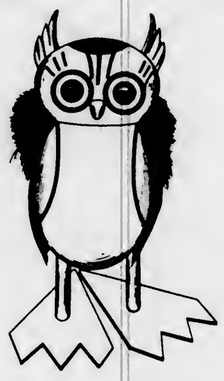
The ornamental design for a glove gauntlet, substantially as shown.

61,482. GLOVE GAUNTLET. JEROME RICE, New York, N. Y., assignor to Wimelbacher & Rice, New York, N. Y., a Firm. Filed May 9, 1922. Serial No. 2,147. Term of patent 3½ years.



The ornamental design for a glove gauntlet, substantially as shown.

61,483. DOLL. MARTIN R. SCHNACK, Los Angeles, Calif. Filed Dec. 29, 1920. Serial No. 433,948. Term of patent 3½ years.



The ornamental design for a doll, as shown.

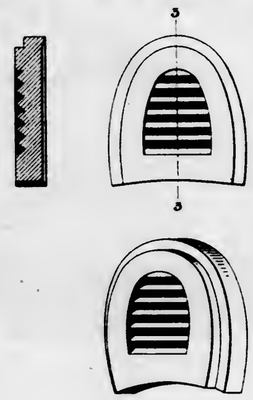
61,484. TOY. FRANK H. STEACY, York, Pa. Filed Feb. 4, 1922. Serial No. 540. Term of patent 3½ years.

The ornamental design for a toy as shown.

61,485. TOY ANIMAL. STEPHEN J. TAMO, Livermore, Calif. Filed Feb. 15, 1922. Serial No. 711. Term of patent 3½ years.

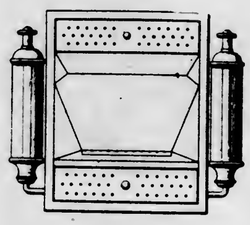
The ornamental design for a toy animal, as shown.

61,486. RING. ALBERT VERBER, New York, N. Y. Filed May 5, 1922. Serial No. 2,091. Term of patent 7 years.



The ornamental design for a ring, as shown.

61,487. RING. ALBERT VERBER, New York, N. Y. Filed May 5, 1922. Serial No. 2,092. Term of patent 7 years.



The ornamental design for a ring, as shown.

61,488. RUBBER HEEL. GEORGE W. WATSON, Boston, Mass. Filed Apr. 17, 1922. Serial No. 1,801. Term of patent 14 years.

The ornamental design for a rubber heel, as shown.

61,489. HEATER. ETIENNE WITZBERGER, Carnegie, Pa. Filed Feb. 28, 1921. Serial No. 448,617. Term of patent 7 years.

The ornamental design for a heater as shown.

61,490. WATCHCASE BOW. LOIS MCG. WILLIAMS, Fort Thomas, Ky., assignor to The Wadsworth Watch Case Company, Dayton, Ky., a Corporation of Kentucky. Filed May 15, 1922. Serial No. 2,248. Term of patent 14 years.

The ornamental design for a watchcase bow, substantially as shown.

61,491. WATCHCASE BOW. LOIS MCG. WILLIAMS, Fort Thomas, Ky., assignor to The Wadsworth Watch Case Company, Dayton, Ky., a Corporation of Kentucky. Filed May 15, 1922. Serial No. 2,249. Term of patent 14 years.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

DECISIONS OF THE U. S. COURTS.

Supreme Court of the United States.

UNION TOOL CO. *v.* WILSON.

Decided May 15, 1922.

1. APPEAL AND ERROR—CROSS WRIT OF ERROR LIES AFTER WRIT OF ERROR TO REVIEW PUNITIVE CONTEMPT ORDER.

Where the district court entered an order imposing a fine, which was partly remedial and partly punitive, for contempt in violating an injunction against the sale of machines which infringed plaintiff's patent, and purged of contempt in selling spare parts for such machines, the criminal feature of the order fixed its character for purposes of review, so that defendant could sue out a writ of error, on which the entire order could be reviewed, though a purely remedial order would be reviewable only on appeal, and after such writ of error had been sued out plaintiff may have a cross writ of error to review the portion of the order purging the defendant of contempt.

2. CONTEMPT—ORDER PURGING OF CONTEMPT IS NOT BEYOND REVIEW.

An order entered by the district court purging defendant of contempt in the sale of spare parts for infringing machines is not so entirely within the discretion of the trial court as to be beyond review.

3. APPEAL AND ERROR—LEGAL DISCRETION DOES NOT AUTHORIZE REFUSAL TO APPLY SETTLED PRINCIPLES OF LAW.

Legal discretion vested in the trial court does not extend to a refusal by it to apply well-settled principles of law to a conceded state of facts.

4. CONTEMPT—ORDER ON APPEAL TO IMPOSE PROPER PUNISHMENT HELD LIMITED TO COMPENSATION, AND NOT A DIRECTION FOR PUNISHMENT.

Where the circuit court of appeals, on defendant's writ of error to a judgment imposing a fine, which was both punitive and remedial, for contempt by selling infringing machines, reversed the judgment in so far as it was punitive, but affirmed it in so far as it was remedial, and on cross writ of error by plaintiff, to review an order purging defendant of contempt in the sale of spare parts for the infringing machines, reversed such order, a direction to impose such punishment as might seem proper must be understood as referring to compensation, and not to criminal punishment.

5. COURTS—WRIT ISSUED BY DISTRICT COURT MAY BEAR TESTE OF CHIEF JUSTICE.

Since the transfer of jurisdiction from circuit courts to district courts, writs issued by the district courts may properly be tested by the Chief Justice of the United States, in view of judicial code, sections 289, 291 (Comp. St., secs. 1206, 1208), notwithstanding the provision of Rev. St., section 911 (Comp. St., sec. 1534), that writs of district courts should bear teste of the district judge.

6. SAME—CORPORATION KNOWING OF INJUNCTION CANNOT OBJECT TO TESTE OF WRIT.

A corporation which knew of the injunction against the infringement of a patent, and was therefore bound to obey it, even if no writ had been issued, cannot object that the writ bore teste of the Chief Justice of the United States, instead of the district judge, especially where the objection was first made in the brief filed in the Supreme Court.

7. SAME—SALE OF SPARE PARTS FOR INFRINGING MACHINES SOLD BEFORE INJUNCTION HELD INFRINGEMENT.

The contention that a patentee, by receiving compensation for the infringing article sold, ratified the sales, does not relieve infringer of contempt in selling spare parts for machines sold before the injunction was issued, where it was not shown that the patentee received compensation for infringement by the use of the machines, and there was consequently no implied license to use the spare parts in such machines.

ON writ of certiorari to the United States Circuit Court of Appeals for the Ninth Circuit.

Suit for infringement of a patent by Elihu C. Wilson against the Union Tool Company. A judgment purging defendant of contempt in selling spare parts for the infringed article after injunction had been issued was reversed by the circuit court of appeals, with directions to impose such punishment as might seem proper (265 Fed., 669), and defendant brings certiorari. Affirmed.

Mr. Frederick S. Lyon, *Mr. A. V. Andrews*, *Mr. Melville Church*, and *Mr. William K. White* for the petitioner.

Mr. G. Benton Wilson and *Mr. F. W. Clements* for the respondent.

Mr. Justice BRANDEIS delivered the opinion of the Court.

Wilson sued the Union Tool Company in the Federal court for the southern district of California, southern division, for infringement of a patent for underreamers. He obtained a decree for an injunction and an accounting (237 Fed., 847), which was affirmed by the United States Circuit Court of Appeals for the Ninth Circuit (249 Fed., 736; 161 C. C. A., 640), and a petition for a writ of certiorari was denied by this Court (248 U. S., 559; 39 Sup. Ct., 6; 63 L. Ed., 421). Thereafter a writ of injunction issued, which forbade the manufacture and sale, not only of infringing machines, but also of parts or elements that might be used in combination to effect infringement.

Wilson claimed that there had been deliberate violation of the injunction, both by the sale of

infringing machines and by the sale of spare parts, and he moved in the district court that the company and certain of its officers be punished for contempt or otherwise dealt with for violating it. The district court found that, since the service of the injunction, the company had sold infringing machines, held it guilty of contempt in so doing, ordered that the company pay to the clerk of the court $5,000 as a fine, and that out of this sum $2,500 be paid to Wilson "as a reasonable portion of the expenses incurred" by him in the contempt proceeding, and further ordered that, if the fine were not paid within 20 days, Double, the company's president, be committed to jail, to be there confined until it should be paid. The district court also found that the company had sold, after the service of the injunction, spare parts to be used with machines or devices sold by the company prior thereto, and that these were of such a nature that when used in combination they would effect an infringement. But the court concluded, for reasons to be stated, that the sale of such spare parts should not subject the company to a fine, and purged it of contempt in that respect, without prejudice to the right of Wilson to renew his application.

To have this judgment entered in the contempt proceeding reviewed by the court of appeals, the company and Double sued out a writ of error, and thereafter Wilson sued out a cross writ of error. The two writs were considered and disposed of separately. On the original writ the judgment was modified by striking out all that related to Double, and it was reversed in so far as it "directed that $2,500 be paid to the clerk of the court as a punishment of the corporation." But in so far as the judgment directed payment to Wilson as compensation, it was affirmed. (262 Fed., 431.) On the cross writ, which was heard and decided later, the court of appeals overruled a motion to dismiss for want of jurisdiction, held the company guilty of contempt in selling the spare parts, held that the district court had abused its discretion in purging the company of this contempt, reversed, in that respect, the judgment, and remanded it, with directions to the district court to impose such punishment as might seem proper. (265 Fed., 669.) A motion of the company for leave to file a petition for mandamus to compel the court of appeals to vacate its judgment on the cross writ of error and to dismiss the latter was denied by this Court. (254 U. S., 608; 41 Sup. Ct., 12; 65 L. Ed., ——.) But a petition for a writ of certiorari was granted to review the reversal of the judgment in so far as it purged petitioner of contempt in selling the spare parts. (254 U. S., 624; 41 Sup. Ct., 14; 65 L. Ed., ——.) And it is that alone which is now here for review.

[1] The contention that the court of appeals was without jurisdiction of the cross writ of error is renewed here. It is argued that the judgment for contempt, so far as now sought to be reviewed, is remedial, not punitive; that being remedial, it can be reviewed only on appeal, and not on writ of error; that an appeal will not lie until after the final decree; and that no final decree had been entered, as the accounting was still in process. It is true that the part of the judgment for contempt now under review is remedial. But it does not follow that the court of appeals lacked jurisdiction to review it on the cross writ of error. The district court entered a single order, part remedial, part punitive. Where a fine is imposed, partly as compensation to the complainant and partly as punishment, the criminal feature of the order is dominant and fixes its character for purposes of review. (*In re Merchants' Stock Co., Petitioner*, 223 U. S., 639; 32 Sup. Ct., 339; 56 L. Ed., 584.) If the company had acquiesced in the judgment entered, Wilson, having no right to initiate a review of the punitive part, could not have instituted any appellate proceeding until after final decree. *Matter of Christensen Engineering Co.*, 194 U. S., 458; 24 Sup. Ct., 729; 48 L. Ed., 1072; *Doyle* v. *London Guarantee & Accident Co., Limited*, 204 U. S., 599; 27 Sup. Ct., 313; 51 L. Ed., 641. See also *Alexander* v. *United States*, 201 U. S., 117, 122; 26 Sup. Ct., 356; 50 L. Ed., 686.) But an order punishing one criminally for contempt, is a final judgment. The contemnor may obtain immediately a review by writ of error. (*Bessette* v. *W. B. Conkey Co.*, 194 U. S., 324, 336–338; 24 Sup. Ct., 665; 48 L. Ed., 997.) And the company availed itself of this right. When the order was thus brought before the court of appeals, it acquired, at the company's instance, jurisdiction to review that part which was civil as well as that which was criminal in its nature. In the exercise of that jurisdiction it granted, in respect to Double, relief which affected both the criminal and the civil parts of the order. If a cross writ of error had not been filed, Wilson could not have secured from the court of appeals relief in respect to that part of the order which was unfavorable to him. (*Bolles* v. *Outing Co.*, 175 U. S., 262, 268; 20 Sup. Ct., 94; 44 L. Ed., 156.) But a cross writ was duly filed, and that enabled the court to review the portion of the order, civil in its nature, which Wilson alleged to be erroneous; for the judgment in the contempt proceeding was a unit. The case resembles in some respects *Mayer* v. *Walsh* (108 U. S., 17; 1 Sup. Ct., 417; 27 L. Ed., 635); *Walsh* v. *Mayer* (111 U. S., 31, 37, 38; 4 Sup. Ct., 260; 28 L. Ed., 338.) (Compare *Field* v. *Barber Asphalt Co.*, 194 U. S., 618, 620, 621; 24 Sup. Ct., 784; 48 L. Ed., 1142.) The facts relating to the sale of spare parts were agreed, and the question before the court was merely as to their legal effect. That question could appropriately be considered on cross writ of error—even without resort to the power conferred by section 4 of the act of September 6, 1916, chapter 448, 39 Stat., 726 (Comp. St., sec. 1649*a*.) Cases like *ex parte National Enameling Co.* (201 U. S., 156; 26 Sup. Ct., 404; 50 L. Ed., 707) and *Farrar* v. *Churchill* (135 U. S., 609; 10 Sup. Ct., 771; 34 L. Ed., 246), relied upon by the company, are not applicable.

[2, 3] The company contends also that the judgment of the district court, being favorable to it in so far as it related to spare parts, was not subject to review by any appellate court, at any time, by any proceeding—although remedial in its nature. The argument is that where the court of whose authority contempt is charged either finds that there was no contempt or purges the offender, a judicial power has been exercised which is discretionary and is not subject to review. But the fact that a remedial order was entered in a contempt proceeding is not in itself a reason why it should not be subject to correction by an appellate court. In *Worden* v. *Searls* (121 U. S., 14, 26; 7 Sup. Ct., 814; 30 L. Ed., 853) such an order granting compensation was reversed by this Court, and in the court of appeals like orders of the district court denying compensation have been reviewed. (*Enoch Morgan's Sons Co.* v. *Gibson*, 122 Fed., 420; 59 C. C. A., 46; *L. E. Waterman Co.* v. *Standard Drug Co.*, 202 Fed., 167; 120 C. C. A., 455.) In the determination of the question whether an injunction has been violated and, if so, whether compensation shall be made to the injured party, there may be occasion for the exercise of judicial discretion; but the order to be entered in such a proceeding is not exclusively or necessarily a discretionary one. (See *Christensen Engineering Co.* v. *Westinghouse Co.*, 135 Fed., 774; 68 C. C. A., 476; *Gordon* v. *Turco-Halvah Co.*, 247 Fed., 487; 159 C. C. A., 541.) Moreover, legal discretion in such a case does not extend to a refusal to apply well-settled principles of law to a conceded state of facts. (See *Winchester Repeating Arms Co.* v. *Olmsted*, 203 Fed., 493, 494; 121 C. C. A., 615; *in re Sobol*, 242 Fed., 487, 489; 155 C. C. A., 263.)

[4–6] Minor objections of a procedural nature are also urged. It is said that while the infringement by sale of spare parts was a civil contempt, the court of appeals directed the district court "to impose such punishment as may seem proper" and thus ordered criminal punishment. In view of the opinion and other proceedings, the direction must be understood as referring to compensation. (Compare *Gompers* v. *Bucks Stove Co.*, 221 U. S., 418, 441; 31 Sup. Ct., 492; 55 L. Ed., 797; 34 L. R. A. (N. S.), 874.) Then it is insisted that the writ of injunction, although properly attested by the clerk of the district court, was void and of no effect because it bears teste of the late Chief Justice of the United States, whereas by section 911 of the Revised Statutes (Comp. St. sec. 1534) it should have borne teste of the district judge. Under that section writs from the circuit courts bore teste of the Chief Justice; and since the transfer of their jurisdiction to the district courts writs from them may be properly tested by the Chief Justice. (See Judicial Code, secs. 289, 291; (Comp. St., secs. 1206, 1208).) But the company is in no position to make the objection. Knowing of the injunction, it would have been bound to obey it even if no writ had issued. (*In re Lennon*, 166 U. S., 548, 554; 17 Sup. Ct., 658; 41 L. Ed., 1110.) Moreover, the objection to the teste of the writ is made, so far as appears, for the first time, in the brief filed by petitioner in this court. (Compare *District of Columbia* v. *Brooke*, 214 U. S., 138, 147; 29 Sup. Ct., 560; 53 L. Ed., 941.)

[7] On the merits the contention is this: The interlocutory decree awards to Wilson, among other things, compensation by way of damages and profits, for employing the invention in any machine sold prior to the service of the injunction. A patentee, in demanding and receiving full compensation for the wrongful use of his invention in devices made and sold by a manufacturer adopts the sales as though made by himself, and therefore necessarily licenses the use of the devices, and frees them from the monopoly of the patent. This license continues during the life of the machine; it does not end when repairs become necessary. Spart parts are needed for repairs. Those here in question were sold for use in, and repair of, machines marketed by the company before the service of the injunction. Therefore, it is argued, the sale of these parts is licensed and thus not a violation of the injunction. But to this argument which prevailed in the district court, there are several answers; and, among them, this. It does not appear that Wilson has received any compensation whatever for the infringement by use of these machines. (Compare *Birdsell* v. *Shalliol*, 112 U. S., 485, 487–489; 5 Sup. Ct., 244; 28 L. Ed., 768.) There was, consequently, no implied license to use the spare parts in these machines. As such use, unless licensed, clearly constituted an infringement, the sale of the spare parts to be so used violated the injunction. And the sale having been made with full knowledge of all relevant facts the court of appeals properly held that, so far as Wilson had sought remedial, as distinguished from punitive action, the district court was not justified in purging the petitioner of contempt arising from the sale of spare parts.

Affirmed.

ADJUDICATED PATENTS.

(U. S. C. C. A. N. Y.) The Just and Hanaman patent, No. 1,018,502, for tungsten-lamp filament, *Held* infringed. *General Electric Co.* v. *Alexander*, 280 Fed. Rep., 852.

(Order No. 2,770.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., September 7, 1922.

Pursuant to the provisions of section 487 of the Revised Statutes, as amended February 18, 1922, Gustav Rasmus, of Wheatridge, Colorado, registration No. 3,253, has been disbarred from practice before the United States Patent Office.

THOMAS E. ROBERTSON,
Commissioner.

Interference Notices.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., August 29, 1922.

The Reid-Edelmuth Manufacturing Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of The Allman Gas Engine and Machine Co., of 481 Canal Street, New York, N. Y., for registration of a trade-mark and trade-mark registered November 16, 1909, to The Reid-Edelmuth Manufacturing Co., of 247 Bush Street, Brooklyn, N. Y., and a notice of such declaration sent by registered mail to The Reid-Edelmuth Manufacturing Co. at the said address having been returned by the post office undeliverable, notice is hereby given that unless said The Reid-Edelmuth Manufacturing Co., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING,
Acting Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., September 12, 1922.

Penn Textile Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Kohn, Adler & Co., 720 Market Street, Philadelphia, Pa., for registration of a trade-mark and trade-mark registered November 29, 1921, No. 148,915, to Penn Textile Company, 102 Fifth Avenue, New York, N. Y., and a notice of such declaration sent by registered mail to said Penn Textile Company at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Penn Textile Company, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING,
Acting Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., Sept. 12, 1922.

H. M. Miller & Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Kohn, Adler & Co., 720 Market Street, Philadelphia, Pa., for registration of a trade-mark and trade-mark registered April 20, 1897, No. 29,877, to H. M. Miller & Co., 1022 Filbert Street, Philadelphia, Pa., and a notice of such declaration sent by registered mail to said H. M. Miller & Co. at the said address having been returned by the post office undeliverable, notice is hereby given that unless said H. M. Miller & Co., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING,
Acting Commissioner.

Adverse Decisions in Interference.

PATENT No. 1,365,421.

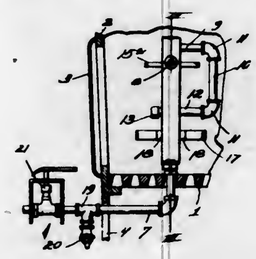
On August 17, 1922, a decision was rendered that Thomas C. MacKay was not the first inventor of the subject matter covered by claims 4, 5, and 6 of his Patent No. 1,365,421, subject, "Control apparatus," and no appeal having been taken within the time allowed such decision has become final.

Applicant's Address.

The requirement of Rule 33, that the post-office address of the applicant must be stated in the petition, means that the applicant must give the post-office address at which he customarily receives his mail.

The rule was made in order that the Office in necessary cases might correspond directly with the applicant and not through his attorney. The address of the attorney with instructions to send communications to the applicant in his care will not be accepted as a compliance with this rule.

Condition of Applications Under Examination at Close of Business September 9, 1922.



(Total number of applications waiting action, excluding Trade-Mark division, 69,832; Trade-Mark division, 8,044. Oldest new case, June 1; oldest amended, May 9, 1921. The dates given are 1921 except where * indicates 1922.)

Room No.	Divisions, Examiners, and subjects of inventions.	Oldest new application and oldest action by applicant awaiting office action. New.	Amended.	No. of applications awaiting action.

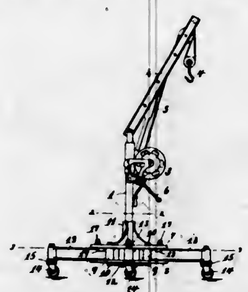
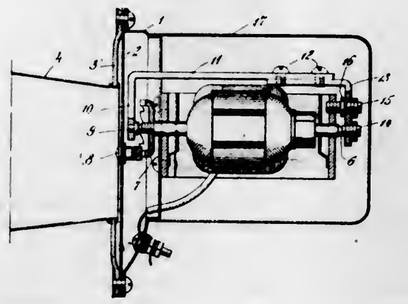
PATENTS



GRANTED SEPTEMBER 19, 1922.

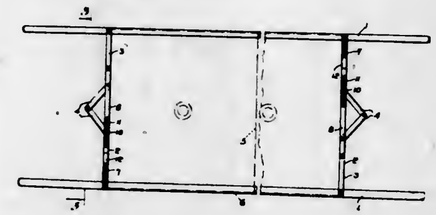
1,429,215. OIL BURNER. ALBERT H. ADCOX, Kansas City, Kans. Filed Oct. 31, 1921. Serial No. 511,575. 4 Claims. (Cl. 158—63.)

4. In an oil burner, the combination with a generator formed with an opening having its walls near the upper end of said opening bowed inwardly to form a pair of ledges, a detachable flame-spreader supported by said ledges, a pair of downwardly depending V-shaped deflectors formed on said spreader, and a discharge pipe having a jet orifice in substantial vertical alinement with the axis of said flame spreader.



1,429,216. PORTABLE HOISTING APPARATUS. ARTHUR J. ARWINE, New York, N. Y., assignor to Gillis & Geoghegan, New York, N. Y., a Firm. Filed Feb. 2, 1921. Serial No. 441,733. 6 Claims. (Cl. 212—140.)

1. In a hoisting apparatus, two disks disposed horizontally one above the other, means for rigidly joining said disks and holding them spaced apart, a tubular post on the upper disk adapted to receive the cylindrical standard of a hoisting mechanism, arms pivotally mounted at their inner ends between said disks and movable horizontally, and casters on the outer ends of said arms.

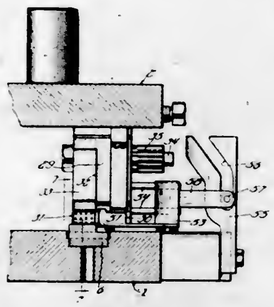


1,429,217. WARNING SIGNAL. EMANUEL AUFIERO, Brooklyn, N. Y. Filed June 27, 1921. Serial No. 480,550. 13 Claims. (Cl. 177—7.)

1. In a warning signal the combination of a diaphragm, an actuator therefor, a shaft for said actuator, a frame by which said shaft is supported and means for adjusting said actuator toward and from said diaphragm comprising

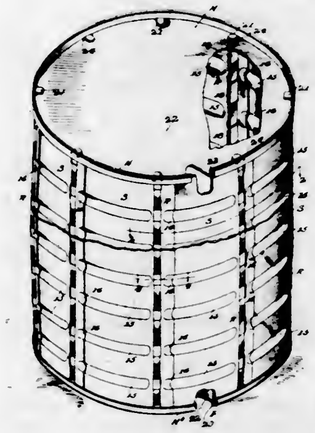
an adjustable member independent of said frame and engaging said shaft at both ends thereof.

1,429,218. CARBOY CARRIER. ALLEN J. BECKER, Essex Fells, N. J. Filed Jan. 10, 1921. Serial No. 436,190. 5 Claims. (Cl. 294—15.)



1. In a carboy carrier, a pair of longitudinal bars, cross pieces connecting said bars, each of said cross pieces comprising inwardly projecting arms rigidly connected at one end to the longitudinal bars, links, each pivotally connected at one end to one of the arms, and at their other end to each other, ratchet teeth carried by one arm, and a spring held dog carried by the other arm and engageable with the ratchet teeth.

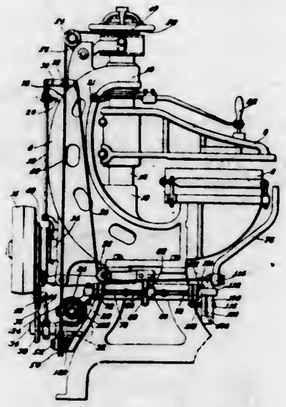
1,429,219. DIE. HENRY BELLON, Chicago, Ill. Filed May 28, 1920. Serial No. 384,853. 7 Claims. (Cl. 153—13.)



1. In a die of the character described, the combination of fixed and movable die members, one of said die members being provided with a forming recess comprising transversely movable forming blocks, the other of said die members comprising an arbor extending transversely to the path of the movable die member, an oscillating arm

mounted on said movable die member, and adjacent said arbor, said members acting successively to bend a strip of

metal into U-shape, to bend one end portion thereof over said arbor, and to apply pressure to the formed strip.

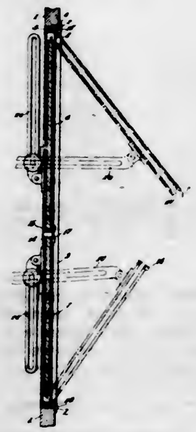


1,429,220. METALLIC KEG. ROBERT W. BLANTON, Ironton, Ohio. Filed Apr. 14, 1921. Serial No. 461,177. 7 Claims. (Cl. 220—5.)

1. In a metal barrel, a side section having formed adjacent each longitudinal edge a plurality of spaced recesses, said recesses extending the entire length of the section and a portion existing between the recesses arranged along one edge being bent upon itself for the purpose described.

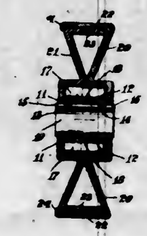
1,429,221. PRESS. WILLIAM J. BRENNAN, Swampscott, Mass., assignor to United Shoe Machinery Corporation of Paterson, N. J., a Corporation of New Jersey. Filed Mar. 21, 1919. Serial No. 284,149. 13 Claims. (Cl. 164—23.)

1. In a machine of the class described, a cutting bed, a presser member, a post carrying said presser member, and means comprising a cable operatively connected to the



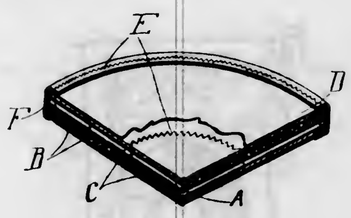
post for moving the presser member into selected position over the cutting bed.

1,429,222. PROCESS FOR CLEANING CONTACT MATERIAL. THOMAS LYNTON BRIGGS, Flushing, N. Y., assignor to General Chemical Company, New York, N. Y., a Corporation of New York. Filed Sept. 15, 1920. Serial No. 410,547. 6 Claims. (Cl. 23—28.)



1. A process for removing foreign substances from contact material mounted on fibrous material, which comprises washing said contact material with water without disarranging such material.

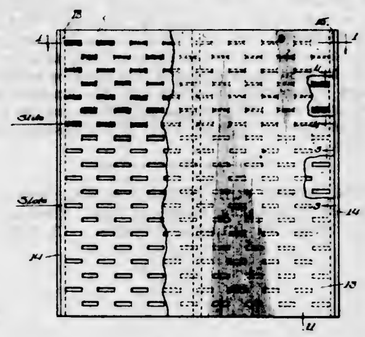
1,429,223. WINDSHIELD. JOSEPH G. BRUENING, Cleveland, Ohio. Filed June 29, 1921. Serial No. 481,179. 3 Claims. (Cl. 296—93.)



1. A windshield comprising a metallic frame adapted to be fitted into an opening, upper and lower windshield sections pivotally supported within said frame, said lower section being hingedly connected along its lower edge to said frame and adapted to open outwardly therefrom independently of said upper section, a flange formed on said frame and adapted to overlap the frame defining said opening, and a second flange formed on said metal frame about the sides and bottom of said lower shield section and projecting in an opposite direction from said first flange, said second flange being adapted to contact with said lower shield section and form a seal therewith.

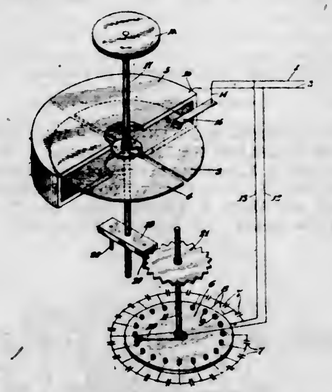
1,429,224. ROLLER BEARING. THOMAS W. BRYANT, Torrington, Conn. Filed Jan. 8, 1921. Serial No. 435,830. 3 Claims. (Cl. 64—62.)

3. In a roller bearing, a split tubular support having slots in its opposite ends, bearing collars having lugs positioned in said slots, an outer bearing member enclosing said collars and forming end abutments therefor, and rollers interposed between said outer bearing member and said collars.



1,429,225. TABLE PAD. MARK CAMPBELL, Cincinnati, Ohio. Filed Feb. 2, 1921. Serial No. 441,937. 3 Claims. (Cl. 65—53.)

1. As a new article of manufacture, a table pad comprising a center sheet, corrugated sheets mounted upon the center sheet and having their corrugations disposed substantially at right angles to one another, backing sheets mounted upon the corrugated sheets, a cover extending over the backing sheets, and a row of stitching passing through the cover, the backing sheets, the corrugated sheets and the center sheet.



1,429,226. PLASTER-RECEIVING BOARD. HARRY A. CUMPER, Chicago, Ill., and ALBERT D. STEWART, Dayton, Ohio. Filed June 21, 1921. Serial No. 479,181. 2 Claims. (Cl. 72—116.)

2. A plaster receiving board comprising a plurality of suitable, united sheets, having a series of spaced apart unobstructed openings therein when the plaster has been applied, each opening bounded on its sides by two flexible

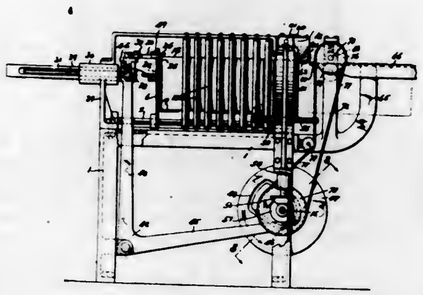
outstanding wings, with their free edges facing and extending away from the side to which the plaster is to be applied.

1,429,227. VARIABLE CONDENSER. WILLIAM DUBILIER, New York, N. Y., assignor to Dubilier Condenser & Radio Corporation, a Corporation of Delaware. Filed Sept. 28, 1921. Serial No. 503,097. 21 Claims. (Cl. 250—41.)

1. In combination a fixed condenser adjustable to different capacities, variable condensers each having a maximum capacity substantially equal to the difference between the fixed capacity values, and means for placing said variable condensers selectively in circuit with said fixed condenser.

1,429,228. TOBACCO-PIPE STAND. WILLIAM E. EDWARDS, Irvington, N. J. Filed July 10, 1919. Serial No. 309,807. 3 Claims. (Cl. 131—12.)

1. A tobacco pipe support having a prop formed of a single piece of wire with a pair of spaced arms adapted

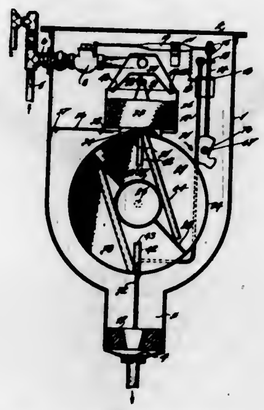


to be pivoted at their free ends to a pipe stem so that the prop will swing longitudinally thereof, said arms being connected at their other ends by an arch extending out of the plane of the arms and adapted at one end of the swing of said arms to receive the pipe stem within its bend and allow the support to fold compactly thereagainst and at the other end of the swing of said arms to abut against the stem of the pipe and hold the prop away from the same in supporting position with the junction points of said arch and arms serving as feet to engage a supporting surface at opposite sides of the median line of said pipe.

1,429,229. STAND FOR CIGARETTES AND THE LIKE. WILLIAM E. EDWARDS, Irvington, N. J. Filed Apr. 15, 1921. Serial No. 461,522. 5 Claims. (Cl. 131—12.)

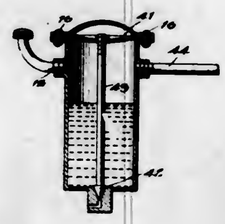
4. A stand of the character described including a member to be attached to an article to be supported and provided with a pair of spaced pivot sleeves, and a pair of substantially U-shaped props having their arms pivotally connected to the respective ones of said sleeves and adapted to swing longitudinally of said article away from each other into an operative position and toward each other into inoperative position, one of said props receiving the other within itself in a nested relation when said props are disposed in an inoperative position.

1,429,230. FEEDING MECHANISM FOR WIRE STITCHING OR STAPLING MACHINES. DENIS A. FLAVELL, Jersey City, N. J., assignor to Bernard Company of N. J., Jersey City, N. J., a Firm composed of Theodore F. Bernard and Denis A. Flavell. Filed Nov. 12, 1921. Serial No. 514,644. 8 Claims. (Cl. 1—7.)



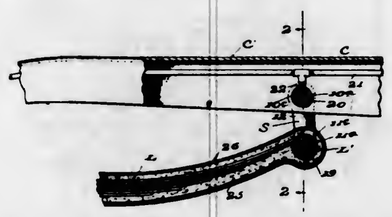
2. In a mechanism of the kind described, means for supporting pamphlets or the like massed together on edge with their folded edges uppermost, a propelling means, means for successively delivering pamphlets endwise from said mass to said propelling means, a guide rail to which said pamphlets are successively delivered by said propelling means, and means intermediate said propelling means and the receiving end of said guide rail for expanding the forward portion of the folded edge of each pamphlet to permit the latter to enter upon and straddle said guide-rail.

1,429,231. CAN-CLOSING MACHINE. PAUL W. FLEISCHER, New York, N. Y., assignor to American Can Company, a Corporation of New Jersey. Filed Dec. 1, 1915. Serial No. 64,494. 15 Claims. (Cl. 113—14.)



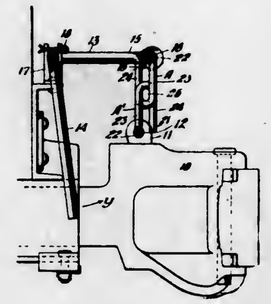
1. In a seaming head, in combination: a seaming head body; seaming roll carrying members; seaming rolls mounted on said carrying members; means for actuating said rolls; a chuck member cooperating with the said rolls, and arcuate guard members extending in line above the can body from near one seaming point to near the other seaming point and adapted to limit the upward movement of a can body within the seaming head relative to the said seaming rolls and chuck.

1,429,232. FLUID-MEASURING APPARATUS. NORMAN B. GARDINER, Staten Island, N. Y. Filed May 31, 1917. Serial No. 171,825. 18 Claims. (Cl. 221—106.)



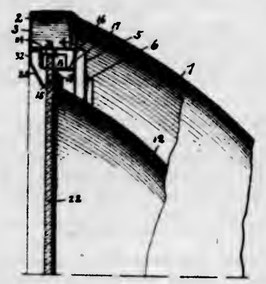
1. In a fluid measuring apparatus, in combination, a measuring container adapted to be completely filled with the liquid to be measured, an opening on one wall thereof whereby said container may be filled, a partition extending from a position flush with the opening to a position within said container, and dividing said opening into a fluid inlet portion and an air outlet portion.

1,429,233. LUBRICATING SYSTEM. PALEMON H. GASKINS, Jacksonville, Fla. Filed Jan. 10, 1921. Serial No. 436,207. 2 Claims. (Cl. 184—76.)



1. In a lubricating system, in combination, a motor vehicle including an engine having a manifold, a chassis, a running gear, and a spring suspension having a cover enclosed leaf spring and a shackle connection, consisting of an upper and a lower shackle bolt, each of said shackle bolts having an axial and a radial bore, a reservoir for the lubricant having a discharge outlet, conveying devices from the discharge outlet to the chassis, running gear, and spring suspension, the conveying devices to the spring suspension leading to the radial bore of the upper shackle bolt, a pipe connection between the axial bores of the shackle bolt, means for utilizing the excess of lubricant from the shackle connection to lubricate the cover enclosed leaves of the spring, and pressure controlled means operated by the pressure in the manifold of the engine for governing the flow of the lubricant through the discharge outlet.

1,429,234. LUBRICATING SYSTEM. PALEMON H. GASKINS, Jacksonville, Fla. Original application filed Jan. 10, 1921, Serial No. 436,207. Divided and this application filed Oct. 6, 1921. Serial No. 505,821. 2 Claims. (Cl. 267—37.)

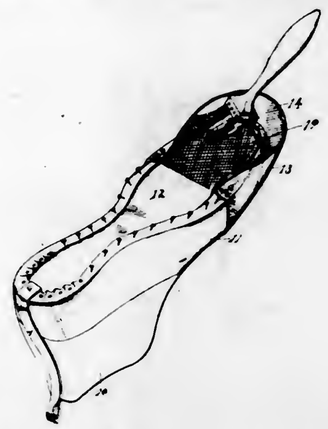


1. In a lubricating system, in combination, a chassis including a channel side member, a spring, a shackle connection between the chassis and the spring, including a shackle bolt having passages for the lubricant, means for supplying lubricant to said shacgle bolts including a supply pipe extending through the channel member of the chassis and communicating with the passages of one of the shackle bolts, a pipe connection between the passages of the shackle bolts for conveying the lubricant supplied to the passages of one of the shackle bolts by the supply pipe to the passages of the other of said shackle bolts, and means for utilizing the excess lubricant from the shackle connection to lubricate the spring and including an envelope of absorbent material encasing the spring and associated with the shackle connection and a boot of flexible impervious material encasing the absorbent envelope.

1,429,235. COUPLING-RELEASE MECHANISM. WILLIAM A. GEIGER, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed Nov. 1, 1920. Serial No. 420,879. 2 Claims. (Cl. 213—59.)

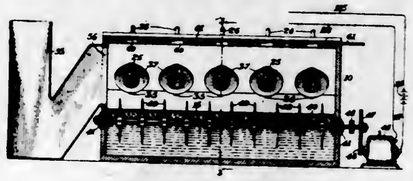
1. In a coupler release mechanism having a locking pin provided with an opening and a release lever having an opening disposed approximately above the locking pin, a connector comprising two loosely and detachably connected links, each link having a lateral opening near its end farthest from the other link, said openings adapting the two links to be detachably linked together and also to be independently threaded through the respective openings of the lever and locking pin all without the aid of tools.

1,429,236. HEADLIGHT. CHARLES E. GODLEY, Detroit, Mich., assignor to Edmunds & Jones Corporation, Detroit, Mich., a Corporation of New York. Filed Feb. 5, 1921. Serial No. 442,638. 6 Claims. (Cl. 240—41.)



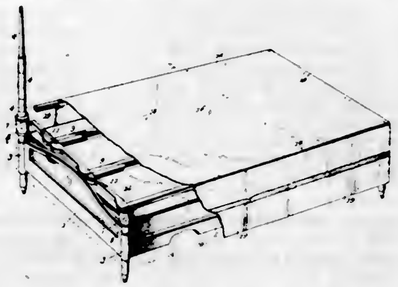
1. In a headlight, a sheet metal body having an opening and the metal of the body around the opening being bent radially inwardly and then rearwardly to constitute an interior cylindrical flange, a lens holder rotatably mounted within the opening in the body and embodying a portion extending within said cylindrical flange, and means between the lens holder and the cylindrical flange to secure the lens holder in position so that its outer portion will be practically in the plane of the radial end of the lamp body.

1,429,237. METHOD OF PROTECTING SHOES DURING TOE SOFTENING. JOHN B. HADAWAY, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 6, 1919. Serial No. 315,658. 5 Claims. (Cl. 12—145.)



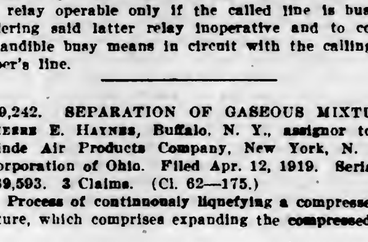
1. That improvement in the art of making shoes which

consists in applying a coating of heat-resisting material to portions of a shoe adjacent to other portions which



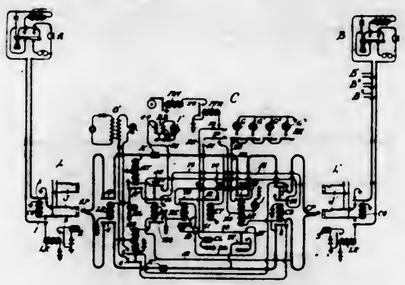
are to be softened, then subjecting said portions to the influence of a softening agent.

1,429,238. SMOKE-SCREEN PRODUCER. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed Dec. 30, 1916, Serial No. 139,902. Renewed Feb. 20, 1922. Serial No. 538,095. 22 Claims. (Cl. 158—91.)



1. A smoke screen producer comprising a fire-box, a burner arranged to produce an imperfect combustion of smoke producing material in said fire-box, means for injecting fire retarding material in said fire-box, and means responsive to radiant energy for controlling said burner and said injecting means.

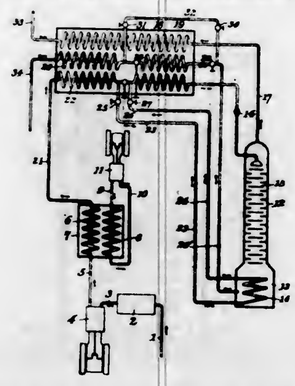
1,429,239. CONVERTIBLE BED. EMILIE B. HANDEL, Baltimore, Md. Filed Dec. 8, 1920. Serial No. 429,129. 3 Claims. (Cl. 5—41.)



1. The combination of a bed having recessed legs, a cover frame having a fabric stretched thereover, and a pin arranged in each of the corners of said frame cooperating with the recesses in said legs for detachably supporting said frame over said bed.

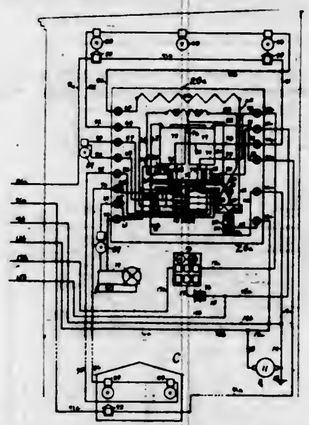
1,429,240. RADIOSIGNALING SYSTEM. EARL C. HANSON, Washington, D. C., and EDWARD T. JONES, New Orleans, La. Filed Feb. 24, 1920. Serial No. 361,062. 4 Claims. (Cl. 250—33.)

4. In a radio transmission and reception system an antenna comprising a plurality of casings buried in the earth, a series of metallic plates within said casings, a second set of metallic plates mounted on a rotatable shaft and intermeshed with said first mentioned plates but insulated therefrom whereby the relative position of the two sets of plates may be varied and a circuit associated with radio signaling apparatus connecting said sets of rotatable plates.



1,429,241. TELEPHONE SYSTEM. JESSE F. HAYDEN, High Point, N. C., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 12, 1917. Serial No. 148,049. 31 Claims. (Cl. 179—58.)

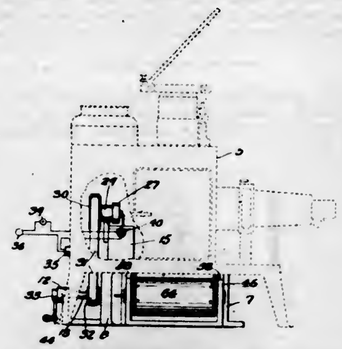
1. A telephone system including a calling and a called subscriber's line, a link circuit for connecting said lines, an operator's telephone, a relay for connecting said operator's telephone to the link circuit, a relay for disconnecting said operator's telephone from the link circuit, audible busy means for said link circuit, and a busy test relay operable only if the called line is busy for rendering said latter relay inoperative and to connect the audible busy means in circuit with the calling subscriber's line.



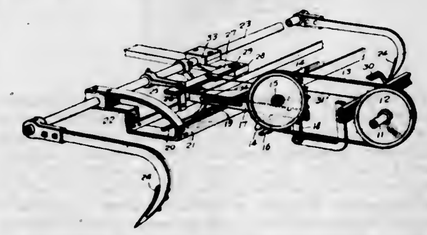
1,429,242. SEPARATION OF GASEOUS MIXTURES. PIERRE E. HAYNES, Buffalo, N. Y., assignor to The Linde Air Products Company, New York, N. Y., a Corporation of Ohio. Filed Apr. 12, 1919. Serial No. 289,593. 3 Claims. (Cl. 62—175.)

1. Process of continuously liquefying a compressed gas mixture, which comprises expanding the compressed mixture under such conditions that at least a portion of the mixture shall be liquefied thereby, collecting liquid so formed, heating the liquid with compressed gas mix-

ture passing to the expansion stage, whereby such mixture is cooled, and additionally refrigerating such cooled mixture by means of gases which have passed through the expansion stage.



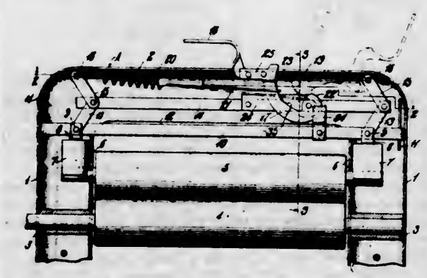
1,429,243. ELECTRIC SIGNALING SYSTEM. SIMON B. HESS, Jamaica, N. Y. Filed Jan. 21, 1918. Serial No. 218,111. 11 Claims. (Cl. 177—360.)



1. An electric signaling system comprising a source of energy, a signal receiving loop, a resistance, a signal sending loop, an electromagnet therein, and means controlled by said magnet upon energization thereof for connecting said loops and said resistance in series with each other and to the source of energy and upon de-energization thereof for connecting said signal sending loop directly to the source of energy and thereafter connecting said signal receiving loop directly to the source of energy and short-circuiting said resistance.

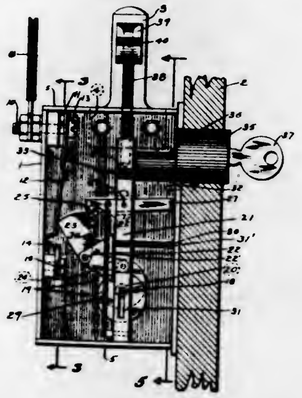
1,429,244. PROJECTOR LANTERN. WILLIAM L. ISBELLS, Elizabeth, N. J. Filed Mar. 27, 1920. Serial No. 369,255. 11 Claims. (Cl. 88—28.)

1. An apparatus of the class described comprising a suitable frame, a picture holder and carrier mounted in said frame, means for mounting a picture strip or film in said frame, means for alternately operating said picture holder and carrier and said strip or film to bring pictures, and objects in position to be projected, and means involving movable electric contact devices operating in a solution for dissolving the separate pictures in the operation of projecting the same upon a suitable screen.



1,429,245. MARKER FOR PLANTERS. BOLIVAR LEWIS LIGHT, Rogers, Ark. Filed Feb. 28, 1921. Serial No. 448,502. 3 Claims. (Cl. 111—30.)

3. The combination with a planter embodying a check shaft, of a marker shaft mounted transversely of the planter structure, marker points carried at the extremity of the structure, an operating lever reciprocating the check shaft, an arm carried by the marker shaft having means for at times engaging the operating lever, a manually-operable detent in the path of movement of said arm adapted to maintain said arm out of engagement with said lever, and means to withdraw said manual detent to permit the arm to drop into supporting engagement with said operating lever.

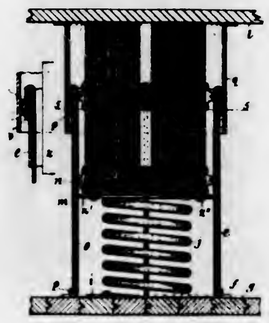


1,429,246. WRINGER. BRUNSON S. MCCUTCHEN, North Plainfield, N. J. Filed Dec. 18, 1920. Serial No. 431,601. 8 Claims. (Cl. 68—32.)

1. A wringer comprising a fixed roller and a movable roller, bearing members for the movable roller, a cross

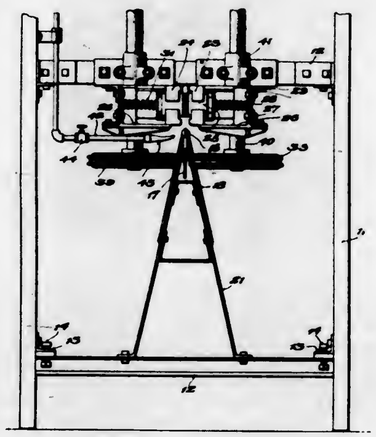
beam connecting the bearing members, means for exerting a pressure against the movable roller for moving the movable roller toward and away from the fixed roller, said means including a longitudinally movable equalizing beam spaced from but connected with the cross beam.

1,429,247. ELECTRIC LOCK AND ALARM FOR AUTOMOBILES. SADIE L. MATHEWS, St. Louis, Mo. Filed Feb. 26, 1919. Serial No. 279,402. 23 Claims. (Cl. 177—314.)



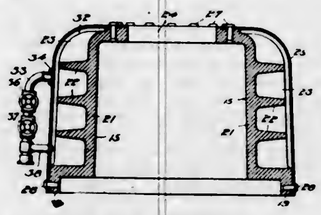
13. A safety device for automobiles, including a slidable member movable back and forth, a rotary spindle having a plurality of trippers or dogs, electrical contacts, switch mechanism including movable switch members carried toward and from the spindle by the said slide and adapted in one position of the slide to be actuated by the trippers or dogs for successively closing breaks in a circuit, means for locking the movable switch members in their engaging positions, and means for automatically releasing the switch members when the slide is moved away from said position.

1,429,248. MULTIPLEX SIGNALING SYSTEM. HAROLD S. OSBORNE, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed July 28, 1919. Serial No. 313,817. 9 Claims. (Cl. 179—15.)



1. In a signaling system, means to transmit a plurality of carrier frequencies, means to impress low frequency signal variations upon each of said carrier frequencies, said signal variations having a frequency range constituting a substantial percentage of the carrier frequency upon which they are impressed, receiving apparatus for each carrier frequency and selective means associated with each receiving apparatus to prevent transmission of undesired frequencies to each receiving apparatus, said selective means being so proportioned and arranged as to transmit with equal freedom a band of frequencies in the neighborhood of said carrier frequency and having a width substantially equal to the range of frequencies employed in connection with said low frequency signals.

1,429,249. SEATING APPLIANCE. FRED G. PARKER, Paterson, N. J. Filed Dec. 13, 1920. Serial No. 430,196. 5 Claims. (Cl. 155—52.)

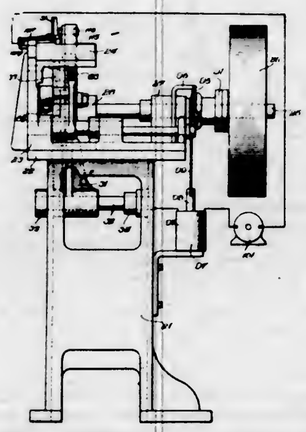


1. A seating appliance comprising opposed means including receiving and received telescoped members, one of said means including a seat and being movable up and down and the other supporting the first means, and the receiving member being inwardly angular in horizontal section and the received member having guiding projections extending outward of the general cross-sectional contour thereof and received in the angles formed by the receiving member.

1,429,250. TOBACCO-HANGING MACHINE. LONNIE J. PAYLOR, Danville, Va. Filed Oct. 23, 1920. Serial No. 418,979. 14 Claims. (Cl. 131—21.)

10. In a machine of the class described, means for supporting a hand of tobacco from its tied end in pendent position, a pointed member for penetrating the hand adjacent its tied end, means for causing relative movement between said penetrating member and said supporting means, and means for gripping the hand below the point of penetration while it is being penetrated.

1,429,251. HOT-TOP INGOT MOLD. JOSEPH I. PEYTON, Chicago, Ill., and SAMUEL E. HITT, Elyria, Ohio. Filed June 3, 1922. Serial No. 565,539. 8 Claims. (Cl. 22—147.)

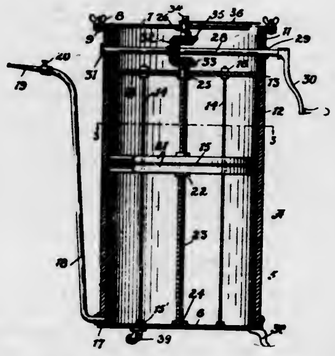


I. An ingot mold having a vacuum hot top formed by spaced walls characterized by the provision that one of said walls is replaceable and renewable.

1,429,252. COKE-OVEN WALL. OLIVIER PIETTE, Brussels, Belgium, assignor, by mesne assignments, to Belgian American Coke Ovens Corporation, Wilmington, Del., a Corporation of Delaware. Filed Nov. 6, 1918. Serial No. 261,421. 4 Claims. (Cl. 72—155.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A flue wall comprising hollow bricks forming flues, each of said bricks having a lateral projection at each side of one of its faces, the projection at one side of each brick extending a greater distance therefrom than the projection at its other side, the larger projections of two adjacent bricks contacting with each other, and the smaller projections of two adjacent bricks extending toward each other but being separated and means for maintaining said separated relation of said smaller projections.

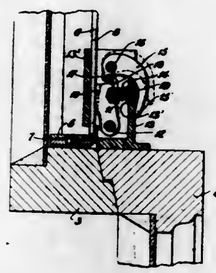
1,429,253. WIRE BENDING AND KNOTTING MACHINE. ANTHONY RHENSTROM, Kenosha, Wis. Filed Oct. 24, 1919. Serial No. 332,960. 16 Claims. (Cl. 140—101.)



1. In a wire bending machine, the combination of a support, devices for holding the wire in position to bend on the support, a swinging bending member, power means for actuating the same and normally disconnected therefrom, and means swinging with the bending member and engageable with the power means for imparting a bending action to said bending member by automatically connecting it with said power means when the bending member has arrived at operative position.

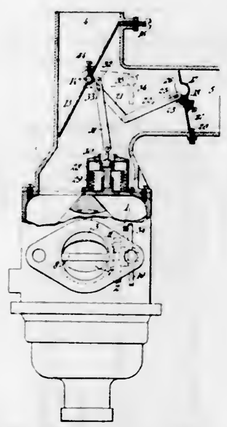
1,429,254. OSCILLATING INTERNAL-COMBUSTION ENGINE. JOHN V. RICE, Jr., Bordentown, N. J., assignor to Rice Gas Engine Company, Bordentown, N. J., a Corporation of New Jersey. Filed July 3, 1920. Serial No. 393,946. 18 Claims. (Cl. 123—42.)

1. In an internal combustion engine, the combination of an oscillating cylinder having a compression chamber provided with a fuel inlet and having also an explosion chamber, a check valve in the compression chamber for admitting fuel during suction and preventing its escape during compression, and a piston surrounded by the explosion chamber and having one end contiguous to the compression chamber, said piston having one or more longitudinal transfer ports or passages for delivering the fuel mixture from the compression to the explosion chambers.



1,429,255. GREASE PUMP. JOHN F. RING, Jr., Auburn, N. Y. Filed May 13, 1920. Serial No. 381,172. 3 Claims. (Cl. 221—79.)

1. A grease dispensing device comprising a cylindrical container having an inlet and outlet opening formed in

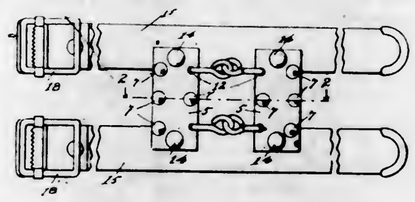


the bottom thereof, a removable partition wall carried by the upper end of the container, tie rods extending longitudinally through the container for holding the partition plate in position, a sliding plunger mounted in said container, the plunger being adapted to receive the rods whereby rotation of the plunger in the container is prevented, and means for moving the plunger up and down in the casing.

1,429,256. WINDOW-SASH-LATCHING DEVICE. HARRY R. RITCHIE, Springfield, Mass. Filed Mar. 16, 1921. Serial No. 452,810. 2 Claims. (Cl. 292—226.)

1. A window latching device, comprising in combination, a serrated bar, a casing secured to the meeting rail of the lower sash, a pivotally mounted serrated latch in the casing for engaging the bar and having a notched end to form a lip or projection, a pivotally mounted lever in the casing and having a lip or projection normally in engagement with the lip of the latch, a spring located between a wall of the casing and the latch for normally forcing the latch into locking engagement with the bar and the lever into engagement with the outer surface of the casing, for the purpose described.

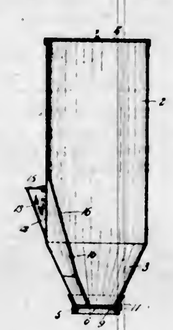
1,429,257. CARBURETOR. CARL F. SCHULZ, Brooklyn, N. Y. Filed Dec. 22, 1916. Serial No. 138,322. 3 Claims. (Cl. 236—12.)



1. In an apparatus of the character described, the combination with a chamber having a hot air inlet and a cold air inlet, and valves for the respective inlets, of a thermostat associated with said chamber, a lost motion toggle connection between said hot air valve and the cold air valve, and a connection between the thermostat and said toggle connection, the connections being timed for opening the hot air valve more or less incident to increase or decrease in the temperature of the air passing said valve and for opening the cold air valve when the hot air valve has assumed a predetermined position, and the air passing through the same has acquired a predetermined temperature, and opening such cold air valve more or less incident to increase or decrease in the temperature of the combined currents of air passing both said valves, and manually operable means arranged exteriorly of said chamber for similarly actuating said valves independently of said thermostatic means.

1,429,258. DISK MILL. STEFAN STEINMETZ, Berlin, Germany. Filed Aug. 26, 1921. Serial No. 495,526. 5 Claims. (Cl. 83—8.)

1. A disk mill for grinding grain, meal, bran and the like, embodying throw wings on the outer circumference of one of the turning mill disks, said wings being tangentially arranged and extending across both disks, a spirally formed grinding chamber enclosing the wings and provided with a curved sieve, so that the wings lift the ground material leaving the disks and throw it against the sieve.



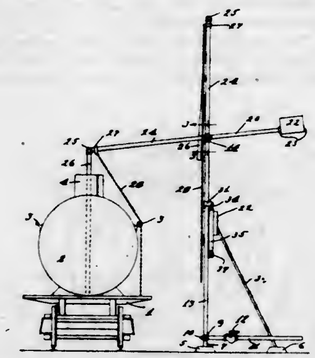
1,429,259. NONSKIDDING DEVICE FOR SHOES. ORESTES TAGLIAFERRY, Cincinnati, Ohio. Filed May 3, 1920. Serial No. 378,387. 1 Claim. (Cl. 36—63.)

A non-skidding device for shoes comprising a plurality of plates spaced apart from each other and each having holding points on its lower side, links or chains connecting said plates near each end thereof in flexible relation to each other, a pair of straps attached to the respective ends of said plates and means for detachably connecting the respective ends of each strap together in adjusted relation, substantially as set forth and for the purposes specified.

1,429,260. FOOD DISPENSER. IRWIN J. VAN FLEET, Hamilton, Ontario, Canada, assignor to William Matches, Hamilton, Ontario, Canada. Filed Oct. 24, 1921. Serial No. 509,925. 5 Claims. (Cl. 211—6.)

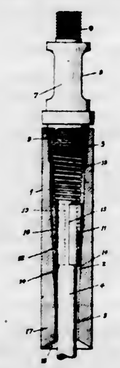
1. In a device of the class described, the combination with a hopper having a port in the side thereof, of a chute formed on the interior of said hopper and extending downwardly from said port to the discharge end of the

hopper, and a shut-off valve normally closing the discharge ends of the hopper and chute.



1,429,261. FLASH LIGHT OR BATTERY HAND LAMP. ARTHUR W. WELLINGTON, Waterbury, Conn., assignor to The Chase Companies, Inc., Waterbury, Conn., a Corporation. Filed May 14, 1921. Serial No. 469,482. 6 Claims. (Cl. 240—8.5.)

6. In a battery hand-lamp, the combination with a tubular case, of a metal cap for the closure of the lower end thereof, a terminal-strip, an insulating-ring located within the said cap, a flanged contact-cup mounted in the said ring upon which its flange rests and formed with loops and retaining-fingers which latter are engaged with the ring for securing the cup and ring together, and a spring located within the cup and having its lower coil passed through the loops thereof, the said spring serving to connect the cup with the battery and to hold the battery in place.

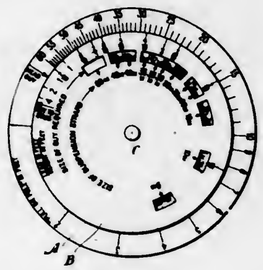


1,429,262. UNLOADING RACK. AUSTIN L. WERTZ, Dubuque, Iowa, assignor to Morrison Bros., a Corporation of Iowa. Filed Nov. 7, 1921. Serial No. 513,233. 6 Claims. (Cl. 137—78.)

3. An unloading rack of the class described comprising rigid upright pipes, rotatable crosses connected therebetween, pipes connected with said crosses, swing joints connected to said pipes, suction pipes attached to said swing joints, counterbalances on the pipes connected to said crosses adapted to retain said pipes in normally vertical position, and chains attached to said counter-

balanced pipes to pull the same into an unloading position to permit the suction pipes to project into a tank to be unloaded.

1,429,263. DEEP-WELL FISHING TOOL. JOHN A. WOLFE, Tulsa, Okla. Filed May 6, 1921. Serial No. 467,480. 1 Claim. (Cl. 294—102.)

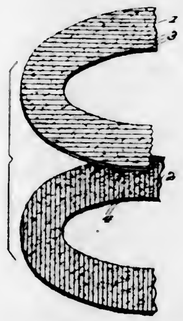


A fishing tool for deep wells, comprising a body member with an elongated tapered bore throughout the greater portion of its length, said bore decreasing in size toward the lower end and at a relatively short distance from the lower end merging into a straight bore, a pair of opposed and relatively long matching taper slips adapted to be supported by the tapered bore above the straight bore and provided with interior gripping teeth, a screw plug for entering the upper end of the body member, and a tapered coil spring located between the screw plug and the top of the pair of slips, the body member having a thickness of base at the bottom of the tool such as to resist expansion of the bottom under forces tending to pull the slips out of the bottom and cause them to escape.

1,429,264. CALCULATING GUY RULE. JOHN W. WRIGHT, Philadelphia, Pa., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Jan. 22, 1918. Serial No. 213,177. 1 Claim. (Cl. 235—84.)

A calculating device comprising a lower member provided near its edge with a set of graduations, an upper

member movable thereover and provided at its edge with a set of graduations co-operating with said graduations on the lower member, a second set of graduations on said upper member consisting of progressively increasing but nonconsecutive values depending upon the practical limitations of the problem to be solved, said upper member having a series of openings opposite the several graduations of said last named series, a second set of gradnations

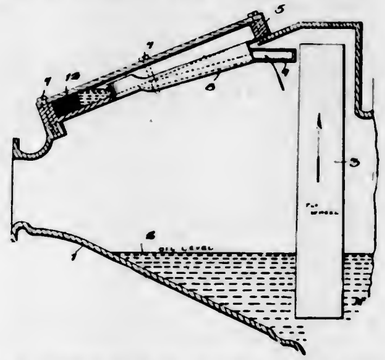


on said under member arranged to be read through said openings and also comprising a set of progressively increasing but nonconsecutive values, and marks indicating the value of such last named graduations which marks are repeated when the graduation is greater in extent than the openings through which it must be read, so that one or more marks shall always appear through the openings.

1,429,265. CONDENSATION PRODUCT OF PHENOL AND FORMALDEHYDE AND METHOD OF MAKING SAME. WILLIAM ACHTMEYER, Middletown, Conn. Filed Mar. 10, 1921. Serial No. 451,342. 13 Claims. (Cl. 260—4.)

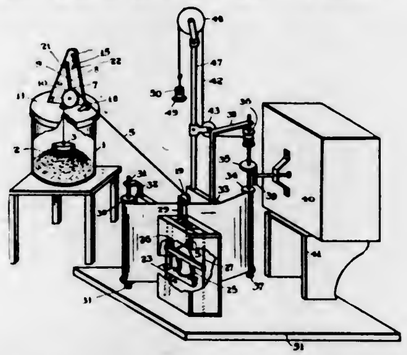
4. The process which consists in causing a re-action between one-hundred parts of phenol and one-hundred parts of forty-percent formaldehyde solution in the presence of a solution of three to five parts of sodium tungstate and nine to twelve parts of sodium phosphate and thirty to forty parts of hot water and separating the watery layer formed from the re-action product.

1,429,266. DISK CLUTCH FACING AND PROCESS OF MAKING SAME. WILLIAM ACHTMEYER, Middletown, Conn. Filed Mar. 10, 1921. Serial No. 451,344. 7 Claims. (Cl. 154—21.)



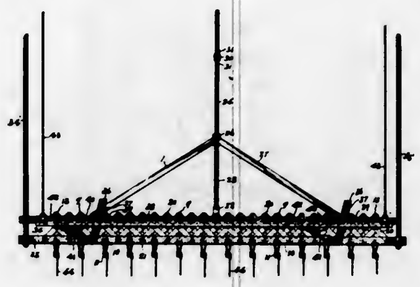
1. A clutch facing comprising two asbestos rings, the fibers of one ring lying at an angle to the fibers of the other.

1,429,267. PHENOLIC CONDENSATION PRODUCT AND METHOD OF MAKING SAME. WILLIAM ACHTMEYER, Middletown, Conn. Filed Mar. 10, 1921. Serial No. 451,345. 7 Claims. (Cl. 260—4.)



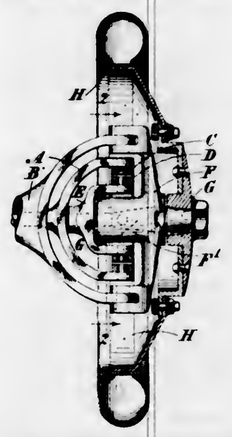
1. As a new composition of matter, a condensation product of a phenolic body and methylene-diphenyldiamine.

1,429,268. LUBRICATING SYSTEM. OSCAR CONRAD BALDWIN, Winfield, Iowa, assignor of one-half to William H. Meeker, Winfield, Iowa. Filed Nov. 28, 1921. Serial No. 518,355. 2 Claims. (Cl. 184—11.)



1. A transmission casing adapted to carry a lubricating oil at a convenient level, a fly wheel rotatable therein, and a cover for the casing comprising an inclined receptacle having a main and auxiliary compartment, the auxiliary compartment being inclined longitudinally above an inlet pipe, an inlet conveyor pipe arranged below the auxiliary receptacle, said inlet having a mouth arranged in close proximity to the outer circumference of the fly wheel and adapted to collect such oil as may be brought up and lubricated by the movement of the fly wheel, an outlet for the main receptacle, a screen arranged before the outlet and a cover plate for the receptacle.

1,429,269. FERMENTATION METER. ARTHUR JOHN BANKS, St. Lambert, Quebec, Canada. Filed Oct. 13, 1921. Serial No. 507,541. 1 Claim. (Cl. 234—1.)

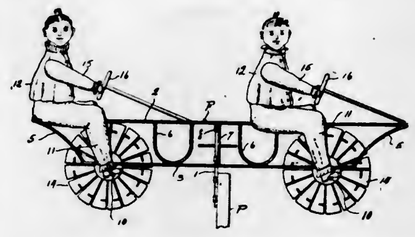


In a fermentation meter, a receptacle for the dough, a float adapted to rise and fall with the dough, a switch frame supported by the dough receptacle and including a pulley, a ratchet wheel a switch member in constant engagement with said ratchet and a cooperating fixed switch member, an electric circuit and signal and a weighted cord passing over said pulley and suitable guide.

1,429,270. PHOTOGRAPHIC-FILM CARRIER. ANTHONY A. BARBER, Arlington, N. J., assignor to B. & B. Photographic Co., Newark, N. J., a Corporation of New Jersey. Filed Sept. 17, 1921. Serial No. 501,373. 18 Claims. (Cl. 95—100.)

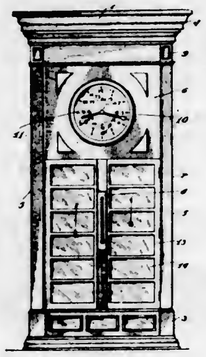
1. In a device of the kind described, a frame having longitudinally extensible side members, transverse supporting rods between said side members and supported by the latter so as to be comparatively widely separated one from another when said side members are opened to expanded position, and a plurality of film gripping devices connected with each supporting rod.

1,429,271. UNIVERSAL SHAFT COUPLING. GERALD BARKER, London, England. Filed Jan. 7, 1922. Serial No. 527,613. 9 Claims. (Cl. 180—48.)



1. In a universal joint, the combination with a driving member and a gimbal-member pivotally connected thereto to turn about a pivotal axis that intersects the axis of rotation of the driving member, of a second gimbal-member pivotally connected to the first gimbal-member to turn about an axis that is at right-angles to and intersects the said pivotal axis of the first mentioned gimbal-member, and a driven member pivotally connected to the said second gimbal-member to turn about an axis that is at right-angles to the axis of pivoting of the second gimbal-member.

1,429,272. METHOD OF PURIFYING TIN-BEARING FERROTUNGSTEN. FREDERICK M. BECKET, Niagara Falls, N. Y. Filed May 26, 1920. Serial No. 384,268. 2 Claims. (Cl. 75—18.)

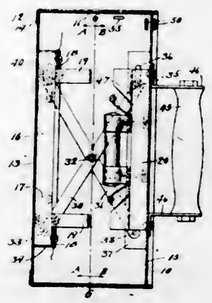


1. Method of purifying tin-bearing ferrotungsten, which consists in reacting on the comminuted alloy with an acid solvent for tin.

1,429,273. SIGN. JOHN C. BELL, Toccoa, Ga. Filed Dec. 3, 1921. Serial No. 519,762. 2 Claims. (Cl. 46—14.)

1. A device of the character described comprising a main frame including upper parallel members and lower parallel members, substantially U-shaped brace members securing the central portion of said upper and lower members, a vane having one end portion extending between and secured to the upper and lower members, said vane being substantially at right angles to the main frame and having flat side faces, the connection between the vane and upper and lower members being between the brace members; means associated with the end portion of the vane secured to the frame for supporting the frame for turning movement, and cross braces connecting the central portions of the lower members.

1,429,274. ADVERTISING DEVICE. JOSEPH ALBERT CYR BERGERON, Sherbrooke, Quebec, Canada, assignor to Joseph Wenceslas Genest, Sherbrooke, Quebec, Canada. Filed Sept. 9, 1920. Serial No. 409,121. 4 Claims. (Cl. 40—32.)

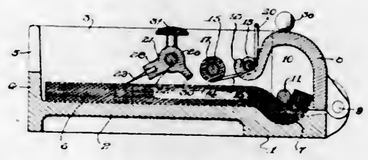


1. In a device of the character described, a cabinet, a series of rollers mounted in said cabinet and arranged in pairs, display means supported by the rollers, each of said rollers having extended trunnions therefor, gears keyed to said trunnions, a second gear meshing with the gears upon the trunnions, a clock mechanism, and an operative connection between the clock mechanism and gear which meshes with the gears upon the trunnions for rotating the rollers and actuating the display apparatus.

1,429,275. ELECTRIC SERVICE SWITCH. GEORGE A. BURNHAM, Saugus, Mass., assignor to Sears B. Condit, Brookline, Mass. Filed Aug. 2, 1918. Serial No. 247,976. 13 Claims. (Cl. 200—114.)

4. In an electric switch, an enclosing casing, a closure therefor bodily movable with respect to said casing, sta-

tionary and movable switch members arranged within said casing, said movable switch members supported by said closure and movable into closed or open position by

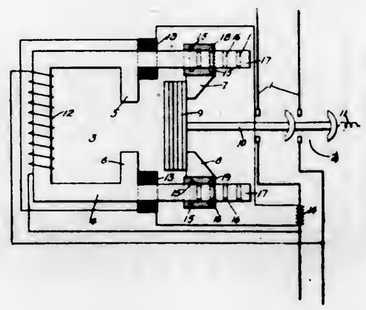


a movement of said closure, said closure arranged to maintain the casing closed during such movement and means to guide said closure for movement in a straight line within said casing.

1,429,276. TABLET FOR PRODUCING IODINE. LEWIS DAVIS, Worcester, Mass., assignor to Brewer & Company, Incorporated, a Corporation of Massachusetts. Filed Nov. 26, 1921. Serial No. 518,009. 6 Claims. Cl. 167—9.)

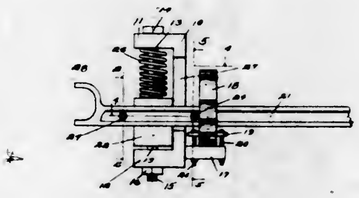
4. A molded solid tablet for the purpose described, comprising potassium bromide, potassium bromate, potassium iodide, and urea nitrate in substantially the proportions described.

5. A tablet for the purpose described, comprising a mixture of alkali salts of bromine, an iodide of an alkali metal, a solid acid compound capable of setting free an acid in the presence of water to decompose a bromine salt present and set free the bromine in such condition as to, in turn, decompose the iodide and set free the iodine.



1,429,277. TICKET HOLDER AND DISPENSER. FRANK DUDEK, Omaha, Nebr. Filed Aug. 9, 1921. Serial No. 490,989. 5 Claims. (Cl. 211—29.)

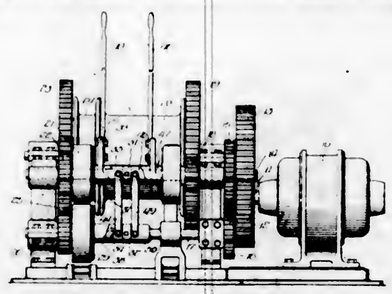
2. In a ticket holder and dispenser, a body provided with a ticket supporting base, a pressure member pivotally carried by said body, a ticket pack engaging pressure rod carried by said member, tensioning means engaging said member for urging said rod in engagement with a pack of tickets, a rockable sleeve, a needle carried by said sleeve and adapted to engage a ticket and lift the ticket upon movement of the sleeve in one direction.



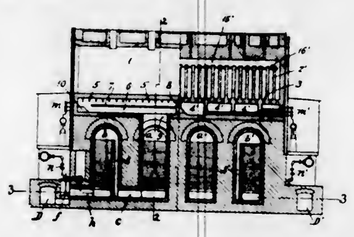
1,429,278. CIRCUIT INTERRUPTER. CHARLES LE G. FORTESCUE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 9, 1918, Serial No. 261,914. Renewed Mar. 11, 1922. Serial No. 543,088. 14 Claims. (Cl. 200—96.)

3. An electromagnet comprising a magnetizable core member, a plurality of stationary and of movable polar projections therefor disposed relatively close together to constitute two magnetic paths, an armature, and means

for actuating the armature in one direction and for so moving the movable polar projections as to permit a relatively long movement of the armature.



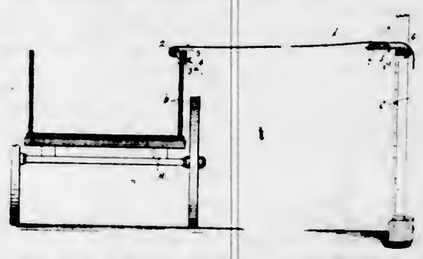
1,429,279. SPRING STRUCTURE. EDWARD FRANK FROMM, Iowa Falls, Iowa, assignor of one-half to William Dunning, Iowa Falls, Iowa. Filed Sept. 21, 1921. Serial No. 502,094. 1 Claim. (Cl. 267—28.)



A spring structure of the class described including in combination with a leaf spring and a vehicle axle, a housing member, said housing member comprising a bracket secured to said leaf spring for arranging the housing member on one side thereof, a pair of extension members spaced from each other, having registering openings therein, a guide element mounted in said openings, a block slidably mounted on said guide element capable of sliding movement between said pair of extensions, a pair of flanges formed on said block for fastening the axle thereto and a spring arranged on said guide element between one of said pair of extensions and said block for yieldingly resisting any movement of the block in one direction, the parts being so arranged that the axle may move bodily independent of the movement of the leaf spring.

1,429,280. CLUTCH MECHANISM. JOHN F. GODFREY, Elkhart, Ind., assignor to The Godfrey Conveyor Company, Elkhart, Ind., a Corporation of Indiana. Filed May 27, 1920. Serial No. 384,583. 3 Claims. (Cl. 192—21.)

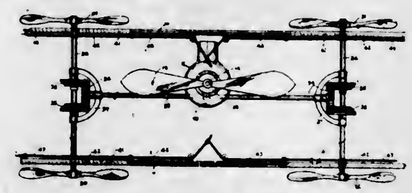
1. In clutch mechanism, the combination of a plurality of shafts, clutch members and fixed collars carried by said shafts, abutment means loosely mounted on each of said shafts between said collars and clutch members and connected to each other to prevent rotation of said abutment means on said shafts, and clutch control means cooperating with said abutment means and clutch members for operating said clutch members.



1,429,281. COKE OVEN. PAUL GOFFART, Brussels, Belgium, assignor, by mesne assignments, to Belgian American Coke Ovens Corporation, Wilmington, Delaware, a Corporation of Delaware. Filed Apr. 8, 1920. Serial No. 372,111. 4 Claims. (Cl. 202—9.)

1. In a longitudinal coke oven bench having upright heating flues operating with reversal of the draft, companion regenerators disposed lengthwise of the bench and transversely under the sole of the coking chambers, said regenerators being partitioned to form separate compartments corresponding to the individual coking chambers, and external smoke flues for connecting said regenerator compartments with a stack, each compartment of one of the companion regenerators having its lower portion connected by a substantially unobstructed upright channel with the upper portion of the corresponding compartment of the other regenerator, whereby the current of fluids will be caused to travel in the same direction in both of such connected compartments.

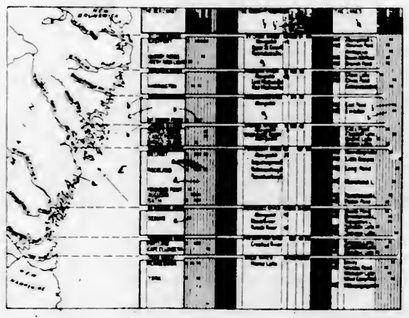
1,429,282. MATERIAL-SAVING DEVICE. LEONARD L GOHEEN, Sherwood, N. Dak. Filed July 5, 1921. Serial No. 482,408. 6 Claims. (Cl. 193—34.)



1. A material saving device comprising a flexible fabric apron, means in one end thereof for detachably connecting the same to a receptacle, means at the other end thereof for resiliently and detachably connecting the apron to the side of a storage receptacle.

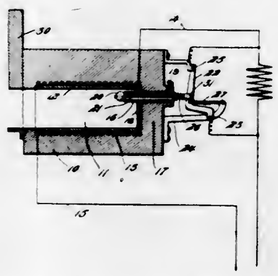
1,429,283. HEADLIGHT CONTROL FOR AUTOMOBILES. FLADGET GRODI, Curtis, Ohio. Filed Aug. 28, 1919. Serial No. 320,335. 1 Claim. (Cl. 240—62.)

In combination with a motor vehicle embodying a frame, a pair of front wheels carried by the frame, steering mechanism for the wheels including a steering arm, and linkage from the arm to the wheels, of a second link adjustably connected to said arm, a pair of upright tubular standards carried in parallel relation by the frame between the wheels, a headlight mounted on each standard and provided with a tubular bearing through the standard, light connections through said tubular bearing for each headlight, a crank on one of said bearings to which the link from the steering arm is directly connected, a housing between the standards and spaced from the frame, a pinion carried by each bearing in communication with the housing between the standards, and a rack in the housing reciprocable by the pinion on the crank carrying bearing for shifting the other bearing simultaneously therewith whereby the connection for directing the headlights is from the steering mechanism and independently of receiving wheel vibration.



1,429,284. AEROPLANE. GEORGE HANSEN and EMIL SCHMIT, Chicago, Ill. Filed Nov. 8, 1920. Serial No. 422,536. 7 Claims. (Cl. 244—15.)

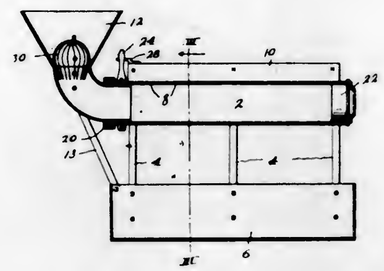
1. An aeroplane comprising a plane, a motor carried by said plane, a propeller movably mounted on the drive shaft of said motor, a clutch member carried by said propeller, a cooperating clutch member having an integral sleeve feathered on said motor shaft, a collar revolubly mounted on said motor shaft adjacent to said motor, antifriction bearings between said collar and said motor, a spring interposed between said collar and said second named clutch member and surrounding said sleeve, an operating member provided with cables revolubly mounted on said second clutch member for moving said clutch longitudinally of the shaft into and out of opera-



tive engagement with said first named cutch member, and antifriction bearings interposed between said operating member and said second clutch member, substantially as described.

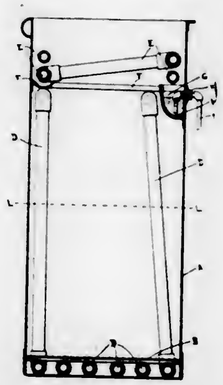
1,429,285. WATERWAY CHART. GEORGE W. R. HARRIMAN, Malden, Mass. Original application filed June 23, 1916, Serial No. 105,524. Divided and this application filed Dec. 18, 1920. Serial No. 431,647. 8 Claims. (Cl. 283—34.)

1. A geographical chart comprising a tabulation of lakes and rivers and having elongated approximately parallel bounded spaces in a sequence corresponding to the geographical locations of the rivers in the territory treated in the chart, a column of names of lakes arranged in a conventional order, and branches from said spaces extending parallel to said column of names and having in them designating marks opposite the names of lakes which respectively feed said rivers.



1,429,286. ELECTRIC FURNACE. CARL I. HAYES, Edgewood, R. I. Filed Mar. 2, 1921. Serial No. 448,965. 4 Claims. (Cl. 204—64.)

1. In a device of the character described, an electrically-heated work-treating chamber, a fusible element located in said chamber, a current controlling device in the heating circuit, located externally of said chamber and means whereby the fusing of said element within said chamber is caused to permit the operation of said device to affect the heating current.

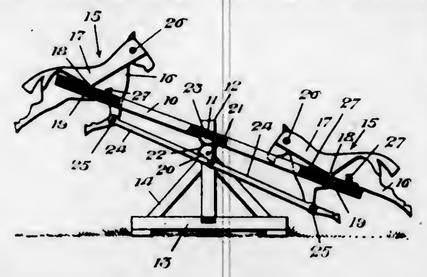


1,429,287. STOCK FEEDER. CHARLES G. HUGGINS, Adrian, Mo., assignor of one-half to Benjamin H. Huggins, Adrian, Mo. Filed Apr. 18, 1921. Serial No. 462,121. 2 Claims. (Cl. 119—56.)

1. A stock feeder consisting of a rotary conveyer having a longitudinal series of discharge ports an open trough disposed beneath said conveyer, a valve extending longitudinally of the conveyer to close the ports when in raised position, means for rotating said conveyer to lower

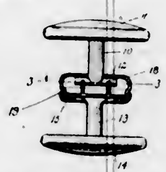
the ports so that the contents of said conveyer may flow through the ports into said trough, and an open hopper disposed above and at one end of the conveyer and having a swivel connection thereto.

1,429,288. ART OF TREATING WOOD AND OTHER POROUS MATERIAL. WINTWORTH V. LANDER, Newton, Mass. Filed Feb. 19, 1920. Serial No. 359,788. 4 Claims. (Cl. 99—12.)



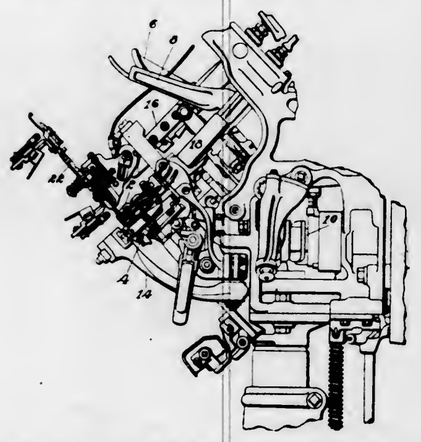
1. In impregnating porous material by filling the interstices of the material with a composition comprising an impregnating component dissolved in a volatile carrier and evaporating the volatile carrier to deposit the impregnating component in the material, the method of regulating the amount of the component deposited which comprises substantially saturating the material with the composition before evaporating the carrier and regulating the proportion of impregnating component to carrier so that when saturated with the composition the material will contain the desired amount of the impregnating component, whereby when the carrier is evaporated the desired amount of the component is deposited in the material.

1,429,289. SEESAW. ERASTUS M. MAXWELL and IRA K. HEARN, Cardinal, Va. Filed May 17, 1921. Serial No. 470,406. 3 Claims. (Cl. 46—22.)



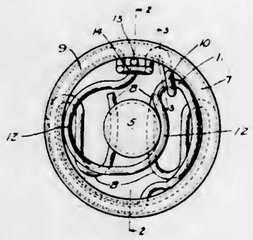
1. A device of the character described comprising a standard, a bar fulcrumed to the standard for oscillation about an axis, a member also fulcrumed to the

standard for oscillation about another axis, said member and bar having gear segments meshing with one another



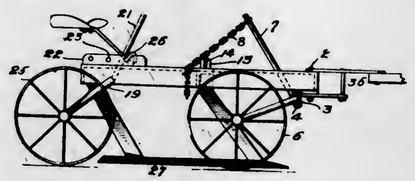
for oscillating said bar when said member is oscillated, and operating means carried by the bar connected to said member.

1,429,290. CUFF BUTTON. MAX C. MILLER, Cumberland Hill, R. I., assignor to Jerome Fleischer, Providence, R. I. Filed Nov. 10, 1919. Serial No. 336,881. 3 Claims. (Cl. 24—102.)



1. A separable cuff button comprising a stud member, a socket member, and a spring held against relative rotation in said socket member and provided with a recess for receiving and releasably engaging the stud end of the opposite member when said stud is passed into the socket and rotated a portion of a revolution.

1,429,291. MACHINE FOR SHAPING UPPERS OVER LASTS. DAVID A. MOYER, Birdsboro, Pa., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 24, 1920. Serial No. 405,632. 28 Claims. (Cl. 12—4.)

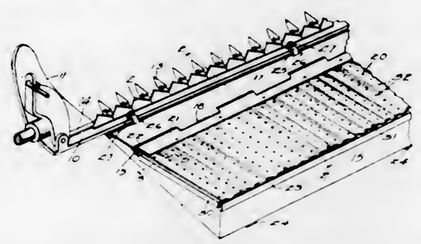


1. In a machine of the class described, the combination with shoe positioning means and overlaying means relatively movable in a direction substantially parallel to the plane of the shoe bottom to lay the margin of the upper inwardly over the sole of the shoe, of a device arranged for engagement with the shoe and to be rendered operative by such relative movement of the shoe and the overlaying means to produce compression between the shoe and said means in a direction transverse to the plane of the shoe bottom in the overlaying operation.

1,429,292. GARMENT FASTENER. ROBERT J. MULVEY, Chicago, Ill. Filed Mar. 21, 1921. Serial No. 453,971. 6 Claims. (Cl. 24—218.)

1. In a fastener, the combination with a disc having a socket therein and slots in the walls of said socket on opposite sides thereon; a securing member associated with said disc, said securing member being tortuously bent across the back of said disc and having its opposite ends engaging said slots; and a fastening member associated with said disc, said member being adapted to be threaded through the cloth of a garment for releasably fastening said fastener in position, there being a hook on each end of said fastening member for holding said fastener in such position.

1,429,293. THISTLE ERADICATOR. OLOF MURK, Warren, Minn. Filed Jan. 27, 1922. Serial No. 532,214. 6 Claims. (Cl. 55—60.)

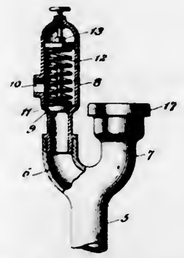


1. In a machine of the class described, the combination of a single-piece main frame, a knife device secured to said main frame within its side edges, and axles provided with wheels supporting said main frame.

1,429,294. SEED-COLLECTOR DEVICE FOR MOWERS. GEORGE I. NEWBERRY, Fulton, Ky. Filed Feb. 18, 1922. Serial No. 537,485. 1 Claim. (Cl. 56—207.)

A seed collecting device for mowing machines comprising a pan provided with means to enable it to be fastened to the rear edge of the finger bar thereof, and having a hinged cover therefor, said pan having its forward edge flattened to be received below the rear edge of the finger bar for closing any gap between it and the finger bar, said cover being provided with corrugations, the corrugations running from front to rear, the valley of the corrugations being provided with a plurality of openings

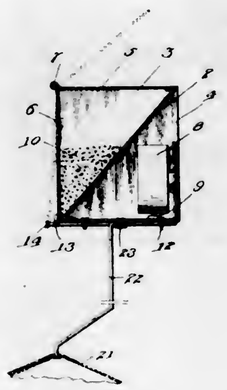
for permitting seed falling from the grain to pass through said openings into said pan while the straw of the grain



will slide over the upper portion of the corrugations without interfering with the seed in valleys of the corrugations, all for the purposes stated.

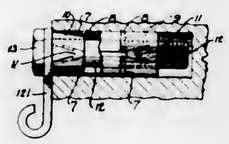
1,429,295. PROTECTED FABRIC. GEORGE J. NIKOLAS, Chicago, Ill. Filed Nov. 21, 1918. Serial No. 263,614. 2 Claims. (Cl. 91—68.)

1. As a new article of manufacture, a layer of fabric carrying a protective coating of varnish material containing intimately and uniformly incorporated impalpably fine particles of fireproofing salts, such salts being insoluble in solvents wherein such varnish material is soluble.



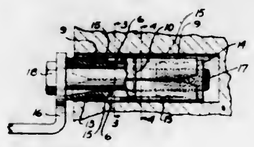
1,429,296. AUXILIARY PRESSURE-RELIEF DEVICE FOR STEAM BOILERS. CASIN W. OBERT, Mount Vernon, N. Y. Filed Jan. 27, 1920. Serial No. 354,329. 2 Claims. (Cl. 220—89.)

2. In a pressure device, a branch pipe having a relief valve in one branch of the pipe, a rupturable diaphragm of vitreous material in the other branch, a cushioning ring extending continuously about the lower edge of the diaphragm and resting between the diaphragm and the branch pipe, a second ring of cushioning material lying upon the upper edge of the diaphragm and extending continuously thereround, and a confining flanged cap having threaded engagement with the branch pipe and having a flange extending continuously about upon the upper cushioning ring for firmly holding the disk in place without subjecting it to compressive strains.



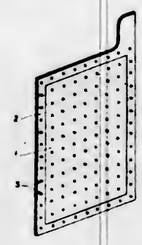
1,429,297. AUTOMATIC STOCK-FEEDING DEVICE. EMMETT J. O'NEILL and HUBERT T. WHITE, Fairmont, W. Va. Filed Feb. 2, 1922. Serial No. 533,632. 2 Claims. (Cl. 119—56.)

1. A poultry feeding device comprising a housing diagonally divided into a plurality of compartments, an outwardly swinging door pivoted to one side of the housing and forming a wall for one of said compartments, a rotatable rod secured to and disposed transversely of the bottom of said housing having a right angularly arranged finger thereon in proximity to its outer extremity normally engaged with the lower portion of said door for retaining the same in closed position and a second finger on its outer extremity spaced from the first finger and arranged at substantially right angles thereto adapted to engage said lower portion of the door subsequent to



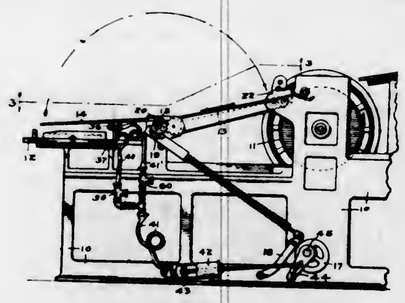
disengagement of the first finger therefrom, the opposite extremity of said rod having a substantially right angular arm arranged thereon and time controlled mechanism arranged in the remaining compartment of said housing adapted to impart movement to said right angular arm for effecting partial rotation of the transverse rod.

1,429,298. BOLT ANCHOR. HENRY W. PLEISTER, Westfield, N. J., assignor to Henry B. Newhall. Filed Sept. 23, 1921. Serial No. 502,765. 2 Claims. (Cl. 85—2.4.)



1. A new article of manufacture for an expansion bolt comprising a steel tubular nut expanded at one end to form a frustum of a cone and provided with screw-threads and with a lug on its unexpanded portion.

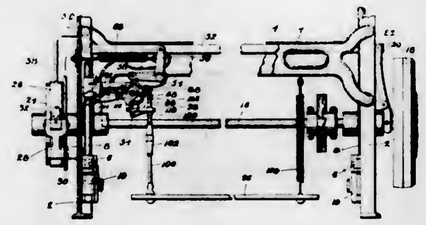
1,429,299. BOLT ANCHOR. HENRY W. PLEISTER, Westfield, N. J., assignor to Henry B. Newhall. Filed Sept. 23, 1921. Serial No. 502,766. 5 Claims. (Cl. 85—24.)



1. The combination in an expansion bolt of expansible shells, a collar, a nut, and cooperating means between the shells, collar and nut and integral with the collar and nut to secure them together.

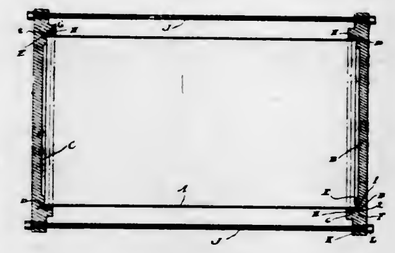
1,429,300. NEGATIVE PLATE FOR ELECTRIC ACCUMULATORS AND THE MANUFACTURE THEREOF. ADOLFO POUCHAIN, Turin, Italy. Filed June 22, 1920. Serial No. 390,917. 4 Claims. (Cl. 204—29.)

1. A method of reducing the electro-chemical actions on the borders of the active material of negative plates for electric accumulators, consisting in perforating the borders of the plate, and applying a layer of insulating varnish on the opposite faces of the plate along said borders so that the varnish will be caused to enter the perforations therein and form keys for connecting the two layers together.



1,429,301. PNEUMATIC PAPER CONTROL FOR PRINTING PRESSES. CHARLES C. SCHUTTE, Indianapolis, Ind. Filed Feb. 28, 1921. Serial No. 448,419. 2 Claims. (Cl. 271—74.)

1. In a printing press, the combination with an impression cylinder, and a reciprocating type-bed, of a gas conductor pipe extending parallel with the impression cylinder and transversely of the path of travel of the sheets of printed paper, for subjecting the latter to a gas flame, an air conductor pipe extending parallel and slightly above the gas pipe and provided with a series of downwardly disposed air discharge openings for discharging air across the heat waves generated by the gas flame for effecting an increased range and distribution of the heat across the surface of the printed sheets of paper.

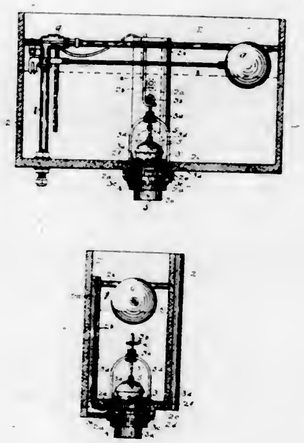


1,429,302. STARTING AND STOPPING MECHANISM FOR PRESSES. WILLIAM C. STEWART, Swampscott, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 15, 1916. Serial No. 97,583. 20 Claims. (Cl. 192—116.)

1. In a machine of the class described, the combination with driven mechanism, driving means, and a clutch for connecting the driven mechanism to the driving means, of clutch operating means comprising a member movable in successive steps to cause the clutch to be alternately set and released, means for operating said member, the member being movable also relatively to its operating

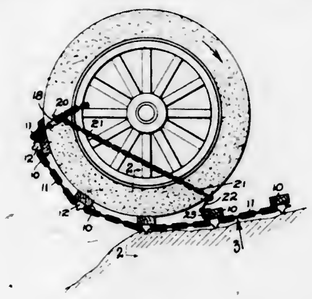
means, and means for positively locking the member against such movement relatively to its operating means as would cause an operation of the clutch.

1,429,303. FLUID-TIGHT JOINT. WILLIAM HENRY SUMBLING, Toronto, Ontario, Canada, assignor to Sumbling Machinery Company, Limited, Toronto, Ontario, Canada. Filed June 7, 1920. Serial No. 387,120. 5 Claims. (Cl. 220—55.)



4. The combination of a pair of closure-members each provided with a groove on its inner side each having an inner outward sloping wall, and a grooved wall facing said sloping wall; a body-portion having its ends placed in said grooves directly in thrust contact each with its associated sloping wall; a packing in the groove formed in said other walls and located between said closure-members and the side of said body-portion; the said sloping walls when said closure-members and body-portion are held in co-operative relationship outwardly displacing the said ends so as to jam said packing in place, and tie-rods mounted in said closure-members and adapted to hold the same and said body-portion in co-operative relationship, for the purpose specified.

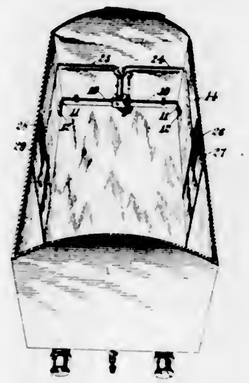
1,429,304. FLUSH TANK. BERT O. TILDEN, Trenton, N. J., assignor to B. O. T. Mfg. Co., Trenton, N. J., a Corporation of New Jersey. Filed Nov. 25, 1921. Serial No. 517,696. 3 Claims. (Cl. 4-5.)



1. A flush tank having a flushing opening in its bottom, said opening being surrounded by an annular recess and by the annular terminal of an overflow passage which discharges into the said opening, one arm of said overflow passage extending rearwardly beneath the bottom of the tank and another arm of said passage extending upwardly between integral portions of the rear wall of the tank to a point above the normal level of the flushing water, a bushing disposed in said flushing opening having an annular flange adapted to be seated in said recess, and having radial apertures facing the said annular ter-

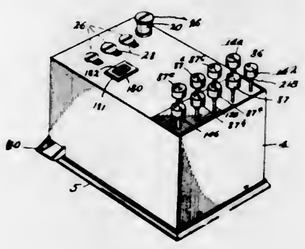
minal, the periphery of said flange being provided with radial sockets, a flush valve adapted to be seated in the open top of said bushing, and a cage inclosing said valve,

said cage having a plurality of arched members whose lower ends enter said radial sockets, the top of said cage comprising a guide for operatively supporting the stem of the valve.



1,429,305. AUTOMOBILE EXTRICATING ATTACHMENT. ADRIAN VAN LEEUWEN, Worcester, Mass. Filed Nov. 1, 1920. Serial No. 420,999. 5 Claims. (Cl. 238—14.)

1. In an attachment for a vehicle wheel for the purpose described, the combination of a series of parallel bars spaced apart, chains for flexibly connecting them together, projections on the lower surfaces of the bars near the ends for engaging the roadway, said projections having passages therethrough for the reception of said chains, and means for preventing longitudinal motion of the chains in said passages.

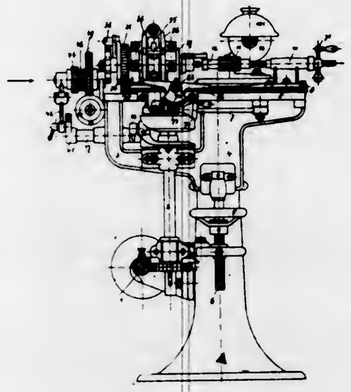


1,429,306. APPARATUS FOR PREVENTING THEFT FROM CLOSED COMPARTMENTS. LEONARD EDWARD VINING, Lucknow, India. Filed Dec. 13, 1921. Serial No. 522,053. 12 Claims. (Cl. 116—114.)

1. Theft-preventing apparatus for a closed compartment comprising in combination an indicator, a line controlling the indicator and operatively connected with the means of entrance to the compartment in such manner that the line moves the indicator from the "all right" position should the means of entrance be opened but will not return it on the closing of such means of entrance, and a movable cover for a trip-setting-opening in the wall of

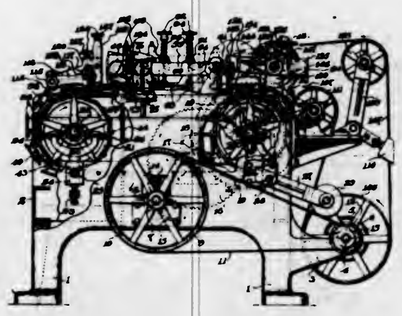
the compartment, which cover carries a one-way engaging finger so situated relatively to the said line that it trails across it when the cover is moved in the closing direction, but interlocks with it when the cover is moved in the opening direction, for the purpose described.

1,429,307. CHANGE-MAKING AND REGISTERING MACHINE. ERNEST D. VOTAW, Kansas City, Mo. Filed May 27, 1920. Serial No. 384,764. 8 Claims. (Cl. 133—1.)



1. In a machine of the character described, a plurality of coin magazines, coin ejectors associated with the respective magazines, a plurality of levers a number of which are superimposed and all of which are adapted to advance said ejectors for a working stroke, horizontally-disposed bars arranged within the same plane and having shoulders of different depths for selectively actuating said levers, and key-controlled means for actuating said bars.

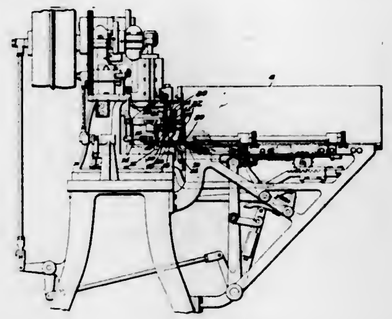
1,429,308. TOOL-GRINDING MACHINE. FRANZ LOUIS WÄCHTLER, Grossenhain, Germany. Filed Oct. 16, 1919. Serial No. 331,213. 14 Claims. (Cl. 51—225.)



1. In a tool grinding machine in which the tool is fitted on a mandrel held between two center points fitted to a

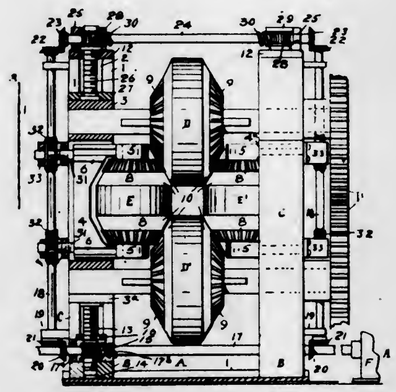
reciprocating slide, which moves the tool past a stationarily revolving grinding wheel, the combination of a freely revolubly journalled spindle carrying the one of said center points, a flexible element wound around said

spindle, a tensioning element connected to one end of said flexible element, the other end of said flexible element attached to a controlling member shiftable crosswise to the axis of the said spindle.



1,429,309. WOOD-HEEL-SEATING MACHINE. LELAND B. WHIPPLE, Rochester, N. Y., assignor to Fitz-Empire Double Pivot Last Company, Auburn, Me., a Corporation of Maine. Filed Aug. 4, 1919. Serial No. 315,082. 46 Claims. (Cl. 12—46.)

1. In a machine for forming concaved heel seats in the heels of boots and shoes, the combination of cutters mounted to cut in a direction longitudinally of the top of the heel to successively concave separate portions extending from the breast to the back of the heel, and means for relatively traversing the cutters and heel during the operation of the cutters to cause them to act successively upon the heel.

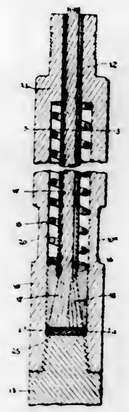


1,429,310. STOCK-CUTTING MACHINE. ERASTUS E. WINKLEY, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 21, 1919. Serial No. 284,170. 22 Claims. (Cl. 164—48.)

1. A stock-cutting machine having, in combination, means for cutting pieces successively from a sheet of material, and means for displacing in the plane of the sheet

being operated upon the portion remaining after the last piece has been cut from said sheet.

1,429,311. BLOOMING MILL. JOHN L. ALBIEZ, Pittsburgh, Pa. Filed Sept. 21, 1920. Serial No. 411,742. 6 Claims. (Cl. 80—34.)



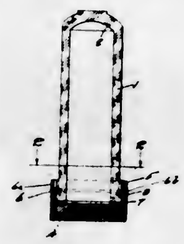
6. In a blooming mill, the combination of a frame, housings in said frame slidable in vertical planes, other housings in said frame slidable in horizontal planes, a pair of horizontal rolls journaled in said first named housings, a pair of vertical rolls journaled in said second named housings, the necks of all of said rolls being provided with beveled gear teeth which intermesh whereby said rolls rotate in unison, means for applying rotative power to one of said pairs of rolls, and common means for sliding said housings whereby said rolls may be shifted in unison in relation to a common center.

1,429,312. WIRE-LINE SOCKET. CECIL VERNON AUGENSTEIN, Macksburg, Ohio. Filed Mar. 22, 1921. Serial No. 454,410. 1 Claim. (Cl. 24—123.)

A wire line socket comprising a body portion having a head at one end and having its other end open and internally threaded, a spring arranged in said body portion and abutting the head at one end, a follower operating in said body portion and abutting the other end of the

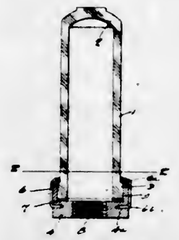
spring and adapted for connection with the wire line cable, a coupling member having threaded engagement

with the lower end of the body portion and a cushioning disk arranged between the coupling member and the follower.



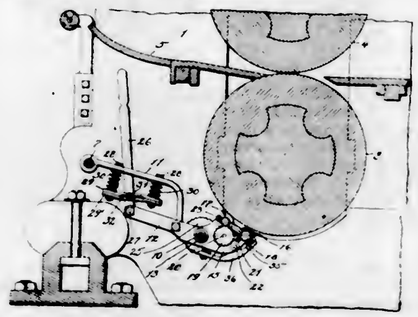
1,429,313. TRANSPARENT CAP FOR TIRE-STEM PRESSURE GAUGES. ALFRED BADOWSKI, Charleston, W. Va., assignor to Tirometer Valve Corporation of America, Charleston, W. Va., a Corporation of West Virginia. Filed Oct. 19, 1921. Serial No. 508,736. 4 Claims. (Cl. 152—12.)

1. A transparent cap for tire stem pressure gauges comprising a transparent tube having a closure at the outer end and open at the bottom end and having a circumferentially extending shoulder at the bottom end with an axially extending slot therethrough; and a metal base having an upwardly extending projection having a radially extending shoulder engaging the shoulder on the tube, the radially extending shoulder on the projection being of a size permitting the assembly of the tube and base by passing the last-mentioned shoulder through the slot in the shoulder on the tube.



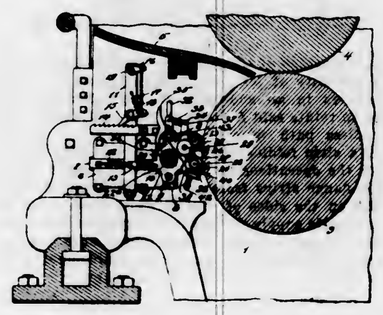
1,429,314. TRANSPARENT CAP FOR TIRE-STEM PRESSURE GAUGES. ALFRED BADOWSKI, Charleston, W. Va., assignor to Tirometer Valve Corporation of America, Charleston, W. Va., a Corporation of West Virginia. Filed Oct. 19, 1921. Serial No. 508,737. 3 Claims. (Cl. 152—12.)

1. A transparent cap for tire stem pressure gauges comprising a transparent tube having a closure at the top and open at the bottom and having a shoulder at the bottom; a base having an upward projection overlapping the shoulder on the tube and having an undercut shoulder thereon, one of said shoulders having axial slots; and a locking ring having projections adapted to be inserted through said slots, said ring when turned relatively to said shoulders



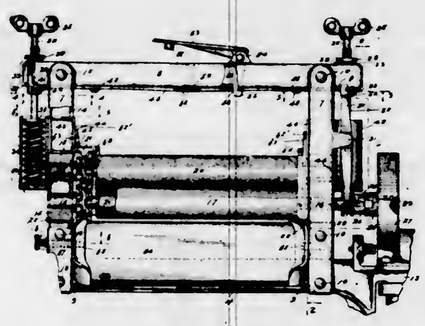
resting on the shoulder of the tube and under the shoulder on the projection of the base thus locking the tube in place on the base.

1,429,315. TRANSPARENT CAP FOR TIRE-STEM PRESSURE GAUGES. ALFRED BADOWSKI, Charleston, W. Va., assignor to Tirometer Valve Corporation of America, Charleston, W. Va., a Corporation of West Virginia. Filed Oct. 19, 1921. Serial No. 508,738. 5 Claims. (Cl. 152—12.)



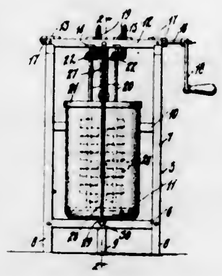
5. A transparent cap for tire stem pressure gauges comprising a transparent tube having a closure at the top and open at the bottom and having an exterior shoulder at its bottom; a metal base having an annular projection centering the tube; and a wire securing means encircling the tube over the shoulder and secured to the base.

1,429,316. ROLLER SURFACING OR POLISHING MACHINE. LOUIS BAGI, Granite City, Ill., assignor of one-half to John Makay, Granite City, Ill. Filed Jan. 18, 1921. Serial No. 438,144. 6 Claims. (Cl. 51—254.)



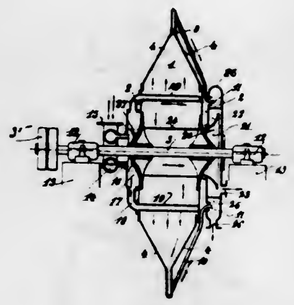
1. A roll polishing machine comprising a polishing-roller, in combination with means including a driving-roller adapted for driven frictional engagement with the roll being acted upon for simultaneously rotating the polishing-roller and causing the polishing-roller to travel lengthwise reciprocatorily along the roll being acted upon, and means for simultaneously shifting the drifting-roller and the polishing-roller into, respectively, yielding driven engagement and yielding polishing engagement with the roll being acted upon.

1,429,317. ROLLER SURFACING OR POLISHING MACHINE. LOUIS BAGI, Granite City, Ill., assignor of one-half to John Makay, Granite City, Ill. Filed July 28, 1921. Serial No. 488,224. 10 Claims. (Cl. 51—254.)



1. A roll-polishing-machine comprising a frame slidably shiftable relatively to the roll to be operated upon, a roller carried for rotation by the frame and adapted for frictional engagement with said roll, and means for slidably shifting the frame to carry the roller into driven frictional engagement with said roll.

1,429,318. CLOTHES WRINGER. EUGENE F. BEEBE, Minneapolis, Minn. Filed Feb. 7, 1921. Serial No. 443,181. 11 Claims. (Cl. 68—32.)

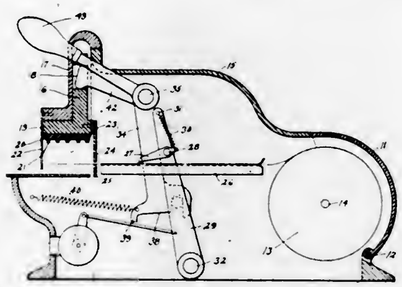


11. A wringer frame divided in a plane thereof, co-operating rolls, pressure devices for one of the rolls, means for driving one of the rolls including a clutch, a releasing bar for holding the pressure devices under tension and for releasing the same, a lever fulcrum stud on one of the sections of the frame, and a lever adapted to be held on said stud and interlocked with the releasing bar and clutch when the sections of the frame are assembled.

1,429,319. CHURN. JOHN F. BERTRAM, St. Louis, Mo. Filed June 9, 1920. Serial No. 387,681. 1 Claim. (Cl. 259—104.)

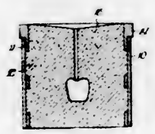
A churn comprising a supporting frame having sides to prevent lateral displacement of a receptacle placed within the frame, said frame having a side normally open through which the receptacle may be removed, a hinged cover for the frame for supporting a driving mechanism adapted to drive an agitating means spaced in the receptacle, and a resilient member connected to said cover and adapted to be stretched across said open side of the frame to prevent accidental displacement of the receptacle through the open side of the frame and to retain the driving means in engagement with the agitating means.

1,429,320. APPARATUS FOR SEPARATING SOLIDS FROM LIQUIDS. CHARLES BOUILLON, Paris, France. Filed Feb. 21, 1922. Serial No. 538,344. 9 Claims. (Cl. 233—14.)



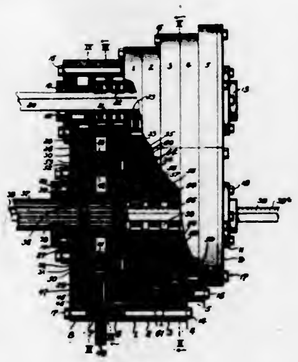
1. A continuous rotary apparatus for clarifying liquids comprising a central container, a series of tapering chambers forming continuations of the container, means located near to the axis of the apparatus for the outlet of clarified liquid from the container, means for the outlet of enriched liquid at the ends of the tapering chambers, means for the inlet of liquid located intermediate of the outlet for clarified liquid and the outlets for enriched liquid, the inlet means to the container and the outlet means from the tapering chambers being adapted to allow the inlet of more liquid to the container than can pass out from the tapering chambers.

1,429,321. STAMP-AFFIXING MACHINE. EUGENE F. BOWEN and EPHRIAM J. SCOTT, Providence, R. I. Filed Sept. 17, 1920. Serial No. 410,905. 2 Claims. (Cl. 216—28.)



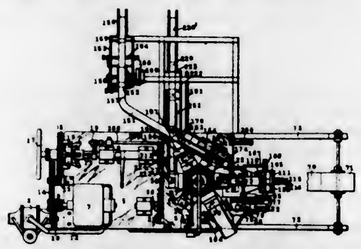
1. In a stamp affixing machine, means for engaging the stamp strip to advance the same, a pivoted arm carrying said engaging means, a spring for giving said arm its feed-

ing stroke, a pivoted actuating leg engaging said carrier arm to return it after its feeding stroke, a plunger, a knife



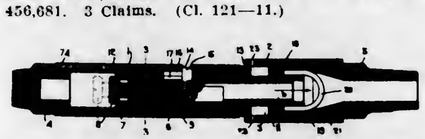
carried thereby, an arm connected to said actuating leg and engaging said plunger, and a hand-operating lever connected to operate both said arm and leg.

1,429,322. DENTAL CASTING RING. ALLEN O. BROPHY, Oak Park, Ill. Filed Aug. 8, 1921. Serial No. 490,586. 8 Claims. (Cl. 22—97.)



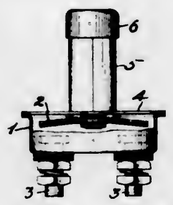
1. A casting flask comprising a perforated investment holder, and removable means for closing the perforations therein to prevent egress of material therethrough.

1,429,323. TRANSMISSION MECHANISM. MERTON V. BROWN, Detroit, Mich. Filed May 17, 1920. Serial No. 381,804. 10 Claims. (Cl. 74—59.)



7. In a transmission mechanism by which direct and reverse drive and variable speeds may be attained, power transmitting gear wheels, and closely assembled tangentially disposed pawls embodied in some of said gear wheels to permit of certain gear wheels transmitting power independent of others.

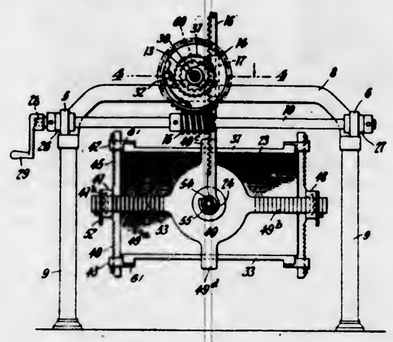
1,429,324. DRUM MACHINE. HAROLD CARLE, Buffalo, N. Y., assignor to F. N. Burt Company, Limited, Toronto, Ontario, Canada, a Corporation of the Province of Ontario, Dominion of Canada. Filed June 29, 1921. Serial No. 481,233. 42 Claims. (Cl. 93—44.)



1. In a machine of the character described, in combination, a plurality of formers, means adapted to translate said formers in an endless path intermittently, means adapted to rotate said formers at their stations of rest in said endless path to coil strips thereon, strip supply devices, a strip folding device, and means adapted to coordinate the operations of the before-mentioned elements to cause flange strips from one of said supply devices to be coiled on the sides of said formers, head strips from another of said supply devices to be applied across ends of said formers and their margins folded onto the coiled strips and flange strips from another of said supply devices to be coiled over the previous'y coiled strips.

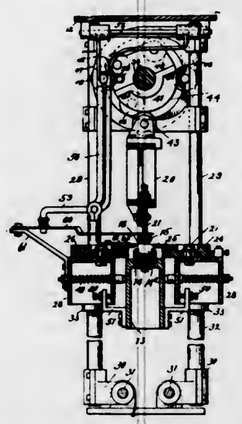
1,429,325. AUTOMATIC CONTROL FOR COMPRESSED-AIR-ACTUATED MACHINES. CHARLES C. CHENEY, Charlestown, Mass. Filed Mar. 29, 1921. Serial No. 456,681. 3 Claims. (Cl. 121—11.)

1. In an automatic control valve for compressed-air-actuated machines, the combination with a tubular housing, of a tubular valve seat member slidably mounted within the housing and having a valve seat at one end, a valve to close said valve seat, and manually operable means to open the valve away from the valve seat, said valve seat member being constructed so that it will be moved relative to the housing to carry the valve seat against the opened valve whenever a pressure builds up at the discharge end of the housing.



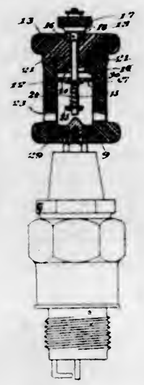
1,429,326. SWITCH. CHARLES F. CUNO, Meriden, Conn. Filed Feb. 12, 1920. Serial No. 358,043. 1 Claim. (Cl. 200—159.)

In a switch of the character described, a housing, a switch mechanism contained therein, a cover plate there-



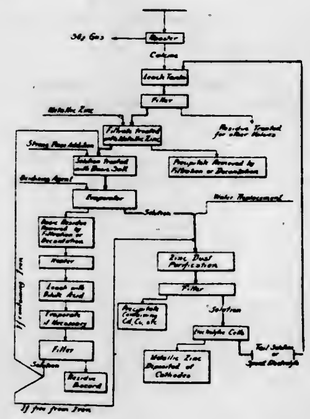
for, a tube formed from sheet metal and having a seam on one side, said tube being mounted on said cover plate, lugs on the lower end of said tube for interconnection with the cover plate, certain of said lugs being formed on opposite sides of the seam and adjacent thereto whereby when said tube is connected to said cover plate said lugs will hold said tube against opening at the lower end, a slidable cap mounted on the other end and overstanding the outside of the tube to prevent the latter from opening at the seam on that end.

1,429,327. TURNOVER MECHANISM. GEORGE J. DANIELL, Brooklyn, N. Y., assignor of one-half to Joseph F. Stewart, New York, N. Y. Filed Apr. 22, 1921. Serial No. 463,470. 11 Claims. (Cl. 214—130.)



1. In turn-over mechanism for a stack of sheets the combination of means for clamping together the stack of sheets, trunnions on said clamping-together means, means for rotatably supporting said trunnions whereby the stack may be turned over, and means for raising and lowering said trunnion supporting means.

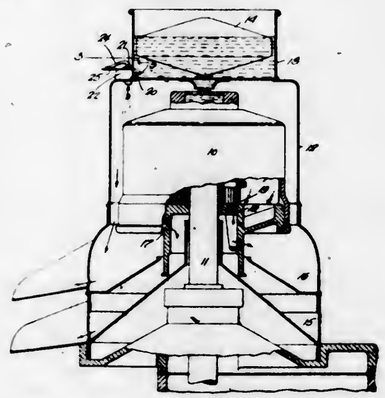
1,429,328. TUBING MACHINE. DAVID F. DOMIZI, Cleveland, Ohio. Filed Aug. 7, 1919. Serial No. 315,845. 7 Claims. (Cl. 113—34.)



1. In a tubing machine having a die and a mandrel adapted to be received by the die, and about which flat stock is adapted to be formed into a tube, folding blades for folding stock about the mandrel, a presser member for pressing the edges of the stock into a seam, swinging members carrying the presser blades, each member being pivoted at one end and carrying the associated folding blade intermediate its ends, and means operating on the free ends of the swinging members to move the free ends inwardly for the folding operation.

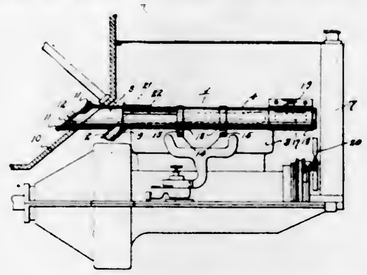
1,429,329. ATTACHMENT FOR SPARK PLUGS. STUART DONALDSON, Carnegie, Pa. Filed Apr. 1, 1921. Serial No. 457,783. 5 Claims. (Cl. 175—183.)

4. An attachment for spark plugs, comprising a supporting member having recesses at one end, means at the other end of said member for attaching the same to a spark plug, an electric rod, a slidable and rotatable support for the electrode rod seating on the recessed end of the supporting member, and provided with lugs to seat in the recesses, said lugs and recesses varying in length and depth to gage the extent of the sliding movement of the electrode rod support in a direction to advance and to retract the electrode rod relative to the main terminal rod of the spark plug, and a spring coiled around the electrode rod for holding the support thereof seated, said rod having an abutment against which one end of the spring bears, and the supporting member carrying an abutment for the other end of the spring.



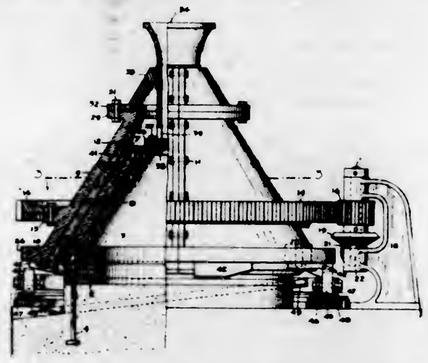
1,429,330. PROCESS OF RECOVERING ZINC FROM COMPLEX ORES. JOHN THAYER ELLSWORTH, Park City, Utah. Filed July 12, 1921. Serial No. 484,195. 12 Claims. (Cl. 204—15.)

2. In the method of recovering zinc from zinciferous materials involving the treatment of the zinciferous ma-



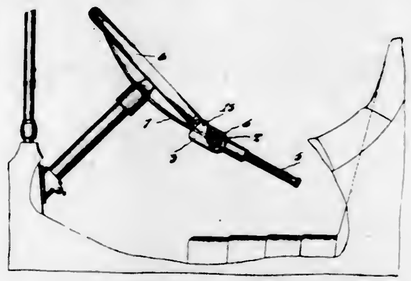
terial with a cyclic solvent solution and electrodeposition of zinc therefrom, concentrating the solution prior to electrolysis and removing therefrom such an amount of soluble salts that when the so concentrated solution is appropriately diluted for electrolysis the concentration of soluble salts therein will be insufficient to produce supersaturation of the solution at any subsequent stage in its cycle, and appropriately diluting the so concentrated solution for electrolysis.

1,429,331. REGULATOR FOR CENTRIFUGAL SEPARATORS. HARVEY FELDMEIER, Little Falls, N. Y., assignor to D. H. Burrell & Co., Inc., Little Falls, N. Y. Filed Nov. 14, 1921. Serial No. 514,897. 13 Claims. (Cl. 233—4.)



1. In a centrifugal liquid separator having a rotary separating element, a by-pass device arranged to deliver unseparated liquid from the liquid supply for the separating element into one of the separated liquids discharging from the separating element, for altering the said separated liquid.

1,429,332. AUTOMOBILE HEATER. JOSEPH B. FRANCISCO, Columbus, Ohio. Filed Mar. 10, 1920. Serial No. 364,723. 1 Claim. (Cl. 237—12.3.)

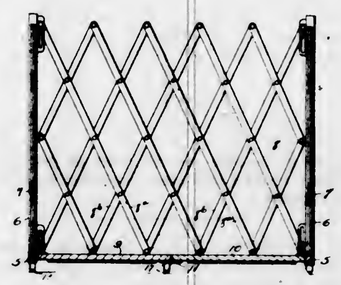


An automobile heater comprising a tube adapted to encircle the exhaust manifold of an internal combustion engine, bowed resilient bands disposed transversely in the tube and having their ends fixed to the tube, said bands being adapted to yieldably engage the exhaust manifold, the ends of the tube being open to permit passage of air therethrough, said tube being split longitudinally and having the edges overlapped, and means for drawing said edges together whereby the bands yieldably engage the manifold to hold the same in clamped relation with said manifold.

1,429,333. ROTARY PULVERIZER. WILLIAM H. FULCHER, Oakland, Calif. Filed Nov. 14, 1921. Serial No. 515,128. 4 Claims. (Cl. 83—10.)

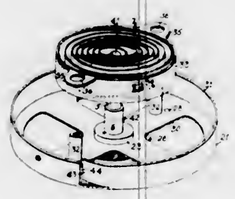
1. The combination of a conical body, a conical shell surrounding said body, means for feeding material into the space between said shell and body, means for rotating said shell, elements depending from said shell, and arranged to move in a circular path as the shell rotates, rollers rolling in a circular path immediately beneath that of said elements, and adapted to be engaged by said elements to elevate said shell, and means for connecting said rollers whereby they roll at constant distances apart.

1,429,334. AUTOMOBILE LOCK. FREDERICK M. FURBER, Revere, Mass. Filed Nov. 5, 1920. Serial No. 421,949. 9 Claims. (Cl. 70—129.)



1. A locking device for the steering wheel of an automobile comprising, in combination, a body part carrying means whereby it may be removably locked in a relatively fixed position on said wheel, and a rigid arm movable relatively to said body part into either an extended or retracted position for the purpose described.

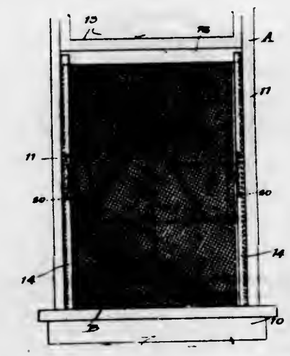
1,429,335. CHILD'S COOP. JOHN GABRIEL, Randolph, Mass. Filed June 29, 1921. Serial No. 481,283. 1 Claim. (Cl. 5—58.)



A collapsible coop of the character described comprising a pair of side rails carrying upstanding posts at each of their ends, noncollapsible side walls extending between the posts above and in alignment with the side rails, a pair of rigid and solid floor sections hingedly connected to said side rails along their outer edges and hingedly connected to each other along their inner edges, longitudinally contractile, lazy tong, side walls disposed between the posts at right angles to the noncollapsible

side walls and having sliding connection with said posts, casters upon which the posts are mounted and a row of casters along the inner edges of the floor sections, the floor sections being disposed so close to the ground that the casters thereon may engage the ground and support the floor sections along their hinged juncture with each

other, said floor sections complementally covering the entire area bounded by the collapsible and non collapsible side walls, and a hand grasp on one of the floor sections adjacent its inner edge, said coop being collapsed by drawing upwardly on the hand grasp of the floor section and being opened by thrusting downwardly on said hand grasp.

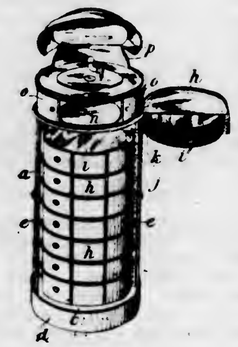


1,429,336. TYPEWRITING MACHINE. WALTER P. GEHRETT, San Francisco, Calif., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed July 29, 1920. Serial No. 399,698. 3 Claims. (Cl. 185—45.)

1. In a typewriting machine, the combination with the carriage driving drum or wheel having posts therein, of a unit structure consisting of a driving spring and a container ring in which said spring is mounted, said ring being adapted to be inserted in said wheel between said posts and having flanged parts for engaging said posts to hold the container in place.

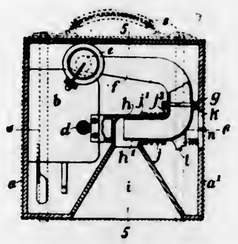
1,429,337. WINDOW-SCREEN MOUNTING. GEORGE WASHINGTON GETSINGER, Savannah, Ga. Filed June 29, 1921. Serial No. 481,289. 3 Claims. (Cl. 156—38.)

2. In combination with a telescopic screen of the character described having substantially channel shaped side frame members, a pair of guideways secured in a window frame, one upon each side thereof and adapted to slidingly receive the side frame members of said screen,



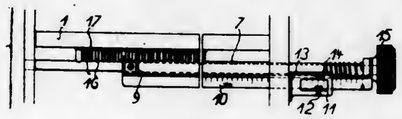
and spring means carried by the window frame for holding the sections of said telescopic screen against telescopic movement.

1,429,338. FINGER-PRINT COMPOSITION. CHARLES F. GLASS, Brooklyn, N. Y., assignor to Fingerprint Machine Corporation, a Corporation of New York. Filed Oct. 23, 1920. Serial No. 419,013. 8 Claims. (Cl. 134—38.)



8. A composition for recording finger prints comprising asphaltum 6 parts by volume, wheat flour 4 parts by volume, talc powder ¼ part by volume and silicon ¼ part by volume.

1,429,339. CABINET FOR CONTAINING TALKING-MACHINE RECORDS. JOSHUA GREEN, Hove, England. Filed Apr. 18, 1921. Serial No. 462,291. 5 Claims. (Cl. 211—16.)



3. In a storage cabinet for talking machine disk records, a storage receptacle comprising substantially semi-circular top and bottom members a curved semi-cylindrical wall connecting the top and bottom portions adjacent to their curved edges, and a plurality of substantially semi-circular shelves supported horizontally in spaced relation between said top and bottom, for supporting disks while permitting them to project from and over the stright edges of the shelves and bottom.

1,429,340. COLLAPSIBLE GRAMOPHONE. JOSHUA GREEN, Hove, England. Filed Dec. 7, 1921. Serial No. 520,559. 12 Claims. (Cl. 274—2.)

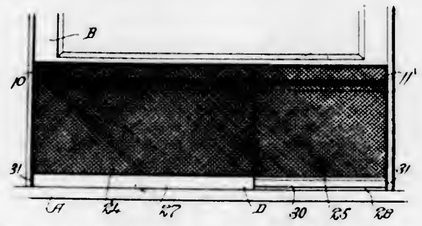
2. In a gramophone, the combination with an amplifying horn, of a horizontal sound tube comprising telescoping sections having slidable and rotary movement with respect to each other, one of said sections being provided with an upwardly extending portion, a tone arm pivotally mounted on said upwardly extending portion so as to swing laterally with respect thereto, and means for locking the tone arm and connected portion of the sound tube in operative position, brought into operation by the longitudinal sliding movement of the sound tube sections with respect to each other.

1,429,341. COLUMN ADJUSTING DEVICE FOR TYPEWRITING MACHINES. HEINRICH GRÜTZMANN, Nuremberg, Germany, assignor to the Firm Bingwerke, vorm. Gebr. Bing A.-G., Nuremberg, Germany. Filed Aug. 5, 1921. Serial No. 490,130. 4 Claims. (Cl. 197—179.)

1. A column-adjusting device for typewriting machines with stops to be thrown into operative position comprising in combination with the carriage and with the carriage frame movable stops and an ejecting device mounted upon the carriage frame adapted to act upon said stops so that each of said stops can be brought into the operative position independently of the actual position of the carriage, and consisting of a revoluble adjusting body movable in longitudinal direction, a bar in said adjusting body marked with graduation lines and an ejecting cam designed to operate said stops.

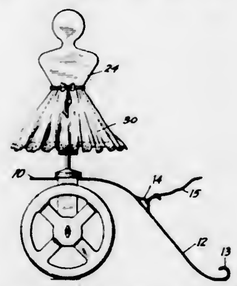
1,429,342. PROCESS OF MANUFACTURING BORNEOL. ALBIN HALLER, Paris, France, assignor to Fabriques de Produits Chimiques de Thann et de Mulhouse, Thann, (Haut-Rhin), France. Filed Oct. 18, 1921. Serial No. 508,596. 4 Claims. (Cl. 260—99.)

3. As a new product, di-bornyl ester of a tetrahalogenphthalic acid other than the chlorine derivative.



1,429,343. HOOK AND EYE TAPE. ALEXANDER MCD. HESS, New York, N. Y. Filed Jan. 22, 1921. Serial No. 439,226. Renewed July 28, 1922. Serial No. 578,270. 1 Claim. (Cl. 2—58.)

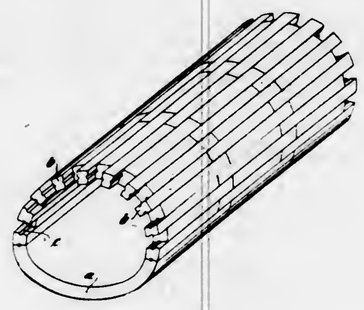
Hook and eye tape comprising a base tape provided with a plurality of alined, longitudinal slots woven therein at a distance from the edge, a second tape, narrower than the base tape sewed thereto at its edge, the line of stitching being substantially in alinement with the slots, and one member of a hook and eye extending through each slot with its base between the two piles of tape and its engaging end above the base tape,



the portion of the base tape in front of the hook and eye member forming a protecting flap when the two members are engaged.

1,429,344. WINDOW SCREEN. JOSEPH D. HIPPOLITUS, New Haven, Conn. Filed Nov. 1, 1920. Serial No. 421,165. 1 Claim. (Cl. 156—39.)

An extension window screen of the type having extensionable roller and anchoring members connected by a sectional screen web of which the members overlap at their adjacent edges, wherein the roller member consists of a spring roller section having at one end an axial tension rod longitudinally adjustable with relation to the spring roller section and keyed thereto for joint rotary movement and having one end of one of the screen web sections attached to and adjustable therewith, the spring roller section being cavitied longitudinally to house said rod and being slotted for the passage of the screen web section therethrough, and the journal studs of the roller being carried by the remote ends, respectively, of the spring roller section and said extension rod.

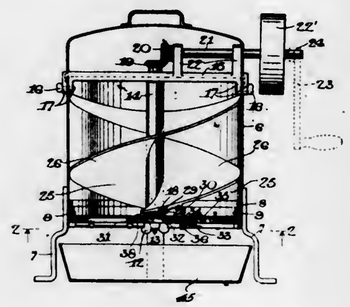


1,429,345. FIGURE WHEELED TOY. WILLIAM J. HOFFMANN, New York, N. Y. Filed May 4, 1921. Serial No. 466,675. 4 Claims. (Cl. 46—45.)

1. A toy comprising a sheet metal plate having downturned side members and an end member adapted to drag

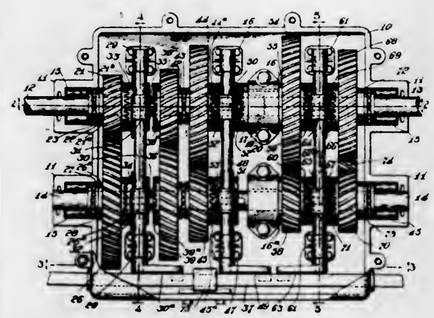
upon a surface, an axle rotatable in said down turned members, wheels fixed at the ends of said axle, a rotatable spindle mounted in a vertical plane in said plate, a figure carried by said spindle, a cylindrical friction element on the spindle, and means carried by said axle to make alternate contact with said element whereby said figure is periodically rotated in opposite directions.

1,429,346. RETORT FOR GAS FURNACES. GUSTAV HORN, Braunschweig, Germany; Elisabeth Horn née Beling, legal heiress of said Gustav Horn, deceased. Filed Sept. 1, 1921. Serial No. 497,795. 1 Claim. (Cl. 48—119.)



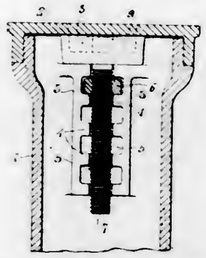
A retort for manufacturing gas comprising stepped overlapping trough-shaped floor pieces of the breadth of the whole retort; narrow ceiling pieces each provided at each lateral surface with a groove and placed side by side in groups above the said floor so as to form an arched ceiling, the groups of narrow adjacent ceiling pieces being placed end to end with the ends of the individual pieces displaced to the extent to which the trough-shaped floor pieces overlap, and the grooves in each two abutting lateral surfaces registering with each other so as to form a channel; and fire-proof mortar in each said channel.

1,429,347. SYSTEM FOR THE IDENTIFICATION OF VEHICLES OF THE MOTOR-DRIVEN TYPE. FRANK W. HOUGH, Washington, D. C. Filed Feb. 11, 1922. Serial No. 535,772. 6 Claims. (Cl. 40—10.)



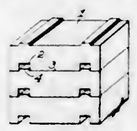
1. An identification label having a central opening, a countersunk portion in said label about said opening, a continuous groove in said label adjacent to said countersunk portion, and a recess in said label beyond said groove having a relatively thin wall of concavo convex shape in cross section.

1,429,348. VEGETABLE CUTTER. EDWIN HUMAN, Milwaukee, Wis. Filed Apr. 17, 1922. Serial No. 554,218. 3 Claims. (Cl. 146—11.)



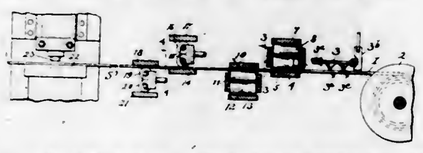
1. In a vegetable cutter, the combination of a pair of vertically disposed oppositely extending spiral feed chutes, and a revoluble member at the bottom of said chutes provided with cutters, said chutes cooperating with said member to hold the vegetables against said member during the cutting operation.

1,429,349. TRANSMISSION MECHANISM. IRVIN HUPP, Chicago, Ill., assignor to Flexo Motive Corporation, a Corporation of Delaware. Filed Nov. 19, 1917. Serial No. 202,784. 27 Claims. (Cl. 74—59.)



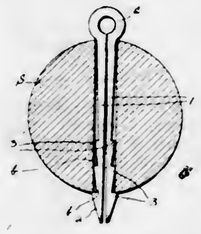
1. Transmission mechanism, comprising, in combination with a power shaft, a driven shaft and a counter shaft, a plurality of gears loosely mounted on said shafts, the gears on the power shaft and the driven shaft meshing with the gears on the counter shaft, clutch mechanisms feathered on all of said shafts intermediate of adjacent gears and intermediate of the power shaft and the driven shaft, means whereby the clutch mechanisms may be actuated and moved into engagement with the gears on either side thereof, and a member common to all of said means whereby predetermined portions of said means are actuated at prearranged moments in the movement of said member.

1,429,350. CURB BOX OR PIPE. PETER J. IHRIG, Springfield, Ohio, assignor of one-half to Justus K. Ihrig, Springfield, Ohio. Filed May 16, 1921. Serial No. 470,150. 5 Claims. (Cl. 137—13.)



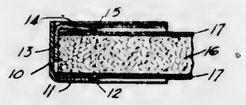
1. In a device of the character described, the combination, with a box or pipe having a series of nut-holders, of a cap and a bolt extended through the cap and having a nut adapted to engage any one of the nut holders.

1,429,351. MEANS FOR LIMITING CAPILLARY ATTRACTION BETWEEN STRUCTURAL ELEMENTS. FRANK J. JACKSON, Waterloo, Iowa. Filed May 29, 1919. Serial No. 300,693. 2 Claims. (Cl. 20—4.)



1. In combination, in a wall structure, tiers of horizontal blocks of which the horizontal faces of abutting blocks are in contact and provided with transversely-spaced longitudinal articulations, each articulation comprising in the under block a raised ridge, and in the superposed block a co-mating groove of greater height, whereby a space is provided above the ridge of greater height than the interspace between the said contacting parts of the blocks, to thereby interrupt capillary attraction between the blocks at such higher spaces.

1,429,352. COMMUTATOR-SEGMENTS MANUFACTURE. HENRY P. JANKE, Toledo, Ohio, assignor, by mesne assignments, to The Toledo Standard Commutator Company, a Corporation of Ohio. Filed June 24, 1918. Serial No. 241,455. 22 Claims. (Cl. 80—3.)



1. In an apparatus for forming tapered commutator segments, means for rolling copper wire into a bar or strip of wedge-like form in cross-section, from which tapered segments may be punched or cut, said apparatus comprising a reciprocable roller and a stationary die in operative relation to the roller, said die having a groove through which the stock to be rolled is fed, said groove being provided with sides which are the same distance apart during the rolling and feeding operations, and having opposite to the roller for the support of the strip or bar to be rolled, a surface inclined at an angle to the path of the roller, and means for feeding the stock through said groove.

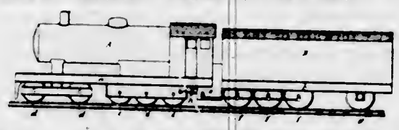
1,429,353. COTTER PIN. JOSEPH S. KARSKY, Owen, Wis. Filed May 1, 1922. Serial No. 557,805. 2 Claims. (Cl. 74—8.)

1. As a new article of manufacture, a cotter pin comprising a split shank providing separated legs, the free extremities of the legs being provided with outstanding teeth, said teeth successively being of greater lengths.

1,429,354. INK PAD AND METHOD OF MAKING THE SAME. ROBERT H. KEE, Los Angeles, Calif., assignor to Mun-Kee Products Corporation, Los Angeles, Calif., a Corporation of California. Filed July 7, 1921. Serial No. 482,875. 7 Claims. (Cl. 91—54.5.)

1. In an inking pad, a frame composed of a pair of members that are substantially L-shape in cross section, one member being arranged within the other and with the horizontally disposed flanges of said members inwardly presented, and an absorbent body arranged within said frame with its edges clamped between said inwardly presented flanges.

1,429,355. BUILDING CONSTRUCTION. HENRY KLEIN and PAUL J. KLEIN, Detroit, Mich. Filed May 6, 1921. Serial No. 467,490. 5 Claims. (Cl. 72—110.)

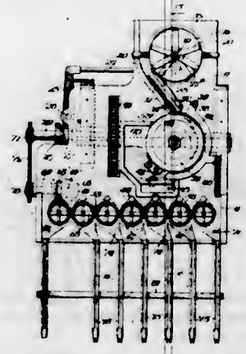


1. A reinforcement for a composition wall comprising substantially parallel flat metallic plates spaced apart and connected by two series of wires lying in spaced planes each substantially parallel to the face of the wall.

1,429,356. LOCOMOTIVE AND THE LIKE PROVIDED WITH AIR COOLER FOR CONDENSING PURPOSES. FREDRIK LJUNGSTRÖM, Brevik, Lidingon, Sweden, assignor to Aktiebolaget Ljungstroms Angturbin, Stockholm, Sweden. Filed Mar. 11, 1919. Serial No. 282,049. 1 Claim. (Cl. 105—38.)

In a locomotive or the like having a steam generating boiler placed on a separate car and an air cooler for condensing purposes on another car, a driving steam motor for the locomotive placed solely on the cooler car at the end of the cooler facing the boiler.

1,429,357. LOCOMOTIVE AND THE LIKE PROVIDED WITH CONDENSER. FREDRIK LJUNGSTRÖM, Brevik, Lidingon, Sweden, assignor to Aktiebolaget Ljungströms Angturbin, Stockholm, Sweden. Filed Mar. 11, 1919. Serial No. 282,050. 1 Claim. (Cl. 105—38.)

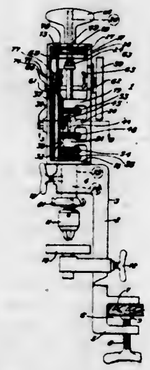


In locomotives and the like, in combination two connected cars, a boiler disposed on one of said cars, a condenser disposed on the other car, a driving steam motor supported solely on the condenser car, the boiler car being placed before the condenser car, a steam conduit from the boiler car to the steam motor, and a joint in said conduit having its axis coinciding with the axis of the connection between the cars.

1,429,358. FILLING COMPOSITION FOR BRAKE SHOES. GUY L. MCINTYRE, Pittsburgh, Pa. Filed Aug. 2, 1920. Serial No. 400,817. 20 Claims. (Cl. 106—25.)

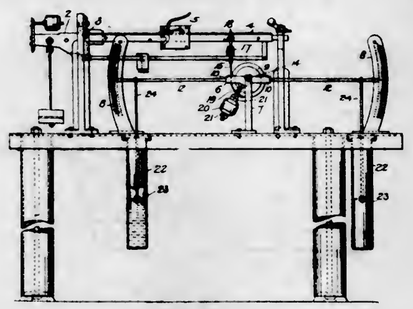
20. A frictional composition having coke as the largest constituent by weight.

1,429,359. APPARATUS FOR PLACING WASHERS IN RUBBER-HEEL MOLDS. HARVEY F. MARANVILLE, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Jan. 18, 1919. Serial No. 271,878. 57 Claims. (Cl. 18—1.)



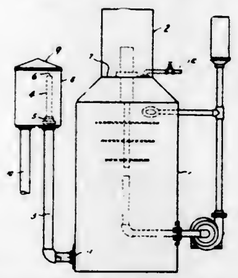
48. A washer handling apparatus comprising a deburring mechanism, a washer holder and conveyor, and a mold carrier beneath the conveyor.

1,429,360. INFLAMMABLE COMPOSITION FOR TABLEWARE. GOLDIE MARTIN, Winchester, Ind. Filed Aug. 27, 1921. Serial No. 496,189. 4 Claims. (Cl. 106—38.)



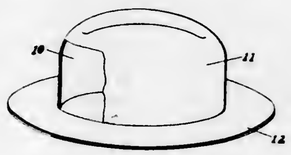
1. An inflammable composition consisting of a mixture of a resinous substance and the resulting product of casein dissolved in carbolic acid.

1,429,361. COMBINED DRILL AND VALVE GRINDER. VICTOR MATALAVAGE, Columbus, Ohio. Filed June 23, 1920. Serial No. 391,216. 10 Claims. (Cl. 51—29.)



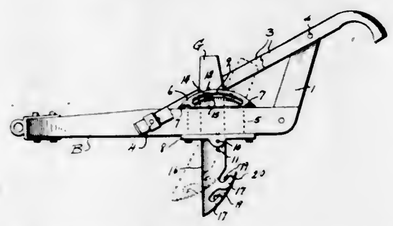
1. In a combination tool of the character described, a frame, a compound gear rotatably carried by said frame, a tool operating spindle rotatably journaled within said frame, means co-operative with said spindle and said gear adjustable to cause selective rotation of said spindle in a predetermined direction and to effect an oscillatory back and forth motion thereof.

1,429,362. QUICK-WEIGHING ATTACHMENT FOR SCALES. MARTIN MAURER, Pueblo, Colo. Filed July 9, 1919. Serial No. 309,678. 3 Claims. (Cl. 265—59.)



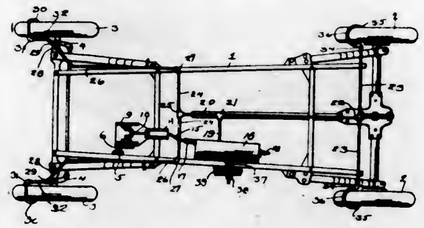
1. In a beam scale of the character described the combination of a fulcrumed scale-beam, a pivoted pointer parallel therewith, a relatively stationary scale cooperating with the pointer, a coaxial segment moving with the pointer, a strap connecting the segment with the beam at a point outside the fulcrum thereof, and a weight acting upon the pointer and relatively disposed to be lifted by movement of the scale-beam under the influence of the load.

1,429,363. AUTOMATIC DISCHARGE MEANS FOR DEHYDRATORS. WYNN MEREDITH, Alameda, Calif., assignor to Petroleum Rectifying Company, San Francisco, Calif., a Corporation of California. Filed Oct. 28, 1920. Serial No. 420,246. 5 Claims. (Cl. 204—24.)



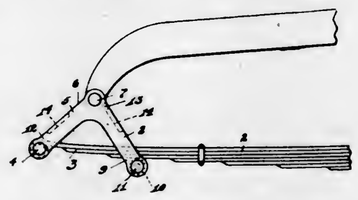
1. In combination with an emulsion dehydration chamber, a pipe connection to the lower part of said chamber and rising therefrom, an outlet member adjustably connected to said pipe whereby the elevation of the discharge from said pipe and said member may be varied to maintain the chamber full and without substantial pressure therein.

1,429,364. ART OF FORMING LINING SURFACES IN HATS. ANDREW W. MITCHELL, Norwalk, Conn., assignor to Ran W Hat Shop, Inc., Norwalk, Conn., a Corporation of New York. Filed July 28, 1920. Serial No. 399,456. 12 Claims. (Cl. 2—108.)



1. An art of the nature of that herein described which consists in inverting a hat formed of a single thickness of material, applying a distinctive color to the inner surface of the crown directly to said material, and reverting the hat.

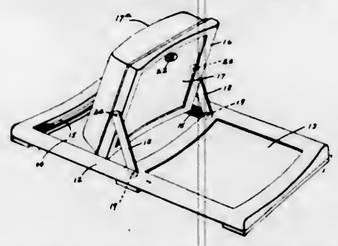
1,429,365. PLOW. CHARLES F. MORRIS, Earlysville, Va. Filed May 14, 1921. Serial No. 469,521. 2 Claims. (Cl. 97—26.)



1. An implement of the class described comprising a beam provided with an opening therethrough, an elongated member disposed through the opening and extending above and below the beam, means for supporting the member for swinging movement, upstanding webs carried by the beam at opposite sides of the member, said webs being provided with slots, and a clamping medium carried by the member and disposed through the slots of the web for holding the member in different positions.

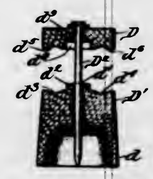
1,429,366. ANTISPLASHING DEVICE FOR AUTOMOBILES. JOHN WILLIAM NETHERTON, South Bend, Ind., assignor of one-half to Harry C. Hardt, South Bend, Ind. Filed June 27, 1921. Serial No. 480,764. 3 Claims. (Cl. 280—157.)

1. In combination with a vehicle frame and supporting wheels therefor, a source of air under pressure carried by said frame, a pipe associated with each of the wheels and in communication with the source of air, said pipe straddling the associated wheel from above and terminating closely adjacent the lowermost point of the wheel and slightly forward of the contacting portion of the wheel, a portion of said pipe immediately adjacent the wheel being flexible.



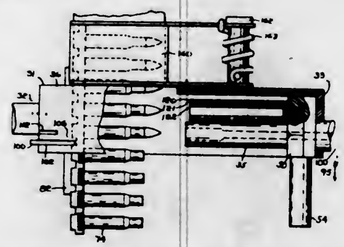
1,429,367. COMBINED SHOCK ABSORBER AND REBOUND SNUBBER FOR VEHICLE SPRINGS. GEORGE J. OLTSCH, South Bend, Ind. Filed Jan. 14, 1921. Serial No. 437,276. 6 Claims. (Cl. 267—19.)

1. The combination with a semi-elliptic spring and a vehicle frame disposed thereover, of a combined shock absorber and snubber therefor, said snubber and shock absorber comprising a bracket pivoted to one end of the spring and to the vehicle frame at a point spaced inwardly from the end of the spring, said bracket being provided with a member disposed below the spring at a point spaced from the end of the spring and forming means whereby the end of the spring will be bent downwardly upon the rebound of the vehicle frame.



1,429,368. CAR SEAT. THOMAS D. OWLER and HARRY S. GORDON, Wakefield, Mass., assignors to Heywood-Wakefield Company, Wakefield, Mass., a Corporation of Massachusetts. Filed Oct. 19, 1921. Serial No. 508,671. 1 Claim. (Cl. 155—10.)

A car-seat comprising end supports and a seat section including an oblong outer frame, adapted to be maintained in an operative position by said supports, a fixed seat face occupying and filling one end portion of the frame, and adapted to support a passenger, the other end portion of the frame being formed to surround an opening, and provided with upwardly facing rests within said opening, an invertible inner frame formed to occupy said opening and bear, either side up, on said rests, so that the inner frame is adapted to occupy either of two operative positions within said opening, said inner frame being provided with two oppositely facing seat faces, one of which is substantially flush with the fixed seat face, and is adapted to support another passenger when the inner frame is in one of said positions, the other face being offset and formed to be inoperatively located below the outer frame when the inner frame is in one of said positions, and to project above the outer frame and support a motor man when the inner frame is in the other operative position, parallel links formed to lie between adjacent edges of the outer and inner frames at opposite sides of said opening, inner pivots connecting said links with the outer frame at one end of said opening, whereby the links are

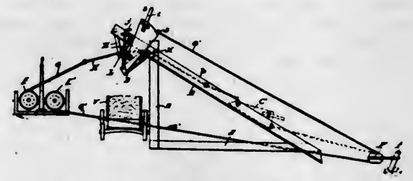


adapted to swing into and out of the opening, and outer pivots connecting the swinging ends of the links with the inner frame, midway between the ends of the latter, said links loosely anchoring the inner to the outer frame, and permitting the elevation and upward displacement of the inner frame, without displacement of the outer frame, the inversion of the inner frame when the latter is elevated.

1,429,369. ATTACHING DEVICE. WILLIAM MORRILL PARKER, Parkersburg, W. Va., assignor to J. H. Parker & Son, Incorporated, Parkersburg, W. Va., a Corporation of West Virginia. Filed Jan. 8, 1915. Serial No. 1,225. 11 Claims. (Cl. 173—314.)

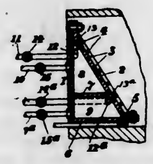
5. An insulator comprising cap and base portions formed with perforations, and a nail extending through said perforations and having a head at one extremity and means adjacent the other extremity to positively retain the cap and base on the nail and permit a substantial movement of the two along the nail.

1,429,370. MACHINE GUN. BURLEIGH PUTNAM, Pasadena, Calif. Filed Aug. 30, 1917. Serial No. 188,021. 4 Claims. (Cl. 89—2.)



1. In a gun, the combination of: a moving barrel; means for inserting cartridges in said barrel; and an oiling device actuated by said barrel lubricating the exterior of said cartridges before they are placed in said barrel.

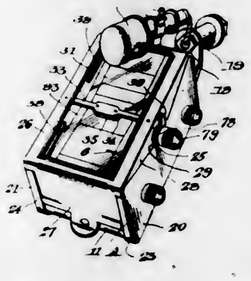
1,429,371. ROPE SOCKET. WILLIAM D. SHAFFER, Santa Paula, Calif. Filed Mar. 14, 1921. Serial No. 452,063. 3 Claims. (Cl. 117—58.)



1. A rope construction, comprising a steel cable having a flexible core extending a portion of its length, and a hard non-compressible core mounted therein and extending the remaining portion of its length, whereby to provide a cable having flexibility and non-compressibility.

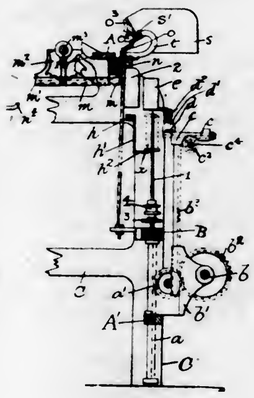
1,429,372. SAND AND GRAVEL LOADER. JESSE M. SHAMP, Wooster, Ohio. Filed Feb. 19, 1921. Serial No. 446,530. 4 Claims. (Cl. 214—110.)

1. In a device of the character described, the combination with an inclined platform having side rails, extensions of said side rails beyond said platform, a roller mounted at the summit of said platform, a roller bar suspended from said extension a short distance beyond, and parallel with said summit roller, a scraper having a bail, a cable attached to said bail, and passed over said rollers, a horizontal cross-bar above said rollers to limit tilt of the scraper, and means for propelling said scraper in and down said platform, substantially as set forth.



1,429,373. LIQUID-FUEL BURNER. JAMES SMITH, Glasgow, Scotland. Filed Mar. 17, 1922. Serial No. 544,539. 9 Claims. (Cl. 158—92.)

1. A liquid fuel burner comprising a casing having a perforated wall, means dividing the casing to form separate compartments to which said wall is common, means

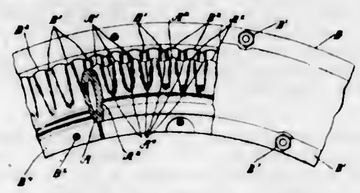


for distributing liquid fuel independently over the exterior surface of the perforated wall of each compartment, and means for supplying a suitable comminuting agent to each compartment independently.

1,429,374. ROAD RECORDER AND INDICATOR. THEODORE JOHN SMULSKI, Chicago, Ill., assignor to Orrville Ernest Joseph, Detroit, Mich. Filed Sept. 7, 1920. Serial No. 408,758. 14 Claims. (Cl. 40—42.)

1. A road indicator and recorder comprising a casing, discs rotatably mounted in the frame, and tape receiving rollers having recessed flanges engaging with the discs, the said rollers being designed to be rotated in opposite directions.

1,429,375. DOFFING APPARATUS FOR SPINNING, DOUBLING, TWISTING, AND LIKE MACHINES. ALFRED STELL, Steeton, and JOHN STELL, Keighley, England. Filed Sept. 15, 1920. Serial No. 410,501. 8 Claims. (Cl. 118—18.)

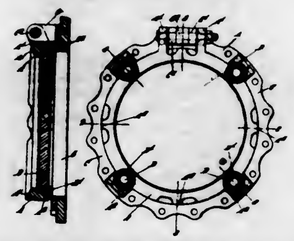


1. In a machine of the character described, the combination with a series of spindles, a series of bobbin receptacles supported at one side of the spindles, means for effecting relative vertical and lateral movement between the spindles and bobbin receptacles, and means for moving the receptacles longitudinally of the series of spindles.

1,429,376. FARM IMPLEMENT. GEORGE S. STEPHENSON, Los Angeles, Calif. Filed Oct. 27, 1921. Serial No. 510,816. 30 Claims. (Cl. 55—23.)

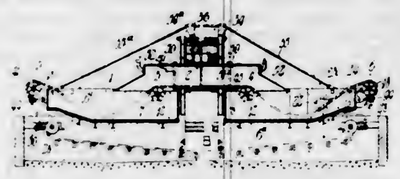
1. An implement of the kind described having a transverse row of corrugating mulchers, said mulchers being V-shaped in cross section with their upper edges flaring rearward at less than 45 degrees.

1,429,377. MOLD FOR TRANSVERSE AND ANNULAR PNEUMATIC TIRES. LAWRENCE A. SUBERS, Lakewood, Ohio. Filed Dec. 13, 1920. Serial No. 430,443. 5 Claims. (Cl. 18—38.)



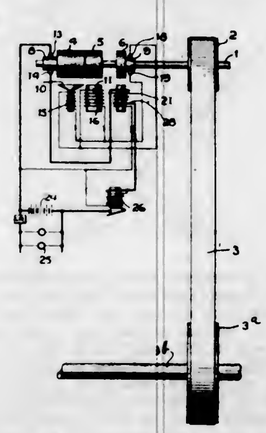
1. In a device for the securing and compression of a fabric tire, during vulcanization, the combination of a core and mold, each provided with continuous series of complementary transverse corrugations and an annular corrugation at each side.

1,429,378. PROCESS FOR THE EXTRACTION OF PLATINUM AND SIMILAR METALS FROM THEIR SANDS AND ORES. RUSSELL THAYER, Philadelphia, Pa. Filed Jan. 23, 1920. Serial No. 353,632. 1 Claim. (Cl. 75—17.)



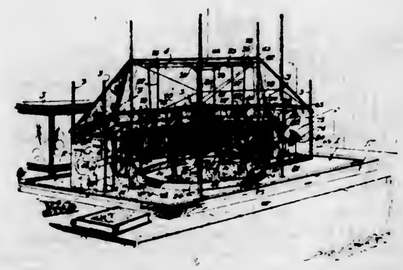
A process of extracting platinous metals from their ores, which consists in forcing a blast of superheated steam through a body of finely divided ore, whilst maintaining said body at a high temperature but below the melting point of said metals, collecting the resultant fume, and recovering the metals therefrom.

1,429,379. SHIP'S LIGHT. THOMAS UTLEY, Liverpool, England. Filed Oct. 12, 1920. Serial No. 416,477. 14 Claims. (Cl. 114—176.)



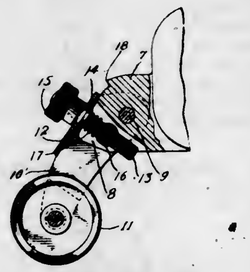
14. A ship's light comprising a main frame with an opening therein, clamping devices co-operating iwth said frame, and a movable member for closing said opening, which member is slotted and provided with bevelled surfaces adjacent to said slots, said clamping devices being adapted to co-operate with said bevelled surfaces to clamp the said member in the closing position.

1,429,380. CONTINUOUS ANNEALING FURNACE. MARTIN VAN MARLE, Dudley, England. Filed Mar. 15, 1922. Serial No. 543,918. 6 Claims. (Cl. 268—8.)



1. A continuous annealing furnace comprising a heating chamber, liquid seals for both ends of said heating chamber, an endless conveyor for the goods passing through said heating chamber and in slack loops through said water seals, and means for positively driving said conveyor at the same speed at both ends of the furnace, whereby the conveyor loops in the water seals are maintained.

1,429,381. ELECTRICAL APPARATUS. THOMAS W. VARLEY, New York, N. Y., assignor to Safety Car Heating & Lighting Company, a Corporation of New Jersey. Filed July 24, 1918. Serial No. 246,432. 9 Claims. (Cl. 171—224.)

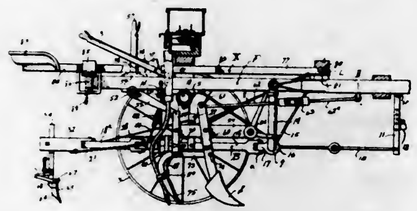


1. In apparatus of the class described, in combination, an armature, exciting means therefor comprising a pair of magnetic circuits differentially effective upon said armature, and operating at unequal degrees of saturation, an exciter adapted to excite both of said circuits at said unequal degrees of saturation, a work circuit connected with the armature, and a series coil on the exciter connected in series with at least part of the work circuit, to limit the current therein by raising the strengths of said fields.

1,429,382. TOY CIRCUS. HENRY ALBERT VAUGHAN, Selma, Ala., assignor of one-half to George F. Cothran, Selma, Ala. Filed Oct. 19, 1920. Serial No. 417,944. 8 Claims. (Cl. 46—40.)

1. A device of the class described including a stationary bar, a reciprocating bar disposed beneath the stationary bar, a movable figure suspended at each end of the movable bar, an additional figure supported intermediate the ends of said movable bar and disposed at right angles to the figures at the ends of the bar, means for imparting reciprocating movement to the movable bar, for moving the figures at the ends thereof in the same general direction and means dependent upon the reciprocating movement of the movable bar for imparting movement to the central figure.

1,429,383. MEANS FOR ADJUSTING VACUUM CLEANER NOZZLES. ALONZO A. WARNER, New Britain, Conn., assignor to Landers, Frary & Clark, New Britain, Conn., a Corporation of Connecticut. Filed Apr. 15, 1921. Serial No. 461,469. 3 Claims. (Cl. 15—16.)

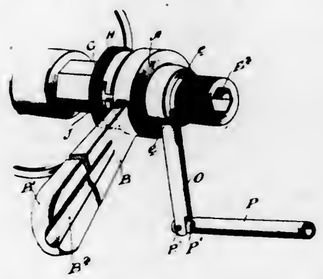


1. In a vacuum cleaner, the combination of a casing having supporting wheels adjacent to its forward end and a lug at its rear end, an arm pivoted to said lug, and means for varying the angular position of said arm with relation to said lug and for preventing pivotal movement of the arm in either direction when adjusted, comprising a nut pivotally mounted on one of said parts, and an adjusting screw extending loosely through an aperture in the other part and screwthreaded into the nut.

1,429,384. CULTIVATOR. GEORGE F. WARNER, Ennis, Tex. Filed Jan. 14, 1920. Serial No. 351,317. 7 Claims. (Cl. 97—35.)

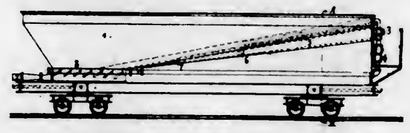
1. A machine of the class described comprising a portable frame, a rock arm carried thereby, a depending arm pivotally engaged therewith and depending therefrom, a vertically swinging arm carried by the frame and in pivotal engagement with the depending arm, a ground

working element operatively connected with said vertically swinging arm, a standard pivotally engaged with the vertically swinging arm, a rod pivotally engaged with an



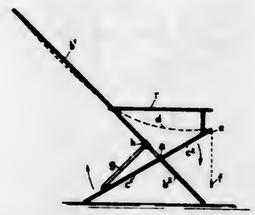
end portion of the standard, a second rod secured at one end portion to the frame, and a turn-buckle connecting the adjacent end portions of the rods and operating to adjust the standard about its pivot.

1,429,385. INNER TUBE FOR PNEUMATIC TIRES. NATHANIEL G. WARTH, Columbus, Ohio. Filed July 18, 1919. Serial No. 311,860. 1 Claim. (Cl. 152—13.)



An inner tube of soft rubber for a pneumatic tire having its main body portion substantially permanently circular in cross section and provided at its inner side with a circumferential outward protrusion from the main body portion said protrusion having its wall of substantially the same thickness as that of the body portion and curved in cross section on an arc of a smaller radius than that of the main body portion and adapted when inserted in the casing and rim to form at each side thereof circumferential inward protrusions subject to compression when the tube is inflated.

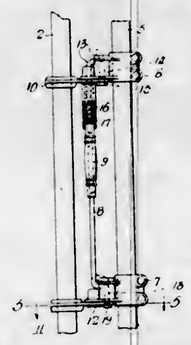
1,429,386. WRENCH. HARRY W. WATSON, Memphis, Tenn. Filed June 24, 1921. Serial No. 480,054. 6 Claims. (Cl. 81—53.)



1. A wrench comprising a stationary ratchet head and a lever handle rigidly connected thereto, a rotatable extension socket member within said head said socket provided with transverse bolt sockets, a spanner surrounding said extension socket, a hollow arm projecting laterally from said spanner ring, the bore of said arm adapted to be brought into register with the said bolt sockets, a slidable bolt in said hollow arm adapted to engage one of said bolt sockets and couple the extension socket member with the said spanner ring, and an extension arm having pivotal connection with the other end of the hollow arm and the bolt therein, whereby said bolt may be projected into and retracted from the bolt sockets by the swinging of the extension arm angularly on its pivotal connection with the hollow arm section.

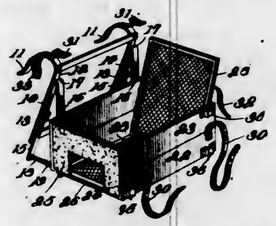
1,429,387. FLUSHING HOPPER FOR SHALLOW AND DEEP DREDGERS. WILHELM WEBER, Wiesbaden, Germany, assignor to the Firm Gewerkschaft Hausbach II, Wiesbaden, Germany. Filed Jan. 22, 1921. Serial No. 439,275. 1 Claim. (Cl. 214—17.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

An improved flushing hopper for material to be flushed in connection with deep dredgers comprising in combination with the hopper proper, flushing gutters which get narrower in the direction of movement of the material to be flushed, spraying nozzles in said gutters for supplying the flushing water, a flushing conduit in which said gutters terminate, means for connecting said flushing conduit with the fixed flushing main, a water pipe at the end of the hopper opposite the flushing conduit and means for connecting said water pipe with the water main.



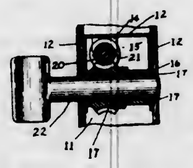
1,429,388. FOLDING SEAT CONVERTIBLE INTO BED. RICHARD WEDEMANN, Brunswick, Germany. Filed Aug. 13, 1921. Serial No. 492,059. 4 Claims. (Cl. 155—45.)

1. A piece of furniture of the class described, comprising a pair of frames having side bars pivotally connected with each other and disposed one within the other, the lengths of the sections of the inner frame taken from the pivotal axis to the ends thereof being shorter than the corresponding sections of the outer frame, and the frames being constructed respectively at their inner and outer sides so as to permit the inner frame to be rocked through the outer frame, an apron attached at one end to one of said frames and adapted to be attached at its opposite end to either one of the ends of the other frame, and bracing means movable on said outer frame and supported by the inner frame or by the ground.



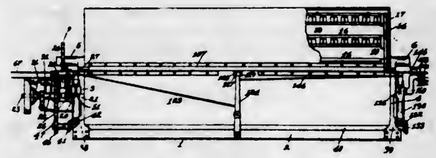
1,429,389. GATE LATCH. WILLIAM L. WEINTZ, Ottawa, Ill., assignor to J. E. Porter Corporation, Ottawa, Ill., a Corporation of Illinois. Filed July 25, 1921. Serial No. 487,261. 8 Claims. (Cl. 292—216.)

1. The combination with a gate post and a hinged gate, of a latch mechanism, comprising two pivoted latch members spaced apart and carried by said gate, said latch members having forked outer ends to straddle said post when the gate is closed and being turned by said post into and out of straddling engagement therewith on swinging said gate into and out of closed position, each latch member having a bolt hole on the side of its pivot opposite its forked outer end, and a single spring pressed latch bolt



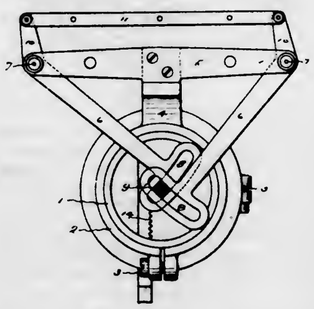
slidably carried by said gate in the plane thereof and lying between the gate and post when the gate is closed, said bolt extending between said latch members and having its ends movable into and out of locking engagement with the bolt holes therein, said bolt snapping into said bolt holes when the gate reaches closed position.

1,429,390. COMBINED SEAT AND BED. FRANK C. WILLIAMS, Salt Lake City, Utah. Filed Nov. 6, 1919. Serial No. 336,073. 10 Claims. (Cl. 5—59.)



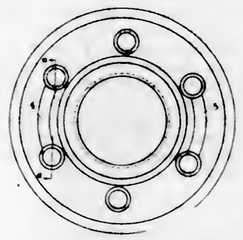
1. A combined seat and bed comprising a suspension frame provided with suspension hooks shaped to fit over the back of a vehicle seat or the like, spaced apart supporting devices having arms secured to said frame and also having depending supporting members in spaced relation with said arms, and a body pivoted to said depending supporting members.

1,429,391. STRING-INSTRUMENT KEY. APOSTLE ANAGNOST, New York, N. Y. Filed Dec. 11, 1920. Serial No. 429,960. 3 Claims. (Cl. 84—306.)



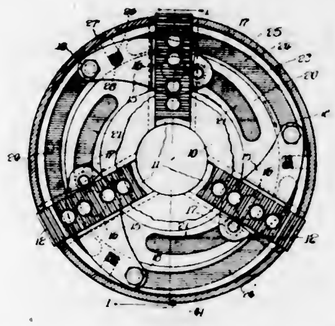
1. A stringed instrument key comprising in combination a frame adapted to be secured within the peg box of a stringed instrument, said frame being shaped so as to form a pair of parallel spaced arms having circular openings and a pair of oppositely disposed projections cut away at their free ends, a hollow worm wheel, provided with a tubular extension, rotatably mounted within the openings of said parallel arms, said tubular extension having a hole formed therein near the worm portion, a pin adapted to fit into said hole, a peg removably secured within the peg box, adapted to extend through the annular openings in the arms of said frame and the hollow of the worm wheel, the latter rotatably engaging the peg, and a worm provided with a milled head the threaded portion of which being mounted between the oppositely disposed projections of said frame, said worm being adapted to engage the teeth of the worm wheel.

1,429,392. METHOD FOR EXHAUSTING FOOD CONTAINERS. JOHN F ANDERSON, Oakland, Calif. Filed Jan. 18, 1922. Serial No. 530,209. 3 Claims. (Cl. 99—8.)



1. The method of sterilizing and exhausting the air from filled containers of fruit or other substances before said containers are capped and hermetically sealed, which consists in conveying a container or containers in a series of circular paths about an axis in a chamber, and intermittently advancing said container or containers through the chamber in the direction of said axis.

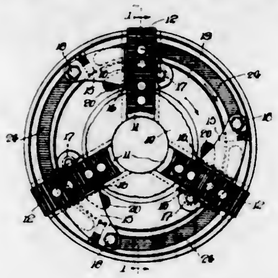
1,429,393. SENSITIVE SPINDLE BEARING. NILS H. ANDERSON, Trumbull, Conn. Filed June 23, 1921. Serial No. 479,784. 7 Claims. (Cl. 74—104.)



7. A spindle bearing comprising a supporting cylinder, a ring clamped upon each end of the cylinder, a bracket extending upward from each ring, a pair of parallel horizontally extending plates attached to each bracket, an arbor mounted at each end of each pair of plates, a link mounted on each arbor, said link having in its free end an arcuate slot the center of which is the axis of the link, arms projecting upward from the pivoted ends of the links, a connection between said arms so that the links will swing coincidentally, a spindle extending through the hub and the slots in the links, a pointer on one end of the spindle, and a pinion on the spindle in the cylinder.

1,429,394. QUICK-DETACHABLE VEHICLE WHEEL. CHARLES S. ASH, Hagerstown, Md. Filed Aug. 6, 1919. Serial No. 315,589. 1 Claim. (Cl. 301—9.)

In a quick detachable vehicle wheel hub, in combination, a pressed metal shell having an enlarged spoke flange at one end and having adjacent axially open bosses struck inward from the body of the shell, and means between certain of said bosses substantially flush with the ends thereof, for the purpose set forth.



1,429,395. CHUCK. WENDELL A. BARKER, deceased, late of Elkhart, Ind., by Rolla Barker Ferreby, administrator, Elkhart, Ind. Filed Oct. 6, 1921. Serial No. 505,792. 8 Claims. (Cl. 279—114.)

1. In a chuck, the combination of a rotatable chuck body, jaws movable radially therein, levers pivoted between their ends to said jaws respectively, cam means coaxial with said body and normally rotating at the same speed and in the same direction as the latter and operatively engaged with one arm of each of said levers, other cam means coaxial with said body and normally rotating at the same speed and in the same direction as the latter and operatively engaged with the other arm of each of said levers, and means for effecting relative rotation of both said cam means to each other and to said body.

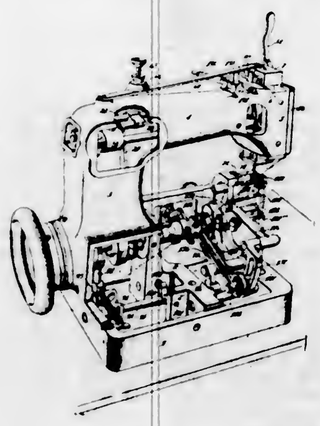
1,429,396. CHUCK. WENDELL A. BARKER, deceased, late of Elkhart, Ind., by Rolla Barker Ferreby, administrator, Elkhart, Ind. Filed Oct. 6, 1921. Serial No. 505,793. 8 Claims. (Cl. 279—114.)

1. In a chuck, the combination of a rotatable chuck body, jaws movable radially therein, levers pivoted between their ends to said jaws respectively, cam means coaxial with said body and normally rotating at the same speed and in the same direction as the latter and operatively engaged with one arm of each of said levers, other cam means coaxial with said body and normally rotating at the same speed and in the same direction as the latter and operatively engaged with the other arm of each of said levers, and means for effecting simultaneous

rotation of both said cam means relatively to said body and then a rotation of one of said cam means relatively to the other.

1,429,397. HAND WARMER. JOHN C. BARROW, Philadelphia, Pa. Filed Aug. 13, 1921. Serial No. 492,099. 5 Claims. (Cl. 219—19.)

1. A device of the class described including an arcuate body member having perforated ears at each end, a resistance coil arranged within said body member, means for retaining said coil in position within the body and a reflector embracing the coil causing the heat therefrom to be reflected toward the closed side of the body.



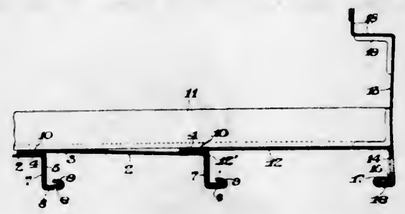
1,429,398. METHOD OF MACHINE-CUTTING SPUR AND HELICAL WHEELS. CURT BARTH, Hamburg, Germany. Filed July 19, 1920. Serial No. 397,521. 4 Claims. (Cl. 90—9.)

1. A process for machine cutting spur and helical wheels by means of a rack-like tool and in which the tool and the work-piece to be cut carry out a rolling-off process relatively to each other, consisting in a complete working stroke being composed of the following operations: firstly, a forward rolling-off movement of the tool and the work-piece relatively to each other for the distance of a multiple of a pitch, at least one pitch, the tool in the course of this movement machining the tooth spaces, secondly, a backward rolling-off action of the said tool and work-piece relatively to each other for any desired extent, which shall in any case, however, and at least be of the magnitude of a pitch, thirdly, a bringing of the two parts, namely tool and work-piece, out of engagement, and, while the one of same is at a stand-still, a forward feed-movement of the other for the distance of a multiple of a pitch, at least one pitch, fourthly, a re-engaging of the tool and work-piece, and a forward

rolling-off action of the same relatively to each other for the extent that the backward rolling-off action has exceeded the amount of a multiple of a pitch, for the purpose of eliminating the effect of the lost motion, substantially as described.

1,429,399. STRAW-BRAID SEWING MACHINE. RUDOLPH BECKER, Roselle Park, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Continuation of application Serial No. 200,273, filed Nov. 5, 1917. This application filed Feb. 1, 1919. Serial No. 274,520½. 65 Claims. (Cl. 112—23.)

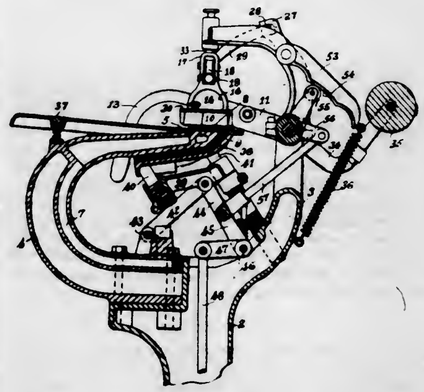
27. In a sewing machine, in combination, means for feeding the work, a presser-foot, stitch-forming mechanism including needles and loopers operatively supoprted on opposite sides of the work, mechanism for operating said needles and loopers, and means for varying the throw of the needles controlled solely by the thickness of the work, and said loopers having their operative positions determined by the thickness of the work.



38. In a sewing machine having hook and eyed needles, a pair of loopers cooperating with the needles in the formation of a chain-stitch and operatively supported for vibration in intersecting planes, and a compound actuating eccentric and connections for operating said loopers.

56. In a sewing machine, in combination, stitch-forming mechanism including a needle, a movable work-engaging element, mechanism for operating said needle, and means for varying the throw of the needle including a movable member, said member connected to and free to follow the movements of said work-engaging element at all times during the cycle of operations.

63. In a straw-braid sewing machine having stitch-forming mechanism including parallel eyed and hooked needles, a plurality of loopers cooperating with said needles and mounted for actuation in intersecting planes, and an eccentric for operating said loopers.

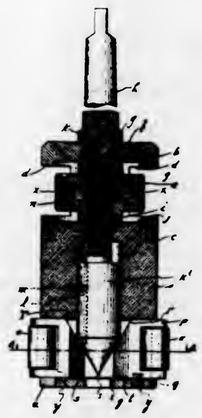


1,429,400. SHEET-METAL BUILDING. HENRY BLOEDOW and JACOB SCHAFFNER, Milwaukee, Wis., assignors to Standard Sheet Metal Works, Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 30, 1921. Serial No. 465,682. 1 Claim. (Cl. 189—34.)

Panels for siding or roofing of a sheet metal building each comprising a body portion, a part extending back on the body portion and outwardly in the form of an L-shaped flange to form a reinforced Z-shaped edge at one side of the body portion, and a part on the other side of the body portion extending outwardly in the form of an L-shaped flange with a backwardly extending hook-shaped edge, the outer flange of the Z-shaped edge of one panel

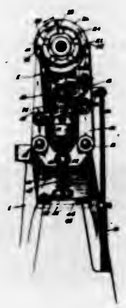
adapted to be hooked onto said hooked edge and then swung to bring the parts forming the joint between the panels into abutting relation.

1,429,401. METHOD OF PRESSING SHIRTS. CHARLES L. BRALEY, Cincinnati, Ohio, assignor to The American Laundry Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Oct. 9, 1916. Serial No. 124,585. 4 Claims. (Cl. 68—9.)



1. The method of pressing shirts, consisting in arranging and pressing the front portions of the yoke at the sides of the neck band, and holding the pressed portions stationary while arranging and pressing the back portion of the yoke.

1,429,402. ELECTRIC HEATER. ABTON ALBERT BUCK, Zurich, Switzerland. Filed Aug. 6, 1917. Serial No. 184,784. 1 Claim. (Cl. 219—46.)



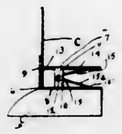
An electric heater formed of textile fabric and incorporated resistance wires threaded stepwise from front to back and back to front therein with each surface thread-portion arranged over an interval along connected rows of wires as stated.

1,429,403. BURNISHING TOOL. ALFONSE CALLEBERT, Jackson, Mich., assignor to Rex Machine Tool Company, Jackson, Mich., a Corporation of Michigan. Filed May 5, 1921. Serial No. 467,075. 5 Claims. (Cl. 29—90.)

1. In a tool for the purpose specified, the combination of a hollow body member, a reciprocating spreader guided longitudinally therein and provided with a threaded stem projecting out of one end of the body member, a projecting boss or bearing encircling said threaded stem and projecting from the end of the body member, a barrel having a hollow interior provided with a projecting stud or bearing, the said barrel provided with slots in its side and having means for detachably engaging the end of the body member, and a nut rotatably locked in place upon the said boss and the said stud and in engagement with the threads of the spreader stem, when the barrel is engaged with the body member.

1,429,404. CLUTCH AND STOP MECHANISM. FREDERIC M. CARD, Bridgeport, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Feb. 9, 1920. Serial No. 357,380. 8 Claims. (Cl. 192—116.)

1. In a clutch of the Horton type, an arm constituting a stop-member, an actuating element, an extensible link connecting said arm and actuating element and comprising component parts with an interposed spring tending to draw them together, resilient means constantly tending to throw said actuating element into a predetermined operative position in opposition to the spring of said link, and manual means for forcibly retracting said actuating element in opposition to said resilient means.

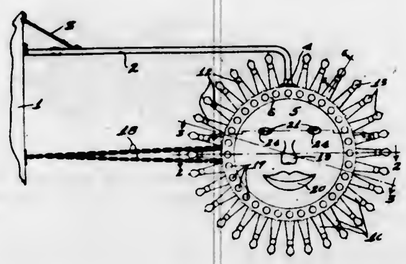


1,429,405. ICE-CREAM-BRICK CENTER PUNCH. FLOYD R. CARTER, OSCAR A. OTTEN, and JOHN C. WILLARD, Fairbury, Nebr. Filed Jan. 31, 1922. Serial No. 533,128. 3 Claims. (Cl. 107—1.)

1. A device for cutting compound ornamental cavities in a brick of ice cream from end to end of the brick, comprising a plurality of punches each having a cutting edge in the form of an element of the compound design, the cross section of each of the punches corresponding in size and form to the cutting edge thereof.

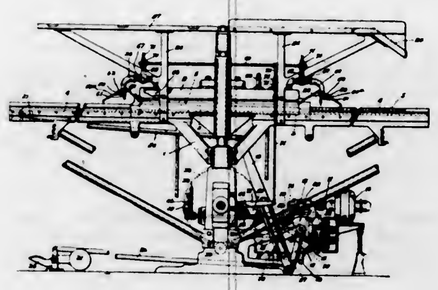
3. The method of producing compound designs in a brick of ice cream which consists in first freezing the brick, then warming the brick until it becomes semi-plastic in consistency, then case hardening the brick by subjecting it briefly to a low temperature, then punching an element of the compound design in the brick, then filling the cavity with edible material, then again case hardening the brick, then punching another element of the design in the brick and filling the cavity thus produced with an edible material which differs from the edible material in the first said cavity, repeating thus until the compound design is complete, and finally re-freezing the brick.

1,429,406. CARD HOLDER. LOUIS L. CHRISTENSEN, Springfield, Mass. Filed Mar. 10, 1922. Serial No. 542,814. 2 Claims. (Cl. 40—146.)



1. A card holder consisting of a stationary member having a base and a jaw disposed angularly thereof, said base being provided with laterally disposed lugs spaced from each other, a movable member having a corresponding lug engaging the lugs of the base, a jaw extending from said lugs to engage the jaw of the stationary member, said movable member being provided with a handle extending from the opposite side of said lugs, a pintle connecting the lugs to each other to permit of the pivotal movement of said movable member on said stationary member, and a spring connecting both members to hold the jaws in clamping relation.

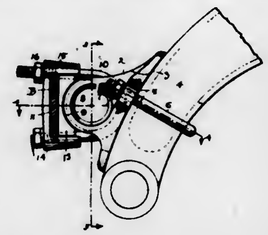
1,429,407. SEALING COMPOSITION. EARL L. CODDINGTON, Middletown, Ohio, assignor of one-half to George D. C. Coddington, West Middletown, Ohio. Filed Aug. 7, 1920. Serial No. 401,981. 4 Claims. (Cl. 106—8.)



1. A sealing composition made from soap, a mineral non-abrasive material, and water in sufficient quantity to form a paste of desired consistency.

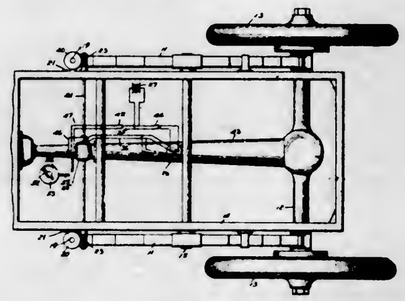
1,429,408. DISPLAY SIGN. MALCOLM COLE, Chicago, Ill. Filed Oct. 21, 1921. Serial No. 509,283. 4 Claims. (Cl. 40—130.)

1. A display sign comprising a pair of convex side plates, radial arm sections integrally formed on the periphery of each side plate, means for securing the side plates and the arm sections together to form a housing with radial arms, a ring of projecting light sockets mounted on each side plate, a light in each light socket, a light socket mounted in the outer end of each radial arm, and a light in each radial arm socket.



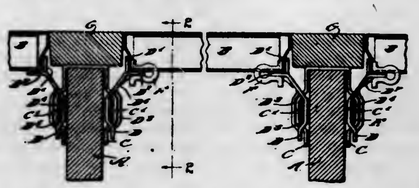
1,429,409. PRESSING MACHINE. FORREST J. COUCH, Rochester, N. Y., assignor to The American Laundry Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Aug. 18, 1916. Serial No. 115,658. 11 Claims. (Cl. 68—9.)

1. The combination of platen type pressing members having relative vertical pressing movement, a work holder movable horizontally into and out of pressing position between said members, means adjacent the edge of one of said members for directing moisture laden vapor upon the work on said holder, controlling means therefor adapted when operated to cause or cut off the supply of vapor to said means, and actuating means for said controlling means operating in timed relation with said movable work holder for causing the supply of said vapor as the holder moves to pressing position.



1,429,410. AUTOMOBILE BUMPER BRACKET. WILLIAM G. COX, Cleveland, Ohio, assignor to Cox Brass Manufacturing Company, Albany, N. Y., a Corporation of New York. Filed Oct. 15, 1921. Serial No. 507,838. 7 Claims. (Cl. 293—55.)

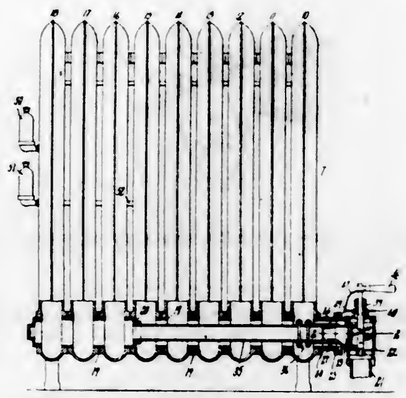
5. A bracket for automobile bumpers, comprising a saddle having a curved base portion and a round projecting part embodying an annular groove, a U-bolt having a round loop seated within said groove, a separate clamping shoe and plate and nuts engaged with said U-bolt adapted to clamp a bumper upon said saddle, and a U-bolt and nuts



adapted to clamp said saddle upon a curved extension of the automobile.

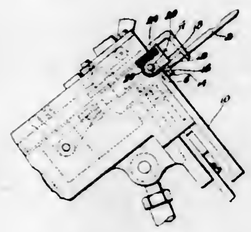
1,429,411. VEHICLE SUSPENSION. ARCHER DAVIDSON, Brookline, Mass. Filed Nov. 12, 1919. Serial No. 337,551. 21 Claims. (Cl. 267—36.)

1. A suspension as characterized comprising, a plurality of carrying springs operatively connecting the running gear and body of the vehicle; and means for maintaining constant the service relation of the body and running gear of said vehicle, said means embodying electrically actuated means having a prime mover for changing the service normal tension of said springs in correspondence with the carried load on said body.



1,429,412. SUPPORT FOR CONCRETE FORMS. HARRY O. DAVIDSON, Cleveland, Ohio, assignor to The Hydraulic Pressed Steel Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 21, 1919. Serial No. 339,581. 5 Claims. (Cl. 25—131.5.)

2. The combination with a stirrup, of a supporting arm, said stirrup and arm having overlapping portions and the locking member longitudinally inserted between said overlapping portions.



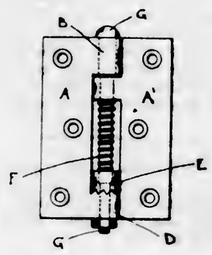
3. The combination with a pan, of a stirrup, and a support detachably connected to said stirrup, said support having vertical and horizontal fingers at its upper end and with which the pan contacts.

1,429,413. RADIATOR WITH ADJUSTABLE CONTROL. GORDON F. DODGE, Brookline, Mass. Filed Jan. 26, 1921. Serial No. 440,011. 5 Claims. (Cl. 257—134.)

3. A radiator having, in combination, a plurality of heating sections, said sections being divided into two series, the sections of each series respectively communicating with each other, a valve casing having two ports one connected to each of said series respectively, a valve rotatably mounted in said casing and adapted to open or close either of said ports independently or both simultaneously and a single supply and return pipe connected to the bottom only of said valve casing.

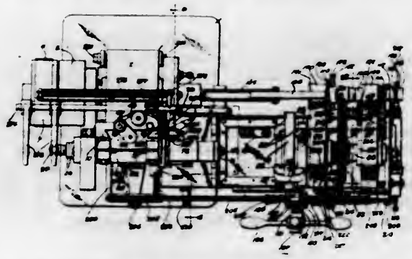
1,429,414. LACING MACHINE. HERBERT E. ENSLIN, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 19, 1920. Serial No. 397,403. 8 Claims. (Cl. 112—5.)

8. A lacing machine having, in combination, a series of spindle carriers, each provided with a socket, a support in which the carriers are laterally adjustable, looper spindles fitting within the sockets in the carriers, and each provided with a flange having an eccentric surface therein, lips on the carriers registering with the eccentric surfaces on the flanges, and a retainer bar mounted on the support for movement into and out of position in front of the flanges.



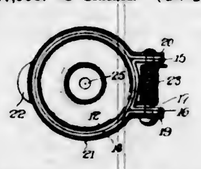
1,429,415. BURNER. GEORGE C. EVANS, Tulsa, Okla. Filed Jan. 18, 1921. Serial No. 438,075. 5 Claims. (Cl. 158—75.)

2. A burner including a body portion having a pair of main channels therein and an auxiliary channel for each main channel in registration therewith, valve means interposed between the main and auxiliary channels for permitting communication between the registering main and auxiliary channels in one position of the valve means, and



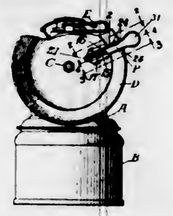
for communicating the main channels with non-registering auxiliary channels in another position of the valve means.

1,429,416. COMBINED HINGE AND DOOR HOLDER. THOMAS WILLIAM FADE, London, England. Filed Jan. 2, 1922. Serial No. 526,459. 2 Claims. (Cl. 16—144.)



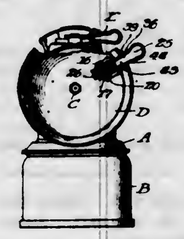
1. A hinge comprising two hinge members provided at one end with lugs and one of the members at the other end provided with a lug having a clutch face, a non-rotatable hinge bolt passing through the lugs and hingedly connecting said members, a non-rotatable clutch member movable lengthwise on the hinge bolt into and out of engagement with the clutch of last mentioned lug, and a spring coiled on the hinge bolt pressing on said clutch member.

1,429,417. MACHINE FOR MANUFACTURING PISTON RINGS. JOHN FLAMMANG, University City, Mo., assignor to Ottmar G. Stark, St. Louis, Mo. Filed Oct. 7, 1919. Serial No. 328,972. 90 Claims. (Cl. 29—1.)



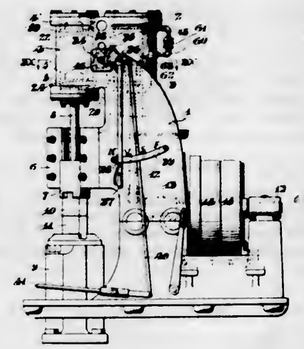
1. In a machine of the character described, the combination of a work supporting chuck, power mechanism for revolving the chuck, a cutter spindle, a cutter carried by said spindle, means for raising and lowering said spindle to move the cutter into and out of contact with the work, automatic means for moving the chuck longitudinally in respect of the cutter, and automatic means for moving the chuck laterally in respect of the cutter to change the angle between the chuck and cutter.

1,429,418. OIL CUP. WILLIAM J. FRISBIE, Chicago, Ill., assignor to Justrite Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed July 27, 1921. Serial No. 487,935. 3 Claims. (Cl. 184—91.)



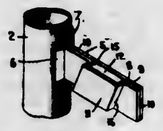
2. In an oil cup, the combination of a body part for containing oil, a strengthening and supporting belt in the form of a close annular endless band of sheet metal, said band intimately fitting entirely around said body part adjacent its edge, sections of said band being looped to form two double thickness laterally extending arms, and a cover for the cup hinged to said arm.

1,429,419. SPARK-PRODUCING MECHANISM. WILLIAM J. FRISBIE, Chicago, Ill., assignor to Justrite Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 8, 1922. Serial No. 535,022. 8 Claims. (Cl. 67—20.1.)



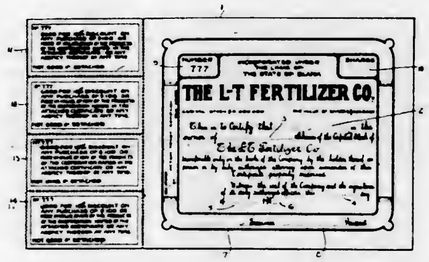
1. The combination of a gas outlet, a frame supported adjacent to said outlet and having a bore, a friction wheel pivoted on said frame in a plane including said gas outlet, pyrophoric material in said bore for operating with said wheel, a lever pivoted on said frame and adapted to be swung toward and away from said outlet, said lever having a channel for receiving gas from said outlet and conducting it towards said wheel, means resisting swing of said lever towards said outlet and tending to return it when released, and means connecting said wheel with said lever whereby said wheel is rotated during return of the lever to cooperate with the pyrophoric material to produce sparks for igniting the gas conducted toward the wheel by said channel.

1,429,420. SPARK-PRODUCING MECHANISM. WILLIAM J. FRISBIE, Chicago, Ill., assignor to Justrite Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 8, 1922. Serial No. 535,023. 12 Claims. (Cl. 67—20.1.)



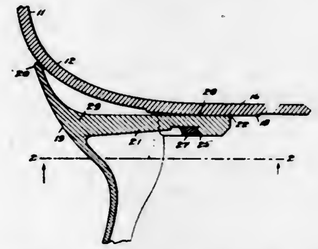
1. In spark producing mechanism of the class described, the combination of a frame, a pivot pin on said frame, a coiled spring surrounding said pin, a friction wheel surrounding said spring and concentric therewith, a lever concentric with said spring adjacent to said wheel, said spring being connected at one end to said lever and its other end to said frame, ratchet teeth on one side of said wheel, a ratchet pawl on said lever for cooperating with said teeth, pyrophoric material and means for holding it against said wheel, said pawl passing along said wheel without rotating it when the lever is swung in one direction but causing rotation of said wheel when the lever is returned in the opposite direction by said spring, rotation of said wheel relative to said pyrophoric material causing the production of gas igniting sparks.

1,429,421. FLUID-POWER HAMMER. EDWARD J. FRITSCH and RALPH W. NAZEL, Philadelphia, Pa.; said Fritsch assignor to said Nazel. Filed Oct. 13, 1919. Serial No. 330,437. 14 Claims. (Cl. 78—42.)



1. In a fluid power hammer provided with an upright power cylinder having a piston therein and an upright work cylinder having a piston therein, mechanism comprising a rotary cylindrical valve and passages connecting the tops of the cylinders and the atmosphere and the bottoms of the cylinders simultaneously through the valve to hold the work piston in suspending action.

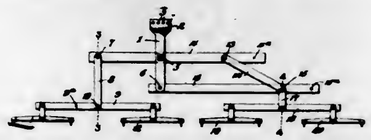
1,429,422. BEDSTEAD. FRANCIS G. GALE, Waterville, Quebec, Canada. Filed June 26, 1916, Serial No. 105,782. Renewed Feb. 18, 1922. Serial No. 537,641. 4 Claims. (Cl. 5—55.)



1. In a bedstead, the combination with a post, of a corner fastening member rigid therewith and extending laterally therefrom, said fastening member having a socket provided wtih opposite walls which incline downwardly and inwardly towards the post, and also having a vertical face in line with said socket longitudinally of the fastening, and an angle iron side rail resting on said corner fastening member and having an anchoring portion which fits said socket and inclines downwardly towards the post, the vertical flange of said side rail resting against the vertical face of the corner fastening member and the end of the horisontal leg of said side rail being shaped to fit against the post when the anchoring member is firmly seated in said socket.

1,429,423. CERTIFICATE. FRANCIS E. HAMILTON, New York, N. Y. Filed June 12, 1920. Serial No. 388,402. 1 Claim. (Cl. 283—1.)

A certificate comprising a body portion and a coupon, said body portion and coupon bearing indications to constitute together a certificate of ownership of interest in an enterprise, said interest consisting of ownership of a share in said enterprise and a right to a portion of the price of goods sold by said enterprise to the holder of said certificate, said body portion alone constituting a certificate of ownership of a share in said enterprise only.



1,429,424. DETACHABLE BATHTUB LEG. RALPH H. HEBBELING, New York, N. Y., assignor to Richmond Radiator Company, a Corporation of Delaware. Filed Nov. 22, 1921. Serial No. 516,921. 3 Claims. (Cl. 4—27.)

1. In a device of the class described, the combination of a bath tub having a thickened bottom portion and a side curving upwardly therefrom, said thickened portion having a pair of spaced apart lugs depending therefrom, a supporting leg including a curved face provided with a tenon projecting horizontally there from and adapted to fit between the lugs with a dove-tail tenon connection therebetween, the lugs and the tenon being each cut away transversely of the length of the tenon to provide undercut shoulders coacting to form a dove-tail key-way with its wider side adjacent said bath tub and a tapering key fitted in said key-way and acting to force the leg and tenon into engagement with the thickened portion of the tub and to force the upper edge of the curved face horizontally against the curved face of the bath tub as the key is driven into position.

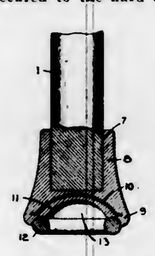
1,429,425. DRAFT EQUALIZER. PERRY OSCAR HELLER, Prophetstown, Ill. Filed May 26, 1921. Serial No. 472,786. 1 Claim. (Cl. 278—12.)

In a draft equalizer, the combination of a longitudinally-disposed draw bar, a transverse evener beam pivoted midway of the length of the draw bar and at one side of the longitudinal center of said beam, a spreader bar arranged in advance of the evener beam and pivoted at its inner end to the forward end of the draw bar, a pair of links pivotally connected to the short end of the evener beam, a doubletree pivotally connected to the forward end of the said links and carrying singletrees, another pair of links pivotally connected to the long end of the evener beam and the outer end of the spreader bar, said evener beam

and spreader bar having additional apertures at their outer ends whereby the position of the last-mentioned links may be shifted, said links assuming an inclined position in both of their adjusted positions, and another double tree flexibly connected to the outer end of the spreader bar and carrying singletrees.

1,429,426. MEDICAL APPLIANCE. OTTO HENKEL, Jena, Germany. Filed Apr. 24, 1913. Serial No. 763,222. 2 Claims. (Cl. 128—4.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

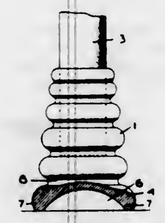
1. In a tube for the reception of a hysteroscope a lateral observation window, the zone of the tube, in which the said window is located, having a greater circumference than the tube proper.



1,429,427. PARCHMENT PAPER OR VULCANIZED FIBER AND PROCESS FOR MAKING SAME. BERNARD HERSTEIN, Brooklyn, N. Y. Refiled for abandoned application Serial No. 183,728, filed July 31, 1917. This application filed Apr. 6, 1920. Serial No. 371,710. 6 Claims. (Cl. 154—34.)

5. A new article of manufacture being an improved parchment or vulcanized paper consisting of layers of papers the cellulose particles of which are nitrated so as to contain not in excess of 4½% of nitrogen and cemented together by an alkali induced gelatinization of said weakly nitrated cellulose of the paper layers.

1,429,428. CRUTCH TIP. GEORGE HIPWOOD, New York, N. Y. Filed Feb. 21, 1921. Serial No. 446,660. 3 Claims. (Cl. 135—54.)



3. A tip element for a crutch comprising a body portion of hard rubber having a shape to fit over the end

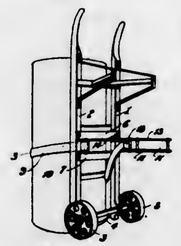
of a crutch body, said body portion having a concave under face and provided at the periphery of the concavity with an annular bead of soft resilient rubber which is permanently secured to the hard body and which pro-

jects below the latter for a distance, whereby the cavity functions as a suction chamber, said hard rubber body having embedded therein above the cavity a concavo-convex plate.

1,429,429. CRUTCH TIP. GEORGE HIPWOOD, New York, N. Y. Filed Sept. 17, 1921. Serial No. 501,246. 3 Claims. (Cl. 135—53.)

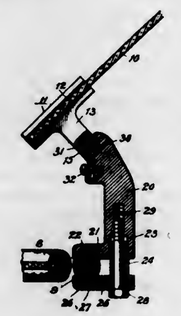
3. A crutch tip formed of yielding material as a one piece integral structure and having a recess in its upper end to receive the end of the crutch and a suction cavity in its lower end, said tip being formed with a plurality of annular exterior grooves, one at least of which is located in the portion of the tip between the suction cavity and the recess, said annular groove permitting a free lateral yielding movement of the recessed end of the tip with reference to the lower end so that a tipping of the crutch can take place without destroying the suction action, said tip having at its upper end means to interlock with the end of the crutch to prevent the tip from being pulled off from the crutch by the suction action.

1,429,430. EMULSION. HARRY N. HOLMES and DONALD H. CAMERON Oberlin, Ohio. Filed Apr. 27, 1921. Serial No. 465,020. 5 Claims. (Cl. 134—1.)



4. An emulsion of the "water-in-oil" type comprising a mixture of a liquid of the "water" type and a solution containing gum dammar.

1,429,431. RAIL JOINT. JOSEPH HRUSKA, Milwaukee, Wis. Filed May 7, 1921. Serial No. 467,634. 2 Claims. (Cl. 238—218.)

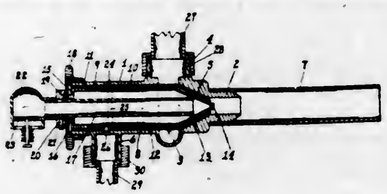


1. A rail joint comprising rail sections provided with relatively thickened web portions, said rail sections having beveled ends respectively overlapping, said bevel ends terminating in lateral projections extending beyond the outer face of the web portions, clamping plates on the opposite sides of the overlapping ends and provided with vertically disposed grooves to receive the said mentioned lateral projections formed on the overlapping rail sections, and means connecting the plates through the overlapping ends.

1,429,432. HAND TRUCK. WILLIAM F. IRRGANG, Springfield, Mass. Filed Sept. 17, 1921. Serial No. 501,365. 5 Claims. (Cl. 214—66.)

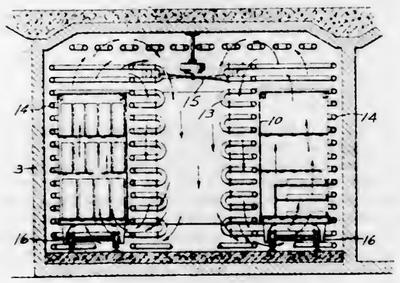
1. In a truck of the kind described, the combination with the upright side pieces of the same, of bars secured to said pieces and extending transversely of the uprights, a flexible band, having one end secured to said bars, lever means pivotally secured to said bars, a pin on the lever, a dog on the lever and spaced from the pin to receive the free or other end of the band therebetween, whereby when the lever is operated the band will be tightened, as described.

1,429,433. WINDSHIELD WING FOR AUTOMOBILES. WILLIAM R. JOHNSTON, Chicago, Ill., assignor to Wm. R. Johnston Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Feb. 28, 1921. Serial No. 448,726. 3 Claims. (Cl. 296—84.)



1. A wind shield wing for automobiles, comprising a plate and means for supporting the plate comprising an arm, a gripping jaw on said arm, a clamping member provided with a coacting jaw to grip a post, a sleeve and socket connection between said arm and said member, and a screw extending through the connection for securing said members together.

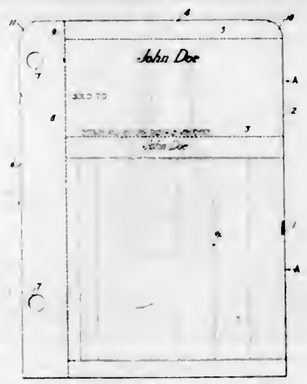
1,429,434. OIL BURNER. ADOLPH W. JONES, Oakland, Calif. Filed Jan. 24, 1920. Serial No. 353,779. 6 Claims. (Cl. 158—74.)



1. A burner including a casing formed with an outlet mixing chamber, a steam inlet and an oil inlet, a valve

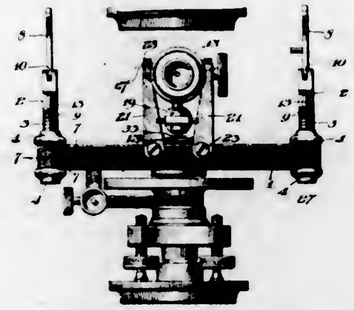
sleeve controlling the admission of oil and steam into said mixing chamber, and an air intake valve for admitting air

into said mixing chamber under the influence of the action of the steam therein.



1,429,435. REVOLVING STORAGE DEVICE. ALEXANDER HOUSTON JONES, Glendale, Calif. Filed Apr. 16, 1921. Serial No. 461,953. 2 Claims. (Cl. 45—103.)

2. A structure of the character described comprising in combination a closed heat insulated chamber having a loading opening in one wall thereof and a discharge opening spaced therefrom, a revoluble container spaced from the top and bottom of said chamber to permit the circulation of atmosphere, said container being provided with vertical imperforate walls dividing it into compartments arranged to permit atmosphere to circulate vertically therethrough and for registration with said openings so that when compartments are in registration therewith they will be substantially closed off from the remainder of the chamber, said container having a stack at its center whereby atmosphere may be circulated through said compartments, refrigerating means in said chamber and means to circulate the atmosphere within said chamber.

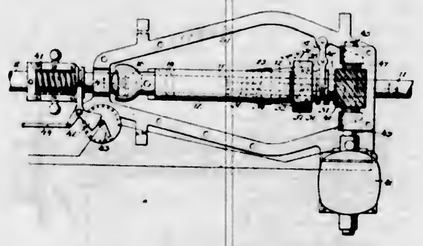


1,429,436. INVOICE SHEET. WILLIAM ASHLEY KELLY, Jersey City, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 12, 1920. Serial No. 423,556. 2 Claims. (Cl. 281—43.)

1. For use in a typewriting machine, an entry sheet having rounded right and left upper corners for facilitating the insertion of the sheet in the typewriting machine and a square lower right corner, and comprising a body-part provided with a heading space and vertical columns for having successive entries typed therein, a lateral filing marginal part at one side of the body-part detachably connected therewith along a weakened line providing for easy detachment of the filing marginal part from the body-part when the entries on the body-part are complete, and a waste marginal part on the body-part detachably connected therewith along a weakened line providing for easy detachment of said waste marginal part from the body-part when entries on the body-part are complete, one of said upper rounded corners of the entry-sheet being formed upon the filing marginal part, and the other upper rounded corner of the entry-sheet being formed upon the waste marginal part, whereby one of said rounded corners will be removed from the entry-sheet by the detachment of each of the marginal parts, so that the removal of both of the

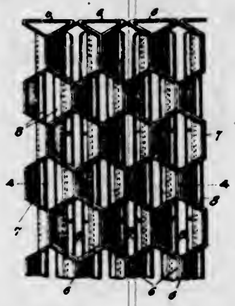
marginal parts will leave the entry-sheet in symmetrical shape with square corners.

1,429,437. CONVERTIBLE BUILDER'S LEVEL AND TRANSIT. WILLIAM F. KIEFER, Philadelphia, and JOHN HENRY WARREN, Jenkintown, Pa. Filed Jan. 14, 1922. Serial No. 529,126. 11 Claims. (Cl. 33—73.)



1. In a device of the character described, the combination with the telescope, the Y's to carry it and the Y support, of telescope supporting members permanently carried by said Y support and having means to support said telescope in one position and supplemental means pivotally mounted on said Y's support and foldable thereon and adapted when raised to form the bearings of the trunnions of the telescope at a right angle to said position, and means to lock said members in operative position.

1,429,438. ELECTROPLATING APPARATUS. FRED R. KLAUS and HARRY WM. KRANZ, Cleveland, Ohio, assignors to The Hydraulic Pressed Steel Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 6, 1919. Serial No. 336,075. 17 Claims. (Cl. 204—5.)



1. In an electroplating apparatus, a cleaner, pickling, washing and electroplating tanks and a continuous conveyor for carrying articles through the cleaner and into and out of the said tanks.

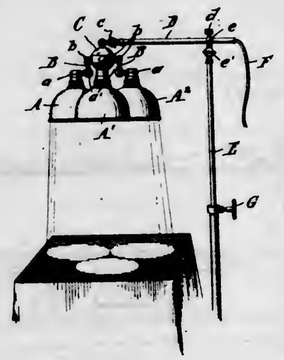
1,429,439. VARIABLE-SPEED GEARING. GUST E. KRANTZ and CARL A. KRANTZ, Chicago, Ill. Filed Nov. 12, 1921. Serial No. 514,532. 29 Claims. (Cl. 74—34.)

1. A variable speed gear embodying a driving shaft, a driven shaft, an intermediate shaft connected with one of the first two recited shafts, gearing connecting the intermediate shaft with the other of the said shafts, a floating member supporting the said intermediate shaft and the gear that is connected with the intermediate shaft, means interposed between the said floating member and the driven shaft for operatively connecting the floating member and the driven shaft and for disconnecting them, and means for retarding the rotation of the floating member to control the speed of rotation of the driven shaft.

1,429,440. RADIATOR CORE. JOSEPH A. KUENZ, Jackson, Mich. Filed Apr. 1, 1920. Serial No. 370,406. 5 Claims. (Cl. 257—130.)

1. A radiator core comprising a plurality of units with each unit composed of an elongated strip of sheet-metal with corrugated or crimped edges and folded intermediately of its length upon itself, the edges nesting in each other and secured together against leakage between them, the folded strip having laterally extended meeting faces with diagonal grooves crosswise of the inner faces between the edges and having ribs in relief on the outer faces, whereby the unit has a continuous zig-zag duct from top to bottom, the core being made up of a plurality of such units and the hollow ribs formed by the grooves in relief being located between the units to restrict the spaces formed thereby, and the united crimped nested edges providing mouths for admitting air between the units in close contact with the walls of the ducts formed by the communicating hollow ribs.

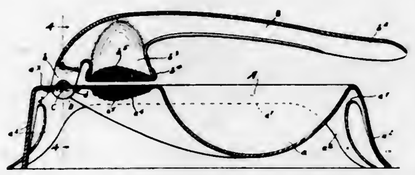
1,429,441. METHOD OF MAKING ELECTRIC CONDUCTORS. JACOB LIND, Kansas City, Mo. Filed Apr. 25, 1921. Serial No. 464,375. 2 Claims. (Cl. 173—13.)



2. The method of insulating aluminum for carrying electric current which consists in heating the aluminum and then quenching the aluminum in a bath consisting of water, and soda.

1,429,442. DISPLAY BOX. FRANK XAVER LIST, New York, N. Y., assignor to National Card Mounting Company, New York, N. Y., a Corporation of New York. Filed June 27, 1919. Serial No. 307,137. 2 Claims. (Cl. 216—44.)

1. A display box comprising a blank stamped and cut to provide at one side of its median line a top with end walls at its opposite ends and side flaps carried upon the extremities of the end walls, said end walls and flaps being adapted to be folded into position upon the top to form the body portion of the box and said end walls further having upon their free longitudinal edges bottom pieces adapted to be folded over toward each other, said top also having a lid portion foldable upon one longitudinal edge remote from the median line of the blank and adapted to be turned over upon the body of the box in a direction opposite to the folding of said end walls, said blank having at the other side of its median line a bottom wall conforming substantially to the dimensions of said top and a side piece hinged between the inner longitudinal edge of the top and the adjacent longitudinal edge of the bottom and upon which said bottom is adapted to be folded to overlie said bottom pieces and with the side pieces lying against the adjacent side flaps of the box body, said bottom wall also having a second side piece hinged along the outer longitudinal edge of the bottom wall and adapted to be folded against the opposite side flaps for reinforcing the same.

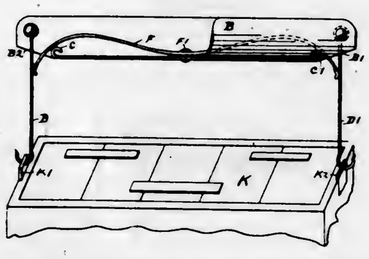


1,429,443. THERAPEUTIC DEVICE. HARRISON D. MCFADDIN, East Orange, N. J. Filed Feb. 15, 1919. Serial No. 277,207. 6 Claims. (Cl. 174—177.)

1. In a therapeutic device the combination of an adjustable standard, a supporting arm pivotally and slidably

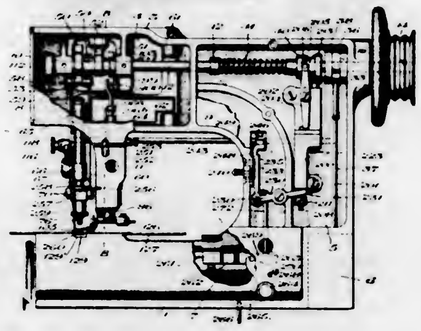
supported on said standard and projecting laterally into space, a lamp carrying member pivotally associated with one free end of the supporting arm, a plurality of links pivoted to said member, a therapeutic lamp pivoted to each link, and means for locking each pivotal or slidable connection of the device, whereby the parts may be individually manipulated to project the light from the lamps in any desired direction and over widely varying areas of projected light, in accordance with the relative positions of the lamps and their supporting elements.

1,429,444. NUT BOWL AND CRACKER. BONNIE L. MALLORY, Cleveland, Ohio. Filed Dec. 22, 1919. Serial No. 346,565. 5 Claims. (Cl. 146—3.)



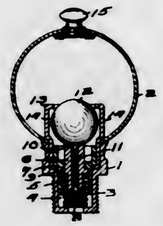
1. As a new article of manufacture, a combined nut bowl and cracker comprising a base having a depressed portion constituting a nut and shell receptacle and a flat portion adjacent to the side wall of the receptacle and surrounding a nut receiving depression, a lever, means pivotally connecting the lever to the base adjacent the nut receiving depression, and a cupped plate applied to the lever in opposed relation to the nut receiving depression.

1,429,445. LETTERING PROCESS. EDWARD L. MERRITT, Oakland, Calif. Filed Mar. 4, 1919. Serial No. 280,512. 2 Claims. (Cl. 41—31.)



2. The process which consists in sticking a sheet of foil on a surface, such as a plate of glass, sketching a design on the foil, cutting the foil along the outline of the design and inside the outline, removing the foil outside and inside the skeleton design, varnishing over the design, and filling in the varnished skeleton letter with a body material.

1,429,446. HANDLE. FRED A. MORGAN, Selma, Calif. Filed Mar. 21, 1921. Serial No. 454,286. 4 Claims. (Cl. 220—94.)

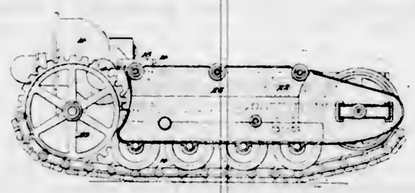


1. An auxiliary handle of the character described consisting of the combination of a rigid member having a hook pivoted at each end of said member, said hooks being adapted to hang approximately parallel, and spring means for normally holding the hooks apart.

1,429,447. STOP MOTION FOR PERFORATING MACHINES. DONALD NOBLE, Bridgeport, Conn., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Feb. 12, 1919. Serial No. 276,610. 23 Claims. (Cl. 164—87.)

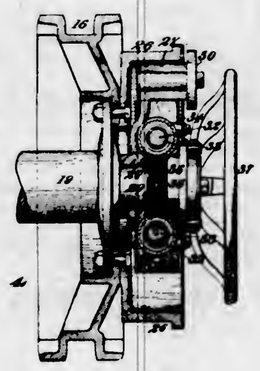
1. In a perforating machine a drive mechanism including a clutch device, means movable in opposite directions for controlling the operation thereof, and connections from said means to said clutch device whereby when said means is held in its central position the clutch drives continuously and when said means is moved in either direction from its central position the machine is stopped after each revolution.

1,429,448. OIL CUP. HARRY G. NOBLE, Toledo, Ohio. Filed Jan. 10, 1921. Serial No. 436,060. 4 Claims. (Cl. 184—69.)



1. In an oil cup, a shell, an oil container secured to the shell, a tubular member located in the shell and communicating with the container, a spring for raising the tubular member, means for limiting the movement of the tubular member by the action of the spring, a ball seated on the end of the tubular member for closing the opening of the tubular member except as the ball may be tilted from the end of the passageway through the tubular member, a cage surrounding the tubular member for limiting the movements of the ball.

1,429,449. MAIN FRAME AND SUSPENSION FOR TRACTORS. EMIL F. NORELIUS, Peoria, Ill., assignor to The Holt Manufacturing Company, Stockton, Calif., a Corporation of California. Filed Aug. 27, 1919. Serial No. 320,237. 5 Claims. (Cl. 180—9.1.)

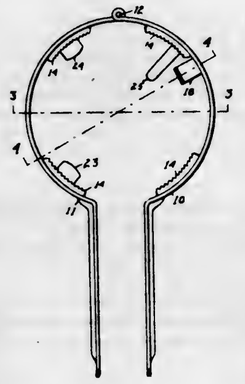


1. In a vehicle, a main frame having a body portion formed of pressed steel with a longitudinally extending

concavity continuous from end to end, said body portion serving to enclose the driving and operating parts of the tractor at the bottom thereof, a transversely extending

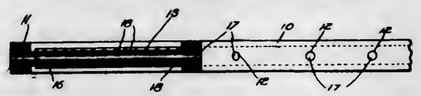
reinforcing member at each end of said body portion detachably connected thereto and a cross sill arranged intermediate the ends of the body portion and detachably connected thereto at the bottom thereof.

1,429,450. GUN-MOUNT BRAKE. EMIL F. NORELIUS, Peoria, Ill., assignor to The Holt Manufacturing Company, Stockton, Calif., a Corporation of California. Filed Aug. 27, 1919. Serial No. 320,238. 5 Claims. (Cl. 180—9.1.)



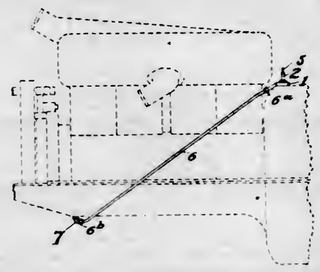
1. In a tractor, a main frame, a chain track truck mechanism at each side of the main frame, said truck mechanism including an endless chain track, a toothed sprocket wheel for driving the same and a load carrying truck within the track, a brake mechanism arranged on said sprocket wheel to restrain the latter against turning movement by thrusts imparted to it by the main frame, said brake mechanism comprising a drum fixed upon the sprocket wheel, internally expanding shoes co-operating with the drum and means connected with the load-carrying truck to hold the brake shoes against turning movement.

1,429,451. FIRE-RESISTANT COMPOSITION. GEORGE S. PEASE, West Carrollton, Ohio, assignor to John W. Latimer, Lakewood, Ohio. Filed Oct. 6, 1919. Serial No. 328,769. 7 Claims. (Cl. 106—29.)



1. A fire-resistant composition comprising a cellular mass or body of oxy-chloride cement, the cells in said mass having therein and only partially filling the same particles of non-heat conducting material.

1,429,452. COMBINATION FRUIT-JAR OPENER AND SEALER. EDGAR V. PHILLIPS, Jamestown, N. Y. Filed Nov. 23, 1921. Serial No. 517,392. 5 Claims. (Cl. 81—3.1.)

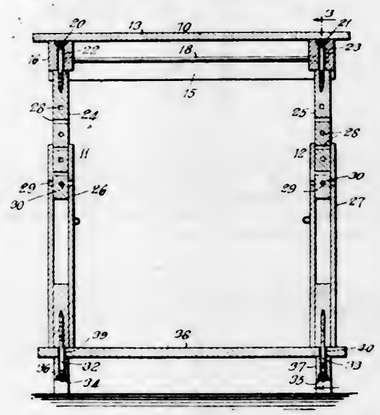


1. A tool of the class described, comprising two semi-circular shaped jaws hinged to each other, handles on said jaws, and a plurality of different sized fixed toothed curves on different levels on said jaws to clampingly fit jar caps of relatively large and small sizes.

1,429,453. INDUCTANCE DEVICE. HAROLD J. POWER, Somerville, Mass., assignor to American Radio & Research Corporation, Medford, Mass., a Corporation of Delaware. Filed Mar. 11, 1918. Serial No. 221,641. 17 Claims. (Cl. 175—360.)

1. In an inductance device, a spiral conducting ribbon, and an insulating and supporting member situated wholly between the edges of the conductor ribbon.

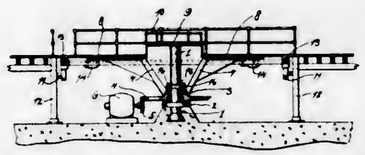
1,429,454. COMBINATION MAGNETO CONTACT AND OIL CONDUCTOR FOR ENGINE CRANK CASES. ROBERT W. RANSDELL, San Diego, Calif. Filed Feb. 1, 1921. Serial No. 441,700. 5 Claims. (Cl. 123—196.)



1. An apparatus of the class described including, a hollow contact support, a contact member adjustably mounted therein, a tube connected to said support and a

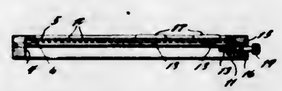
hollow connection member, secured to opposite end, threaded at one end, adapted to be secured in a threaded hole of the one conventional cap bolts of the crank casing.

1,429,455. FILLING COMPOSITION. REECE RICE, Indianapolis, Ind., assignor, by mesne assignments, to Rice Improved Valve & Manufacturing Company, Indianapolis, Ind., a Corporation of Indiana. Filed Aug. 5, 1920. Serial No. 401,424. 4 Claims. (Cl. 106—8.)



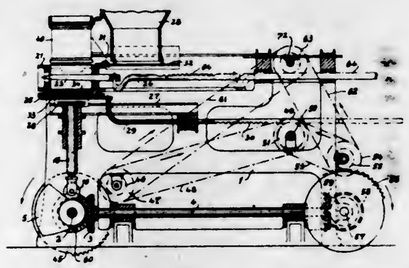
1. A packing for movable elements, comprising pulverized asbestos, thirty parts; wood fibre, twenty parts; ground hemp, twenty-five parts; and a starchy cereal, twenty-five parts.

1,429,456. KNOCKDOWN WARDROBE. HENRY E. RICHMOND, Bennington, Vt. Filed Dec. 31, 1921. Serial No. 526,100. 3 Claims. (Cl. 45—118.)



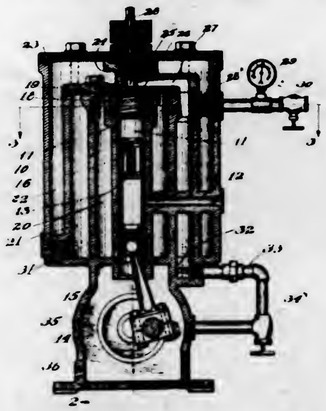
3. A knockdown wardrobe which comprises, a top having a horizontal supporting frame, a garment supporting rod mounted in the end members of said frame lengthwise of said top, a cover supporting means on said frame, sockets on said frame, upper and lower leg members adapted to be adjusted to form legs of different lengths, stud screws on said upper leg members adapted to fit into said sockets and mount said legs on said top, means for holding said leg members in their adjusted positions, feet adapted to be mounted on the lower ends of said legs and a bridge adapted to be positioned between said feet and said legs, said feet and leg members being adapted to be enclosed in said frame when dis-assembled and to be retained in said frame by said bridge member.

1,429,457. AMUSEMENT-PARK DEVICE. FRANK SALLMANN, Lyndhurst, N. J. Filed Jan. 17, 1921. Serial No. 437,720. 1 Claim. (Cl. 46—27.)



A device of the class described comprising an upright column, a sleeve rotatably mounted thereon, a groove in said column, balls mounted in said groove, said sleeve being loosely mounted about said column to allow a clearance, a flange on the extremity of said sleeve adjacent said balls, a platform mounted upon said sleeve, and means for rotating said sleeve.

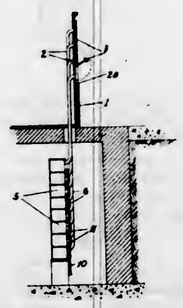
1,429,458. DISPLAY DEVICE. DANIEL B. SAMUELS, New York, N. Y., assignor of one-fourth to Francis B. Bradley, Short Hills, N. J., and three-fourths to Interchangeable Lock Sign Co., Inc., a Corporation of New York. Filed Dec. 24, 1919, Serial No. 347,127. Renewed Feb. 21, 1922. Serial No. 538,369. 8 Claims. (Cl. 40—143.)



1. A display device comprising two superposed plates mounted for relative movement and each having a plurality of apertures, display characters and securing means carried by the characters adapted to enter aligned apertures in the respective plates and be locked therein by relative movement of said plates.

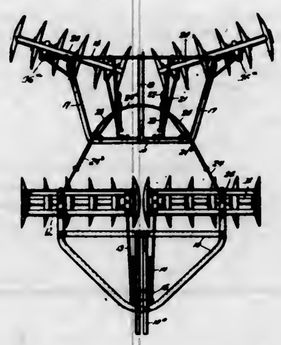
1,429,459. PRESS FOR THE MANUFACTURE OF STONES. CARL HEINRICH SCHOL, Allendorf, Dillkreis, Germany. Filed June 29, 1920. Serial No. 392,886. 11 Claims. (Cl. 25—45.)

1. In presses for the manufacture of stones, particularly from blast furnace slag, the combination of fixed abutments with moulds movable against the abutments, and means for raising the bottom in the mold substantially as and for the purpose described.



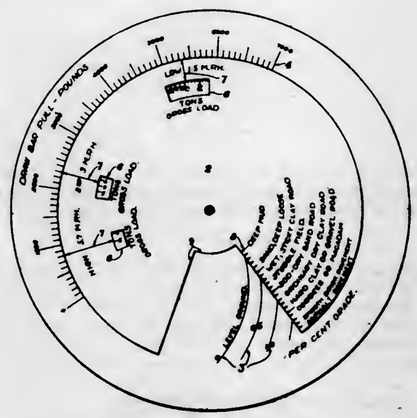
1,429,460. COMBINED COMPRESSOR AND CONDENSER. ALF SELROD, Chicago, Ill. Filed Aug. 15, 1919. Serial No. 317,723. 5 Claims. (Cl. 62—115.)

1. In a compressor, the combination of a cast metal casing having a cylindrical bore and integral annular



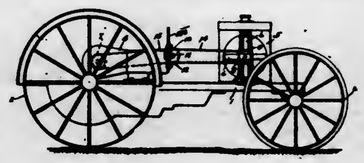
walls surrounding said bore to form a condensing chamber and water jacket concentric with said bore, heads for enclosing said chamber and jacket, ports connecting said chamber and said bore, valve mechanism for preventing back-flow through said ports, and means for compressing gas in said bore and forcing it through said ports into said chamber, said water jacket being in two annular portions, one within and the other outside of said chamber radially.

1,429,461. BANK SAVINGS SYSTEM. MARK H. SHADINGER and CLYDE M. JONES, Sacramento, Calif. Filed Feb. 7, 1921. Serial No. 443,011. 7 Claims. (Cl. 302—2.)



1. An individual savings system comprising an air tight tube terminating in a public place and adapted to receive money and the like therein, an air tight receptacle into which the tube discharges, a door over the outer end of the tube and normally forming an air tight seal therewith, a similar door for the receptacle openable at will and suction means for the tube and receptacle, whereby air from the outside will rush into the tube when the tube-door is opened, and means for shutting off the suction from the tube and receptacle when the door of the latter is opened.

1,429,462. TANDEM DISK HARROW. CHARLES S. SHARP, Auburn, N. Y., assignor to International Harvester Company, a Corporation of New Jersey. Filed Mar. 19, 1919. Serial No. 283,590. 7 Claims. (Cl. 55—83.)

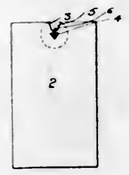


1. In a tillage implement, front and rear sections, a curved bar hingedly connected to one section at its ends and having its bight portion telescopically mounted on the other section, and stops on the arms of said bar for limiting its outward movement on said section.

1,429,463. CALCULATOR FOR TRACTOR PERFORMANCE. ALBERT R. SQUYER, Peoria, Ill., assignor to The Holt Manufacturing Company, Stockton, Calif., a Corporation of California. Filed May 24, 1920. Serial No. 383,738. 2 Claims. (Cl. 235—88.)

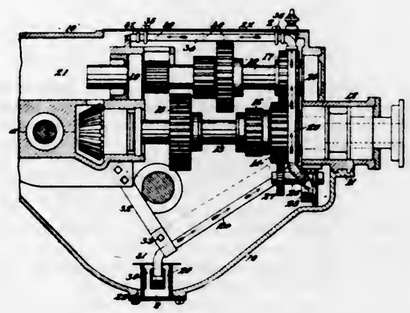
1. A calculator for tractor performance, comprising two cards rotatable relatively to each other, one of said cards bearing plotted designations pertaining to percentage of grade, and the other card bearing designations pertaining to the character of road to be negotiated, the two designations being in position to co-operate with each other, and one of said cards bearing also a scale pertaining to the hauling capacity of the tractor and a corresponding portion of the other card bearing indications pertaining to the gear ratio of the tractor, said designations and scales being so co-related that when the indicator for a given road condition registers with the indicator for a known grade, then the indicator for a given gear ratio will register with a graduation on the scale which correctly represents the capacity of the tractor under the conditions given.

1,429,464. TANDEM TWO-BELT FAN DRIVE FOR TRACTOR ENGINES. PETER H. THOMPSON, Rome Township, Faribault County, Minn. Filed Apr. 21, 1921. Serial No. 463,300. 4 Claims. (Cl. 180—1.)



1. In a tractor having a radiator fan pulley and a pulley connected to the engine for driving the fan, a double loose pulley disposed between said pulleys, a belt for driving the same from the engine pulley and a belt extending from the loose pulley to the fan pulley and driving the latter.

1,429,465. TAG. CLARENCE CHARLES TOLO, Minneapolis, Minn. Filed Apr. 15, 1920. Serial No. 374,127. 2 Claims. (Cl. 40—20.)

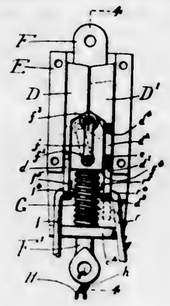


1. A tag having an angularly shaped opening therein and a notch in its edge, and a narrow gap forming a

communicating passage between the notch and opening, whereby threads, tape or ribbon may be introduced through the notch and gap into the opening, the opening being

shaped so that its edge adjacent the gap forms substantially a re-entrant angle, whereby the introduced threads, tape or ribbon are directed away from the gap.

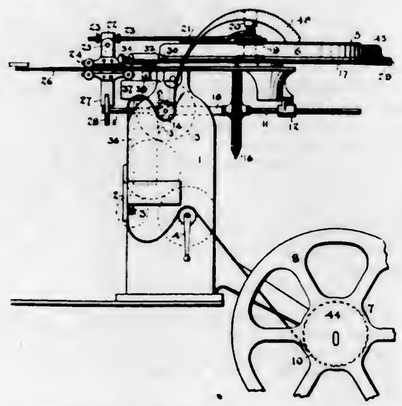
1,429,466. OILING SYSTEM FOR TRANSMISSIONS. WILLIAM TURNBULL, Peoria, Ill., assignor to The Holt Manufacturing Company, Stockton, Calif, a Corporation of California. Filed May 25, 1918. Serial No. 236,525. 8 Claims. (Cl. 184—6.)



7. In a transmission mechanism, a housing, a variable speed gear transmission mechanism journaled in the housing, and a force feed oil circulating pump mounted within the housing and driven by the transmission mechanism to circulate a lubricant within the housing, a distributing pipe communicating with the pump, and a series of delivery tubes communicating with the distributing pipe, each tube extending over a set of gears in the housing and being in the same plane therewith.

1,429,467. BELT DRESSING. PEARL E. ULLRICH, Chicago, Ill. Filed Oct. 30, 1920. Serial No. 420,793. 7 Claims. (Cl. 134—7.)

3. A belt dressing consisting of the residue of wash oil from gas plants, after the aromatic, or solvent hydrocarbons have been distilled.



1,429,468. POWER-MECHANISM TRIP DEVICE. INNES T. VERDIN, Cincinnati, Ohio, assignor to The Verdin Kappes & Verdin Company, Cincinnati, Ohio, a Corporation of Ohio. Filed May 12, 1920. Serial No. 380,753. 2 Claims. (Cl. 192—116.)

1. In a clutch tripping device the combination with a trip bar, of means adapted to be reciprocated in parallelism and having centrally converging surfaces, means mounted on the trip bar and comprising a trip arm, a trip roller, and pivots connecting the trip arm to the bar and the roller to the arm, the arm and the roller being adapted to normally take a position in alignment with the point of convergence of the inclined surfaces and to be moved from such alignment by the movement of one of

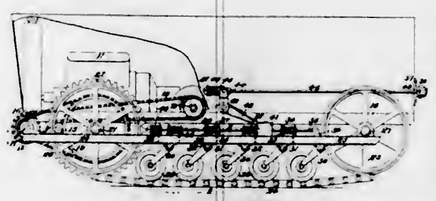
the reciprocating means, and to be reciprocated in parallelism with the reciprocating means by the joint movement of the reciprocating means.

1,429,469. DELIVERING CINEMATOGRAPH FILMS FOR EXHIBITION. EDWARD JOHN WAY, Johannesburg, Transvaal, South Africa. Filed May 23, 1921. Serial No. 471,837. 11 Claims. (Cl. 88—18.7.)

1. In cinematograph apparatus, the combination with a projector and means for feeding film therethrough, of a carrier for unused film coil, a frictional driving connection between said feeding means and the carrier tending to drive said carrier to deliver film at a greater rate than the feeding rate, and means to reduce the speed of the carrier.

1,429,470. ENDLESS APRON FOR HARVESTERS. WILLIAM WEBBER, La Grange, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed Mar. 6, 1919. Serial No. 281,051. 6 Claims. (Cl. 24—32.)

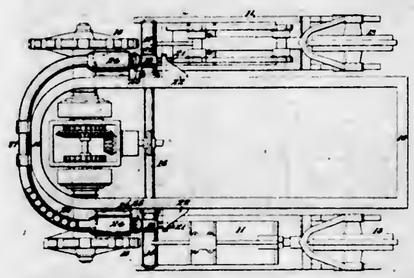
3. In an apron having a series of apertures spaced from one end thereof, straps longitudinally alined with



said apertures and extending outwardly from the opposite end of the apron, buckles secured to said apron adjacent said last named end whereby said straps may be passed through said apertures and over a portion of said apron to said buckles.

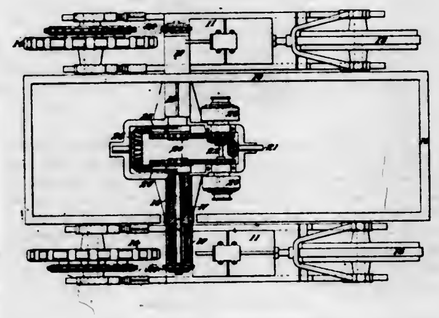
1,429,471. CAN OPENER. FREDERICK L. WHITCOMB, Clyde, Ohio. Filed Apr. 6, 1921. Serial No. 459,003. 3 Claims. (Cl. 30—3.)

1. A can-opener comprising a cutting blade member provided with fulcrum ears disposed at right angles thereto, and having a prolonged anchoring tang, said blade member being formed from a sheet steel blank; and a metal handle and an integral terminal guide member cast in a molten state about the tang and ears of the blade member.



1,429,472. CONSTRUCTION FOR TRACTION ENGINES. ELMER E. WICKERSHAM, Stockton, Calif., assignor to The Holt Manufacturing Company, Stockton, Calif., a Corporation of California. Filed Oct. 24, 1918. Serial No. 259,583. 4 Claims. (Cl. 180—9.)

1. In a tractor construction, a main frame, track units at the opposite sides of said main frame and including driving sprockets, idler wheels, truck frames and track chains embracing the sprockets and wheels, means for pivotally connecting said truck units to the main frame at points in the rear of the driving sprockets, and yielding connections between the truck frames and the main frame permitting rocking movement of the truck frames about their rear pivotal connection with the main frame under operative conditions.

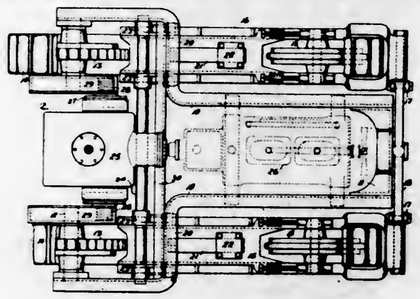


1,429,473. TRACTOR-FRAME SUSPENSION. ELMER E. WICKERSHAM, Stockton, Calif., assignor to The Holt Manufacturing Company, Stockton, Calif., a Corporation of California. Filed Sept. 29, 1919. Serial No. 327,283. 3 Claims. (Cl. 305—9.)

1. In a vehicle, a main frame, a chain track truck mechanism at each side thereof mounted for rocking movement in a vertical plane and equalizing connections between the main frame and opposite truck mechanisms comprising a ball race fixed upon the main frame, a series of balls in said race extending from one side to the

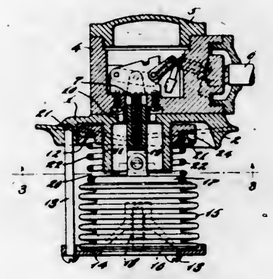
other of the main frame and brackets on each truck mecahnism co-operating with the balls in said race to cause opposite and equal movements of the truck mechanisms.

1,429,474. TRACTOR-FRAME SUSPENSION. ELMER E. WICKERSHAM, Stockton, Calif., assignor to The Holt Manufacturing Company, Stockton, Calif., a Corporation of California. Filed Sept. 29, 1919. Serial No. 327,284. 8 Claims. (Cl. 180—91.)



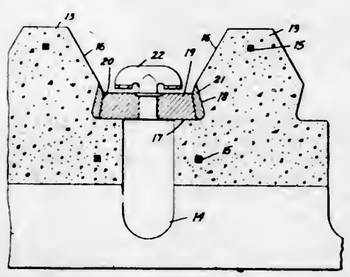
1. In a vehicle, a main frame, a claim track truck mechanism at each side, means for supporting the entire weight of the main frame at a single point on each truck mechanism, and connections included in said supporting means for stabilizing the main frame and causing equal opposite movements of the truck mechanisms about their points of connection with the main frame.

1,429,475. TRACTOR MAIN FRAME AND SUSPENSION. ELMER E. WICKERSHAM, Oakland, Calif., assignor to The Holt Manufacturing Company, Stockton, Calif., a Corporation of California. Filed Jan. 26, 1921. Serial No. 439,979. 9 Claims. (Cl. 305—9.)



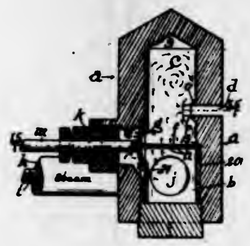
1. In a tractor of the self-laying track type a main frame formed of longitudinal sills and a front cross sill, the longitudinal sills being formed with a horizontal bend intermediate their ends, a driving sprocket wheel for the track at the rear of and inside of each longitudinal sill leaving the space between opposite driving wheels unobstructed for the reception of driving and steering mecha-

nism, a roller truck mechanism associated with each track, said longitudinal sills extending across the top of



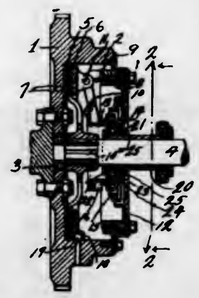
their respective truck mechanisms and continuing forwardly at the inside thereof.

1,429,476. THERMOSTAT. MAURICE A. WICKS, Detroit, Mich., assignor to Kelvinator Corporation, Detroit, Mich., a Corporation of Delaware. Filed June 14, 1920. Serial No. 388,832. 3 Claims. (Cl. 200—140.)



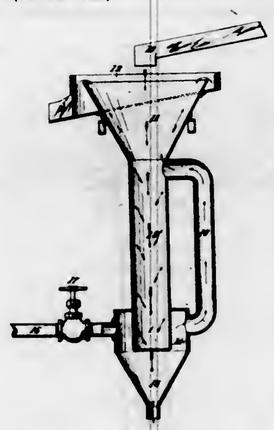
1. The combination with a supporting member having a hole, a depending threaded flange surrounding said hole, and an abutment ring adjustable along said threads, of an operating device projecting through said hole, an expansible metal vessel operatively engaging said device, a spring surrounding said flange and operatively engaging said abutment and opposing the expansion of the vessel, and means securing the further end of said vessel to said supporting member.

1,429,477. FILTER-BOTTOM CONSTRUCTION. JAMES E. WILLIAMSON, South Orange, N. J. Filed Aug. 17, 1921. Serial No. 492,956. 7 Claims. (Cl. 210—124.)



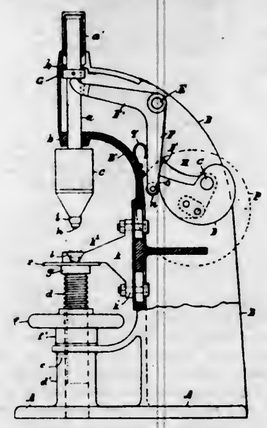
1. In construction of the character described, in combination, a main chamber, a bottom therefor, a plurality of spaced ribs extending transversely of said bottom and forming therebetween a plurality of transverse channels open at the top, separate means provided with a plurality of nozzles adapted to be bridged across adjacent ribs thereby to close said transverse channels, and a main channel connecting all of said transverse channels.

1,429,478. MEANS FOR BURNING CRUDE OIL. MARTIN F. WITT, Los Angeles, Calif. Filed Jan. 27, 1921. Serial No. 440,323. 7 Claims. (Cl. 158—75.)



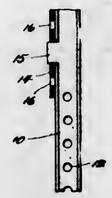
1. An oil burner having a compression chamber; means for supplying liquid fuel and an expansive medium to the compression chamber; a fuel dividing exit for the fuel and expansive medium during normal operation of the burner; and a valve-controlled exit from the compression chamber; the parts being arranged to direct the flow of expansive medium to remove obstructions from the top and bottom surfaces of the fuel dividing exit when the valve-controlled exit is opened.

1,429,479. CLUTCH-LEVER COLLAR. CLARENCE G. WOOD, Muncie, Ind., assignor to Hoosier Clutch Company, Muncie, Ind., a Corporation of Indiana. Filed July 18, 1921. Serial No. 485,636. 3 Claims. (Cl. 192—68.)



1. The combination with a clutch comprising a driven and a driving element, said driven and driving elements being locked together by means of levers having their arms terminating adjacent the driven shaft, of a collar surrounding said driven shaft, said collar being stamped from a single piece of material and provided with an annular flange, a spacer flange surrounding said collar adjacent said annular flange, said spacer collar being provided with spaced lugs secured to the annular flange of the collar, thereby forming spaced segmentally shaped lever engaging grooves carried by the collar.

1,429,480. ORE CLASSIFIER. CHARLES ALLEN, El Paso, Tex. Filed Nov. 5, 1918. Serial No. 261,191. 7 Claims. (Cl. 83—82.)

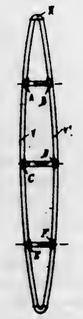


1. In the classification of fine ores, fine coal and the like in a sorting column wherein the material to be treated flows downwardly against the action of a rising current of water, causing the lighter product to overflow the rim of the column and the heavier product to pass out through a discharge orifice at the bottom of the column, that step which comprises the by-passing of a portion of the up-flowing stream from bottom to top of the column whereby to maintain a substantially uniform velocity of flow of the up-current in the column regardless of the volume of occupancy of the column by solid particles within usual working limits.

1,429,481. HARDNESS-TESTING MACHINE. JOSEPH G. AYERS, Jr., Montclair, N. J., assignor to Hyatt Roller Bearing Company, Harrison, N. J., a Corporation of New Jersey. Filed Mar. 31, 1921. Serial No. 457,493. 7 Claims. (Cl. 265—13.)

1. An apparatus for testing the hardness of metallic specimens, consisting of the base with column projected upwardly therefrom, a threaded support mounted upon the base, a goose-neck projected over the support and provided with bearings, a rod movable through the bearings with a standard weight secured to its lower end, a test-ball secured to the lower end of the weight, means for lifting and dropping the rod and weight, and means for holding the specimens to be tested upon the threaded support.

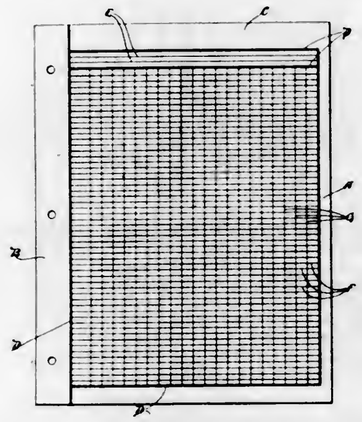
1,429,482. SHANK FOR EAVES-TROUGH SUPPORTS. MATTHEW RUSSELL BERGER, Philadelphia, Pa. Filed Feb. 6, 1922. Serial No. 534,311. 4 Claims. (Cl. 108—29.)



1. A device of the character stated comprising a stem of channel-iron apertured throughout the major portion of its extent for the adjustable support of a gutter supporting-arm, a side wall of said stem adjacent its top having projected therefrom a tongue disposed in a plane at right angles to the vertical axis of said stem and a plate rigidly secured below and near the stem top, said plate being penetrated by said tongue and being apertured for the reception of attaching means.

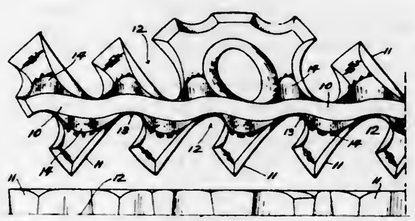
1,429,483. PROCESS OF MANUFACTURING UREA. CARL BOSCH and WILHELM MEISER, Ludwigshafen-on-the-Rhine, Germany, assignors, by mesne assignments, to Badische Anilin & Soda Fabrik, Ludwigshafen-on-the-Rhine, Bavaria, Germany, a Corporation of the Grand Duchy of Baden. Filed July 9, 1920. Serial No. 395,149. 4 Claims. (Cl. 260—126.)

1. The process of manufacturing urea which consists in compressing a mixture of ammonia and carbon dioxid in about the proportions required for the formation of urea while said mixture is kept during compression at an elevated temperature to avoid the separation of ammonium salts, conveying the compressed gaseous mixture while maintaining said temperature, then reducing it to a melt by lowering the temperature and maintaining the melt at a temperature suitable for effecting the formation of urea.



1,429,484. AIRCRAFT. LOUIS BREGUET, Velizy-Villacoublay, France, assignor to Société Anonyme des Ateliers d'Aviation Louis Bréguet, Paris, France. Filed Jan. 25, 1921. Serial No. 439,848. 4 Claims. (Cl. 244—31.)

1. An aircraft strut comprising two tubes of curved shape having their concave portions oppositely situated,

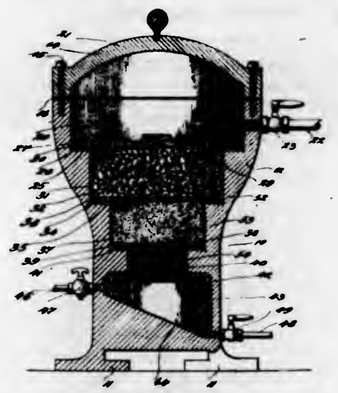


means for connecting together the ends of the said tubes, means for cross-connecting the two tubes, and means for securing the said strut to the longitudinals.

1,429,485. RULED SHEET. CHARLES A. BRITTAIN, St. Louis, Mo. Filed Apr. 13, 1921. Serial No. 460,904. 2 Claims. (Cl. 283—1.)

1. A sheet having thereon horizontal lines spaced to conform to the space units of the vertical movement of a typewriter platen and having also vertical lines spaced to conform to the space units of the horizontal movement of a typewriter carriage and intersecting said horizontal lines.

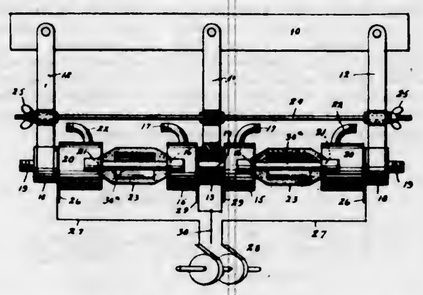
1,429,486. GRATE BAR. HORACE BUDD, Philadelphia, Pa. Filed Jan. 4, 1921. Serial No. 435,229. 1 Claim. (Cl. 126—167.)



A grate bar comprising a web the longitudinal, opposite faces of which present fluted surfaces the convexed portions of said web materially increasing in thickness from the bottom to the top of said web, and a plurality of spaced teeth diverging from the opposite sides of said web in its thickest parts in staggered relation and so arranged that each space between adjacent teeth registers with a concaved portion of the web, the thickest part of each convexed portion merging upon a curved line with the underside of a tooth to form a reinforcement.

1,429,487. DEEP-WELL PUMP. WILBUR F. BUDLONG, deceased, late of San Jose, Calif., by Emma I. Budlong, executrix, San Jose, Calif., assignor to Campbell & Budlong Machine Works, San Jose, Calif., a Corporation of California. Filed Dec. 7, 1920. Serial No. 428,875. 3 Claims. (Cl. 103—102.)

1. A deep well pump comprising a tubular pump casing, a pump structure supporting the lower end thereof, a suction end casting disposed at the lower end of the pump structure, a driving unit at the upper end of the pump casing, a sectional non-rotating mandrel extending from the driving unit to the suction end casting, a sectional tubular pump shaft adapted to rotate around said mandrel, and bushings connecting the sections of the mandrel and forming bearing members thereon and around which the pump shaft has a running fit.

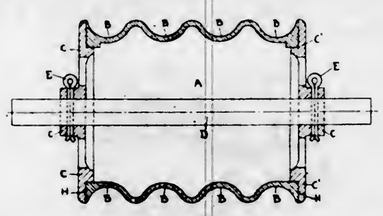


1,429,488. FILTER. ANGELO M. CAPRO, Philadelphia, Pa. Filed June 19, 1920. Serial No. 390,079. 6 Claims. (Cl. 210—103.)

1. A filter comprising an upright body having a plurality of progressively contracted chambers therein, a sediment chamber in the base of said body having an inclined bottom, an inlet to the uppermost of said chambers, outlets arranged at different heights in said sediment chamber, open meshed baskets in the intermediate chambers, said baskets containing filtering material, means for manipulating said baskets, and a single means for clamping said baskets in their respective chambers.

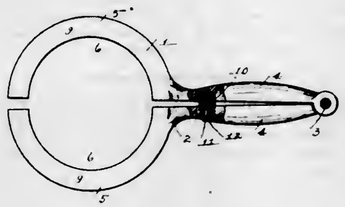
1,429,489. ELECTRIC FURNACE. MONROE S. CLAWSON, Upper Montclair, N. J. Filed July 13, 1920. Serial No. 395,872. 8 Claims. (Cl. 204—64.)

1. An electric furnace comprising a main supporting member, a central member carried thereby, side members pivotally mounted on said supporting member and movable toward or from said central member, revoluble heads mounted in said central member, other heads revolubly



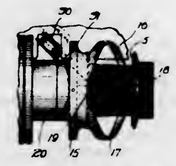
mounted within said side members, and resistance members engaged between said heads and adapted to hold the material to be heated.

1,429,490. SANITARY TOILET SEAT. HADLEY S. CRAYTON, Towanda, Ill. Filed Jan. 6, 1922. Serial No. 527,329. 2 Claims. (Cl. 4—18.)



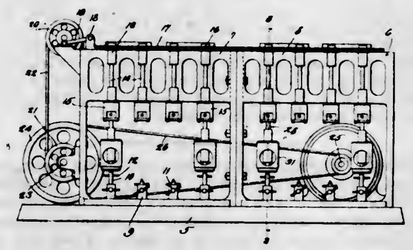
1. A sanitary toilet seat for use on water closet seats, comprising a base of saddle shape cross-section with spaced ears reaching inwardly from the lower edge of its inner pendent portion and with a tab reaching outwardly from the lower edge of its outer pendent portion, a pad of paper sheets corresponding in cross-section shape to and superimposed on the base and having an inwardly-directed flange arranged upon the ears of the base and also having a tongue portion arranged on the tab of the base, and means connecting the pad flange to the ears of the base.

1,429,491. PULLEY. ARTHUR DAVIDSON, Renfrew, Scotland. Filed Oct. 27, 1920. Serial No. 420,002. 1 Claim. (Cl. 242—117.)



A drum, plates closing the ends of the drum and each having an annular flange entering the drum and a circumferential flange bearing against one end of the drum, said flange having a flat portion, said drum also having flat portions engaging those of the plates, and each plate also having a central bore and an outstanding hub, a spindle extending through the drum and through the bores and hubs of the plates, and split pins arranged in openings in the hubs and spindle, detachably securing the plates to the spindle and also detachably securing the plates on the ends of the drum.

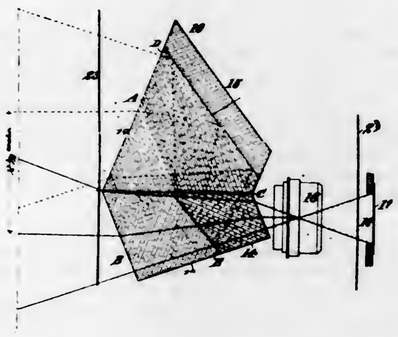
1,429,492. CULINARY UTENSIL. ELROY DE ARMOND, Grand Rapids, Mich. Filed Feb. 23, 1922. Serial No. 538,737. 5 Claims. (Cl. 107—10.)



1. In a utensil of the character and for the purpose described; a pair of like members connected swingably to and from each other and respectively having oppositely disposed cooperating handle portions and oppositely disposed cooperating work-engaging portions adapted to surroundingly contact the work between them in the swung-together position of said members, the under sides of said work-engaging portions being in the same plane: a spring pressing said members apart; a stop limiting the separating movement of said members.

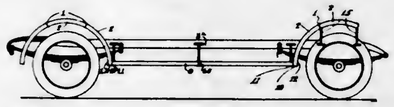
1,429,493. WINDING MECHANISM FOR STRANDS. CHARLES JOHN DE COSTER, Philadelphia, Pa., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 25, 1918. Serial No. 259,700. 5 Claims. (Cl. 242—18.)

1. In a winding mechanism, a winding spool, a rotatable spooling device having a single continuous guiding surface thereon and surrounding said winding spool, means for rotating said spooling device, and means for maintaining a pressure of the strand upon the guiding surface of the spooling device whereby the strand will be supported and laid upon the winding spool in smooth even layers by said guiding surface.



1,429,494. VALVE-GRINDING MACHINE. CHARLES DIEHL, Peru, Ind. Filed Oct. 28, 1921. Serial No. 511,216. 3 Claims. (Cl. 51—29.)

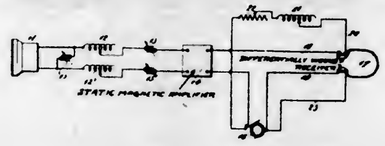
1. A valve grinding machine including a base, a frame supported by the base, operating rods extending through



the frame and carrying pinions on the upper ends thereof, a reciprocable rack bar movable along the upper surface of the frame and contacting with the pinions to move the operating rods, supports mounted on the base, a centering pin mounted in each support, means for connecting a valve to the respective operating rods, said valve adapted to engage the centering pin associated therewith,. and means for reciprocating the rack bar.

1,429,495. METHOD OF AND APPARATUS FOR PRODUCING STEREOSCOPIC PHOTOGRAPHIC FILMS. LEON FORREST DOUGLASS, San Rafael, Calif. Filed July 14, 1919. Serial No. 310,738. 4 Claims. (Cl. 88—16.6.)

3. A prism for producing stereoscopic images comprising a prism block for direct transmission of rays and a reflecting prism block, one of said blocks having its incident face positioned at a right eye viewpoint and the other having its incident face positioned at a left eye viewpoint, and said reflecting prism block having an internal reflecting surface so positioned as to direct its rays upon the emergent face of the other prism block at such an angle as to cause re-reflection of the same in stereoscopic registration with the rays emerging from said direct transmission prism block.

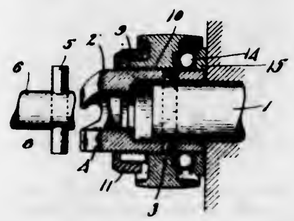


1,429,496. MUD OR SPLASH GUARD FOR VEHICLES. WILLIAM FAIRCLOUGH, Wigan, England. Filed May 26, 1919. Serial No. 299,783. 7 Claims. (Cl. 280—153.)

1. A mud or splash-guard for road vehicles comprising, in combination, two brackets or slips having upper and lower limbs and permanently secured to the vehicle at a spaced interval apart, and a single mud-guard unit of a length corresponding to the distance between the brackets and adapted to be slid in between the limbs of said brackets, so as to be engaged thereby at the ends, but removable therefrom when required.

1,429,497. METHOD AND APPARATUS FOR DETECTING, MEASURING, AND UTILIZING LOW-FREQUENCY IMPULSES. REGINALD A. FESSENDEN, Brookline, Mass., assignor to Submarine Signal Company, Portland, Me., a Corporation of Maine. Filed June 6, 1917. Serial No. 173,102. 2 Claims. (Cl. 177—352.)

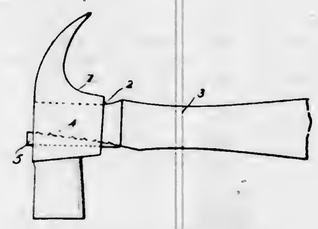
1. The method of detecting and utilising low frequency comparatively inaudible impulses in the presence of disturbing high frequency impulses which consists in passing said low frequency impulses together with said undesired high frequency impulses through an amplifier whose amplification constant is the function of the ratio of the frequency in the amplified circuit to the frequency of the current to be amplified, and employing as the frequency of the amplified circuit a frequency of the order of one thousand per second, whereby said low frequency comparatively inaudible impulses are highly magnified and rendered highly audible, while said undesired high frequency impulses are substantially weeded out.



2. An apparatus for the detecting and utilization of low frequency impulses and for the elimination of undesired high frequency impulses, comprising a member adapted to receive both low and high frequency impulses, a weeding out circuit connected thereto and adapted to weed out the high frequency impulses, a static magnetic amplifier, and an electro magnetic indicating mechanism connected to the amplified side of the magnetic amplifier.

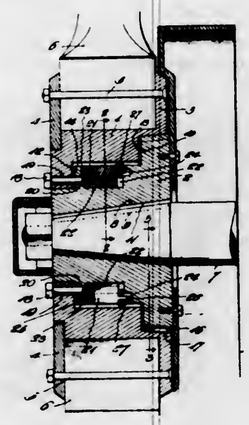
1,429,498. BELT DRESSING. ERNEST B. FOLSOM, San Francisco, Calif., assignor to Pacific Mill & Mine Supply Company, San Francisco, Calif., a Corporation of California. Filed Apr. 30, 1919. Serial No. 293,724. 5 Claims. (Cl. 134—8.)

4. A belt dressing made from wool grease, rubber, a solvent therefor, caustic soda and resin.



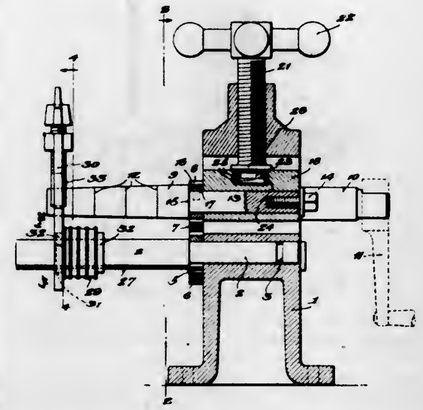
5. A method of producing a belt dressing which consists in melting wool grease and rosin and thereafter mixing and boiling the melted ingredients together, after which caustic soda is slowly added and worked into the mass the mixture then being boiled, and thereafter cooled, to a temperature of approximately 280°, at which time rubber in solution is added and the entire mass permitted to completely cool and solidify.

1,429,499. THRUST BEARING FOR CRANK SHAFTS. JOHN J. FRANK, Spokane, Wash., assignor to Arthur A. Proulx, Almira, Wash. Filed Sept. 3, 1919, Serial No. 321,421. Renewed Feb. 18, 1922. Serial No. 537,642. 1 Claim. (Cl. 64—49.)



The combination in an engine starting device with a crank shaft, and an externally threaded, fixed, bushing having means for engagement of the starting handle, of a fan-belt driving pulley having internal threads to engage the bushing threads, said pulley having a series of longitudinal slots to form clamping tongues, an inner tapered locking nut engaging the tongues to lock the pulley on the bushing, a race ring against the fixed part of the engine frame, and ball bearings interposed between said ring and the pulley.

1,429,500. TOOL HOLDER. PHINEAS N. FREASE, Bothell, Wash. Filed Apr. 15, 1922. Serial No. 553,063. 1 Claim. (Cl. 306—33.)



The combination with a hammer head having an eye therethrough, and a handle having a wedge-shaped cut-away portion in one edge of the part which passes through the eye, of a wedge-shaped member having serrations upon one of its faces and relatively fine teeth upon its opposite face, whereby the wedge member is adapted to be driven in the recess in the handle so that the serrations will engage and embed in the handle and the teeth will engage the wall of the eye in the hammer head to effectively lock the handle against movement in the hammer head.

1,429,501. WHEEL HUB. WILLIAM C. GEORGE, Clatonia, and FRED N. NORSGEA, Humboldt, Nebr. Filed Jan. 16, 1922. Serial No. 529,733. 5 Claims. (Cl. 301—9.)

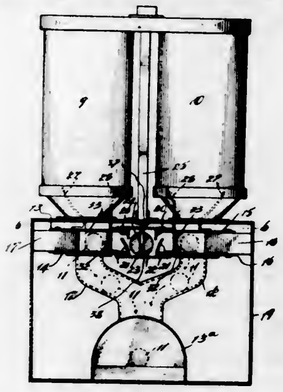
1. In a demountable wheel, a hub structure including an inner spindle-engaging section and an outer spoke-carrying section fitting upon the inner section, the sections having their contacting faces provided with contacting abutment shoulders adjacent the inner and outer ends of the hub structure, blocks positioned in pockets formed in the inner hub section, and fasteners passing through alined openings in the hub sections and having their inner end portions engaging said blocks.

1,429,502. MACHINE FOR ENLARGING RINGS. ELIAS T. GOLDBERG, New York, N. Y., assignor to Rose Goldberg, New York, N. Y. Filed Mar. 26, 1921. Serial No. 455,935. 8 Claims. (Cl. 80—5.)

8. In a ring enlarging machine, a frame a block vertically movable therein, a stick borne by the block, a screw threaded through the frame and having a grooved lower end, means borne by the block to engage in the screw groove to allow the screw to rotate but to raise or lower the block as the screw is raised or lowered, a shaft, a circular block on the shaft, and means to drive the shaft and stick in unison.

1,429,503. TREATING PEAT FOR MANUFACTURING AN INSULATING MATERIAL. RUDOLF GRAEFFE, Brand-Erbisdorf, near Freiberg, Germany. Filed Jan. 6, 1921. Serial No. 435,567. 3 Claims. (Cl. 18—48.)

1. The herein described insulating material composed of peat being boiled in water and coal-tar-pitch having been brought to foam by preheating to about 200° C. being mixed with said peat during the boiling process whereafter the thoroughly mixed material is dried and treated according to its further use that is pressed and formed into plates, substantially as described.



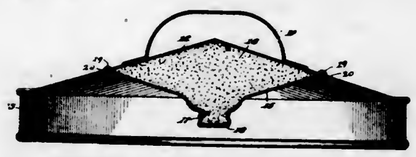
1,429,504. METHOD OF BLENDING WHEATEN. CHASTAIN G. HARREL, Liberty, Mo., assignor to The Campbell Baking Company, Wilmington, Del., a Corporation of Delaware. Filed Sept. 6, 1921. Serial No. 498,891. 3 Claims. (Cl. 99—10.)

1. The step in the method of controlling the fermentation period of the dough batch for bakery products which consists in determining the hydrogen ion concentration in the flour and permitting the dough batch in which the flour is incorporated to continue for a period of time having a definite relation to the hydrogen ion concentration present.

1,429,505. VENDING MACHINE. ELLES E. HARTMAN, East Jordan, Mich. Filed Oct. 23, 1920. Serial No. 418,926. 12 Claims. (Cl. 194—75.)

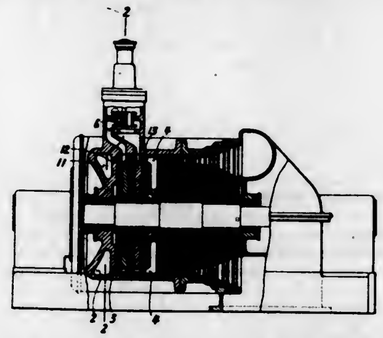
1. In a coin controlled apparatus, a container having an outlet, gates adjacent said outlet, each gate having an opening normally out of alinement with the outlet from said container, and actuating means dependent upon the presence of a coin therein to actuate said gates, one

at a time, to cause the openings therein to be positioned relative to the outlet from said container for the passage



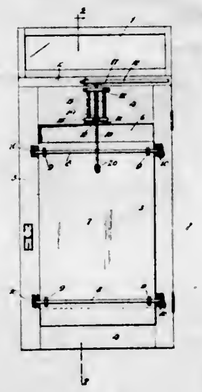
of an article from said container, the coin forming the connection between said gates and actuating means.

1,429,506. DOORMAT-OPERATED ANIMATED FIGURE. FREDERICK E. HERR, Barberton, Ohio. Filed Dec. 4, 1919. Serial No. 342,423. 10 Claims. (Cl. 46—40.)



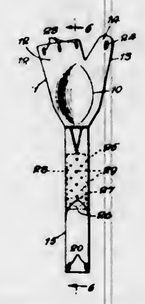
1. The combination with a door mat including a plate, a plurality of movable members connected to the plate, of an animated figure including a body member, a limb member pivotally connected thereto, and means for operatively connecting the limb member with the plate so that upon depression of any one of said members the limb member will be actuated.

1,429,507. CAN COVER. FRED H. JONES, Globe, Ariz. Filed Aug. 15, 1921. Serial No. 492,382. 1 Claim. (Cl. 220—23.)



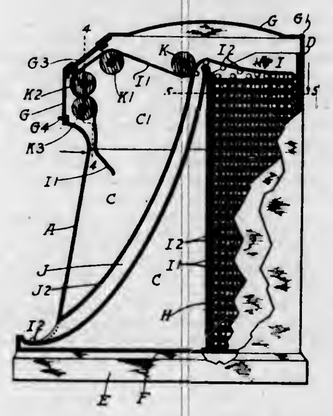
A weightable garbage can cover comprising an upwardly tapering top portion provided with an annular hollow bead, a dish-like downwardly sloping disk the outer edge of which extends into the chamber afforded by said hollow bead and attached to the under side of said top portion at said bead by solder, thus forming a chamber of considerable size adapted to hold a substantial amount of heavy material, said disk being provided with a depending threaded sleeve, combined with a screw cap fitted to said sleeve.

1,429,508. MULTIPLE-STAGE PRESSURE-STAGE TURBINE. JOSEF KARRER, Zurich, Switzerland, assignor to Maschinenfabrik Oerlikon, Oerlikon, near Zurich, Switzerland, a Corporation of Switzerland. Filed Feb. 19, 1920. Serial No. 359,801. 6 Claims. (Cl. 253—69.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



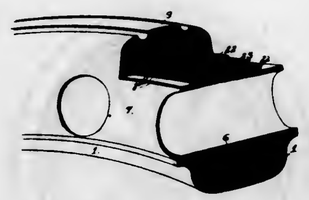
1. In a multi-stage pressure-stage turbine, a group of high-pressure stages, guide ducts of normal capacity partially supplying and permanently interconnecting said stages of said group, auxiliary guide ducts partially supplying a stage of said group, means for controlling the steam supplied by said auxiliary guide ducts to said stage, auxiliary guide ducts partially supplying a subsequent stage of said group, means for diverting steam from said first-mentioned stage to said auxiliary guide ducts of said subsequent stage and means for controlling the flow of steam from said first-mentioned stage along said diverting means to said auxiliary guide ducts of said subsequent stage.

1,429,509. DOOR. JOHN D. KOHER, Wichita, Kans. Filed Mar. 25, 1921. Serial No. 455,684. 7 Claims. (Cl. 20—16.)



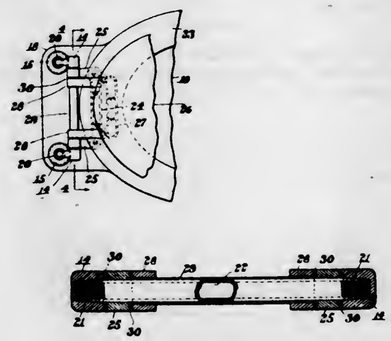
1. The combination of a horizontally swinging door having an opening therethrough, a screen fixed in the opening in the door, and means operable by movement of the door for uncovering the screen as the door is closed and covering the screen as the door is opened.

1,429,510. JOCK STRAP. THOMAS LA MAIDA, New York, N. Y. Filed Apr. 15, 1921. Serial No. 461,546. 3 Claims. (Cl. 128—160.)



1. A jock strap, comprising a pocket element having, extending from part of its edge an approximately Y shaped flap member and tab member, both being adapted to be detachably fastened to a belt, a band protruding from a portion of the pocket opposite to the flap and tab members for being removably attached to the back of the belt and the band having in its central part a pocket, and a removable perforated flexible stay in the pocket of the band to prevent the band from wrinkling.

1,429,511. DISPENSING-MACHINE SUPPLY. HENRY HARRISON LAMB, Fountain City, Tenn. Filed Feb. 10, 1920. Serial No. 357,513. 3 Claims. (Cl. 206—29.)

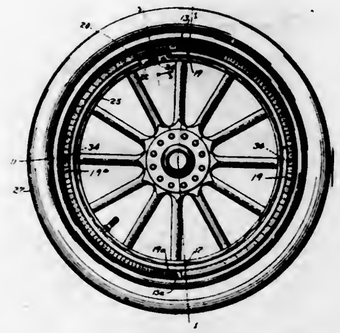


2. An article of manufacture for use in a dispensing machine, said article comprising a flexible ribbon and matches arranged transversely to the ribbon and secured to one face of the ribbon by means holding the match by a force which is less than the force which would be required to tear the ribbon or to break the match, substantially as described.

1,429,512. METHOD OF MANUFACTURING CUSHION TIRES. HENRY M. LAMBERT, Portland, Oreg., assignor to Lambert Tire and Rubber Company, Portland, Oreg., a Corporation of Arizona. Filed May 4, 1921. Serial No. 466,812. 9 Claims. (Cl. 154—12.)

1. The method of manufacturing cushion tires which consists in building up a base layer on a suitable ring or rim, then placing cushion blocks at intervals radially on said base structure and subsequently building up over the cushion blocks a tread structure to form a tire carcass of greater cross sectional area than the finished product, then applying a constricting pressure to the outer surface of the carcass and simultaneously applying an expanding pressure in the holes between adjacent cushion blocks and vulcanizing the carcass while under pressure.

1,429,513. HINGE. FREELAND D. LESLIE, Milton, Mass., assignor to B R E Manufacturing Company, Hyde Park, Mass., a Corporation of Massachusetts. Filed Oct. 15, 1921. Serial No. 507,883. 6 Claims. (Cl. 4—18.)



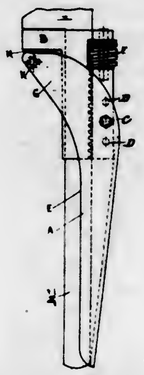
1. A hinge leaf having parallel arms; a separate tubular member interposed between said arms with its ends secured therein; a cylindrical member extending through and beyond the ends of said tubular member; and standards having sockets to receive the opposite ends of said cylindrical member adjustably secured thereto.

1,429,514. PURIFICATION OF ANTHRAQUINONE. HARRY F. LEWIS, Buffalo, N. Y., assignor to National Aniline & Chemical Company, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 22, 1920. Serial No. 432,400. 10 Claims. (Cl. 260—57.)

5. The method of purifying impure anthraquinone which comprises dissolving the same together with soluble impurities in hot technical o-dichlor-benzol, cooling the resulting solution to crystallize the anthraquinone therefrom, and separating the resulting solution of impurities from the purified anthraquinone.

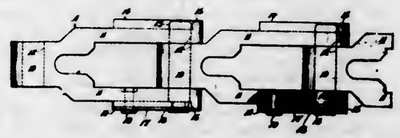
1,429,515. TIRE-MOUNTING RIM. WALKER BLAINE LUCAS, Harlowton, Mont. Filed Feb. 8, 1921. Serial No. 443,441. 1 Claim. (Cl. 301—11.)

An annularly divided tire mounting rim embodying a main annular section and an auxiliary annular section, each of which provides reversely paired internal half spiral elements that are suitably spaced and complementally adapted for interlocked wedging engagement, when said auxiliary section is fitted laterally within said main section and given a substantially half turn therein in one direction, and being correspondingly released for bodily removal upon a substantially half turn in the reverse direction.



1,429,516. LAND LEVELER. HARRY R. LYTLE, Sacramento, Calif. Filed Aug. 4, 1920. Serial No. 401,097. 2 Claims. (Cl. 37—7.)

1. A land leveler comprising a leveling blade, draft bars rigidly connected thereto, carrying wheels at the rear of the blade, a forwardly extending crank axle on the wheels pivotally connected to the rear of the blade and means for controlling the elevation of the blade comprising a rigid bracket on the rear of the blade, a lever fulcrumed intermediately on said bracket, a crank arm on the crank axle and a link pivotally connected to the crank arm and lever.

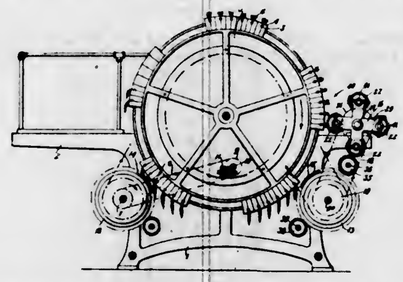


1,429,517. COMBINED NUT AND PIPE WRENCH. JOHN MCGHEE, Glasgow, Scotland. Filed Nov. 9, 1920. Serial No. 422,929. 3 Claims. (Cl. 81—171.)

1. A combined nut wrench and pipe wrench, comprising a shank, a fixed jaw thereon, a sliding jaw, means to adjust the sliding jaw with reference to the fixed jaw, said sliding jaw forming the lower jaw of the nut wrench and also the upper jaw of the pipe wrench, and a third jaw pivotally connected to the sliding jaw and also having

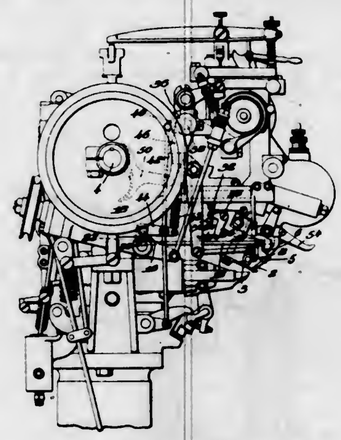
an operating shank, said third jaw forming the lower jaw of the pipe wrench.

1,429,518. LINK PIN FOR DREDGER-BUCKET CHAINS. ARTHUR MCMAHON, Scotia, Calif. Filed May 12, 1920. Serial No. 380,806. 1 Claim. (Cl. 74—32.)



The combination of dredger bucket chain links comprising spaced sides and a head connecting the sides at the inner ends thereof, each side being provided at its outer faces with a longitudinal enlargement having a longitudinal recess extending from the inner end of the enlargement and terminating short of the outer end of the same to form an outer end wall for the recess, each link having its head fitted between the sides of a contiguous link, the said links being provided through their heads and through their sides at the outer ends of the recesses with transverse aligning openings, a hinge pin passing through the aligning openings and connecting the links, said pin being of cylindrical form to permit it to rotate freely in the said openings and provided at one end with an annular groove, a flat locking plate arranged in one of the recesses and agreeing in form and depth with the same so as to nest snugly therein, said plate being formed with an open ended fork at one end, the arms of which extend into the annular groove of the pin at opposite sides thereof to retain the pin in the said openings, and a fastening device detachably securing the plate within the said recess in fixed relation with the link on which it is mounted and with its forked end at the closed end of the said recess.

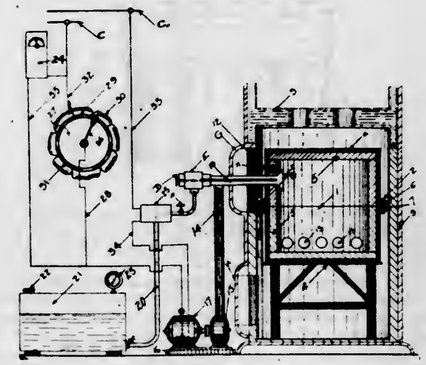
1,429,519. COMBING DEVICE FOR TEXTILE FIBERS. AUBREY E. MEYER, White Plains, N. Y. Continuation of application Serial No. 162,602, filed Apr. 17, 1917. This application filed Aug. 29, 1918, Serial No. 251,030. Renewed Feb. 24, 1922. Serial No. 539,038. 19 Claims. (Cl. 19—117.)



17. In apparatus for combing fibers, the combination of a support, a combing cylinder mounted on said support to yield about its axis, means for producing relative

movement between the cylinder and the fiber to be combed for combing the fiber, and adjustable frictional gripping means for regulating the yielding movement of the cylin-

der about its axis so that when the teeth place the fibers being combed under such tension as to unnecessarily cut or break them, the cylinder will yield about its axis.



1,429,520. SEWING MACHINE. WILLIAM C. MEYER, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed May 6, 1916. Serial No. 95,893. Divided and this application filed Sept. 6, 1918. Serial No. 252,968. 7 Claims. (Cl. 112—252.)

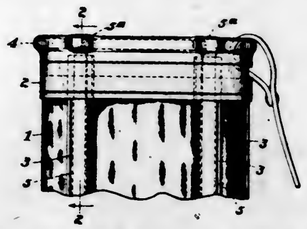
1. An inseam shoe sewing machine having, in combination, stitch-forming devices, a thread gripping device comprising relatively movable thread gripping jaws arranged to receive the thread as the shoe is removed from the machine by the operator and to hold the free end of the thread under tension during the first part of a seam formation and means for controlling and relatively actuating the jaws of the gripping device to cause the same to lie relatively in open positions to receive the thread when the work is removed from the machine and to lie in closed positions so as to grip the thread during the formation of at least the first stitch upon starting the machine.

1,429,521. OIL BURNER. FREDERICK FRASER MILLER, Napanee, Ontario, Canada. Filed Feb. 24, 1921. Serial No. 447,613. 2 Claims. (Cl. 158—1.)

1. An apparatus, using liquid fuel for generating heat, for use with a furnace or a boiler, and being a combination of a combustion chamber made of heat resisting and nonconducting material or materials, and so constructed, with reference to the furnace or boiler, as to retain within itself a self firing degree of temperature for some time after the fuel is cut off, with means for spraying a

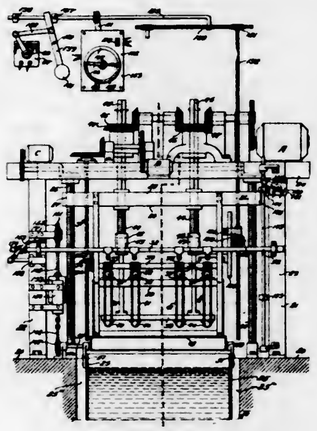
fuel mixture into the combustion chamber, and with means for intermittently cutting on and off the fuel mixture in such a manner that it is on often enough and long enough, to keep the temperature of the combustion chamber at all times above the firing point of the fuel mixture, all substantially as described.

1,429,522. MANUFACTURE OF FINELY DIVIDED SULPHUR. ALWIN MITTASCH and FRITZ WINKLER, Ludwigshafen-on-the-Rhine, Germany, assignors to Badische Anilin- & Soda-Fabrik, Ludwigshafen-on-the-Rhine, Germany, a Corporation of Germany. Filed Aug. 19, 1921. Serial No. 493,650. 6 Claims. (Cl. 23—10.)



5. The process of manufacturing sulphur in a very finely divided state by decomposing by evaporation an ammonium sulfid solution containing a protective colloid, and separating the colloidal sulphur from the liquid.

1,429,523. TRUNK BED. FRED MOORE, Aurora, Ill. Filed Aug. 30, 1921. Serial No. 496,879. 2 Claims. (Cl. 190—2.)

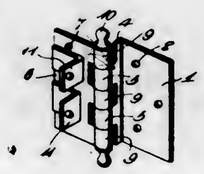


1. In a trunk bed, the combination of a casing provided with drawers in its rear portion and with a compartment in its front portion, a mattress in the compartment against the drawers and holding the drawers in a closed position, and a door on the casing and closed against the mattress for holding the mattress in the compartment.

1,429,524. CADDY BAG. HARRY A. MYERS, Philadelphia, Pa., assignor to George A. Reach, Philadelphia, Pa. Filed Jan. 12, 1922. Serial No. 528,755. 2 Claims. (Cl. 150—1.5.)

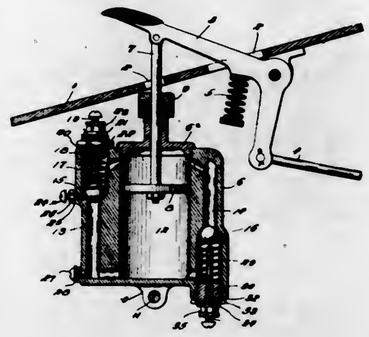
2. A caddy bag having a reinforcing ring embedded in the top thereof, and stays of resilient sheet metal embedded in the sides thereof held against longitudinal movement, said stays having hook shaped ends embracing the reinforcing ring, the openings to the hooks being of less diameter than the diameter of the ring whereby they may be sprung into engagement with the ring and held thereon by the resiliency of the metal.

1,429,525. CONTROLLING MEANS FOR MERCERIZING MACHINES. FRANK H. OLDEN, Chester, Pa. Filed Aug. 17, 1921. Serial No. 492,906. 16 Claims. (Cl. 8—20.)



1. The combination with a yarn mercerizing machine including means operative to stretch said yarn, of a device including means adjustable into predetermined positions to allow movement of said stretching means to different extents and to effect the stopping of said stretching means after having moved to said extents whereby stretches differing in length can be imparted to said yarn; substantially as described.

1,429,526. METHOD OF DETERMINING CONDITION OF DOUGH FOR BAKERY PRODUCTS DURING FERMENTATION PROCESS. CURTIS J. PATTERSON, Kansas City, Mo., assignor to The Campbell Baking Company, Wilmington, Del., a Corporation of Delaware. Filed Aug. 29, 1921. Serial No. 496,770. 3 Claims. (Cl. 99—10.)



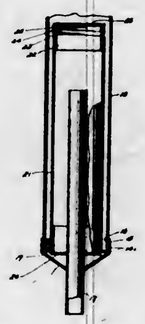
1. The process of determining the condition of dough for bakery products during the fermentation process which consists in mixing the doubh batch, allowing the same to ferment for a suitable time, and determining the hydrogen ion concentration.

1,429,527. HINGE. HENRY A. PAUL, Muskogee, Okla. Filed Sept. 2, 1920. Serial No. 407,691. 2 Claims. (Cl. 16—135.)

1. A hinge comprising a pair or hingedly connected leaves provided with apertures adapted to receive screws by which said leaves may be attached to one side of a door and its jamb, and a right angular member having one of its arms disposed flat against one side of one of said leaves and rigidly fastened thereto and its other arm extending laterally therefrom and provided with an aperture adapted to receive a screw by which said other arm may be attached to another side of the door jamb.

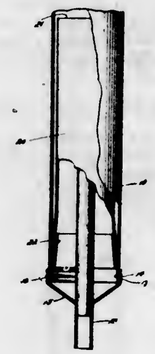
1,429,528. THROTTLE-CONTROL MECHANISM. PEARSON M. PAYNE, Pittsburgh, Pa. Filed Nov. 6, 1920. Serial No. 422,349. 2 Claims. (Cl. 188—97.)

1. A dash pot capable of containing fluid, said pot having a central opening, said pot having by-passes, said passes having valves therein, said valves being spring controlled, means to vary the force of said springs, and means to fix the maximum opening of said valves.



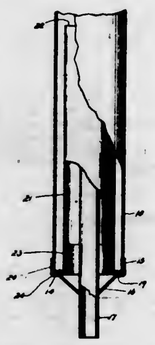
1,429,529. COMPOUND WIRE ROPE. GEORGE PYBURN, Airdrie, Scotland. Filed Oct. 11, 1920. Serial No. 416,100. 1 Claim. (Cl. 117—59.)

A compound wire rope strand comprising two straight core wires arranged in parallel relation, six wires covering the core wires, and of twice the diameter of said core wires, said six wires being arranged in a lay or twist, and a plurality of outer wires of greater diameter than said six wires and also arranged in a lay or twist,



of the same length as that of the said six wires, the length of the lay on the rope being twice that of the lay on the strands.

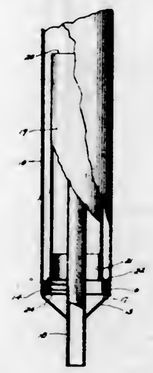
1,429,530. VACUUM CLEANER. EDWIN A. REEVES, Milford, Conn. Filed Apr. 15, 1920. Serial No. 374,112. 1 Claim. (Cl. 183—67.)



A vacuum cleaner, composed in part of a substantially cylindrical receptacle, a nozzle pipe, a conical head, having straight flange portion, and secured to said nozzle pipe so that said straight flange portion is substantially parallel with the axis of said nozzle pipe, a cup of less diameter than the inside diameter of said receptacle fixed to said nozzle pipe adjacent to and inside of said conical head with its open end facing the same end of said nozzle pipe as that of said conical head, and a flexible bag fixed to and in part enclosing said cup, and projecting beyond one end of said nozzle pipe, both said receptacle and the straight flange of said conical head being threaded, whereby the said conical head, nozzle pipe, cup and flexible bag may be detachably secured as a unit to said receptacle.

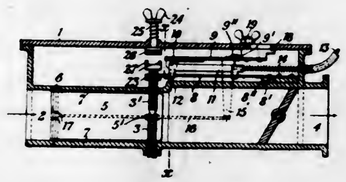
1,429,531. VACUUM CLEANER. EDWIN A. REEVES, Milford, Conn. Filed Apr. 15, 1920. Serial No. 374,113. 1 Claim. (Cl. 183—73.)

A vacuum cleaner composed of a cylindrical receptacle of substantially uniform diameter and threaded at one open end which is at the bottom of the receptacle when the same is in its operative position; a dust bag also having one open end; a conical collar projected into and held by friction within the open end of said dust bag which is also held by friction inside of said receptacle by reason of said conical collar, the larger end of which is adjacent to the threaded portion of said receptacle; a head secured to the threaded portion of said receptacle; and a nozzle tube secured to said head so that a portion thereof projects through said conical collar into said dust bag and another portion thereof projects outside of said head, said head and nozzle tube forming a closure for the open end of said receptacle.



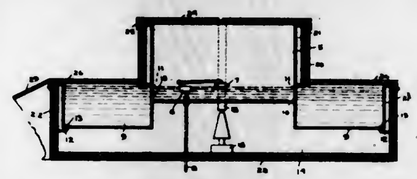
1,429,532. VACUUM CLEANER. EDWIN A. REEVES, Milford, Conn. Filed Apr. 15, 1920. Serial No. 374,114. 1 Claim. (Cl. 183—66.)

A vacuum cleaner, composed of a cylindrical receptacle having an internally projecting flange at one end with an opening therethrough and exteriorly threaded adjacent to said flange, a nozzle tube, a head having a conical portion secured to said nozzle tube, a cylindrical portion, with an open end interiorly threaded, for engagement with the threads upon said receptacle, a flange portion between said conical portion and said cylindrical portion and at substantially a right angle thereto, a cylindrical sleeve



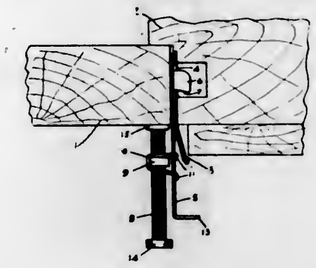
the body of which projects into said receptacle through the aforesaid opening of the flange of the cylindrical receptacle, and having an outwardly projecting flange at one end that is held between the receptacle flange and the flange on said conical head when the parts are all assembled and entirely enclosed and substantially air tight without the use of packing, and a cloth dust bag stretched over said sleeve and thereby held in frictional engagement therewith.

1,429,533. VACUUM CLEANER. EDWIN A. REEVES, Milford, Conn. Filed Apr. 15, 1920. Serial No. 374,115. 3 Claims. (Cl. 183—73.)



1. The combination in a vacuum cleaner, of a dust bag, a receptacle having threads or corrugations at one end thereof; a head having a cylindrical portion and an inner band concentric therewith, both said cylindrical portion and inner band being threaded, the latter being threaded within the open end of said dust bag, and threadedly engaging the thread upon the inside of said inner band.

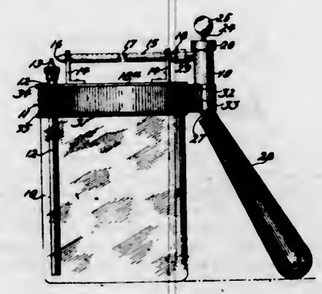
1,429,534. CARBURETOR. HAROLD GEORGE RENNER, Gisborne, New Zealand. Filed Feb. 4, 1919. Serial No. 274,889. 2 Claims. (Cl. 261—50.)



1. In a carburetor of the character described, a casing having a choke tube therein comprising a pair of suction operated walls, a jet tube projecting into the choke tube and on which said walls are adapted to converge, a needle valve controlling the outlet of said jet tube, suction operated flaps in the choke tube adapted to converge, means for communicating the movements of said walls to the needle valve, said means including a pivoted control arm mechanically connected to the walls, a needle valve arm carrying the needle valve and arranged substantially parallel to the control arm, an adjustable member movable between said arms, and yieldable means acting on the needle valve arm to prevent lost motion thereof.

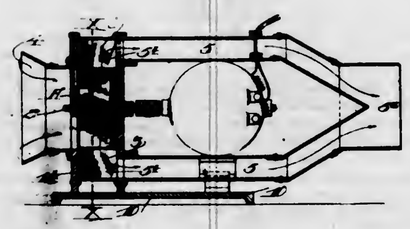
1,429,535. STOCK WATERER. JAMES E. W. RICHARDS and CHARLES E. RICHARDS, Arapahoe, Nebr. Filed June 25, 1920. Serial No. 391,692. 1 Claim. (Cl. 119—73.)

A stock waterer comprising a reservoir and a fount having a common wall, the bottom of the reservoir being located at a higher level than the bottom of the fount, a water supply pipe entering the reservoir, a float-actuated valve controlling the passage of water from the pipe to the reservoir, and means for heating the water in the reservoir, said wall having an elongated slot disposed close to the bottom of the reservoir and below the valve, said wall having spaced openings disposed above the slot and of small area compared with the area of the slot, the slot affording a relatively free circulation of water between the fount and the reservoir when the water is in use and decreasing a surface circulation tending to carry excessively heated water in the reservoir through the openings and affording a slow surface circulation between the fount and the reservoir when the water is not in use.



1,429,536. DOOR FASTENER. FRANK T. ROBINSON, Louisville, Ky., assignor of one-half to Casca T. Howland, Petersburg, Va. Filed Mar. 15, 1921. Serial No. 452,539. 5 Claims. (Cl. 292—291.)

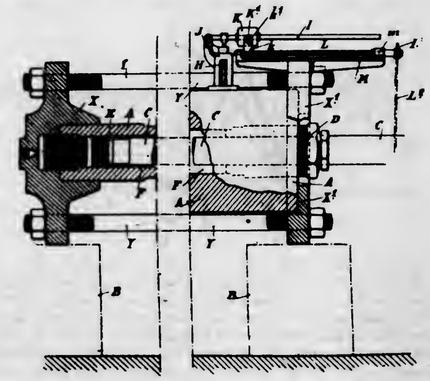
1. In a door fastener the combination with a door, a casing therefor, and a latch plate having a slot therein, of a plate having a plurality of transversely extending slots therethrough, a tongue on said plate adapted to enter the slot in the latch plate, a locking bolt, a bracket carried by the locking bolt having lateral extensions adapted to engage the slots in the second plate, and a nut between the arms of said bracket for causing said bolt to travel lengthwise when rotated.



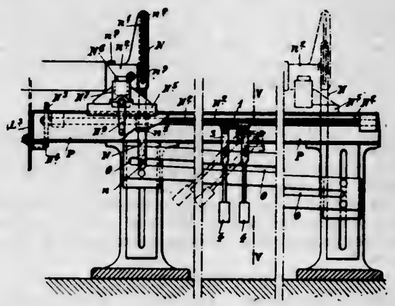
1,429,537. AIR BRUSH. WERNER F. ROTHERMUND, Brooklyn, N. Y. Filed Mar. 15, 1921. Serial No. 452,544. 12 Claims. (Cl. 91—45.)

1. In an air brush the combination with a container, of a removable cover therefor, a liquid outlet tube and an air tube mounted on said cover, a handle for said container, means associated with the handle adapted to frictionally engage the cover, and a valve at the upper end

of said handle, said valve being adapted to have connection with the air tube when said holding means is engaging the cover.

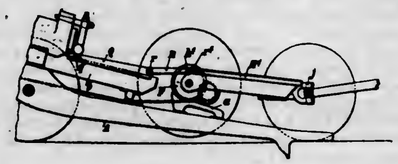


1,429,538. TRANSMITTING FAN. MARK P. SCHETZEL, Oakland, Calif. Filed Oct. 21, 1920. Serial No. 418,366. 2 Claims. (Cl. 253—195.)

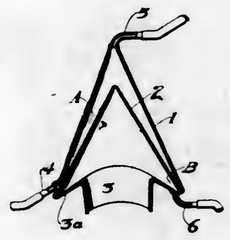


1. A device of the character described comprising a cylindrical shaped casing, an inner cylindrical casing concentric therewith and interspaced to form an annular discharge passage, a head member forming a closure for the forward end of said inner casing, a cone-shaped cover forming a cover for the opposite end, a converging casing forming an extension of the first named casing and surrounding the cone to produce a contracted annular discharge passage, a shaft journalled in the front head of the inner casing, a fan secured on said shaft and rotated thereby, a drum surrounding the fan, said drum having a diameter substantially the same as the first named exterior casing and being secured thereto and forming an extension thereof, an inlet opening in said drum in alignment with the fan, and a series of stationary radially disposed air directing blades secured within the drum to prevent whirling of the air discharging from the fan.

1,429,539. APPARATUS FOR PRODUCING HOOPING EFFECTS IN METAL TUBES. EUGÈNE SCHNEIDER, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint-Stock Company of France. Filed Oct. 29, 1920. Serial No. 420,523. 25 Claims. (Cl. 29—1.11.)



1. In an apparatus of the character described, a movable mandrel projecting through one end of the tube being treated and having a head at its opposite end, a duct formed in said tube near the end through which the mandrel projects, a loaded valve in said duct, guide means supported independently of said tube, mechanism engaging said guide means and actuated by the mandrel



on movement thereof, and means controlled by said mechanism for automatically regulating the load of said valve.

1,429,540. TWO-AXLED VEHICLE FOR TRANSPORTING HEAVY GUN BARRELS, AND IN THE ADAPTATION OF GUNS FOR THE USE OF SUCH VEHICLE. EUGÈNE SCHNEIDER, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint-Stock Company of France. Filed Jan. 4, 1922. Serial No. 526,986. 14 Claims. (Cl. 89—40.)

12. A gun-transport vehicle comprising a gun-receiving frame, a rear carriage on which said frame is mounted, a front carriage, and connections between said front and rear carriage providing for independent elevation of one of said carriages and sliding movement of the same transversely of the other carriage, said connections including a sleeve rotatably and slidably mounted on the front carriage axle, and means for moving said sleeve longitudinally of the said axle.

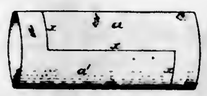
1,429,541. WATER STILL. LOUIS J. B. SCHNUG, San Diego, Calif. Filed Apr. 30, 1920. Serial No. 377,803. 2 Claims. (Cl. 203—5.)

2. A water still, including a conventional tea kettle, a conical-shaped casing, a flange member secured to the outer edge of said casing and extending upwardly and inwardly forming an annular trough inside of said casing and provided with a downwardly extending tapering flange portion fitting snugly the filling opening of said tea kettle, means communicating with said trough portion for conducting liquid therefrom and another larger conical-shaped casing secured to the outer lower side of said conical-shaped casing forming a cold water receptacle with the outer surface of said conical-shaped casing and provided with an inlet opening in the apex of said larger conical-shaped casing.

1,429,542. PROCESS OF DRYING JAPANESE LACQUER. YUJI SHIBATA, Tokyo Fu, and YUSHICHI NISHIZAWA, Tokyo, Japan. Filed Mar. 29, 1920. Serial No. 369,792. 3 Claims. (Cl. 134—26.)

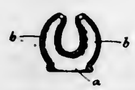
3. An article of manufacture, comprising a Japanese lacquer preparation having therein a complex salt of metals and ammonium in the proportion of five to thirty per cent.

1,429,543. RAIL JOINT. DAN SMITH, Esto, La. Filed Nov. 21, 1921. Serial No. 516,749. 2 Claims. (Cl. 238—237.)



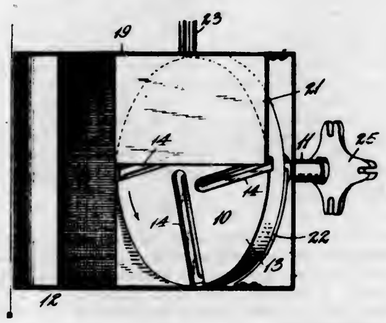
1. In a device of the class described, a pair of rails having reduced overlapped ends provided in their inner surfaces with cooperating vertical undercut grooves disposed opposite to each other and extended upwardly through the upper surface of the overlapped ends of the rails; a retainer shaped to fit in the grooves and received therein, the retainer being engaged directly with the overlapped ends of the rails to hold them against lateral separation; and a securing device connecting the ends of the rails and engaging the retainer to hold the same against vertical movement.

1,429,544. DIFFERENTIAL FLOTATION PROCESS. BLAMEY STEVENS, Triunfo, Baja California, Mexico. Filed Mar. 8, 1920. Serial No. 364,033. 5 Claims. (Cl. 83—85.)



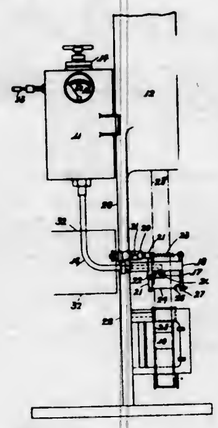
1. In a flotation process, preparing a flotation pulp, adding to that pulp a selective re-agent which is a solvent for flotatable metals in the ore being treated and which is saturated with one of such metals, then floating that metal of saturation.

1,429,545. METHOD OF PRODUCING SUSPENSORY BANDAGES. ALFRED PARKER STOKES, St. Heliers, Jersey, Channel Islands. Filed July 14, 1920. Serial No. 396,255. 3 Claims. (Cl. 128—160.)



1. The method of producing suspensory bandages, which consists in dividing a knitted tubular body into two like parts consisting each of a relatively longer flat body portion and a relatively shorter tubular portion at each end, then severing the tubular portions substantially symmetrically relatively to the body portion to form strips projecting laterally thereof and then stretching the strips.

1,429,546. INHALING DEVICE FOR USE IN THE TREATMENT OF ASTHMATIC, CATARRHAL, AND OTHER AFFECTIONS. ALFRED PARKER STOKES, St. Heliers, Jersey, Channel Islands, assignor to Richard Palmer, New York, N. Y. Filed Aug. 10, 1921. Serial No. 491,280½. 2 Claims. (Cl. 128—206.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. An inhaling device comprising a yieldable body portion of substantially ring like structure, said body portion being hollow and interrupted at one side to provide a pair of horns closely spaced apart at their outer ends to yieldably receive the nasal membrane therebetween for supporting the device in the nose, said ring like structure being open at its outer side remote from said interruption to receive a medicament carrying vehicle and admit the distribution of the vehicle toward and into the opposite horns and permit the passage of air independently through the horns.

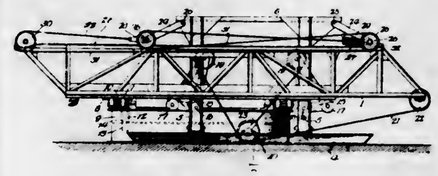
1,429,547. FEEDING, SORTING, AND COLLECTING MECHANISM. ALEXANDER F. SWEEDEN, Long Island City, N. Y. Filed Apr. 26, 1921. Serial No. 464,756. 14 Claims. (Cl. 83—92.)

1. A hopper, an inclined disk, co-acting with said hopper and provided with means for effecting a collection of articles from the hopper, and a peripheral discharge of the collected articles from the disk and means for revolving said disk.

1,429,548. FIRE-EXTINGUISHING APPARATUS FOR CINEMATOGRAPHS. WILLIE TAYLOR, Farsley, near Leeds, England. Filed Sept. 28, 1920. Serial No. 413,394. 4 Claims. (Cl. 169—2.)

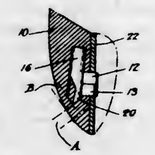
1. In fire-extinguishing apparatus for cinematographs, the combination of a reservoir for fire-extinguishing fluid, a fluid outlet pipe connected thereto, said outlet pipe having an orifice, a valve normally closing said orifice, means for supporting said valve, a spring tending to move said valve clear of said orifice, and an inflammable connection for retaining said valve closed over said orifice against the action of said spring, said orifice and inflammable connection being disposed immediately above the film gate of the cinematograph.

1,429,549. SAW. ERICK TJENALL, Omaha, Nebr. Filed May 21, 1920. Serial No. 383,165. 1 Claim. (Cl. 145—113.)



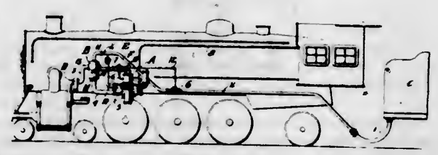
The combination with the rear end of a saw blade disposed within a kerf of a handle, of a reinforcing plate for said blade and handle, said plate comprising a member bent to form parallel portions rigidly secured to the opposite sides of the sawblade and having a transverse portion engaging the rear edge of the blade, said parallel portions merging into outwardly and rearwardly extending members engaging the forward edges of the saw handle to each side of the kerf and means for securely holding the reinforcing plate in the kerf of the handle.

1,429,550. PROCESS OF ORE CONCENTRATION. LOUIS FENN VOGT, Washington, Pa., assignor to Standard Chemical Company, Pittsburgh, Pa. Filed Jan. 15, 1920. Serial No. 351,632. 8 Claims. (Cl. 83—84.)



1. The process of concentrating ore of the carnotite type containing radium, uranium and vanadium, consisting in destroying the cementing function of the mineral of the ore, crumbling the ore and classifying the resultant product to recover the value-bearing constituents separated from the gangue.

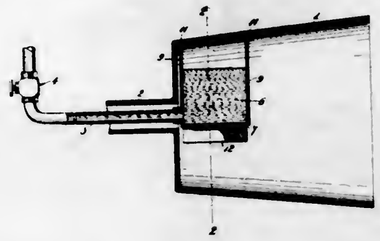
1,429,551. WALKING-MOTION PROPELLING APPARATUS. VINCENT G. ANDERSON, Kenosha, Wis., assignor to Frederick C. Austin, Chicago, Ill. Filed Apr. 22, 1918. Serial No. 229,946. 16 Claims. (Cl. 180—8.)



1. A walking motion propelling apparatus comprising a main frame, an auxiliary frame, means to lift the main frame and shift it forward on the auxiliary frame, and instrumentalities separate and distinct from said means and operating between the top of the main frame and the top of the auxiliary frame to lift the auxiliary frame and shift it forward.

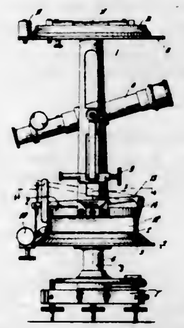
1,429,552. ARTIFICIAL-TOOTH ANCHORAGE. JESSE ARKIN, New York, N. Y. Filed Oct. 29, 1921. Serial No. 511,293. 8 Claims. (Cl. 32—9.)

1. In an artificial tooth, the combination with a flat backed ceramic tooth facing, of a coupling member embedded therein, said coupling member being initially a thin ductile high fusing metal plate, rectangular in shape and having offset wings projecting at a lateral angle from opposite sides of said rectangle, and a third side having a pair of projections forming spaced angular elements, said metal plate being later formed into a hollow cylindrical shank having a V-shaped lower end and a pair of wings projecting outwardly one above the other in vertical alinement with said shank.



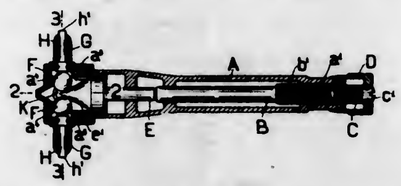
1,429,553. LOCOMOTIVE FEED-WATER-HEATER SYSTEM. EARL A. AVERILL, Mount Vernon, N. Y., assignor to Locomotive Feed Water Heater Company, a Corporation of Delaware. Filed Nov. 17, 1919. Serial No. 338,636. 5 Claims. (Cl. 103—79.)

1. A locomotive feed water heating system comprising in combination a supply receptacle, a feed water heater, located at a point above the average low level of the water in the supply receptacle, steam actuated means for elevating the water from the supply receptacle to the heater, a boiler feed pump for pumping the water from



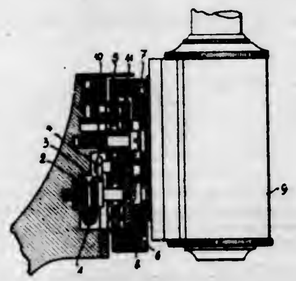
the heater into the boiler, and means under the influence of the water in the heater for controlling the supply of steam to the water elevating means.

1,429,554. ROTARY OIL BURNER. ARTHUR H. BALLARD, San Francisco, Calif., assignor to Ballard Oil Burning Equipment Company, Boston, Mass., a Corporation of Massachusetts. Filed Dec. 26, 1918. Serial No. 268,375. 6 Claims. (Cl. 158—77.)



1. In a burner of the type specified, the combination with a rotary atomizing cup, of a stationary delivery pipe through which oil is introduced into the cup, a cut-off in said pipe, a stationary upturned receptacle within the cup with which the delivery pipe connects and into which the oil is initially fed, said receptacle being arranged whereby it will maintain a head of oil within it when the cut-off is closed and the delivery pipe beyond said cut-off is in a position where oil therein will gravitate therefrom, said receptacle presenting also an edge over which the oil will pass into the cup from the head of oil maintained within the receptacle during the feeding of the oil and rotation of the cup.

1,429,555. THEODOLITE AND SIMILAR ANGLE-MEASURING INSTRUMENT. IGNACIO VIRIATO BAPTISTA, Rio de Janeiro, Brazil. Filed Feb. 4, 1922. Serial No. 534,076. 2 Claims. (Cl. 33—46.)

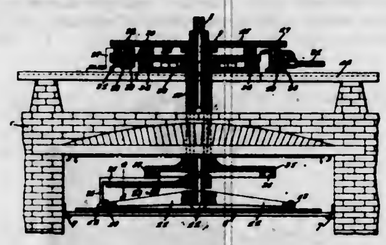


1. A theodolite or similar instrument, comprising means for supporting on and removably securing to that part of the instrument, which is kept stationary when angular measurements are being made, a cardboard disk having its center coinciding with the axis of the instrument; and recording means, manually operated, mounted on that part of the instrument which revolves on the stationary part, embodying a member adapted to print on the cardboard disk a straight line following a diameter lying in the vertical plane containing the optical axis of the instrument.

1,429,556. INSIDE GAUGE. MAX BARTHOLDY, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Dec. 29, 1921. Serial No. 525,678. 4 Claims. (Cl. 33—178.)

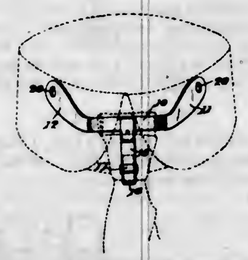
1. A gauge of the class described comprising a body, a pair of measuring pins supported by said body, a pair of relatively shorter supporting pins carried by said body and means adapted to displace said pins simultaneously during the measuring operation.

1,429,557. MICROSCOPE. AUGUST BAUER, Wetzlar, Germany. Filed July 24, 1922. Serial No. 577,104. 5 Claims. (Cl. 88—39.)



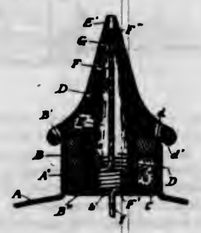
1. A microscope comprising a support having a guide member carried thereby, a microscopic tube adjustable with respect to said support and having a sliding member cooperating with said guide, freely movable rolling members disposed between the guide and the sliding member and a retaining member also disposed between the guide and the sliding member for retaining the rolling members in spaced relation.

1,429,558. FLOATING DECOY. FRED BAUER, Red Wing, Minn. Filed Sept. 30, 1921. Serial No. 504,441. 3 Claims. (Cl. 43—3.)



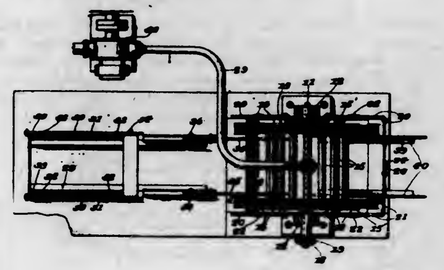
3. A device of the character specified comprising a float representing a duck, a spring roller mounted in the body portion of said float, an anchor cord winding upon said roller, an anchor in the form of a loop adapted to fit over a portion of the float when not in use attached to the free end of said cord and a wire catch fastened to the float body to retain the anchor cord at the proper length against the tension of the spring roller.

1,429,559. OVEN-LOADING DEVICE. ADEN BECKETT, Long Island City, N. Y. Filed Apr. 25, 1921. Serial No. 464,131. 2 Claims. (Cl. 198—20.)



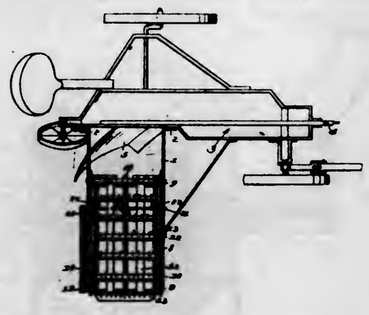
1. In an oven, a loading device including a rotatable shelf disposed within the oven, an arm rotatable above the shelf, said arm having a groove, a bar positioned in the groove, an eccentric disposed above the bar and having connection therewith, means for rotating the arm to cause the bar to move within the groove and force material from the shelf, and means for operating the arm and shelf in opposite directions.

1,429,560. TIE HOLDER. ISAAC BERNSTEIN, San Francisco, Calif. Filed Nov. 28, 1921. Serial No. 518,237. 2 Claims. (Cl. 24—57.)



1. A tie form and support comprising a back plate having oppositely extending wings to be disposed between the front and rear folds of a turnover collar, a downwardly extending prong secured centrally of said plate and around which the knot of a tie may be disposed, a yieldable member secured to the end of said prong and fitted with a ring to be disposed over a collar button, and means for adjusting the length of said yieldable member.

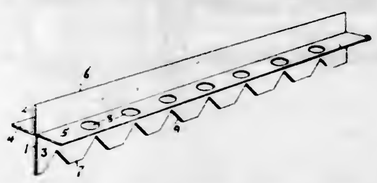
1,429,561. DISPENSING DEVICE FOR CONTAINERS. EDGAR H. BERRY, New York, N. Y. Filed May 29, 1917. Serial No. 171,699. 14 Claims. (Cl. 221—22.)



1. A dispensing device for containers, comprising a nozzle, a flanged nozzle supporting cup adapted to engage the container structure, a projecting lip on the nozzle, closed inward into rotatable engagement with the cup flange, elastic packing means, interposed between the nozzle and the cup, intercommunicating passages through the bottom of the cup and through the nozzle, and means for plugging the discharge passage, substantially as, and for the purpose set forth.

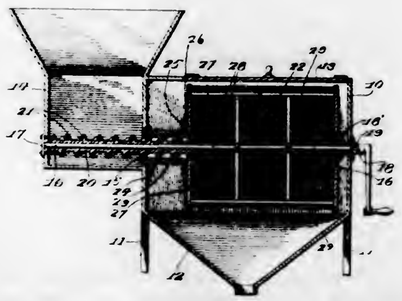
1,429,562. CORE FOR CASTING IRON PIPES AND MEANS FOR PRODUCING THE SAME. GRANT G. BEARY, Bessemer, Ala. Filed Apr. 13, 1921. Serial No. 461,077. 14 Claims. (Cl. 22—12.)

1. A machine for producing cores for use in casting pipes, having a rotary core barrel carrying member and a spraying member for applying fluid scale forming material to the core barrels, said carrying member being continuously movable to progressively and uniformly apply the material to the exterior surfaces of the core barrels.



1,429,563. QUACK-GRASS DESTROYER. HENRY BRUNING, Freeport, Minn. Filed Aug. 21, 1920. Serial No. 405,159. 2 Claims. (Cl. 55—51.)

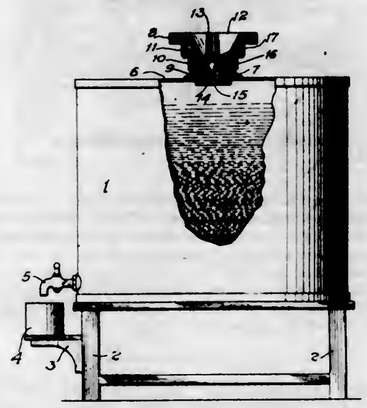
1. A grass destroying machine, comprising the combination with a wheeled plow, having a plow share and a supporting frame therefor, of a horizontally disposed main frame having one end thereof connected to the frame of the wheeled plow and arranged at substantially right angles to one side thereof, said main frame consisting of a pair of parallel bars, a cross bar arranged between the opposite sides of the outer portions of said parallel bars, a drive wheel supported within said main frame and rotatably supported by said cross bar, an inclined frame supported between the sides of said main frame and extending upwardly therefrom, the outer end of said inclined frame being arranged at a point beyond the adjacent end of the main frame, an endless conveying means carried by said inclined frame, the lower end of the conveying means being arranged in proximity to the earth-turning side of the plow share whereby to



receive the earth turned thereby in said lower end, said conveying means comprising a plurality of belts, a plurality of teeth carrying slats connected to and arranged transversely of said belts, pulleys arranged in said inclined frame over which said belts pass, means for operatively connecting one of said pulleys with said drive wheel whereby upon the travel of said drive wheel over the ground said endless conveying means will be set in operation, a jigging mean arranged in said inclined frame, said jigging means consisting of a crank shaft adapted to engage the belts of said endless conveying means and means for operatively connecting said crank shaft to said drive wheel, substantially as and for the purpose specified.

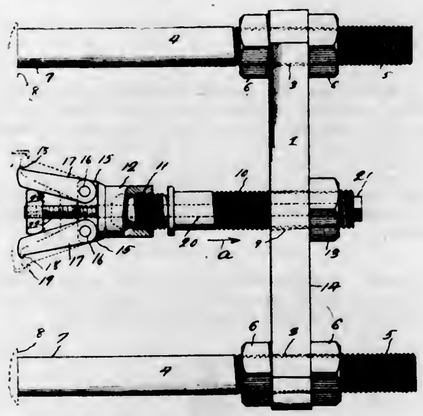
1,429,564. JOINT STRIP FOR CONCRETE FLOORS. FRANK J. BORKENSTEIN, Fort Wayne, Ind., assignor to Art Mosaic and Tile Company, Toledo, Ohio, a Copartnership composed of Michael C. Fioritto, Richard E. Wright, and Frank J. Borkenstein. Filed June 25, 1921. Serial No. 480,346. 2 Claims. (Cl. 94—18.)

1. A joint strip for concrete floors formed with a central plane, there being along one edge thereof a contiguous L-shaped extension and at the opposite edge thereof a similar contiguous L-shaped extension, said extensions having corresponding wings that project outwardly from the central plane, there being a series of apertures in each wing and in the lower edge of the strip.



1,429,565. FLOUR SIFTER. JOHNSON BREWER, Rice, Tex. Filed Jan. 24, 1922. Serial No. 531,470. 3 Claims. (Cl. 83—39.)

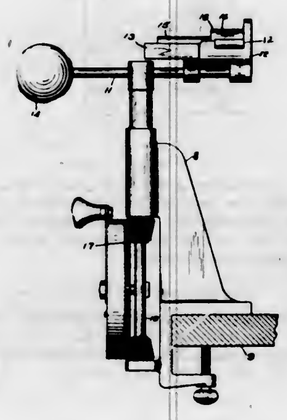
1. A flour sifter including a box, a hopper on one end of the box and having communication within the box, a stationary shaft extending longitudinally through the box, drum and hopper, a means for rotating the drum, and a feeding means mounted on the shaft and connected with drum for feeding material from the hopper to the drum, as the drum is rotated.



1,429,566. VALVE OR PLUG FOR OIL CONTAINERS. BENNER H. CARLILE, Independence, Kans. Filed May 18, 1921. Serial No. 470,708. 1 Claim. (Cl. 220—44.)

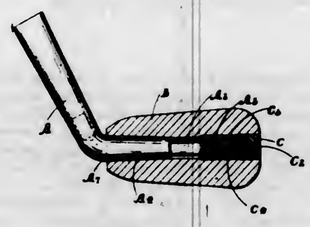
A plug or valve for oil containers, comprising a structure provided with a plurality of different diameters radially arranged above each other adapted to be fitted to openings of varying diameters formed in the top of the container, said structure having a seat formed at its inner lower end portion with an opening therethrough, a spring resting on the upper surface of said seat, an inner

vertical wall formed within said structure screw-threaded at its upper end, a tube fixedly secured to said inner wall provided with screw-threads at each end thereof, and a ball valve resting in contact with said spring and adapted to be seated in contact with the lower end of said tube.



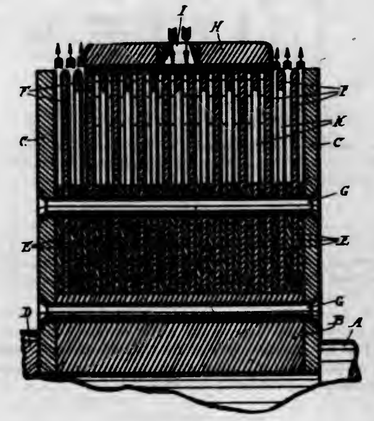
1,429,567. BEARING-CUP PULLER. FRED CARLISLE, Tulsa, Okla. Filed Mar. 22, 1921. Serial No. 454,385. 1 Claim. (Cl. 29—84.)

A bearing puller comprising a bar, adjustable supporting shafts carried by said bar adjacent its ends, a threaded shaft extending through the bar substantially centrally thereof and provided with a nut engaging the outer face of the bar, an adjustable head carried by the inner end of the threaded shaft, a plurality of dogs pivoted to adjustable head and extending outwardly and adapted to be forced into engagement with a bearing, a bolt extending through the threaded shaft and having its inner end disposed between the plurality of pivoted dogs, an engaging



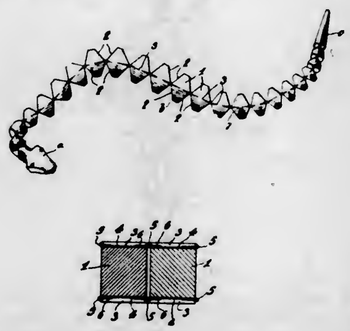
block disposed on the threaded end of the bolt and engaging said dogs, the head of the threaded bolt engaging the outer end of the threaded shaft and forming means whereby the threaded bolt may be rotated for moving the dog engaging block in the direction of the threaded shaft for forcing the free ends of the dogs outwardly.

1,429,568. METHOD OF AND APPARATUS FOR METAL CASTING. ROLLAND T. CASE, La Crosse, Wis. Filed Mar. 3, 1921. Serial No. 449,311. 2 Claims. (Cl. 22—97.)



1. In combination with a crucible having a conical discharge spout, of a mold therefor, consisting of a mold member having a molding recess and a conical end recess leading thereto, the portion of the mold forming the conical recess being of a shape to closely fit over the conical end portion of the crucible to receive molten metal therefrom directly into the mold recess.

1,429,569. GOLF CLUB. ALEXANDER CRAIG, Coventry, England. Filed Apr. 1, 1922. Serial No. 548,822. 4 Claims. (Cl. 46—4.)

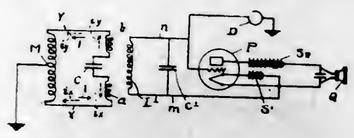


1. In a golf club, the combination of a shank, a socket integral therewith for receiving the shaft, a plain taper on said shank, a readily removable head, a plain taper bore to said head engaging said taper on said shank, a locking device carried by the outer end of said shank and adapted to act upon said head and hold said tapers in engagement at any angle, substantially as set forth.

1,429,570. TURBINE. CHARLES W. DAKE, Chicago, Ill., assignor to The Pyle National Company, Chicago, Ill., a Corporation of New Jersey. Filed Mar. 30, 1921. Serial No. 456,912. 11 Claims. (Cl. 253—50.)

1. In a turbine, a plurality of parallel annular motive fluid chambers, connections between them, and means for conducting motive fluid through said chambers successively, there being a plurality of connections between adjacent chambers.

1,429,571. TOY. WILLIAM THEODORE DAVIS, Mineral Wells, Tex. Filed Nov. 3, 1921. Serial No. 512,613. 3 Claims. (Cl. 46—40.)

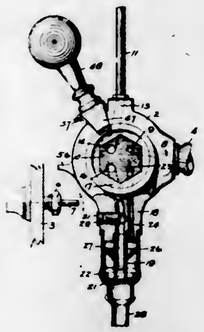


1. A toy comprising a plurality of sections adapted to be hingedly connected together, each section having oppositely disposed parallel slots and hinge members adapted to lie in said slots, the hinge members of one section being pivotally secured to those of the next adjacent, intermediate said sections.

1,429,572. CIRCUIT RECEIVER. HENRI JEAN JOSEPH MARIE DE REGNAULD DE BELLESCIZE, Toulon, France. Filed Aug. 14, 1918. Serial No. 249,910. 7 Claims. (Cl. 250—20.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In the construction of radiotelegraphic receivers comprising a self inductor and a capacity forming an oscillat-

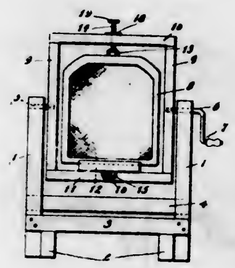
ing circuit in connection with an indicator circuit, a method consisting of balancing the external electrostatic



actions on all of the elements of the receiving apparatus, so that these actions may be distributed symmetrically with respect to said capacity.

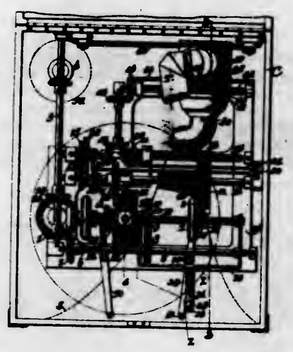
1,429,573. SHORTENING AGENT. CARLETON ELLIS, Montclair, N. J. Filed Jan. 23, 1919, Serial No. 272,629. Renewed Feb. 15, 1922. Serial No. 536,819. 3 Claims. (Cl. 99—10.)

1. A shortening agent containing hard hydrogenated oil and a pulverulent to granular water-soluble substance employed in the manufacture of food products, such hard oil being in the form of a shell upon the surface of the particles of such water-soluble substance.



1,429,574. MIXING FAUCET. WILLIAM A. ENGLAND, San Francisco, and JOSEPH L. MATTINGLY, Berkeley, Calif., assignors to Eng-Skell Company, Inc., San Francisco, Calif., a Corporation of California. Filed Feb. 15, 1921. Serial No. 445,061. 9 Claims. (Cl. 225—26.)

1. A mixing faucet comprising a head formed with groups of related but unconnected passages, unitary means for connecting the related passages in each group, means for supplying one of the fluids to be mixed to one end of each group of passages, and means at the other ends of said passages for mixing said fluids and discharging the mixture.

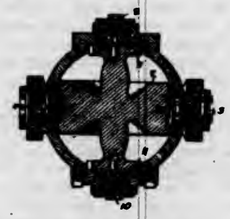


1,429,575. RADIATOR HOLDER. JESSE L. FISCUS, Audubon, Iowa, assignor of one-half to Albert Idso, Audubon, Iowa. Filed June 17, 1920. Serial No. 389,698. 1 Claim. (Cl. 29—89.)

A radiator holder comprising a base including vertical arms, a frame having side bars and upper and lower bars, horizontal pivot shafts extending from the side bars of said frame and journaled in the arms of said base, a bracket positioned in the lower portion of the frame for engaging the lower end of a radiator set vertically in the frame, the bracket being elongated and having side flanges for engaging the forward and rear faces of a radiator, a pin extending from the bottom of the bracket and fitting into a socket formed in the lower bar of the frame to rotatably mount the bracket for turning movement at right

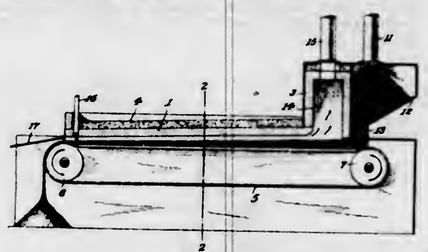
angles to the movement of the frame, and a clamp including a threaded stem passing through the upper bar of the frame and a rotatable head swiveled upon the lower end of the stem for engaging the upper end of the radiator about the filling neck thereof.

1,429,576. SPEED-REGULATING MEANS. THEODORE FLETCHER, San Antonio, Tex., assignor of one-half to J. M. Nix, Bexar County, Tex. Filed June 20, 1918. Serial No. 240,995. 15 Claims. (Cl. 74—26.)



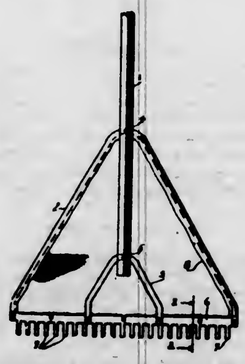
1. In a phonograph, a turn table, a friction wheel in driving contact with the turn table, a friction wheel shaft, a shaft supporting yoke, a driven shaft providing a pivotal mounting for the yoke, driving means between said shaft and the friction wheel shaft, a resilient member carried by the yoke, a notched handle on said resilient member adapted to enable the rocking of the yoke on its pivotal mounting to secure the engagement or disengagement of the friction wheel with the turn table, and fixed engaging means cooperating with the notches of said handle.

1,429,577. GYROSCOPE. JAMES A. FLINT, Denver, Colo., assignor to the Government of the United States. Filed May 10, 1919. Serial No. 296,124. 3 Claims. (Cl. 74—78.)



1. A bearing for fluid sustained gyroscopes comprising in combination, a threaded bushing provided with a port,

a bearing cup threaded within said bushing and provided with an annular recess communicating with said port, said

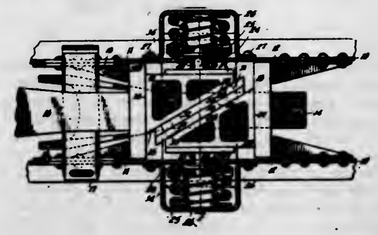


bearing cup also being provided with a bearing seat and with fluid conducting means connecting said annular recess and said seat.

1,429,578. GAS PRODUCER. ALBERT L. GALUSHA, Sharon, Mass. Filed May 28, 1920. Serial No. 384,860. 7 Claims. (Cl. 48—76.)

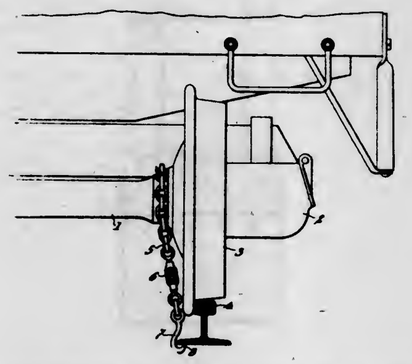
1. In a gas producer, the combination with an elongated combustion chamber of limited sectional capacity, of an imperforate traveling fuel support traversing the same from end to end, means for depositing fuel thereon at the rear end in regulable amount, and means for conveying off the gases which are driven off from the fuel bed by the heat developed by the combustion of a portion of the fuel at the forward or delivery end.

1,429,579. LAWN BROOM. WILLIAM P. GAUGHAN, Stockton, Calif. Filed Dec. 29, 1921. Serial No. 525,652. 1 Claim. (Cl. 55—10.)



A lawn broom comprising a handle, supports mounted thereon and extending both sides thereof, a bar connecting said supports and sheet material mounted on said supports and bar in parallel relation to said handle and substantially filling the spaces between said supports and bar and teeth extending from said bar in substantially the same plane as said sheet material.

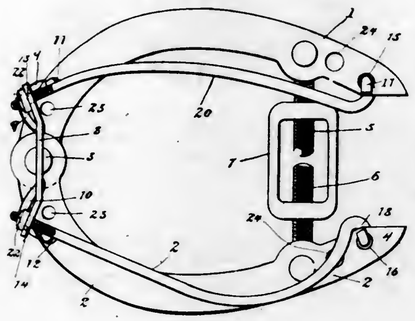
1,429,580. SHAFT COUPLING. PAUL NEAL GEIGER, Massillon, Ohio. Filed Oct. 25, 1918. Serial No. 259,705. 15 Claims. (Cl. 64—96.)



1. A rotatable shaft coupling comprising a helical body and integral axial ends having a cross section like the shaft, the helical body tapering from a substantially square section at each end to an increased radial width and a decreased thickness intermediate the ends.

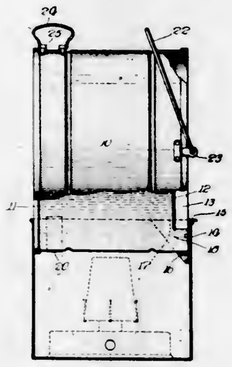
1,429,581. FRICTION SHOCK-ABSORBING MECHANISM. WILLIAM A. GEIGER, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed Sept. 8, 1921. Serial No. 499,142. 8 Claims. (Cl. 213—64.)

1. In a friction shock absorbing mechanism, the combination with oppositely parallel moving friction members, of supplemental friction plates interposed between said members, the plate adjacent one member being actuated by the other member.



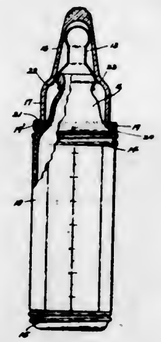
1,429,582. CAR-AXLE ANCHOR. JESSE T. GENTRY, Lebanon Junction, Ky. Filed June 22, 1921. Serial No. 479,601. 3 Claims. (Cl. 188—45.)

1. An anchoring device for use with a car axle comprising a flexible member, means for adjusting the length



of the member and means for connecting the flexible member to a rail flange at the inner side thereof so that the flexible member extends in straight lines from the car axle to the points where attached to the rail.

1,429,583. HORSESHOE. JOHN BUCHANAN GILLIES, Thornhill, Ontario, Canada. Filed Oct. 3, 1921. Serial No. 505,017. 1 Claim. (Cl. 168—22.)

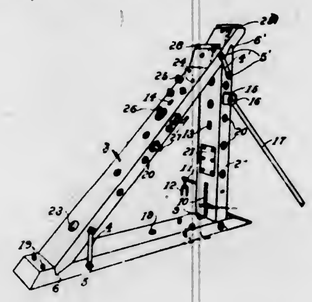


A horseshoe comprising two segmental plates pivotally connected together at the toe for their contraction and expansion, adjusting means for the accurate spacing of the sole plates consisting of a turnbuckle and bolts connected with the sole plates, and means for clamping the shoe to the hoof consisting of a toe-band shaped to engage the toe of the hoof, links pivotally connecting said band with the sole plates, and hoof straps pivotally connected at one end with the sole plates near the heel of the shoe and adjustably connected at the other end with the toe band.

1,429,584. WATERING APPLIANCE. RAYMOND B. GLIDDEN, Kewanee, Ill., assignor to Kewanee Implement Company, Kewanee, Ill., a Corporation of Illinois. Filed Apr. 19, 1919. Serial No. 291,303. 3 Claims. (Cl. 119—73.)

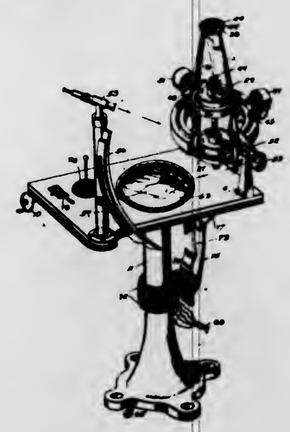
1. In a watering-appliance of the character described, the combination of a cylindrical water-supply tank having an apertured head disposed inwardly away from the corresponding circular edge of the tank, a wall across said edge in register with the aperture of the head forming a trough with said head and that portion of the tank sidewall between them, said trough wall extending beyond said tank edge and constituting a supporting foot for the tank, brace ends of said wall being bent lengthwise the tank and secured to its outer face, the top edge of said wall having an outstanding flange or lip, a bail handle hinged to the trough end of the tank in parallel relation to the trough, a second handle secured to the other end of the tank disposed at right angles to the trough, a plurality of supporting legs at the end of the tank opposite the trough, and a housing adapted to contain a heating appliance and having a rectangular top opening, said tank being adapted to rest on said supporting foot and legs or be mounted on said housing with said trough wall and its brace ends accommodated in said housing, the flange of the wall overlying the corresponding edge of the housing, substantially as described.

1,429,585. NURSING BOTTLE. ROBERT J. HAGERTY, Philadelphia, Pa., assignor of one-half to Frank H. Hebron and one-half to Thomas C. Kelly, both of Philadelphia, Pa. Filed Dec. 23, 1921. Serial No. 524,352. 5 Claims. (Cl. 215—11.)



1. In an article of the character stated a bottle provided with an external screw-threaded portion that portion of the bottle above said screw-threaded portion being of smaller diameter and provided with a bead, a nipple engaged over said bead, a nipple closure having an imperforate dome fitted over said nipple in impinging relation with that part of the nipple engaging over said bead and a lock-ring engaging the screw-threaded portion of said bottle for clamping said nipple closure upon said bottle.

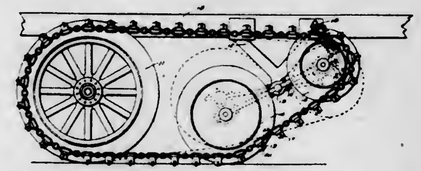
1,429,586. MOLDING MIXTURE. THOMAS HANNA, deceased, late of Columbus, Ohio, by John W. Bricker, administrator, Columbus, Ohio, and ABE M. HANNA, deceased, late of Columbus, Ohio, by Luella H. Hanna, executrix, Columbus, Ohio. Filed Oct. 2, 1920. Serial No. 414,348. 2 Claims. (Cl. 106—39.)



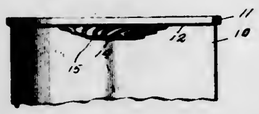
1. A process of making a molding mixture which consists in mixing a solution of animal glue with formaldehyde, and then mixing a filler into the first-mentioned mixture.

1,429,587. COLLAPSIBLE MECHANIC BENCH. HUGH H. HARRIS, Alexandria, Va. Filed Dec. 27, 1920. Serial No. 433,247. 12 Claims. (Cl. 81—41.)

1. A collapsible work bench comprising a frame composed of pivotally connected members, which defines a right triangle when in the operative position, one side of said triangle being the base member of the bench.



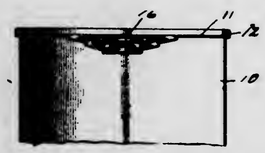
1,429,588. GYROSCOPIC APPARATUS. JOHN FILLMORE HAYFORD, Evanston, Ill., and LYMAN JAMES BRIGGS, Battle Creek, Mich., assignors to the Government of the United States. Filed Apr. 17, 1919. Serial No. 290,895. 16 Claims. (Cl. 33—73.)



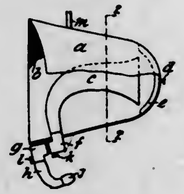
1. Gyroscopic apparatus comprising, in combination, a support subjected to disturbing movements and forces, a gyroscopic system supported by said support and maintaining a constant horizontal reference line despite said movements and forces, and means for indicating the relative positions of said support and said line.

1,429,589. TRACTION DEVICE FOR VEHICLES. EMIL HELM, Kitchener, Ontario, Canada. Filed Apr. 23, 1920. Serial No. 376,107. 3 Claims. (Cl. 305—8.)

1. The combination with a motor vehicle embodying the usual body frame, and driving wheels carried by the frame, of a substantially straight supporting arm mounted on each side of said frame and pivoted forwardly of the axle of the drive wheels, idler wheels mounted on opposite ends of said arms, an endless flexible traction element passing about each pair of said idler wheels and the corresponding drive wheel, said arms being normally angularly arranged whereby one idler wheel of each pair normally contacts the ground, and resilient means for maintaining said arms in normal position.



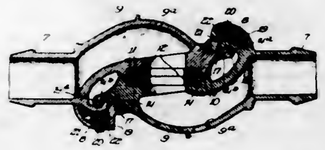
1,429,590. SIFTER TOP. HARRY W. JONES, New York, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed June 12, 1920. Serial No. 388,536. 6 Claims. (Cl. 221—61.)



1. A can wall having severed lines curving outwardly from about a predetermined portion of said wall said portion being capable of being pressed inwardly of the can to provide openings along said lines of severance.

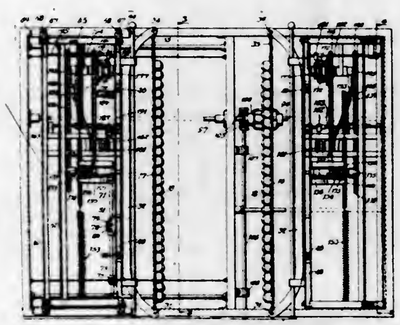
1,429,591. DISINTEGRATOR SIFTER TOP. HARRY W. JONES, New York, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed June 12, 1920. Serial No. 388,537. 4 Claims. (Cl. 221—61.)

1. A can wall having a part of expanded metal formation providing sifter openings.



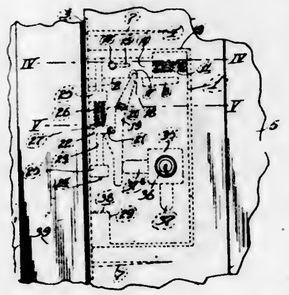
1,429,592. ACOUSTIC INSTRUMENT. CHARLES KAHN, London, England. Filed July 15, 1921. Serial No. 484,865. 2 Claims. (Cl. 181—25.)

1. An acoustic instrument consisting of a resonator casing, a tapering tube in the casing, an angle piece at



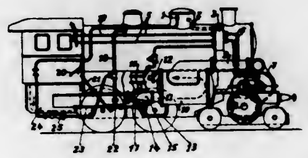
the end of the tapering tube, a second angle piece rotatably connected to the first and an ear tube rotatably connected to the second angle piece.

1,429,593. COUPLING FOR TRAIN-PIPE-CONNECTION HOSE. MICHAEL E. KEEHAN and JOSEPH J. GLASS, Chicago, Ill. Filed Jan. 14, 1921. Serial No. 437,212. 10 Claims. (Cl. 285—62.)



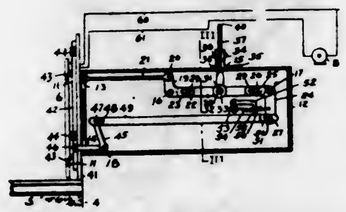
3. A train pipe coupling member formed with a lubricant chamber within the body portion thereof.

1,429,594. MASSAGE DEVICE. JOHN KERCHER, Chicago, Ill. Filed Aug. 21, 1916, Serial No. 116,026. Renewed Feb. 9, 1922. Serial No. 535,396. 22 Claims. (Cl. 128—58.)



1. In a device of the class described, a flexible apron, means at its ends for holding said apron under tension and giving it a horizontal movement substantially in the plane thereof, and a series of projections thereon adapted to be brought into contact with the body to be massaged.

1,429,595. BURGLAR ALARM. RUDOLPH KOEHLER, St. Louis, Mo. Filed Feb. 17, 1919. Serial No. 277,452. 2 Claims. (Cl. 116—15.)

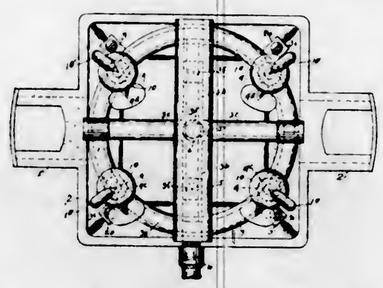


1. The combination of a door, a frame therefor and a burglar alarm embedded in said door, said alarm comprising a reciprocally mounted firing pin, a cartridge chamber in alinement with said pin, a trigger for releasing said pin, a releasing member operable with said trigger adapted to bear against said frame, thereby preventing said pin from movement, and means operable with said trigger for preventing said releasing member from actuating said trigger.

1,429,596. STEAM-DRIVEN LOCOMOTIVE. CONRAD KOHLER, Zurich, Switzerland. Filed July 14, 1921. Serial No. 484,650. 2 Claims. (Cl. 105—38.)

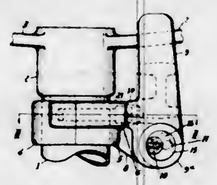
1. An arrangement for controlling the flow of the water of condensation of steam driven locomotives provided with a surface condensing plant, comprising a pump for water of condensation operatively connected to the surface condenser and to the steam boiler and adapted to deliver under normal working conditions the total quantity of the water of condensation from the surface condenser to the boiler, a changing over device interposed in the connection from said pump to the boiler, a water storage tank, an operative connection between said device and said tank, and means to operate said device so that said pump delivers the water of condensation at will either into the boiler or into said storage tank whereby an excessive accumulation of the water of condensation inside the condenser is avoided under all circumstances.

1,429,597. GATE-RELEASING DEVICE. JULIUS LESJAK, Sygan, Pa. Filed Sept. 18, 1920. Serial No. 411,198. 2 Claims. (Cl. 187—61.)



1. A device for the purpose set forth comprising the combination with a normally locked gate having a plurality of latches, of a vertically movable locking bar provided with keeper members associated with the latches to maintain the gate closed, a bell crank lever connected to said bar, an actuating arm having one end attached to said lever, and a toggle lever mechanism connected with said arm and adapted to actuate said arm and to have the movement of certain of its elements arrested to cause the operation of the other of its elements and said bar and bell crank whereby said bar is shifted upwardly to open the latches.

1,429,598. OIL BURNER. CHARLES H. LEWIS, Syracuse, N. Y. Filed Oct. 27, 1921. Serial No. 510,858. 5 Claims. (Cl. 158—63.)



1. A kerosene burner, including a hopper-like base, an annular reservoir mounted on said base, hollow radial arms bridging the central opening in the reservoir and

communicating therewith, a hollow vaporizing member disposed above and parallel to the reservoir and registering with one of said radial arms, a vertical conduit connecting said member with all of said radial arms, the said radial

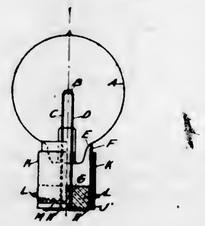
arms having jets adapted to heat said member for vaporizing liquid fuel, jet-burners mounted on said reservoir and partially encircling said member, and cocks for controlling said jet burners.

1,429,599. AUTOMOBILE LOCK. BENJAMIN LIEBOWITZ, New Rochelle, and JAMES BALSAM, New York, N. Y.; said Liebowitz assignor to said Balsam. Filed Nov. 12, 1921. Serial No. 514,527. 5 Claims. (Cl. 70—129.)

5. In a locking device for an automobile steering wheel, a split collar clamped to the steering column, a forked member pivotally jointed to the collar and adapted when swung into upright position to engage a spoke of the steering wheel, a spring pressed split bolt extending longitudinally of the joint between the collar and the forked member and automatically operative to lock the latter in upright position, and key-controlled means for unlocking the same.

1,429,600. BEAM STRUCTURE. ANDREAS P. LUNDIN, Flushing, N. Y., assignor to American Balsa Company, Inc., a Corporation of New York. Original application filed Nov. 21, 1918, Serial No. 263,464. Divided and this application filed Dec. 7, 1920. Serial No. 429,043. 8 Claims. (Cl. 244—31.)

1. An airplane frame, the structure of which consists in part of balsa wood, suitably treated with paraffin to preserve it and make it waterproof and flanked by plates of relatively tough material.

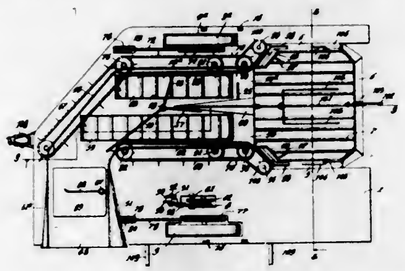


1,429,601. ELECTRIC POCKET LAMP WITH MECHANICAL ELECTRIC GENERATOR. ANTOINE LUZY, Paris, France. Filed May 7, 1918. Serial No. 233,138. 5 Claims. (Cl. 171—76.)

1. In an electric pocket lamp having an electric generator, a multipolar permanent magnet in the form of a cup the edge of which forms the alternate poles, a stationary armature having a star shaped core arranged co-axially with said magnet, and means to cause the multipolar magnet to rotate relatively to said stationary armature..

3. In an electric pocket lamp having an electric generator, a casing, a shaft journalled in the casing, a hollow sleeve fixed on said casing coaxially with the shaft, a stationary armature mounted on the sleeve, a permanent multipolar magnet mounted on the shaft and being in the form of a cup, the indented edge of which forms the alternate poles, a ferrule fixed on said magnet and forming a guide block on said shaft, a pinion keyed to said shaft and means meshing with the pinion for imparting rotation to the shaft to cause the magnet to rotate relatively to the stationary armature.

1,429,602. BASE FOR INCANDESCENT LAMPS. FREDERICK W. LYLE, Toronto, Ontario, Canada. Filed July 15, 1918. Serial No. 245,049. 3 Claims. (Cl. 176—22.)



1. In a support for incandescent lamps the combination of a cylindrical core attached to a lamp bulb and provided with a shoulder having a projection on its annular face, a sleeve adapted to revolve and slide on the cylindrical core and provided with indentations adapted to engage the projection on the cylindrical core, and further provided with radially projecting lugs, a socket into which the said sleeve is adapted to slide, recessed slots in the socket wall adapted to engage said radially projecting lugs, and a member actuated by springs in the socket structure adapted to press the said radially projecting lugs of the sleeve into engagement with the recessed slots of the socket wall and to press the said projection on the cylindrical core into engagement with the indentations of the said sleeve.

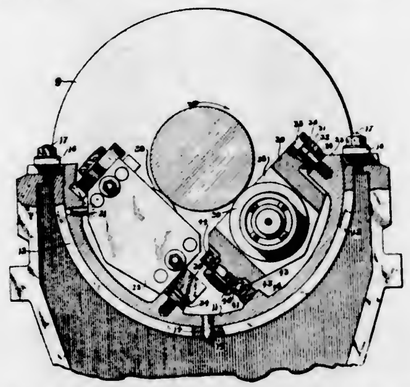
1,429,603. SHOCK-FORMING MACHINE. FRANK MCCANN, North Battleford, Saskatchewan, Canada. Filed Dec. 10, 1918. Serial No. 266,102. 9 Claims. (Cl. 56—415.)

1. In a shock forming machine, a lateral receiving passage and an intercommunicating longitudinal passage, a longitudinal portion dividing the rear portion of the longitudinal passage into two delivery passages, a gate vertically pivoted in line with and in advance of the said longitudinal portion and comprising a forwardly extending

wing and rearwardly extending diverging wings, the forwardly extending wing alternately connecting the lateral receiving passage with one of the delivery passages, a sheaf

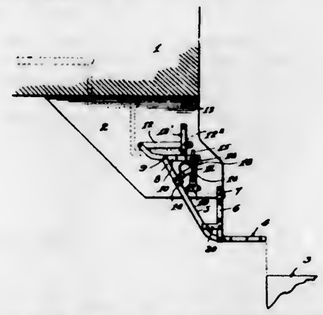
feeder in the receiving passage adapted to be automatically thrown into action by the weight of the sheaves, and conveyors for positively moving the sheaves through the longitudinal passage.

1,429,604. AUTOMATIC FOOT, TOE, AND ANKLE BRACE. GOTTLIEB F. MADINGER, St. Joseph, Mo. Filed Nov. 7, 1921. Serial No. 513,486. 3 Claims. (Cl. 128—80.)



1. A combined toe and ankle brace for rectifying deformed feet comprising a boot-like member having a foot portion and a leg portion, the instep of the boot portion to the leg portion being split down the front, the margins of said split being overlapped, and a spiral strap attached to the margin of the leg portion adjacent the instep and extending spirally around the leg portion, and a buckle attached to the upper end of the leg portion and with which said strap engages.

1,429,605. PROCESS AND APPARATUS FOR PRODUCING BODIES UNDER TENSION TO BE USED AS TIRES FOR VEHICLE WHEELS AND THE LIKE. DEMETRIO MAGGIORA, Florence, Italy. Filed Nov. 17, 1919. Serial No. 338,642. 7 Claims. (Cl. 154—14.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

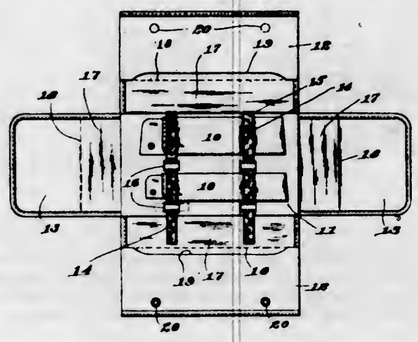


6. The method of producing baries under tension consisting in expanding the body to abnormal size, and permitting the body to contract by its inherent resiliency about an internal body member.

1,429,606. SUPPORTING BEARING. ROLAND MARSLAND, Essington, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 31, 1920. Serial No. 434,259. 13 Claims. (Cl. 64—38.)

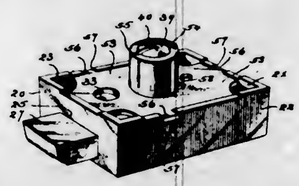
13. A supporting bearing for a rotatable element comprising a plurality of rollers, supporting frames for the rollers and pivot means for each frame arranged behind its roller, considering the direction of rotation of the roller and the element at the place of contact thereof, whereby each frame and its roller may move about an axis substantially parallel to the radius of the rotatable element passing through said place of contact.

1,429,607. DROP STEP FOR PASSENGER COACHES. JOSEPH F. MAURER and GEORGE W. BEISER, Peru, Ill. Filed Apr. 10, 1922. Serial No. 551,362. 7 Claims. (Cl. 105—448.)



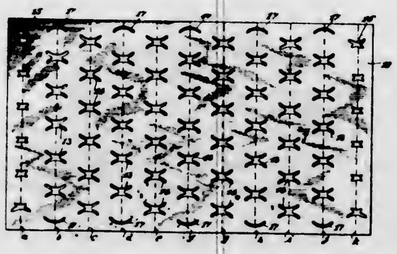
1. In a device of the nature described, the combination with a step structure including an auxiliary step suspended therefrom adapted to fold beneath it, an arm rigidly secured to said auxiliary step, and a lever pivoted on the structure to which said arm is pivoted, of a stop member secured on said step structure adapted to receive the point of pivotal connection of the said arm and lever against it when the step is lowered for sustaining the latter positively in its position for use.

1,429,608. COLLAR CASE. JOSEPH M. MAY, East Milton, Mass., assignor to Ryan-Cushing Co., Boston, Mass., a Corporation of Massachusetts. Filed Apr. 26, 1920. Serial No. 376,496. 4 Claims. (Cl. 150—34.)



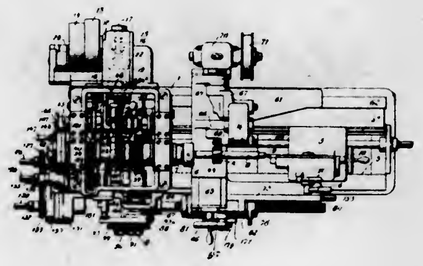
4. A case for resilient strip-form articles, comprising a stiff flat base having a frictional surface adapted to engage the base of a stack of such articles, a band having

frictional under and upper surfaces, fast at one end to said base and adapted to pass over the stack, and nonmetallic means having a frictional under surface, under which the band passes after passing over the stack; the



whole being organized to hold a stack in place on the base by friction when the band is drawn taut; and flaps extending from the edges of the base and adapted to enclose the stack and band.

1,429,609. LOCK. WILLIS R. MICHAEL, York, Pa. Filed Mar. 22, 1922. Serial No. 545,709. 9 Claims. (Cl. 70—75.)



1. In a lock the combination with a bolt-plate having a lug thereon, of a rotatable key-post, a series of tumblers pivotally sustained so as to swing at one side of the key-post and across the path of the bolt-lug, said tumblers being reversible from one side to the opposite side of the key-post whereby the lock may be changed from a right to a left-hand lock.

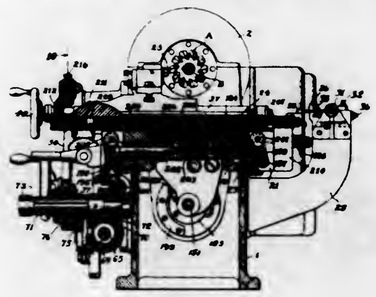
1,429,610. EGG HOLDER AND CARRIER. HERBERT L. G. MOORE, Hoboken, N. J. Filed July 8, 1920. Serial No. 394,752. 9 Claims. (Cl. 217—33.)

1. An egg-tray composed of three sheets of flexible material, each creased or lightly scored transversely on predetermined spaced parallel lines for the purpose of folding, one of said sheets being provided with approximately X-shaped openings cut out on said scored lines, the other sheets being provided with openings of a shape to enable the three sheets to be interlocked when folded, thereby forming a plurality of single egg receptacles on both sides of the tray.

1,429,611. METAL-CUTTING MACHINE. FRIEDERICH MÜLLER, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 10, 1917. Serial No. 201,338. 207 Claims. (Cl. 10—154.)

1. The combination in a relieving machine, of a rotatable blank-carrying spindle, a cutting tool, mechanism for effecting relative movement between the tool and the blank longitudinally of the latter, mechanism for effecting relieving movements of the tool in timed relation to the blank rotation, and mechanism including a rack and a pinion relatively movable in proportion to the said longitudinal movement between the tool and blank for varying the relation between the relieving movements of the tool and the rotative movement of the blank.

60. The combination in a relieving machine, of a rotatable blank-carrying spindle, a cutting tool, mechanism for effecting relative movement between the tool and the blank longitudinally of the latter, mechanism including a splined shaft for effecting relieving movements of the tool in timed relation to the blank rotation, disengageable mechanism supplemental to the shaft for varying the relation between the relieving movements of the tool and the rotative movement of the blank in proportion to the said longitudinal movement, and means for preventing variation in the aforesaid timed relation when the said mechanism is disengaged.



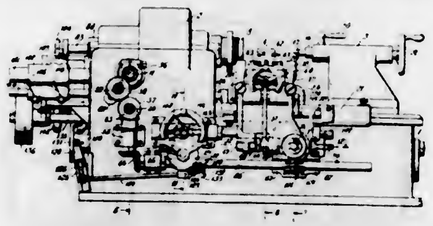
100. The combination as described, of a rotatable blank-carrying spindle, a cutting tool, means for feeding the tool with respect to the blank, a controlling member connected to the spindle so as to rotate slightly slower than the spindle, means operable after one revolution of the controlling member and after a little more than one revolution of the spindle for stopping the spindle, and automatic means for starting the spindle after each stopping thereof.

125. In a relieving machine, the combination of a rotatable blank-carrying spindle, a cutting tool, means for feeding the tool longitudinally of the blank in timed relation to the spindle rotation, automatically acting mechanism for effecting regular relieving movements of the tool, automatic means supplemental to the last said means for repeatedly withdrawing the tool from the blank, and means for changing the timed relation of the relieving movements in accordance with the feed.

205. In a metal cutting machine, the combination with a blank-carrying spindle, a cutting tool associated with the blank, a carriage for supporting said tool, and means for rotating said spindle, of a feed shaft for moving said carriage, two auxiliary spindles, means for respectively

operating said spindles at different speeds and for operating one of said spindles intermittently by said spindle-rotating means, and means comprising a train of gear wheels connected to said feed shaft and selectively connected to one of said auxiliary spindles according to the feed desired.

1,429,612. MECHANICAL MOVEMENT. FRIEDERICH MÜLLER, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Original application filed Mar. 31, 1919, Serial No. 286,524. Divided and this application filed July 29, 1920. Serial No. 399,715. 170 Claims. (Cl. 82—14.)



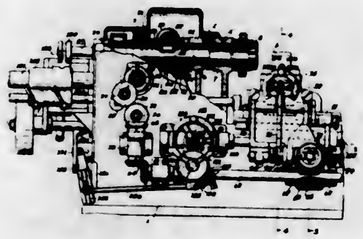
5. The combination of a guide, a pin adapted to engage the guide, two supports to which the guide and the pin respectively are normally fixedly secured and whereby their relative movements are limited to two directions at an angle to each other, and automatic means for effecting relative intermittent movements between the supports in one of the said directions.

70. A mechanical movement comprising in combination, a holder, and a tool relatively movable in a predetermined direction, the said tool being also movable transversely of the said direction, means for effecting relative movement between the tool and the holder in the said direction, automatic means for rapidly withdrawing the tool transversely of the said direction at intervals, automatic means for slowly returning the tool transversely of the said direction after each withdrawal, and means for differently limiting the returning movements of the tool so that the successive positions of the tool lie in a path in a direction different from the said predetermined direction.

130. The combination in a mechanical movement of the class described, of a movable carriage, a tool on the carriage relatively movable transversely of the direction of carriage movement, automatic means for moving the carriage longitudinally at intervals, means including a former and a relatively movable former pin on the carriage for controlling the tool to cause it to assume different positions with respect to the carriage following successive movements of the carriage, automatic means for withdrawing the former pin from the former at the time of each carriage movement, locking means between the former pin and the carriage, and automatic means for effecting locking after each carriage movement and unlocking before the next following carriage movement.

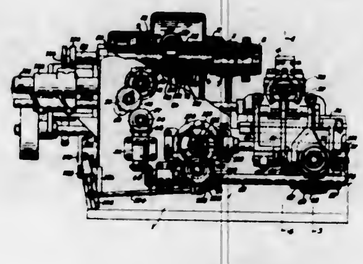
1,429,613. METHOD OF MAKING MILLING CUTTERS. FRIEDERICH MÜLLER, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Original application filed Mar. 31, 1919, Serial No. 286,524. Divided and this application filed Sept. 27, 1919, Serial No. 326,875. Renewed July 5, 1921. Serial No. 482,538. 54 Claims. (Cl. 76—101.)

1. The herein described method which consists in axially rotating a blank, in providing a cutting tool in position to cut the blank, in effecting intermittent feeding movements between the tool and the blank longitudinally of the latter, in relatively moving the tool and the blank out of operative relation prior to each feeding movement,



and in restoring the tool and the blank into operative relation after each feeding movement, the last said operative relation being so determined at each successive instance as to cut the blank with a varying diameter.

1,429,614. MILLING CUTTER FOR GEARS. FRIEDERICH MÜLLER, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 26, 1918, Serial No. 268,355. Renewed Mar. 24, 1922. Serial No. 546,519. 1 Claim. (Cl. 29—103.)

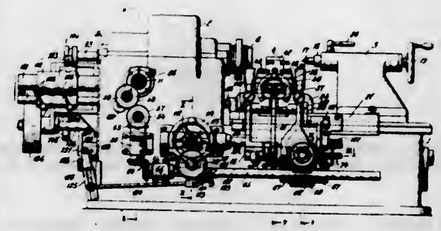


A milling cutter for cutting a predetermined contour conforming exactly to the space between two adjacent gear teeth, provided with a plurality of teeth, each having a helicoidal front cutting face with a contour adapted to cut the said predetermined contour and having the outer surface behind the cutting face relieved along lines extending backward and inward from the edge to permit grinding on the cutting face without changing the said contour.

1,429,615. METAL-CUTTING MACHINE. FRIEDERICH MÜLLER, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Original application filed Mar. 31, 1919, Serial No. 286,524. Divided and this application filed July 29, 1920, Serial No. 399,716. Renewed July 19, 1922. Serial No. 576,148. 18 Claims. (Cl. 82—19.)

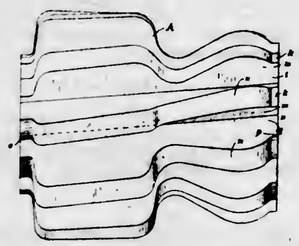
1. In a metal cutting machine of the type in which there is provided a rotatable blank-carrying spindle, a transversely movable cutting tool adapted to engage the blank at the front thereof and means for effecting relative longitudinal movement between the tool and the blank, and in which there may be provided means for effecting transverse relieving movements of the tool in timed relation to the rotation of the spindle, the combination of a former mounted in longitudinally fixed relation to the blank and having a contour the reverse of that desired to be cut on the blank, and a former pin mounted in longitudinally fixed relation to the tool and engaging the former at the rear thereof, the said former pin controlling the transverse movements of the tool to cause it to follow the contour of the former and the action of the former pin being supplemental to that of the relieving means when the latter is provided.

1,429,616. METHOD OF MAKING MILLING CUTTERS. FRIEDERICH MÜLLER, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Original application filed Mar. 31, 1919, Serial No. 286,524. Divided and this application filed July 29, 1920, Serial No. 399,717. Renewed July 19, 1922. Serial No. 576,149. 8 Claims. (Cl. 82—19.)



1. The herein described method consisting in axially rotating a blank, in providing a cutting tool in position to engage the blank at the front thereof and cut it, in providing a former having a contour the reverse of that with which the blank is to be shaped, in providing a former pin connected with the tool and normally engaging the former at the rear thereof, and in effecting relative feeding movement between the pin and the former and between the tool and the work longitudinally of the latter, the former pin following the contour of the former and thus causing the tool to cut the said contour on the blank.

1,429,617. METAL-CUTTING MACHINE. FRIEDERICH MÜLLER, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 31, 1919, Serial No. 286,524. Renewed July 19, 1922. Serial No. 576,159. 342 Claims. (Cl. 82—19.)



100. In combination, a rotatable blank-carrying spindle, a cutting tool, automatic means for effecting at intervals relative intermittent feeding movements all in the same direction between the tool and the blank longitudinally of the latter, means for moving the tool inward or outward as longitudinal movement takes place so as to cut the blank with different diameters, automatically acting mechanism for effecting regular supplemental relieving movements of the tool independent of the aforesaid movements, and automatic means for stopping the spindle rotation and the relieving movements at the time of each feeding movement.

250. The described combination of a rotatable blank-carrying spindle, a longitudinally movable tool carriage, a transversely movable slide on the carriage, a tool slide mounted on the first said slide and transversely movable thereon, automatic means for moving the tool slide trans-

versely to withdraw the tool from the blank at intervals, locking means between the slides, and automatic means for effecting unlocking at the time of each withdrawal and for subsequently effecting locking.

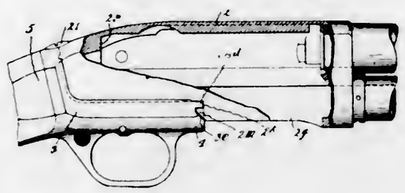
1,429,618. MILLING CUTTER. FRIEDERICH MÜLLER, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 26, 1920, Serial No. 368,928. Renewed July 19, 1922. Serial No. 570,160. 9 Claims. (Cl. 29—103.)

1. A milling cutter for cutting a predetermined irregular contour consisting in part of a line or lines inclined with respect to the axis at an angle or angles in excess of the maximum angle at which a longitudinally fed former pin will follow outward along an inclined part of a predetermined former, the said cutter comprising a plurality of generally longitudinal teeth each provided with a helicoidal front cutting face with an outer cutting edge of such form that the projection of said edge about the axis of the cutter upon an axial plane of intersection is the same as the said predetermined contour, the outer surface of each tooth behind the helicoidal cutting face being relieved along lines extending backward and inward from the outer edge of the face in uniform relationship whereby the cutter may be ground on the helicoidal faces without changing the effective contour, and the inclination and spacing of the teeth being such that the relieved surface of each tooth extends backward toward the next following tooth to an extent beyond that to which it could be cut by a preliminary shaped milling cutter having a length equal to that of the first said cutter.

1,429,619. RECOIL CHECK. CHARLES A. NELSON, Utica, N. Y., assignor to Savage Arms Corporation, a Corporation of Delaware. Filed Sept. 21, 1918. Serial No. 255,059. 6 Claims. (Cl. 89—42.)

2. A recoil check comprising an imperforate expansion wall rigidly secured to and extending forwardly from the

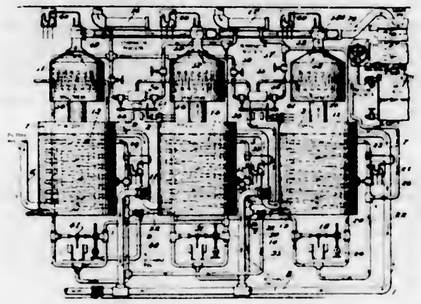
barrel end, gas escape apertures at the extreme end of said wall and a separately formed baffle plate having



double opposed bosses surrounding the bullet passage therethrough and rigidly secured to said expansion wall.

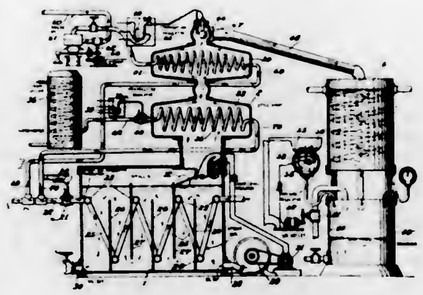
1,429,620. TRACK FOR SLIDING DOORS. STUART W. PARSONS, New Britain, Conn., assignor to The Stanley Works, New Britain, Conn., a Corporation of Connecticut. Filed July 28, 1921. Serial No. 488,257. 11 Claims. (Cl. 16—96.)

1. In a device of the character described, track sections positioned end to end, a bracket having lugs extending through the respective sections, and a plate formed separately from said bracket and overlapping and secured to the abutting ends of said sections, said plate and bracket being in engagement with one another whereby one secures the other in position.



1,429,621. FIREARM. JOHN D. PEDERSEN, Jackson, Wyo. Original application filed Aug. 9, 1917, Serial No. 185,394. Divided and this application filed Sept. 15, 1919. Serial No. 323,766. 12 Claims. (Cl. 42—75.)

1. In a separable frame for firearms, in combination, frame members comprising a receiver provided with a mechanism chamber and a guard-frame provided with an upwardly extending portion and an arm extending forwardly from said upwardly extending portion and below said mechanism chamber; interlocking means comprising pairs of oppositely disposed faces for sliding connection of said receiver and said upwardly extending portion and arm of the guard-frame; means for detachably locking said arm at the forward end thereof to said receiver; and means on said goard-frame engageable with means on said guard-frame and engageable with means on said receiver for detachably connecting the rear end of said receiver and the upwardly extending portion of said guard-frame.

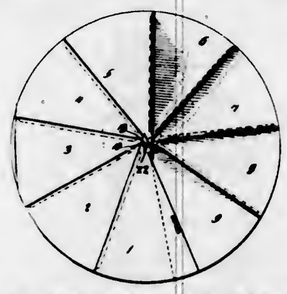


1,429,622. APPARATUS FOR CRACKING OILS. WILLIAM B. D. PENNIMAN, Baltimore, Md. Filed Apr. 25, 1917. Serial No. 164,337. 9 Claims. (Cl. 196—13.)

3. In an apparatus for cracking oils, a plurality of stills for the oil, a heating unit submerged in each still, two sources of fluid under different thermal conditions, means for supplying fluid from each source to the heating units, and thermostatically controlled means for regulating the supply of fluid from each source to each heating unit, with means for passing the fluid from the heating unit of one still to the heating unit of the next still,

the thermostatically controlled supply to each still after the first being mingled with that from the preceding still, and the thermostat being acted upon and controlled by the thermal condition of the combined supply of fluid from all the various sources, the oil being passed through the system from still to still in the opposite direction from the fluid flow.

1,429,623. APPARATUS FOR CRACKING OILS. WILLIAM B. D. PENNIMAN, Baltimore, Md. Filed May 5, 1917. Serial No. 166,587. 7 Claims. (Cl. 196—3.)



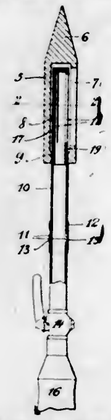
6. In an apparatus for cracking oils, a still for containing the oil, steam containers in contact with the oil, a source of wet steam, a pipe leading from the said source to the said containers in the still, a superheater in the pipe line, thermostatic means controlled by the temperature of the steam in the container for regulating the temperature of the superheater, a vapor chamber in communication with the still space over the oil, a steam container therein, means for supplying wet steam to the steam container, and thermostatically controlled means under the influence of the thermal condition of the vapor which is passed in contact with the steam container, the said thermostatic means controlling the supply of wet steam.

1,429,624. SILAGE COVER. BERT B. PERKINS, Monticello, Minn. Filed Feb. 15, 1921. Serial No. 445,150. 3 Claims. (Cl. 217—78.)

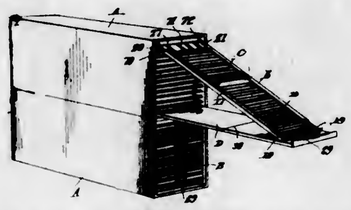
1. A silage cover comprising a plurality of elements

successively overlapping to provide a collapsible structure and adjustable from a common center to correspond to

the diameter of the silo with which it is associated, and engaging means on the overlapping edges of the elements.



1,429,625. COMPASSES. HEINRICH PERROT, Calw, Germany. Filed Dec. 29, 1919. Serial No. 348,228. 7 Claims. (Cl. 33—157.)

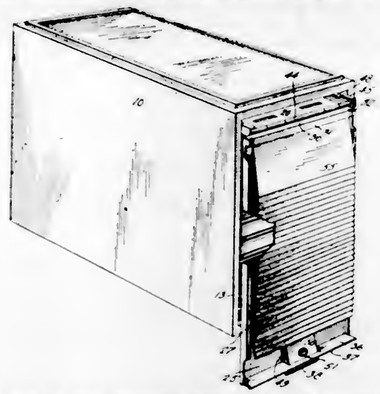


1. A compass or analogous instrument comprising a pair of legs having enlarged upper ends or heads which are pivotally connected together; and a clamping device for said legs embodying a presser piece having an edge cooperative with the adjacent edges of said heads, and an actuating member for the presser piece, the cooperating edges of said head and presser piece having complemental wedge-shaped surfaces for direct engagement with each other.

1,429,626. SOLDERING IRON. ANTONY PLOCHOCKI, Brooklyn, N. Y., assignor to himself and Adam Weisman, Brooklyn, N. Y. Filed Nov. 28, 1921. Serial No. 518,158. 1 Claim. (Cl. 158—26.)

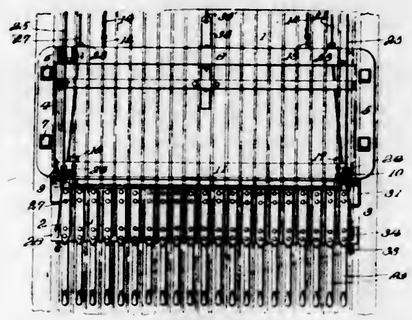
As a new article of manufacture, a soldering iron comprising in combination a cylindrical soldering pointed head having a cylindrical axially disposed rearwardly open combustion chamber within the same, a gas supply pipe screwed into the said rear opening of the said chamber, a valve in said pipe for controlling the flow of gas therethrough, an operating handle on said pipe, air inlet openings provided in said pipe, an apertured sleeve on said pipe for adjusting the said air inlet openings therein, a burner member having a tapered end adapted to be held frictionally in the said gas supply pipe in centrally disposed operative position within the said combustion chamber, said burner member having three longitudinal circumferentially equally spaced slots leading from the said gas supply pipe to the said combustion chamber, three longitudinally circumferentially equally spaced wider slots leading from the said combustion chamber to the outside of said soldering head, the burner member being adapted to be placed in position within said combustion chamber with the three burner member slots in predetermined operative relationship to the said three slots in the soldering head whereby to regulate the flow of the gas from the said gas pipe to the slots in the soldering head.

1,429,627. CABINET. JAMES HENRY RAND, Jr., and VERNON FRANKLIN KING, Tonawanda, N. Y., assignors to American Cardex Co. Inc., Tonawanda, N. Y., a Corporation of New York. Filed Dec. 2, 1918. Serial No. 265,007. 8 Claims. (Cl. 45—2.)

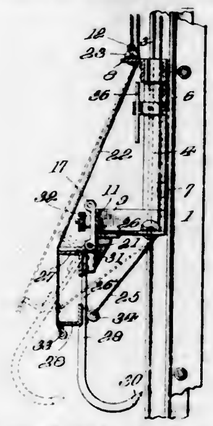


8. In a cabinet, the combination of a casing, a plurality of spaced sheet metal partitions in said casing having flanges at their front portions forming stops and stiffening the front portions of the partitions, a plurality of shallow trays arranged to slide in and out in said casing between said partitions, each of said trays having a bottom and a pair of side walls formed of a portion of substantially flat sheet metal bent angularly at its side edges to provide integral side walls and to stiffen the bottom portions, sheet metal tail pieces having bottoms hinged at their front edges to the rear ends of said trays and having upwardly extending flanges which cooperate with the partitions above to guide the tail pieces in sliding movements of the trays, stops projecting downwardly below the bottoms of said tail pieces, said tail piece stops cooperating with the stops at the front portions of said partitions to arrest outward movement of said trays and to releasably retain said trays pivotally supported in front of said casing when they are pulled out.

1,429,628. RECORD CABINET. JAMES H. RAND, Jr., Tonawanda, N. Y. Filed Aug. 9, 1920. Serial No. 402,089. 20 Claims. (Cl. 45—2.)



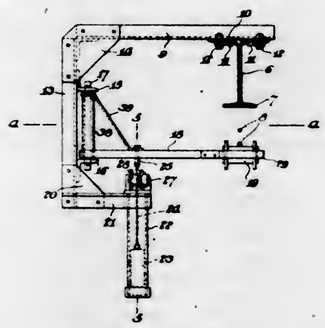
3. A cabinet comprising side walls having their front and rear ends formed to provide inwardly opening channels and outwardly projecting marginal flanges, and a bot-



tom wall, partitions having projecting ends extending into said channels, and channeled spacing members inter-

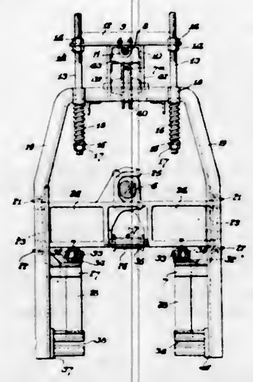
posed between said partitions and provided with projecting ends extending into the channels of said wall ends.

1,429,629. DEVICE FOR CLEANING FLUME GRATINGS. WILLIE O. RANDLETT, Richmond, Va., assignor of one-half to Cyrus B. Buchanan. Filed June 16, 1921. Serial No. 478,187. 11 Claims. (Cl. 210—176.)



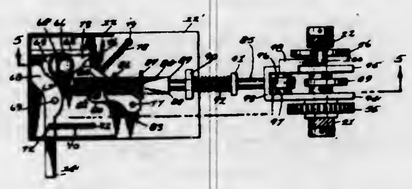
1. The combination with a grating of the character described, comprising a frame sliding longitudinally of said grating, a pivoted reversible rake carried by the lower end of the frame, means for raising said frame, and means for rocking the rake on its pivot.

1,429,630. LID HOLDER. LOUIS N. REBIDEAU, Basin, Wyo. Filed June 21, 1921. Serial No. 479,224. 3 Claims. (Cl. 220—24.)



1. In combination, a receptacle formed of rigid material having at its upper end a reduced neck portion with a flared upwardly opening mouth, of a lid having a lower portion adapted to fit inside the neck of the can and a rigid upwardly extending portion adapted to fit the inside diameter of the flared mouth of the can, said rigid flared portion of the lid having an opening in one side thereof; a vertical member passing through said opening and secured at its upper end to the flared mouth of the can underneath the opening in the flared part of the lid to hold said flared part of the lid against rotation on the flared mouth of the can when the two are in operative relation to each other, said vertical member being curved outwardly at a point above the lid and then turned downwardly with its lower end secured to the body of the can to support the lid for upward and downward movement on said vertical member, the upper end of said vertical member being suitably arranged for guiding the lid into operative position on the can to cause the flared part of the lid to always come into the same relative position to the flared top of the can when put upon the can, whereby when the flared top of the can and the flared part of the lid are once perfectly fitted to each other they will always be guided into the same relative position to each other when the lid is placed on the can.

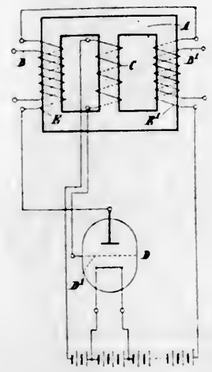
1,429,631. CABLE CARRIER. JAMES F. REILLY, Philadelphia, Pa. Filed Feb. 6, 1922. Serial No. 534,365. 10 Claims. (Cl. 104—182.)



1. A device for supporting the cable of a cable operated railway comprising a supporting framework, a swinging arm supported by said framework, means carried by said swinging arm adapted to support the cable, and means for maintaining said swinging arm in its normal operative position and for returning the same thereto, said means including a cable having one end connected to said swinging arm at a point some distance from the pivotal axis thereof, and means for maintaining tension on said cable.

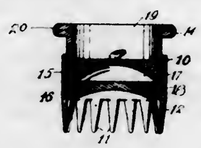
1,429,632. CABLE CARRIER. JAMES F. REILLY, Philadelphia, Pa. Filed Feb. 18, 1922. Serial No. 537,466. 21 Claims. (Cl. 104—182.)

1. A device for supporting the operating cable of a cable operated cableway comprising the combination with the main cable, of a framework and means for supporting said framework with respect to said main cable, means supported by said framework adapted to engage the main cable in the normal position of said means, and means associated with said main cable engaging means adapted to support the operating cable in said normal position.



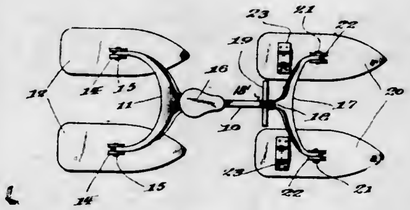
1,429,633. COIN-CONTROLLED VENDING MACHINE. JACOB RIEDMUELLER, New York, N. Y. Filed June 28, 1921. Serial No. 480,948. 4 Claims. (Cl. 194—9.)

1. In a coin operated vending machine of the class described, a pair of contacts adapted to close a motor circuit when brought into engagement, a trigger mechanism, an operating lever for operating said trigger mechanism by the intermediary of the inserted coin, a spring controlled rod, a bevelled finger on said rod, said finger adapted to close the motor circuit by effecting an engagement between said contacts, upon the operation of said trigger mechanism, a train of gears adapted to be operated upon the closure of the circuit, means for breaking the circuit, means for automatically resetting the trigger mechanism after each operation of the train of gears upon the closure of the motor circuit, means for dispensing a predetermined amount of liquid upon the closure of the motor circuit, and means for returning the dispensing means into their normal position after each operation.



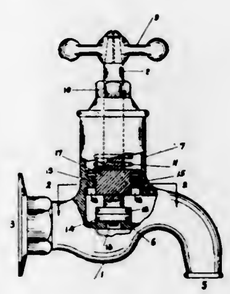
1,429,634. TELEPHONIC REPEATER. CHARLES ROBINSON, Reigate, and RONALD MARTIN CHAMNEY, London, England. Filed Nov. 18, 1919. Serial No. 338,861. 7 Claims. (Cl. 179—171.)

1. In a telephonic repeater, the combination of a current-magnifying device, a magnetic core structure comprising three cores magnetically in parallel with one another between two yokes common to the two sets of concurrent ends of the cores, two line-windings, one upon each of two said cores, a booster winding in two equal halves in series to assist one another, each mounted upon one of the said two cores which carry line-windings and having their two free ends connected to one operative side of the said cur-



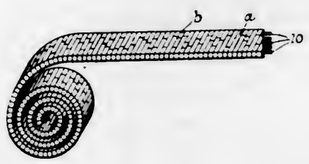
rent-magnifying device, a generator winding mounted on the third said core of the said core structure, and connected to the other operative side of the current-magnifying device, substantially as described.

1,429,635. COMB. EMMETT H. ROSS, Jamestown, N. Y. Filed Mar. 18, 1922. Serial No. 544,908. 2 Claims. (Cl. 132—13.)



1. A comb having tubular teeth thereon connected to a chamber in said comb, and a screw cap fitting in the threaded wall of said chamber to press the contents of said chamber through said tubular teeth by turning said cap.

1,429,636. SNOW VEHICLE. ERNEST N. ROWE, Glenwood Springs, Colo., assignor of one-half to Harry McMillen, Glenwood Springs, Colo. Filed May 13, 1921. Serial No. 469,333. Renewed Apr. 21, 1922. Serial No. 555,917. 1 Claim. (Cl. 280—16.)



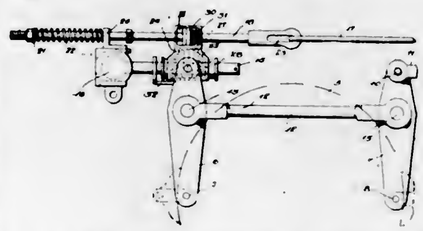
A snow vehicle comprising a pair of forks, one of the forks having a forwardly extending horizontal bar pivotally connected to the other fork, skees pivotally connected to the lower ends of the legs of the forks, a handle bar on the said other fork, and transverse straps on the rear portions of the front skees for engagement with the feet of the rider whereby the rider steers with the hands and feet.

1,429,637. FAUCET. MITCHELL W. RUSSELL, Springfield, Mass. Filed June 8, 1921. Serial No. 475,851. 2 Claims. (Cl. 251—132.)

2. The combination, in a faucet, with a case provided with a valve-seat and with oppositely-disposed interiorly-arcuate integral lugs having on their upper edges cam surfaces inclined in opposite directions, of a valve-stem provided with a valve to open and close the passage surrounded by said valve-seat, and further provided with a collar having in opposite sides thereof recesses to receive said lugs, the upper edges of said recesses forming inclined cam surfaces arranged and adapted to ride on said first-named cam surfaces when said valve-stem is rotated, and the long walls at one end of said recesses cooperating with adjacent ends of said lugs to limit the rotary movement of the parts, and a spring bearing on said collar to force the same with its parts in the direction to cause said valve to close said valve-seat.

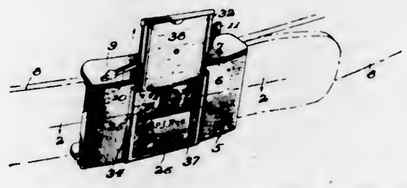
1,429,638. BELT. ARNOLD O. RUTZ, Milwaukee, Wis., assignor to Milwaukee Gas Specialty Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed June 20, 1918. Serial No. 240,987. 5 Claims. (Cl. 74—62.)

1. A power belt comprising a plurality of parallel expansible tension members, and a pulley contacting and wearing surface composed of transversely extending sections arranged side by side, some of which are composed of two or more pieces arranged end to end and having holes for receiving the tension members.



1,429,639. WRENCH. MARTIN SALOUN, Milwaukee, Wis., assignor of thirty per cent to Charles Stepanek, Milwaukee, Wis. Filed Sept. 26, 1919. Serial No. 326,432. 2 Claims. (Cl. 81—165.)

1. In a combination tool of the class described, a shank having an end portion provided with a relatively fixed jaw and an elongated transversely extending opening and a smaller opening in alinement with the elongated opening, a nut block slidably positioned in the elongated opening, a movable jaw having side portions which are guided by and extend over the outer side portions of the end of the shank and the nut block and are rigidly connected to said block, and a screw journaled at

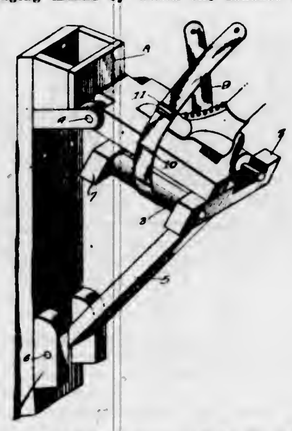


both ends in the shank end portion and threaded through the block and having medially of its length a head portion positioned in the smaller opening.

1,429,640. SLACK ADJUSTER. WILLIAM H. SAUVAGE, Flushing, N. Y., assignor, by mesne assignments, to Gould Coupler Company, New York, N. Y. Filed Feb. 6, 1920. Serial No. 356,750. 10 Claims. (Cl. 188—199.)

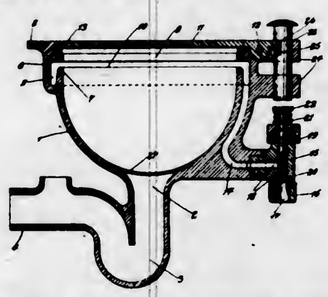
5. In a slack adjuster mechanism, in combination, live and dead levers at one side of a wheel for exerting clasp brake action, a push rod, and an adjusting rod occupying substantially parallel relation, a member associated with the dead lever carrying positively acting means operating on both the push rod and the adjusting rod whereby relative free movement of the adjusting rod may take place in one direction and a similar movement on the push rod in the opposite direction, thereby to permanently take up and hold the excess travel, and spring means associated with one of said rods adapted to insure operation of the slack adjuster when excess travel occurs.

1,429,641. BUCKLE. LOUIS SAYKO, Boise, Idaho. Filed May 27, 1922. Serial No. 564,001. 3 Claims. (Cl. 40—150.)



1. A buckle comprising a front and rear wall, the rear wall being arranged in spaced relation to the front wall whereby to form a socket, a card carrying plate arranged in said socket, the front wall being provided with openings through which the card carried by said plate may be seen, and a cover plate extended over said openings.

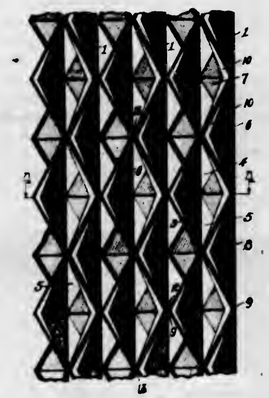
1,429,642. SHOE-POLISHING DEVICE. FREDERICK H. SCHLOTTMANN, Brooklyn, N. Y. Filed Sept. 9, 1921. Serial No. 499,589. 1 Claim. (Cl. 15—266.)



In a collapsible blacking stand, a back plate having means for attachment to a wall and a stationary arm

projecting therefrom at the upper part of the same, a gravity bracket hinged to the end of the arm and having bearings on the under side thereof, a brace hinged to the lower part of the back plate, the bracket and brace having coacting engaging means by which the bracket may be

held at will at an angle of approximately 45 degrees to the back plate, and rollers carried by the said bearings whereby a strip of fabric may be passed around the rollers and over a shoe on said bracket, said rollers being positioned to lie at opposite sides of the brace when folded.

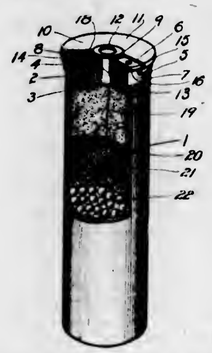


1,429,643. FLUSHING RECEPTACLE. EDWARD J. SCHNEIDER, St. Louis, Mo. Filed Aug. 31, 1921. Serial No. 497,183. 3 Claims. (Cl. 4—40.)

1. A device of the character described, comprising a bowl, a passage for admitting water into said bowl, a valve controlling the admission of water into said passage, a stem for said valve, a rod supported for vertical movements into and out of engagement with said stem, a spring for moving the valves to closed position, a lid for the bowl arranged to be closed by gravity, a hinge structure for the lid, and a connection between said lid and said rod whereby movement of said rod to open the valve will open said lid and whereby movement of said lid to closed position will move the rod away from the valve stem.

7,429,644. RADIATOR CORE. VINCENT SCHREINER, Toledo, Ohio. Filed Mar. 28, 1921. Serial No. 456,301. 6 Claims. (Cl. 257—130.)

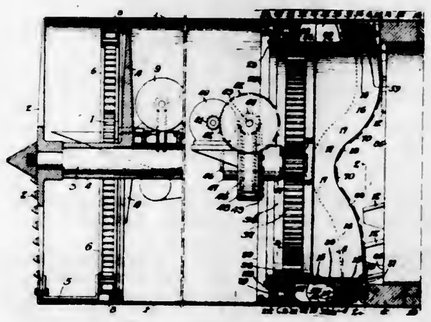
1. A radiator core having sheet metal strips forming water passages, the strips being nested and each having a separate set of transversely extending crimps along and extending inward from each side edge thereof and gradually losing themselves toward the opposite edge of the strips with the crimps of one set alternating with those of teh other, the strips having their side edges connected to form a water tight joint and the portions



between the edges being separated to form a water passageway between the strips lengthwise thereof.

1,429,645. METHOD OF MAKING NUTS AND ARTICLE MADE THEREBY. HUGO F. SCHROEDER, Torrington, Conn., assignor to Schroeder Brothers Manufacturing Company, Torrington, Conn., a Copartnership consisting of Hugo F. Schroeder, Ernest E. Schroeder, Richard F. W. Schroeder, Gustave A. Schroeder, jr., and Arthur E. R. Schroeder. Filed June 29, 1921. Serial No. 481,200. 4 Claims. (Cl. 10—86.)

1. A method comprising rolling a thread in a sheet and forming on the sides of the sheet wings, and afterward forming the rolled-winged-sheet into a cylinder with the edges of the sheet and the wings solely in abutment to form an externally-threaded nut.

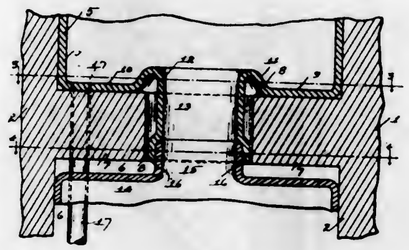


1,429,646. SHOTGUN SHELL. CHARLES A. SHAEFFER, Kansas City, Mo., assignor of one-third to Harry E. Sherman and one-third to Louie A. Sherman, both of Kansas City, Mo. Filed May 2, 1921. Serial No. 466,021. 3 Claims. (Cl. 102—17.)

1. A shell comprising a tube, a base wad within the tube, a flange on the tube against the base wad, a base

cap having an outer flange engaging over the tube, projections on the base cap engaging the flange on the tube, an inner flange on the base cap projecting into an opening in the base wad, and a primer cap having a flange overlapping the outer flange on the base cap, and provided with a primer extending into the opening in the base wad.

1,429,647. MACHINE FOR BUILDING TUNNELS AND THE LIKE. MILTON ROY SHEEN, Philadelphia, Pa., assignor to Tunnel Machine Manufacturing and Engineering Company, Philadelphia, Pa., a Corporation of Delaware. Filed Nov. 20, 1920. Serial No. 425,534. 18 Claims. (Cl. 61—85.)

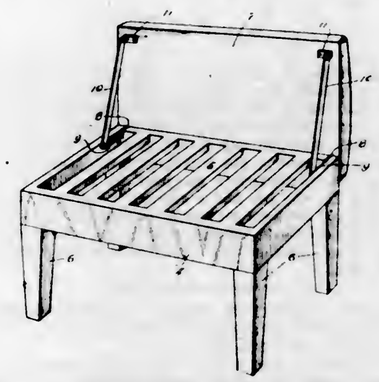


1. A machine for building tunnels and the like, having in combination, a casing, an annular bearing flange secured within the casing, said bearing flange having a cylindrical track thereon, an annular bearing surface upon the bearing flange, a bearing ring, rollers loosely mounted upon the bearing ring adapted to travel upon the said cylindrical track and upon the said annular bearing surface of the bearing flange, and a cam cylinder rotatably mounted upon the said rollers of the bearing ring.

1,429,648. SLED BRAKE. WILLIAM S. SHIFFER and VICTOR L. ZWALLY, Lancaster, Pa. Filed Aug. 5, 1920. Serial No. 401,368. 2 Claims. (Cl. 188—8.)

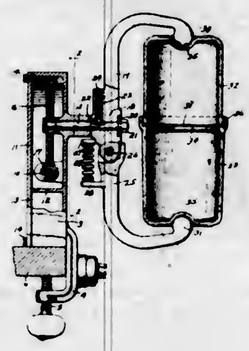
1. The combination with a sled, of pivoted levers pivoted to each side of the sled, the rear ends of the pivoted levers being provided with downwardly extending arms, the lower ends of said downwardly extending arms being provided with bifurcations adapted to receive the sled runners, the arms of the bifurcations forming ground engaging elements disposed on each side of the runners, a guide bracket for guiding the rear ends of each of the pivoted levers in its downward and upward movement, coiled springs connected to the rear ends of the levers and to the sled for normally holding the ground engaging elements in their upward positions, the forward ends of the levers being provided with offset portions and hand engaging members, said offset portions arching the runner brackets, said hand engaging portions of the levers being disposed adjacent the forward end of the sled and within reach of the operator where they can be singly or simultaneously moved.

1,429,649. REFRIGERATOR. ANDREW SIMONS, Grand Haven, Mich. Filed Nov. 25, 1921. Serial No. 517,597. 4 Claims. (Cl. 62—89.)



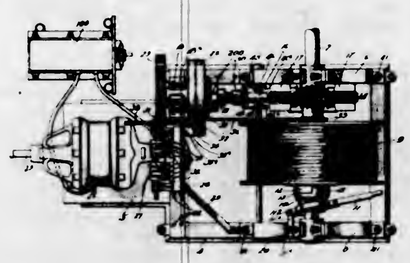
1. In a structure of the character described having two chambers with a partition between them having an opening therethrough; a lining for one chamber, one of whose walls extends integrally first inwardly and then outwardly to form a hollow neck extending inwardly into the space enclosed by said lining and outwardly into said opening, said neck having an outer end portion expanded in cross section; a second lining for the other chamber having an outwardly extending hollow neck extending into said expanded end portion of the first mentioned lining's neck.

1,429,650. PROCESS OF MANUFACTURING ALDEHYDES AND ANHYDRIDES FROM DIESTERS. FREDERICK W. SKIRROW, Shawinigan Falls, Quebec, Canada, assignor to Shawinigan Laboratories, Limited, Montreal, Quebec, Canada. Filed Nov. 8, 1920. Serial No. 422,665. 8 Claims. (Cl. 260—123.)



1. In the decomposition of diesters to aldehydes and anhydrides, the use of an oxide of sulphur as a catalytic or decomposing agent.

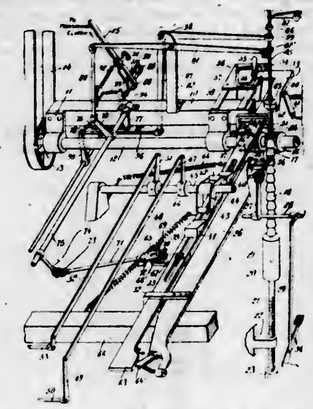
1,429,651. BAGGAGE STAND FOR HOTEL GUEST ROOMS. ANNA W. SLAGHT, Evanston, Ill. Filed June 6, 1921. Serial No. 475,312. 5 Claims. (Cl. 155—90.)



1. In combination with a baggage-stand of the character described, a leg-supported frame comprising front, rear and end rails, a central baggage-receiving section level with said surrounding rails whereby said section and rails present a flat surface throughout, and a lid hinged to the rear frame-rail and forming a barrier in its raised position for the purpose set forth.

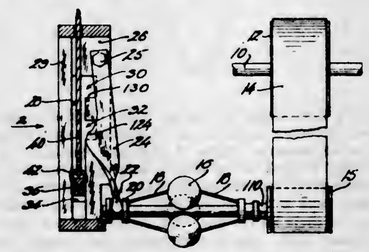
1,429,652. LIQUID AERATOR. JAMES W. SMALL, Chicago, Ill. Filed Dec. 20, 1920. Serial No. 432,085. 9 Claims. (Cl. 259—81.)

1. A liquid aerator comprising a power driven shaft having a depression in one side; an aerator vessel holder journaled on said shaft; and a spring-pressed member mounted in the holder and engaging the depression.



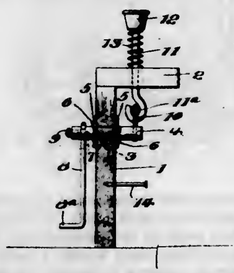
1,429,653. HOISTING MECHANISM. BARTON S. SNOW, Batavia, Ill., assignor to T. W. Snow Construction Co., Chicago, Ill., a Corporation of Illinois. Filed Mar. 18, 1921. Serial No. 453,421. 11 Claims. (Cl. 254—173.)

1. In a hoist, the combination of a frame having bearings spaced apart, a shaft mounted in said bearings and provided with a gypsy, a drum on said shaft, an element on said shaft through the medium of which said shaft is rotated, said shaft, drum and element being reversible, end for end, as a unit, and said drum being located midway of said bearings in either position of said shaft.



1,429,654. MECHANICAL MOVEMENT. GEORGE C. SNYDER, New York, N. Y. Filed Mar. 6, 1920. Serial No. 363,823. 19 Claims. (Cl. 74—14.)

1. In a mechanical movement for controlling the operation of a machine, the combination of a controlling member, means for imparting a step-by-step movement to the member, and means associated with the member and



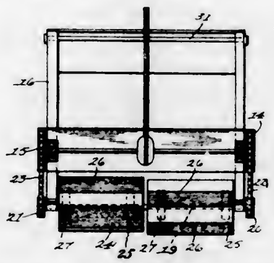
adapted to actuate controlling elements of the machine as the member is advanced.

1,429,655. SAFETY DEVICE FOR MOTORS. JOHN STENZEL, Jr., Windsor, Colo. Filed July 20, 1920. Serial No. 397,709. 3 Claims. (Cl. 192—116.)

1. In combination, a driven shaft, a governor connected therewith, an arm movable by said governor, a frame adjacent said arm and having a seat, a member adapted to rest on said seat when said shaft and governor move, power control means having connection with said member, said arm being adapted to force said member from said seat when the shaft and governor stop, whereby said member will release said power control.

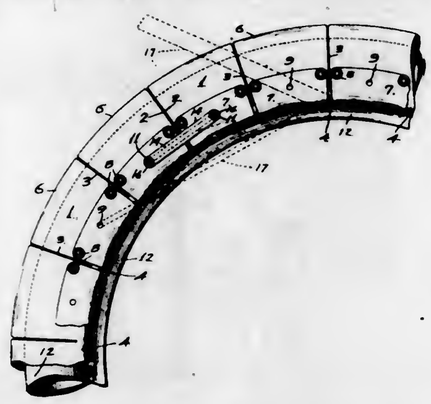
1,429,656. IMPELLING DEVICE FOR GAMES. WILLIAM EVERETT STONEBRIDGE, New York, N. Y. Filed Oct. 7, 1921. Serial No. 506,140. 5 Claims. (Cl. 124—1.)

1. An impelling device comprising an upright support, a second supporting member disposed at an angle thereto,



a shaft carried by said upright member, a striker on one end of said shaft, a rod projecting from the opposite end of the shaft, a plunger supported by the second supporting member, the lower end of said plunger being adapted to engage the said rod, a finger piece at the upper end of the plunger, and a spring surrounding the plunger and adapted to resist downward movement of the same.

1,429,657. SHOE-LACING MEANS. STEPHEN TRAWINSKI, Chicago, Ill. Filed May 13, 1922. Serial No. 560,680. 2 Claims. (Cl. 24—140.)

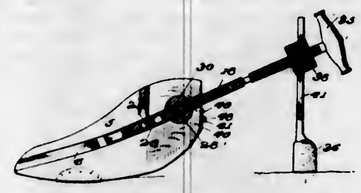


1. In a shoe lacing means, an upper divided to form an opening therein, a plurality of integral eyes suitably spaced apart upon adjacent edges of the said opening, the said eyes being formed by relatively long integral flap members projecting from the sides of the opening in the upper, the said flaps being folded back on a line substantially midway of their length and then secured to the inner face of the shoe upper, and a reinforcing strip within the adjacent edges of the shoe upper secured therein by means of an adhesive and a row of stitching passing through the said strip and the overturned edges of the integral flap.

1,429,658. AUTOMOBILE SLED. IVER URRVIG, Williston, N. Dak. Filed July 23, 1920. Serial No. 398,440. 1 Claim. (Cl. 301—41.)

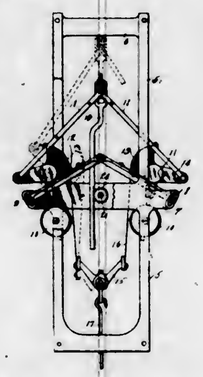
A propelling means for motor sleds, comprising a shaft, a plurality of wheels on said shaft, a plurality of slats secured with their ends to the periphery of each pair of said wheels, each of said slats having a body part of triangular cross-section adapted to engage the snow covered ground with its pointed apex, and means for securing said slats on said wheels.

1,429,659. OVERTIRE. LEWES D. WALKER, Sacramento, Calif. Filed Feb. 23, 1922. Serial No. 538,780. 9 Claims. (Cl. 152—17.)



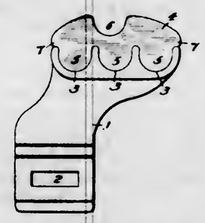
9. An over-tire comprising a casing separated at one point to provide two ends and cut transversely through the tread to the beads thereof at regular intervals between said ends to provide tread sections; shoes detachably connected to each section and embracing adjacent portions of the beads to prevent separation of said sections from said beads, each of said shoes being provided with centrally disposed apertures for the engagement of a placing and removing tool whereby said over-tire may be placed and removed; U-bolts detachably engaging and centrally disposed apertures of the shoes adjacent the two ends of the over-tire; and means for engaging the free ends of said U-bolts to retain the same in position to lock said over-tire upon a vehicle tire.

1,429,660. THERMAL RELAY. LAWRENCE E. WAGNER, Berkeley, Calif., assignor to Motor Protector Manufacturing Company, San Francisco, Calif., a Corporation of California. Filed Feb. 1, 1918. Serial No. 214,912. 7 Claims. (Cl. 175—294.)



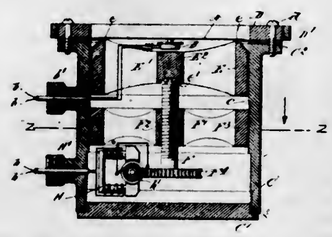
1. A protective device for an electric circuit, comprising a heating element in said circuit, means operative by an increase in temperature of the heating element for generating an electric current, and means operative by an increase in said current to a predetermined magnitude to open said circuit.

1,429,661. SHOE STRETCHER. HENRY WATERS, Bisbee, Ariz. Filed June 16, 1921, Serial No. 478,101. Renewed Aug. 8, 1922. Serial No. 580,546. 5 Claims. (Cl. 12—128.3.)



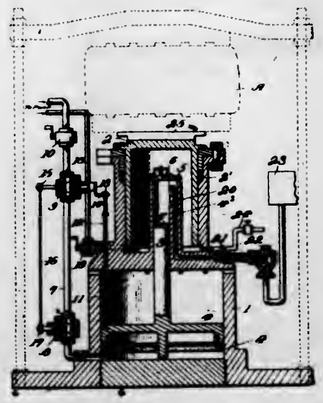
1. A shoe stretcher comprising a pair of sections, hinge plates secured to the rear ends of said sections and having aligned barrels, a hinge pin passed through said barrels and inclusive of pivotally connected sections whereby the sections may partake of a hinge movement with relation to each other, and a spreading member arranged between said sections.

1,429,662. WEIGHING SCALE. LEWIS C. WETZEL, Windsor, Ontario, Canada, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Dec. 21, 1916. Serial No. 138,257. 7 Claims. (Cl. 265—62.)



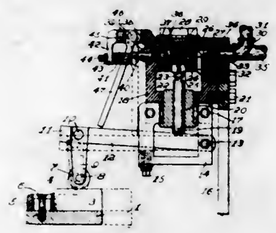
1. In a weighing scale, weighing mechanism comprising a supporting element, oppositely disposed pendulums carried by said element, means for actuating said pendulums, means whereby said pendulums are moved along said element when actuated, indicating means, and means connected with the pendulums and indicating means for transmitting movement from the pendulums to said indicating means in increased ratio as successive increments are weighed upon the scale.

1,429,663. BEARING. JESSIE B. WILLIAMS, Graniteville, S. C. Filed Oct. 27, 1921. Serial No. 510,685. 3 Claims. (Cl. 64—10.)



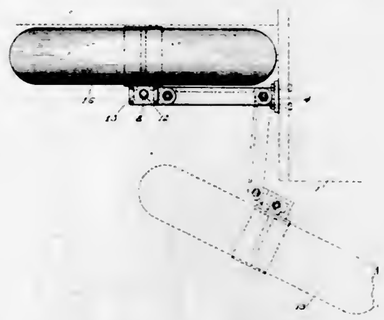
1. The combination with a whip roll stand or bearing, having longitudinally spaced recesses on its upper face, of a removable bearing block, said removable bearing block having a recess in its upper face and longitudinally spaced projections on the lower edge adapted for reception in the recesses.

1,429,664. DIAPHRAGM TUNING. EDWARD C. WOOD, Somerville, Mass., assignor to Submarine Signal Company, Portland, Me., a Corporation of Maine. Filed Sept. 18, 1917. Serial No. 192,014. 2 Claims. (Cl. 181—5.)



1. The diaphragm mounting above described, comprising means for holding the diaphragm at its edges and adjustable means for stretching said diaphragm, said means being applied to said diaphragm between said holding means and the center of the diaphragm, and comprising a slidable ring adapted to engage one surface of the diaphragm and means for adjusting said ring toward and from the diaphragm, the edge of said ring engaging said diaphragm being narrowed and located away from the inner wall of said casing, said adjusting means comprising a ring, threaded means for adjusting the ring with relation to the diaphragm and means comprising an electric motor to operate said threaded means.

1,429,665. HYDRAULIC PRESS. JAMES N. WOOD, Washington, D. C. Filed July 19, 1920. Serial No. 397,276. 6 Claims. (Cl. 138—17.)

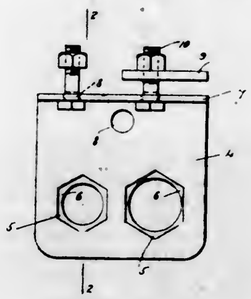


1. An hydraulic press comprising a main cylinder, provided with three interior cylindrical chambers of different diameters, pistons slidably mounted in said cylindrical chambers having piston heads of different areas, means for admitting fluid under pressure beneath said pistons and to the cylindrical chamber above the smaller of said pistons, and means for permitting the exit of fluid from said chamber under pressure.

1,429,666. AUTOMATIC BELL-RINGING DEVICE. ALBERTO I. WOODRING, Waterloo, Iowa, assignor, by mesne assignments, to National Safety Device Company, Waterloo, Iowa. Filed Mar. 17, 1922. Serial No. 544,643. 10 Claims. (Cl. 116—65.)

8. In combination, a movable controller-element having a cam adjustably fixed thereon, a movable contact-device having a finger-part pivotally mounted thereon for limited movement in one direction, said controller-element while moving in one direction only engaging said cam with said finger-part to cause the latter to change the position of said contact-device, a source of fluid under pressure, a bell-signal, a motor operatively connected to said bell-signal and operable by a fluid under pressure, a valve-chamber having separated receiving and delivery chambers in communication with both said source of fluid under pressure and with said motor, respectively, a resiliently-controlled valve adapted to control the passage of said fluid between the chambers, and a plunger mounted in said receiving chamber, projecting therefrom into contact with said contact-device and movable by the latter to open said valve.

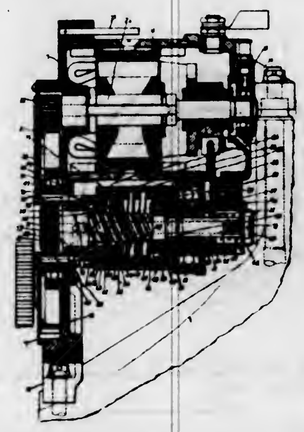
1,429,667. TIRE CARRIER. ALVA W. WOODWARD, Akron, Ohio, assignor, by mesne assignments, to Lawrence Carrier Corporation, Wilmington, Del., a Corporation of Delaware. Filed July 9, 1919. Serial No. 309,592. 29 Claims. (Cl. 224—29.)



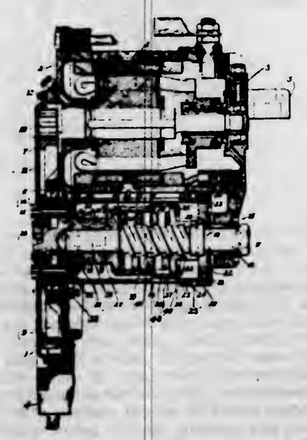
22. The combination, with a motor vehicle, of a tire carrier including means for supporting and carrying a tire thereon, and means including force-multiplying mechanism whereby the tire may be removed from the vehicle and placed upon the ground, the force-multiplying mechanism being composed of rigid elements.

1,429,668. FIRE-ALARM BOX. RUDOLPH ZAKRZEWSKI and KAZIMIEZ SCLEK, Thorpe, W. Va. Filed Oct. 22, 1921. Serial No. 509,491. 2 Claims. (Cl. 177—379.)

1. In an alarm box of the class described, a casing having front and rear vertical walls, the front wall of the casing being provided with a hand-hold, a rotary switch for an alarm circuit mounted upon the inner face of the rear wall of the casing in line with said hand-hold, a pivoted arm-engaging member normally urged to a position to engage and hold the arm of a person inserted within the casing through said hand-hold, means operatively connected to said switch for holding the arm-engaging member in inoperative position, said last named means being operable upon turning of the switch to release said arm-engaging member, means to automatically engage the arm-engaging member and to retain the latter in engagement with the person's arm upon release of said arm-engaging member, said last named means including a pivoted toothed bar and key-operated means for releasing said toothed bar from the arm-engaging member, and key-operated means for swinging the arm-engaging member to inoperative position upon release of the same, said last named means including a member operable by the same key for releasing the toothed bar.



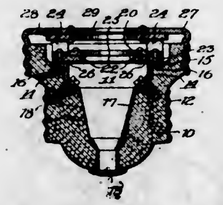
1,429,669. HOLDER FOR SPARK PLUGS. GEORGE O. ZIMMERMAN, Mason City, Ill. Filed Oct. 29, 1921. Serial No. 511,507. 1 Claim. (Cl. 81—119.)



A holder for spark plugs, comprising a flat supporting plate having a plurality of hexagonal sockets of different size for engaging with spark plugs, said plate being arranged at one end of the sockets which are unobstructed and open at that end, and said sockets having inwardly projecting shoulders at their other ends for supporting the plugs in the sockets.

1,429,670. STARTING APPARATUS FOR AIRPLANE ENGINES AND THE LIKE. JOSEPH BIJUR, New York, N. Y., assignor, by mesne assignments, to Bijur Motor Appliance Company, a Corporation of Delaware. Filed Mar. 25, 1918. Serial No. 224,494. 67 Claims. (Cl. 74—7.)

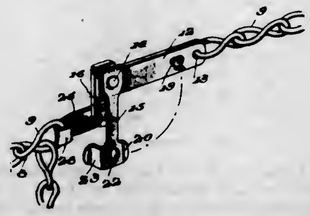
1. In an engine starting unit, in combination, a motor, a drum driven therefrom, a member contained within said drum and operatively connected thereto, a driving member normally contained within said drum and operatively connected to said first mentioned member for longitudinal movement thereof and rotary movement therewith.



1,429,671. STARTING APPARATUS FOR AIRPLANE ENGINES AND THE LIKE. JOSEPH BIJUR, New York, N. Y., assignor to Bijur Motor Appliance Company, a Corporation of Delaware. Filed Jan. 16, 1919. Serial No. 271,477. 30 Claims. (Cl. 74—7.)

1. In a starter unit for gas engines and the like, in combination, a motor having a shaft, a front head member and a back head member for said motor, a transmission member lodged in said back head against displacement and extending in a direction parallel to said motor and toward said front head, a barrel member and reduction gearing on said front head member for imparting power from said motor to the end of said transmission member through said barrel member and adjacent said back head.

1,429,672. RENEWABLE FUSE PLUG. NELS BOHLIN and SVEN FOANES, Chicago, Ill. Filed Mar. 10, 1921. Serial No. 451,280. 4 Claims. (Cl. 200—130.)

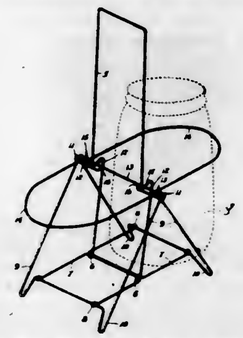


1. A fuse plug having an internal fuse chamber, fuse terminals in said chamber, a plate of insulating material hingedly attached to the body of the plug and adapted, when in closed position, to rest upon the fuse terminals and retain a fuse member in position thereupon, and means for retaining said plate in closed position.

1,429,673. RUBBER HEEL. GUSTAV BORMANN, Hanover, Germany. Filed Mar. 8, 1922. Serial No. 542,192. 2 Claims. (Cl. 36—36.)

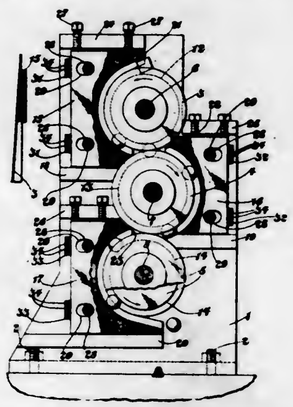
1. A device of the kind described comprising in combination, a flanged metal plate having openings adapted to rest with its flange from below against a heel piece, a bulged portion in said plate provided with a hole for the passage of fastening means, a flanged rubber tap adapted to rest on and to surround said plate and a projection on said tap constructed and arranged to fit into said openings of said plate.

1,429,674. ANTISKID CHAIN. ROBERT BRIGGS, Salida, Colo. Filed Jan. 13, 1922. Serial No. 528,918. 5 Claims. (Cl. 24—69.)



1. A fastener for a skid chain comprising a body, a link connected to one end of the body, a hook pivoted to said link and having a bill adapted for engagement with one of the links of a side chain, said bill being adapted to flatly abut one end of the body whereby to close the bill and hold the link of the chain within the bill.

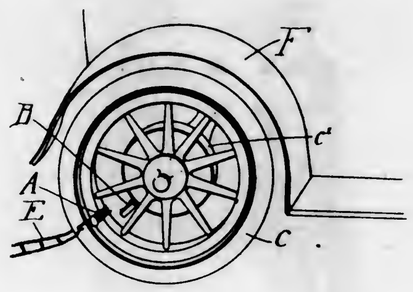
1,429,675. COLLAPSIBLE FRUIT-JAR HOLDER. ALBERT C. BURLINGAME, Minneapolis, Minn., assignor of one third to D. A. Frerichs and one-third to Anton Larson, both of Minneapolis, Minn. Filed Aug. 22, 1919, Serial No. 319,104. Renewed Feb. 3, 1922. Serial No. 533,980. 3 Claims. (Cl. 53—1.)



1. A jar holder comprising U-shaped leg members, a pivot rod to which the upper ends of said leg members

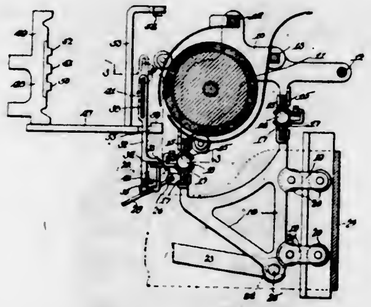
are pivoted, a U-shaped carrying bail having intermediate stop shoulders movable to and from engagement with said pivot rod, toggle-acting brace yokes pivoted to the lower

portions of said leg members, and U-shaped jar holding yokes pivotally connected to said pivot rod, and the complete holder being adapted to be folded when said carrying bail is pressed downward.



1,429,676. METAL-BALL-ROLLING MACHINE. CLINTON T. COATES, St. Louis, Mo., assignor of one-third to Albert W. Albrecht and one-third to Charles A. Cloud, both of St. Louis, Mo. Filed Mar. 24, 1921. Serial No. 455,059. 8 Claims. (Cl. 80—18.)

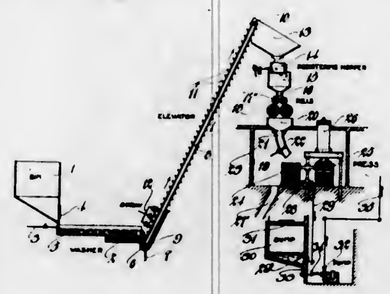
8. In a machine of the class described, the combination of a frame, a roller transversely supported in the upper part of the frame and having a groove therein the surface of which is roughened, a die having a segmental face disposed adjacent to one side of the roller, there being a groove in said face deflected downwardly on gradually decreasing radii, a second roller arranged in the frame below said first-named roller and having a smooth surfaced groove therein a die arranged in the frame adjacent to said roller and on the opposite side from said first named die, a third roller mounted below said second named roller, said last named roller being split, and means for driving said two first-named rollers, and a section of said last-named roller.



1,429,677. ANTISKID-CHAIN-APPLYING DEVICE. CLIFFORD FLUGEL, Cincinnati, Ohio. Filed Aug. 5, 1921. Serial No. 489,967. 5 Claims. (Cl. 152—14.)

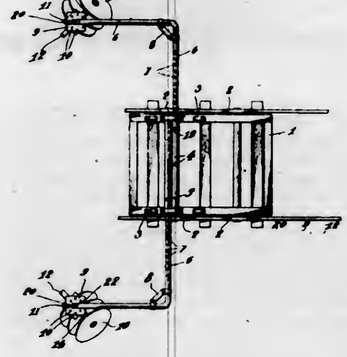
1. In an anti-skid chain applying device the combination of means adapted to be mounted on a wheel and to carry an anti-skid chain about the wheel during the movement of the wheel, and means adapted to apprise the

operator of the substantial positioning of the anti-skid chain upon the wheel.



1,429,678. MULTICOLORED-RIBBON SHIFT FOR TYPEWRITERS. MAX GARBELL, Chicago, Ill. Filed Jan. 19, 1920. Serial No. 352,514. 5 Claims. (Cl. 197—154.)

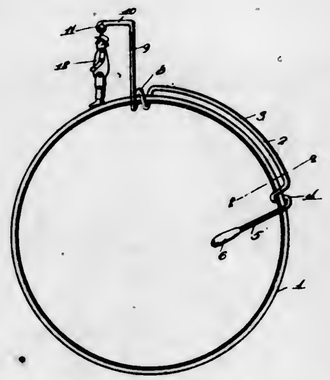
3. In a multi-colored ribbon shift for typewriters having a carriage supporting frame adapted for vertical movement and a platen carriage mounted on said frame, the combination with ribbon holding and guiding means extended in front of the platen and oscillatably mounted on the carriage-supporting frame to swing about an axis parallel to the platen toward and from the latter; of resilient means supported entirely from said frame for yieldingly resisting movement of said ribbon-holding means toward the platen and for automatically restoring said holding means to normal position after a printing operation; and manually operable means mounted on said frame and cooperable with the ribbon-holding means for adjusting the latter vertically relatively to the frame to thereby bring different portions of the ribbon into operative position for printing.



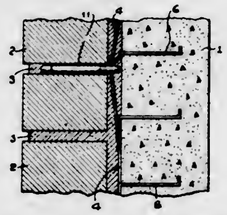
1,429,679. PROCESS FOR TREATING FRUIT JUICES. JOHN G. F. HIEBER, Spokane, Wash. Filed Sept. 13, 1920. Serial No. 409,862. 5 Claims. (Cl. 99—10.)

1. The process of extracting fruit juices which consists in floating the whole fruit to a washer and there cleaning the exterior of the fruit, spraying the washed fruit, crushing and grinding the washed fruit to a pulp, expressing juices from the pulp while in a sterilized atmosphere,

gathering the juice and finally sterilizing the gathered juice.



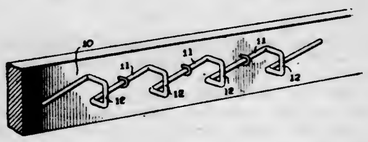
1,429,680. RAILROAD WEEDER AND RESHOULDERING MACHINE. PERRY ADAM KEISTER, Cedar Rapids, Iowa. Filed Nov. 16, 1921. Serial No. 515,689. 2 Claims. (Cl. 37—59.)



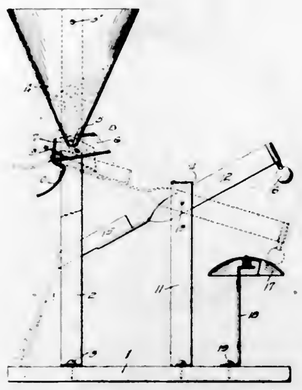
1. A device of the kind described comprising parallel tubular members, angled members adapted to partially telescope into the tubular members, and extending respectively from opposite ends of the tubular members, means for locking the second mentioned members in position, means for supporting a set of discs from the free end of each of the second mentioned members, discs supported by said means, the discs of each set being rotatable on a common axis and also the set rotatable as a whole about an axis at right angles to the axis of each individual disc.

1,429,681. PLAYING HOOP. MARTIN A. MCDONALD, Oakland, Calif. Filed Nov. 6, 1920. Serial No. 422,127. 1 Claim. (Cl. 46—36.)

A playing hoop comprising a circular hoop, an attachment bracket comprising a segmental length of wire conforming to the shape of the hoop and having each end provided with a coil through which the said hoop passes, the uppermost coil being located at the highest portion of the hoop, the lowermost coil being provided with a right angularly extending shank having a handle at its terminal, the upper coil being provided with a vertical support, having a forwardly projecting arm, and a movable figure suspended from the arm and having its lower end engaged with the periphery of the hoop.

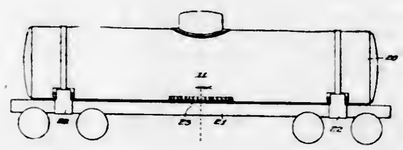


1,429,682. METHOD OF SECURING FACINGS AND THE LIKE TO WALLS AND THE LIKE. RALPH A. MEGENITY, Kansas City, Mo. Filed Jan. 16, 1920. Serial No. 351,937. 1 Claim. (Cl. 72—101.)



The method of attaching a facing or other member to a cementitious body which comprises embedding a stud in said body so that its face lies exposed along the surface thereof, bending a portion of the length of the stud outwardly from the surface of the body to a sufficient extent to permit the insertion of a tie-piece between said stud and body, introducing the tie-piece, and securing the facing to the tie-piece.

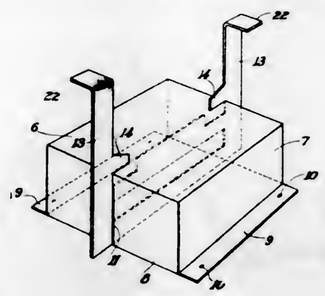
1,429,683. STUD FOR CONCRETE CONSTRUCTION. RALPH A. MEGENITY, Kansas City, Mo. Filed Nov. 1, 1920. Serial No. 420,970. 10 Claims. (Cl. 72—120.)



9. An anchor strip of the character described consisting of a plurality of parallel spaced attachment portions lying in one plane, and V-shaped anchor portions connecting adjacent attachment portions and extending laterally to one side of said plane substantially as described.

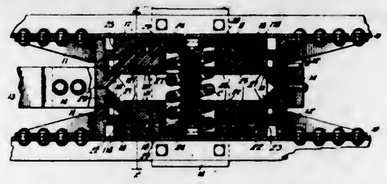
1,429,684. SAND TOY. CARL C. MULDNER, Jr., Maplewood, Mo. Filed Oct. 11, 1920. Serial No. 416,045. 3 Claims. (Cl. 46—37.)

1. In a toy of the class described comprising a sand hopper, means for supporting said hopper, a dumping receptacle pivotally connected to the lower end of the sand hopper, a tripping arm fixed to said dumping receptacle, a rocker arm, a support for said rocker arm, a sand tray fixed to one end of said rocker arm for engagement with the tripping arm for tilting the dumping receptacle when in its uppermost position, a bell, a support for said bell, and weighted means fixed to the opposite end of the rocker arm for striking and sounding the bell each time the dumping receptacle is tripped.



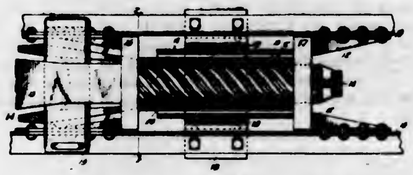
1,429,685. TANK CAR. AXEL M. NELSON, Chicago, Ill., assignor to General American Tank Car Corporation, Chicago, Ill., a Corporation of West Virginia. Filed May 19, 1922. Serial No. 562,145. 10 Claims. (Cl. 105—362.)

1. In a tank car, the combination of a tank-portion, an under frame, means for preventing displacement of said tank-portion on said under frame in a direction lengthwise of the car, cradle means interposed between said tank portion and said under frame and adjustable crosswise of the tank, and means holding said cradle means in adjusted position.



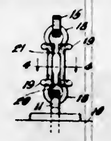
1,429,686. CONCRETE INSERT. CHESTER J. O'BRIEN, Chicago, Ill. Filed June 3, 1920. Serial No. 386,210. 9 Claims. (Cl. 72—105.)

1. A concrete insert comprising a box having opposite slotted walls, and a partition fitting in the slots, with means for the connection of a hanger and having bendable



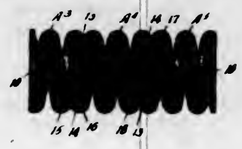
parts engageable over the top of the box for holding the partition in the slots.

1,429,687. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed Apr. 26, 1920. Serial No. 376,495. 4 Claims. (Cl. 213—64.)



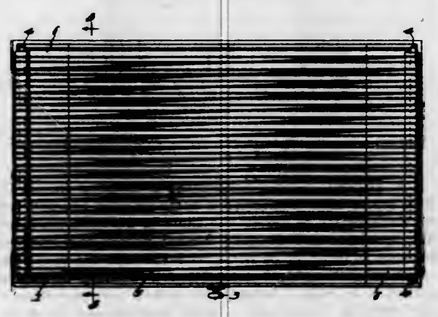
1. In a friction shock absorbing mechanism, the combination with a friction shell having interior friction surfaces and provided with opposed arcuate openings; of combined friction shoes and wedges cooperable with said friction surfaces of the shell and movable lengthwise thereof; a pair of laterally movable friction shoes within the shell, each of said laterally movable shoets including a substantially cylindrical spring cap and separate end shoes proper, each of the latter having an arcuate flange fitting the spring cap and the spring cap and said flanges extending within said openings of the shell, the shoes proper having inclined surfaces cooperable with said wedge-shoes; and spring means interposed between said laterally movable shoes.

1,429,688. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed Oct. 4, 1920. Serial No. 414,662. 5 Claims. (Cl. 213—64.)



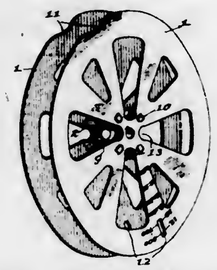
3. As an article of manufacture, a yieldable resistance unit comprising: a plurality of intercalated helical elements of steep pitch, the adjacent surfaces of said elements being in contact throughout the length of the helical elements and the unit being entirely free from any axial coil spacing, all helical elements contracting and expanding simultaneously, similarly and uniformly.

1,429,689. COUPLING-RELEASE MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed Feb. 16, 1921. Serial No. 445,291. 3 Claims. (Cl. 213—59.)



1. In a coupler release mechanism having a lock pin provided with an opening at its upper end and a release lever having an opening therein disposed substantially above the lock pin: a connector comprising two loosely connected loops, each loop being substantially of elongated U form with the ends of each arm thereof hook-shaped, the hook-shaped ends of each loop extending in a plane substantially perpendicular to the plane defined by the arms of the loop, the hook shaped ends of one loop being slidable longitudinally of and on the arms of the other loop.

1,429,690. PROCESS OF MAKING MULTIPLE-PIECE SPRINGS. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed Mar. 10, 1921. Serial No. 451,238. 4 Claims. (Cl. 29—173.)



1. The herein described process of making a multiple-piece, helically coiled spring wherein adjacent turns of the pieces are in line contact for approximately 360° which consists in: forming a single piece helically coiled spring consisting of a plurality of continuous, axially spaced turns of the desired pitch and coil diameter and of an uncompressed over-all length greater than that of the desired finished multiple-piece spring; then severing one of the intermediate turns of said coiled initially formed spring; and then nesting the pieces so formed with adjacent turns of the severed pieces in line contact throughout an arc of substantially 360°.

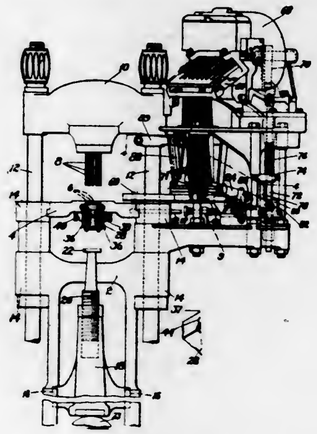
1,429,691. ELECTRICAL FLY-KILLING DEVICE. CARMELO PANDOLFO, Montevideo, Uruguay. Filed Oct. 8, 1920. Serial No. 415,591. 4 Claims. (Cl. 43—112.)

1. An insect electrocuting apparatus comprising a casing, posts extending from the corners of said casing, insulated cross bars arranged between the posts and supported by the latter, conducting wires spaced apart and wound upon said cross bars, and a transformer arranged in the casing and in electrical connection with said wires.

1,429,692. FILM REEL. GERARDO PASSAVANTI, New York, N. Y. Filed Mar. 17, 1920. Serial No. 366,458. 10 Claims. (Cl. 242—70.)

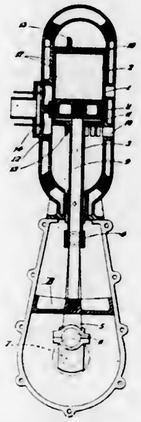
3. A film reel including side flanges and a metallic hub, said hub formed from a single strip of sheet metal, and so shaped as to form a finger groove in the periphery thereof, tabs on said hub, whereby said hub is secured to said flanges, one of said flanges provided with an aperture in substantial alignment with said finger groove.

1,429,693. ELECTRIC CLOCK. LOUIS PILLION, Dijon, France. Filed Aug. 26, 1920. Serial No. 406,224. 1 Claim. (Cl. 58—26.)



A secondary electric clock in which the dial comprises at least one series of prisms on the faces of which the hours, the quarters of an hour and the minutes are indicated, in combination with a driving mechanism for each prism, a central member which operates the said driving mechanisms and means for operating the central member from a main clock as set forth.

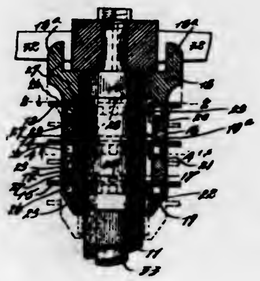
1,429,694. COUNTER AND SHANK FASTENING MACHINE. JOSEPH H. POPE, Hamilton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 2, 1919. Serial No. 269,284. 36 Claims. (Cl. 1—19.)



1. In a machine of the class described, the combination of relatively adjustable devices constructed and arranged to support a molded counter adjustably and hold the coun-

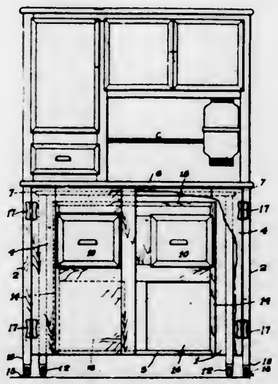
ter in predetermined shape, means for positioning a shoe shank in finally assembled relation to the counter, and

mechanism constructed and arranged permanently to fasten the counter and the said shank in assembled relation.



1,429,695. DOUBLE-ACTING INTERNAL-COMBUSTION ENGINE. JAMES BROWN PRICE, Cross Keys, England, assignor of one-half to Luther Silverthorne, Newport, England. Filed Feb. 7, 1920. Serial No. 356,959. 5 Claims. (Cl. 123—62.)

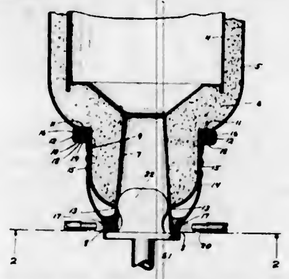
1. A double-acting internal combustion engine of the class described including a main cylinder, a fixed piston therein, a reciprocating double piston having the side wall thereof perforated for transferring a compressed charge from one side of one of the pistons to the opposite side, the said compressed charge being passed into the working chamber of the same portion of the main cylinder where initial compression occurred.



1,429,696. STEERING-WHEEL LOCK. LOUIS RONCA, Jersey City, N. J. Filed Mar. 25, 1922. Serial No. 546,550. 3 Claims. (Cl. 70—53.)

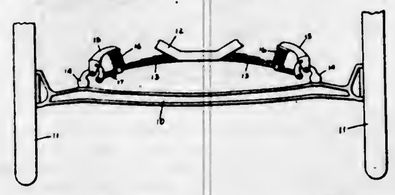
1. In a steering wheel lock, a carrier arranged for securement to the housing of a steering post carrying a wheel, a key carried by the carrier having slots therein, a sleeve slidable longitudinally of the carrier, and disks rotatably mounted on the sleeve arranged to engage the slots in said key, each disk having a slot for the passage of the key, teeth carried by each disk, a spring adjacent each disk

to engage said teeth to cause clicks when the disks are rotated, and a stop carried by each disk to contact with the key, said stops being located in different positions relative to the slots in the disks and arranged to contact with said key in order that a starting point for the movement of the disks to carry out the combination will be provided.



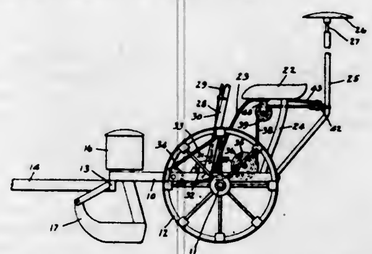
1,429,697. KITCHEN CABINET. MAX M. SCHULTZ, Detroit, Mich. Filed Sept. 26, 1919. Serial No. 326,681. 5 Claims. Cl. 45—16.)

1. A kitchen cabinet comprising a housing having a bench top, a table proportioned to be inserted beneath the top, closures for retaining the table in position, provided with openings, and drawers located within the lines of the table adapted to be withdrawn through the openings.



2. A kitchen cabinet comprising a housing having a bench top, a cabinet beneath the bench top, providing a space entirely thereabout, a table proportioned to be inserted within the space under the bench top, and closures for the opening retaining the table in position.

1,429,698. METALLIC RECEPTACLE AND METHOD OF MAKING THE SAME. HERBERT M. SMITH, Great Barrington, Mass., assignor to Stanley Insulating Company, Great Barrington, Mass., a Corporation of Maine. Filed Sept. 30, 1918. Serial No. 256,288. 9 Claims. (Cl. 215—13.)

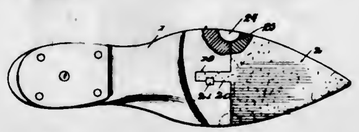


1. A device of the kind described having a neck piece terminating in a rearwardly directed flange, and a tubular member surrounding the neck piece and rigidly joined to the latter at the terminus of its rearwardly directed end.

1,429,699. SHOCK ABSORBER. FREDERICK L. SPRING, Indianapolis, Ind. Filed May 20, 1920. Serial No. 382,884. 10 Claims. (Cl. 267—17.)

7. A shock absorbing construction for two relatively movable members separated by spring means, including a lever pivotally supported at one end and curved so as to extend towards said separating spring means, yielding shock absorbing means between said lever and said separating spring means, auxiliary lever means similarly curved and pivotally connected to said separating spring means and extending towards said shock absorbing lever and supported thereby intermediate the pivoted support of said shock absorbingg lever and the yielding shock absorbing means connection with said lever, and stop means associated with both of said lever means for limiting the relative movement of said lever means to each other.

1,429,700. ATTACHMENT FOR CORN PLANTERS. ALLEN A. STAHL, Sheridan, Ind. Filed Dec. 23, 1921. Serial No. 524,402. 1 Claim. (Cl. 97—83.)



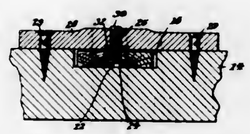
In a machine of the class described, the combination with a supporting frame, an operator's seat mounted upon said frame, a market comprising a guide shaft pivoted to said frame and having a marking member mounted thereon, means for elevating and throwing said marker from one side of the machine to the other, comprising a shaft rotatably mounted transversely of said frame, a winding drum keyed upon said shaft near the center thereof, a second winding drum keyed to the end of said shaft, a lever pivoted to said frame, a cable connecting said lever with said last mentioned drum so that said drum will be rotated by the operation thereof, a second cable connected to said first mentioned drum and guide shaft, and a plurality of pulleys mounted above said frame over which said last mentioned cable is adapted to pass for drawing said arm to elevated position and permitting it to drop to the other side of said frame, substantially as described.

1,429,701. COMBINED SHIPPING AND DISPENSING PACKAGE. JAY Q. STEPHENS, Kansas City, Mo. Original application filed Nov. 28, 1919, Serial No. 340,988. Divided and this application filed Nov. 23, 1920. Serial No. 426,004. 1 Claim. (Cl. 206—56.)

A combined shipping, packing and dispensing device consisting of a tubular container having a set of vertical slits and a cross slit connecting the tops of the vertical slits, thereby constituting tongs, said tongs being bent inwardly and downwardly and being located a sufficient distance above one end of the container to hold the contents against gravity discharge through the bottom of the container.

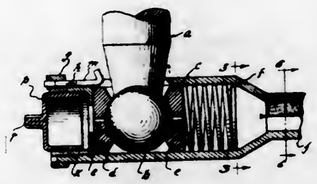
1,429,702. SHOEMAKER'S LAST. HARRY E. TREAT, Rochester, N. Y. Filed July 2, 1920. Serial No. 393,667. 2 Claims. (Cl. 12—133.)

1. A shoemaker's last comprising a body portion and a toe portion each having a blunt end, the blunt end of one of said portions being recessed to form a mortise and the blunt end of the other being provided with an integral tenon fitting the mortise, and a locking element seated within a recess formed partly in one side of the tenon and partly within the confronting wall of the mortise, the mortise and tenon being disposed substantially perpendicularly to the working face of the last and extending longitudinally with relation to their respective



portions, and the locking element being coextensive in height with the tenon and extending from the working face of and heightwise of the last and having its lower end disposed substantially flush with said working face.

1,429,703. FLUXED SOLDER. GEORGE L. VAN ALLEN, Prince Bay, N. Y., assignor to Baker & Company, Inc., a Corporation of New Jersey. Filed Sept. 21, 1918. Serial No. 255,067. 9 Claims. (Cl. 113—110.)



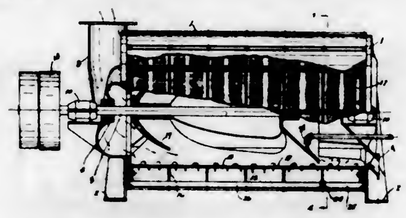
1. As an article of manufacture, a tube of solder having a coating of flux on the walls thereof.

1,429,704. CHICKEN COOP. ISADORE VANDERBECK, Huntsville, Mo. Filed Oct. 29, 1921. Serial No. 511,339. 2 Claims. (Cl. 217—62.)

1. In a coop structure, a central transverse member having an upper closure slat receiving recess, a closure slat longitudinally movable within said recess and provided with an aperture intermediate its ends, a strap secured to said central transverse member and spanning said recess, a locking bolt perpendicular to said strap and movable into and out of said aperture in the closure slat, a head on said bolt and said strap being provided with a countersunk portion surrounding said bolt to receive the head thereof.

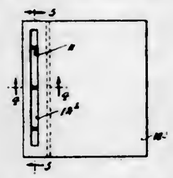
1,429,705. DRAG LINK. FRANK P. WILLIAMS, Detroit, Mich. Filed July 5, 1921. Serial No. 482,290. 9 Claims. (Cl. 287—90.)

1. In a drag link, the combination of a member provided at its end with an enlarged hollow portion internally threaded and slotted at the top to receive a ball and arm, and a stamped plug provided with turned-over edges and having one or more slots and a key fitted into the rear portion of the slot of the enlarged portion and engaging through one of the slots in the stamped plug to lock the same in place and serve to cover a portion of the slot.



7. A drag link formed of a shell having a cylindrical hollow end portion and a main rod portion of square cross section.

1,429,706. WHEEL-SPOKE TIGHTENER. LAWRENCE J. WILSON, Coleman, Tex. Filed Dec. 6, 1921. Serial No. 520,275. 1 Claim. (Cl. 301—81.)



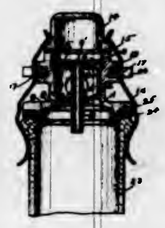
As an article of manufacture, a fastening plate for wheel spokes comprising a body portion having one knife edge and a lateral offset at one end, and adapted to be forced between the converging portions of the spokes of a wheel with the offset engaging the hub sleeve thereof.

1,429,707. PAPER-PULP-SCREEN MACHINE. HAROLD T. BAKER and JOHN D. HASKELL, Dayton, Ohio. Filed May 4, 1921. Serial No. 466,663. 5 Claims. (Cl. 92—35.)

1. In a paper-pulp screen machine, the combination with an outer casing approximately elliptical in cross section, of fiber screening means rotatable within said casing, a stock inlet to the latter, an accepted stock outlet and a tailing discharge outlet from said casing, the wall of the outer casing approaching the screening means at two points to form compression spaces between the screening means and the casing wall for the purpose specified.

1,429,708. LOOSE-LEAF BINDER. LOUIS W. BERGMAN, New York, N. Y. Filed Mar. 29, 1921. Serial No. 456,555. 2 Claims. (Cl. 129—23.)

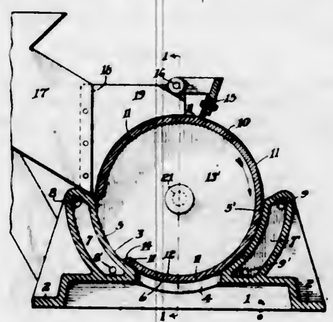
1. A loose leaf binder, comprising a cover, a member formed with opposite grooves, laterally curved leaf holders having flat bases frictionally engaging said grooves, the free ends of said leaf holder being perpendicular to said bases, an auxiliary cover having a slot to engage said free ends of the leaf holders, and means between said two covers for detachably connecting the latter together.



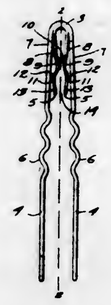
1,429,709. CHIROPRACTIC TABLE. ELVA BOWMAN, Fort Wayne, Ind. Filed June 23, 1921. Serial No. 479,751. 6 Claims. (Cl. 128—72.)

1. In a chiropractic table, a frame including a foot and a head pedestal spaced apart; a pair of abdominal supports in the space between the pedestals and having

hinged connection respectively in said pedestals; a stirrup in each of said pedestals; a prop for each abdominal support having hinged connection in the corresponding stirrup; a spring resisted toggle mechanism for sustaining each of said props in normal position; and a locking means adapted to engage each of said props and hold the same in normal position.



1,429,710. SAMPLE TAKER. BERTIE BRAYSHAW, Fort Atkinson, Wis., assignor, by mesne assignments, to The General Tool & Manufacturing Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed June 14, 1920. Serial No. 388,975. 4 Claims. (Cl. 73—21.)



1. A sample taker comprising a hollow body portion having a tube extending through the bottom of said body portion, a disc carried by the body portion and arranged to bear on the end of the tube, said disc having a perforation arranged to register with the tube for admitting fluid therein and having other perforations for admitting fluid into the body portion, an outlet, a cap covering said body portion and being provided with an inlet, and spring means for securing said cap to said body portion.

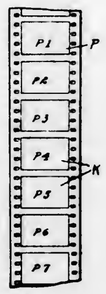
1,429,711. COAL FEED FOR GAS PRODUCERS OR FURNACES. OAKLEY T. BROWN, Audubon, N. J., assignor, by mesne assignments, to United States Cast Iron Pipe & Foundry Company, Burlington, N. J., a Corporation of New Jersey. Filed May 14, 1918. Serial No. 234,400. 3 Claims. (Cl. 214—35.)

1. In a feeder for gas producers, a feeding drum, supports therefor, a casing fitting a part of the drum surface and having a discharge opening, and walls forming with the casing a water cooling chamber for the casing about the opening and between the drum and the producer.

1,429,712. HAIRPIN. ROBERT S. BUSBY, Jacksonville, Fla. Filed Oct. 18, 1920. Serial No. 417,654. 3 Claims. (Cl. 132—32.)

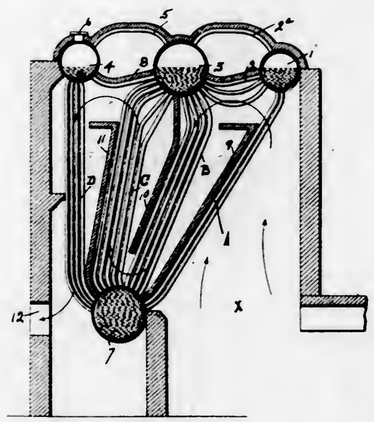
1. A hair pin comprising a head, a pair of main projections in spaced apart relation with comparatively straight portions leading therefrom and a pair of auxiliary projections disposed between the said straight portions of said main projections, said auxiliary projections leading from said head with portions next adjacent thereto in converging relation for a part of their length, then bulged inwardly toward the longitudinal axis of the pin with the crowns of the bulges confronting one another and providing a constricted passage way, then bulged outwardly toward the said straight portions of said main projections providing constricted passage ways therebetween, and having end portions in converging spaced relation.

1,429,713. COMPRESSED-AIR-FILTERING APPARATUS. PERRY H. CAZIER and WILLIAM H. HECKER, Nashville, Mich. Filed Sept. 17, 1921. Serial No. 501,333. 5 Claims. (Cl. 183—39.)



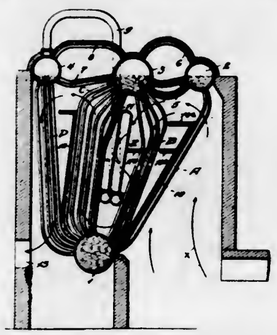
1. An apparatus of the class described, comprising a vertically positioned container, absorbent material for collecting moisture and lubricant from compressed air passed therethrough, means for carrying compressed air to the lower end of the container, means to close said air carrying means against the passage of air, said last named means being normally open, a normally open outlet to the container at its upper end, means to close said outlet, a normally closed outlet to the lower end of the container, means for opening said outlet, and a normally closed conduit for carrying compressed air into the upper end of the container combined with means for opening said conduit substantially as and for the purposes described.

1,429,714. PROCESS OF MAKING SUBSTITUTED AMINES. CHARLES B. CHATFIELD, Orange, N. J. Filed Mar. 5, 1919. Serial No. 280,809. 3 Claims. (Cl. 260—128.)



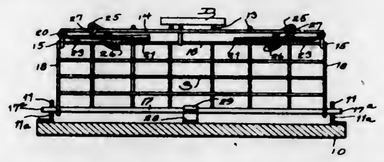
1. In the process of making substituted amines, the step which consists in providing a batch of the amine and caustic alkali and causing a bromide of the substituting radical to gradually react with the amine at atmospheric pressure, the caustic alkali acting to neutralize the hydrohalogen substantially as formed.

1,429,715. PHOTOGRAPHY. EDWIN W. CLARK, Chicago, Ill. Filed May 26, 1920. Serial No. 384,416. 4 Claims. (Cl. 88—19.5.)



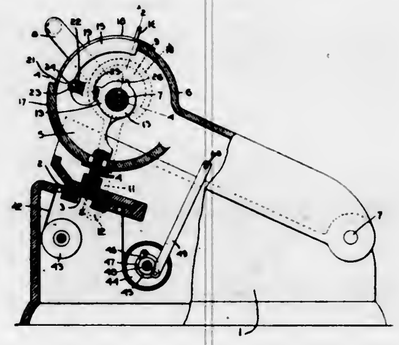
1. A moving-picture film of standard size, standard picture spacing, and standard arrangement of pictures, having pictures thereon of substantially standard area; said pictures having been taken closer to the plane of principal action and having greater width of said plane, than pictures taken of the same subject in the standard way and using a lens of the same focal length.

1,429,716. WATER-TUBE BOILER. ALFRED COTTON, St. Louis, Mo., assignor to Heine Boiler Company, St. Louis, Mo., a Corporation of Missouri. Filed Mar. 16, 1920. Serial No. 366,286. 4 Claims. (Cl. 122—302.)



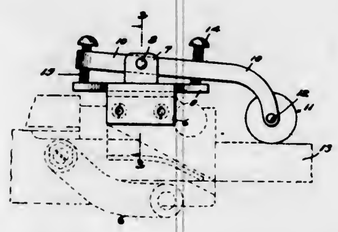
1. A water tube boiler, comprising at least two elevated transverse steam-and-water drums, water circulators connecting said drums together, a transverse mud drum, a radiant heat bank of upflow tubes leading upwardly from said mud drum to one of said elevated drums and constituting the sole source of water supply to said elevated drum, a separate and distinct convected heat bank of upflow tubes spaced away from said radiant heat bank and connected to the other elevated drum for causing the remainder of the water rising from said mud drum to circulate upwardly to said other elevated drum, a baffle arranged between said radiant heat bank and said convected heat bank, a cooperating baffle for causing the fire gases to flow downwardly among the tubes of the convected heat bank, and downcomer tubes leading from one of said elevated drums directly to said mud drum.

1,429,717. SUPERHEATER BOILER. ALFRED COTTON, St. Louis, Mo., assignor to Heine Boiler Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 12, 1920. Serial No. 373,248. 4 Claims. (Cl. 122—478.)



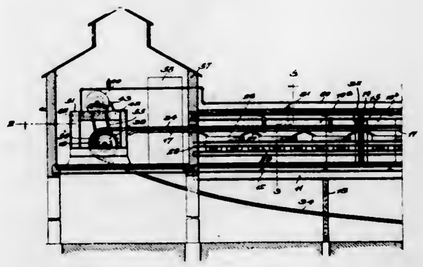
1. A water tube boiler, comprising at least two elevated transverse steam-and-water drums, water circulators connecting said drums together, a transverse mud drum, a radiant heat bank of upflow tubes leading upwardly from said mud drum to one of said elevated drums and constituting the sole source of water supply to said elevated drum, a separate and distinct convected heat bank of upflow tubes spaced away from said radiant heat bank and connected to the other elevated drum for causing the remainder of the water rising from said mud drum to circulate upwardly to said other elevated drum, a baffle arranged between said radiant heat bank and said convected heat bank, a co-operating baffle for causing the fire gases to flow downwardly among the tubes of the convected heat bank, downcomer tubes leading from one of said elevated drums directly to said mud drum, and a superheater arranged so that it will be heated by gases flowing through the boiler.

1,429,718. POULTRY CRATE. EDWARD COX, Bloomfield, Iowa, assignor of one-fourth to Edward N. Bezzenberger, Bloomfield, Iowa. Filed Jan. 29, 1921. Serial No. 441,004. 2 Claims. (Cl. 220—7.)



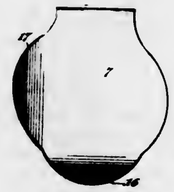
1. In a collapsible poultry crate, a base, transverse guides secured to said base adjacent the ends thereof and having pairs of slots formed therein substantially paralleling said base, a top member, side members pivotally connected with said top member and each embodying upper and lower strands, said lower strands being of greater length than said side members and having their ends slidably mounted in the slots of said guide members, end members pivotally connected to the top member intermediate said side members and common means engaging the lower strands of said side members when the crate is in extended position to hold the lower ends of the side members against shifting and engaging the upper strands of said side members when the crate is collapsed to hold the crate in collapsed position.

1,429,719. PERFORATING MACHINE. ALFRED L. DAY, Brookline, Mass., assignor to Day Perforator Company, a Voluntary Association of Massachusetts. Filed May 5, 1920. Serial No. 379,162. 12 Claims. (Cl. 101—26.)



1. In a perforating machine, the combination with a plurality of punches, of a settable matrix member for selectively operating the punches, means to give said matrix member its punch-actuating movement, and means to restore automatically the matrix member to zero position after each punch-actuating movement thereof.

1,429,720. ATTACHMENT FOR MONOTYPE MACHINES FOR MAKING BOARDER RULES AND DOTTED RULES. ALFRED C. DE NISSON and FRANK D. CHRISTIE, Seattle, Wash. Filed July 30, 1919. Serial No. 314,359. 3 Claims. (Cl. 199—1.)

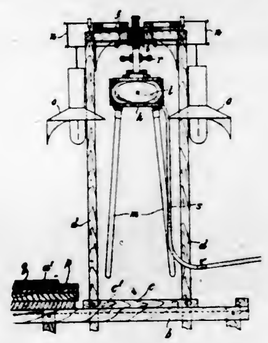


1. An attachment for monotype machines comprising in combination with a monotype mold, of a bracket supported adjacent to said mold, an arm pivoted to said bracket, adjustable means carried by said arm at each side of the arm adapted for engagement with said bracket to hold the arm in adjusted positions and a roller journalled in the outer end of said arm and having a design relief on the periphery thereof and adapted for engagement with a bar of type metal issued from said mold.

1,429,721. WAX-SWEATING APPARATUS. CARL STREETER DICKENS, THOMAS EDWIN SCHLEY, and JOHN WHARTON NEWTON, Beaumont, Tex., assignors to Magnolia Petroleum Company, Dallas, Tex., a Voluntary Joint-Stock Association of Texas. Filed Nov. 13, 1920. Serial No. 423,869. 5 Claims. (Cl. 196—24.)

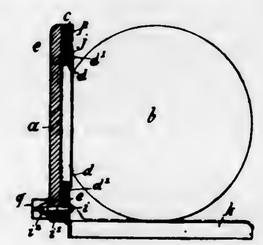
1. An apparatus for sweating paraffin and the like, comprising an elongated closed sweating chamber having a plurality of compartments situated end to end in a substantially horizontal plane, partitions in said chamber separating said compartments, an endless foraminous belt having a substantially horizontal path of travel through said compartment, means for heating each of said compartments to varying predetermined degrees, oil receiving receptacles in said compartments beneath said belt, a supply chamber at one end of said sweating chamber, means in said supply chamber for continuously depositing wax upon said belt, and means for moving said belt through its path of travel.

1,429,722. DEFLECTOR SHIELD. MAURICE H. DONAHUE, Columbus, Ohio. Filed May 10, 1922. Serial No. 559,813. 5 Claims. (Cl. 240—45.6.)



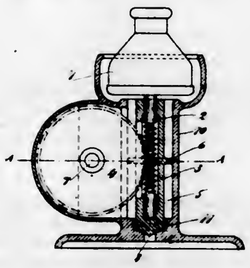
1. A shield for automobile headlights adapted to be positioned in front of a headlight, the front portion thereof being curved forwardly and upwardly with respect to the rear portion and a side thereof being curved upwardly and outwardly.

1,429,723. PHOTOGRAPHIC-PRINTING APPARATUS. HENRY ROBERT EASON, London, England. Filed Dec. 28, 1921. Serial No. 525,458. 7 Claims. (Cl. 95—76.)



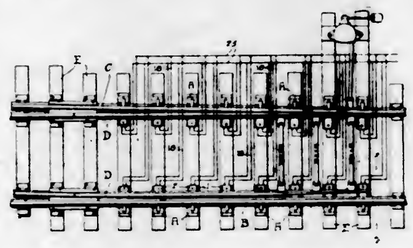
5. Photographic printing apparatus including a table for a sensitized surface and a plurality of photographic plates, a carriage adapted to be moved along said table into position over any of said plates, and pressure-applying

means including an auxiliary carriage supported on said first-mentioned carriage, depending legs supported by such



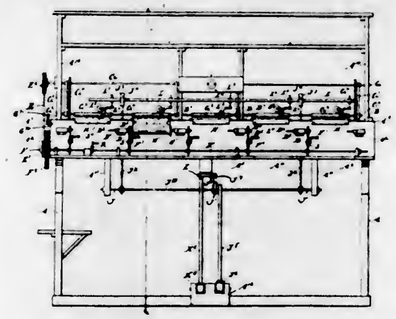
auxiliary carriage and means for lowering said depending legs to exert pressure on any of said plates.

1,429,724. COVER FOR THE SEATS OF SANITARY APPARATUS. EUGÈNE LÉON ECKERLEIN, Paris, France. Filed Aug. 29, 1921. Serial No. 496,236. 5 Claims. (Cl. 4—18.)



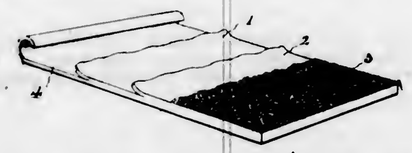
1. In a cover for the seat of a sanitary apparatus the combination of a container comprising two circular concentric frames, adapted to contain a block of sheets of paper or the like which are designed to be turned down successively over the seat of which they cover the entire surface and to be torn off after use.

1,429,725. SELF-CENTERING CENTRIFUGE. ERNST ELIS FRIDOLF FAGERSTRÖM, Skarsatra, near Stockholm, Sweden. Filed Oct. 16, 1919. Serial No. 331,254. 3 Claims. (Cl. 64—48.)



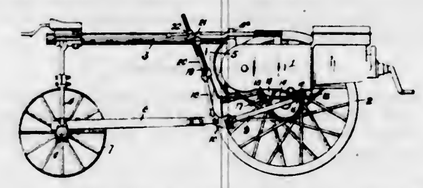
2. In a device of the character described, the combination with a centrifugal drum and a chambered standard, of a sleeve arranged within the chamber of the standard, said sleeve being cut out at one side and having a peripheral flange bearing against the inner wall of the standard, the lower end of the sleeve being seated in a recess in the standard, said recess having a shape corresponding to the shape of the lower end of the sleeve, the bearing surface of the recess having such an inclination relatively to the longitudinal axis of the spindle that the sleeve will always tend to slide upon the bearing surface and regain its centered position, the said sleeve being also adapted to have a lateral movement in said recess, a worm spindle rotatably mounted at both its ends in the sleeve and being movable longitudinally as well as laterally with the sleeve, and a vertically-arranged worm wheel mounted upon an axis arranged in a horizontal plane coinciding with the flange on the sleeve, said worm wheel projecting through an opening in the standard and the opening formed in the sleeve.

1,429,726. ELECTRIC HEATER FOR RAILWAY SWITCHES. JOSEPH B. FEDER, East Orange, N. J. Filed Dec. 8, 1920. Serial No. 429,068. 6 Claims. (Cl. 246—428.)



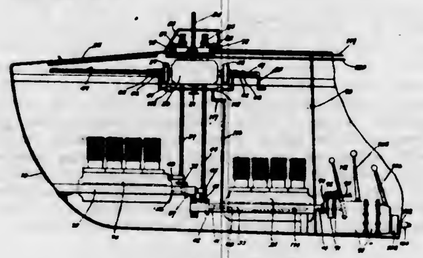
1. A slide plate for railway track switches including a body portion to support a switch point, and electrical heating means removably mounted in said body portion.

1,429,727. APPARATUS FOR TREATING MUSIC SHEETS. NUNES CLARENCE FERRIS, Brooklyn, N. Y., assignor to Elizabeth F. Boyle, Brooklyn, N. Y. Filed July 17, 1919. Serial No. 311,469. 6 Claims. (Cl. 33—23.)



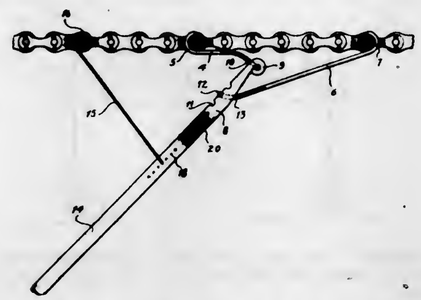
1. In an apparatus of the character set forth, a table, means for supporting a plurality of music sheets in position for presentation thereto in the same horizontal plane, spooling mechanism for such sheets, means for guiding such sheets separately and independently of each other across said table from said supporting means to said spooling mechanism, a series of marking wheels above said table, and means for moving said printing wheels simultaneously into and out of contact with such sheets in the traverse of the latter.

1,429,728. BITUMINOUS SHEET ROOFING AND WEATHERPROOFING MATERIAL. CHARLES N. FORREST, Rahway, N. J., assignor to The Barber Asphalt Company, Philadelphia, Pa., a Corporation of West Virginia. Filed July 12, 1919. Serial No. 310,432. 4 Claims. (Cl. 154—51.)



1. A flexible bituminous sheet weatherproofing material comprising a fabric base saturated or impregnated with a bituminous medium; faced, on its weather side, with grit secured thereto with bituminous cement; and backed, on its inner side, with a water insoluble and repellent protective and fixative bituminous coating, sufficiently hard and high melting not to stick to a similar sheet under shipping conditions, but soft enough to adhere spontaneously to the facing of a subjacent similar sheet under the natural influence and conditions of use when exposed to the hot sun.

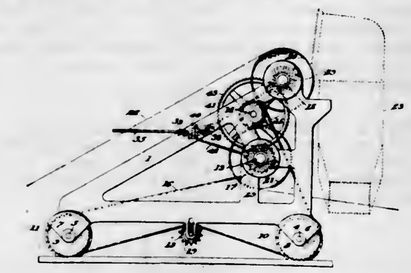
1,429,729. ADJUSTABLE DRAFT MEANS. FRANK H. GERDSMAN, Findlay, Ohio. Filed Dec. 11, 1920. Serial No. 429,851. 4 Claims. (Cl. 280—33.2.)



1. In combination, a tractor, an arcuate member secured thereto for longitudinal arcuate adjustment transverse to the tractor, means operable to adjust said member, and a draft member pivotally trailing from the adjustable member and having its line of draft shifted by an adjustment of the first member.

1,429,730. AEROPLANE. FRANK GILL, Chicago, Ill. Filed Dec. 13, 1921. Serial No. 521,990. 4 Claims. (Cl. 244—25.)

1. In an aeroplane, the combination with motor driven wheels, of a frame for maintaining the wheels, a fuselage mounted on said frame, sustaining planes engaged with the fuselage, primary and secondary propellers, and means for disengaging one of said propellers without disengaging the other, and other means whereby both propellers may be disengaged without stopping the engines.

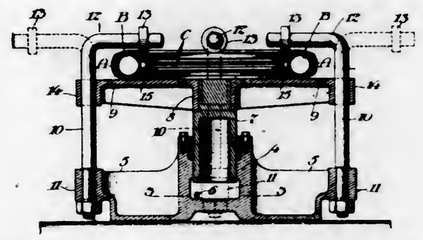


1,429,731. CHAIN TOOL. ALEXANDER H. GRANT, Chicago, Ill. Filed June 11, 1920. Serial No. 388,304. 4 Claims. (Cl. 254—78.)

1. In a chain tool, the combination of a pair of members provided with opposed seats for engaging links of a chain respectively, a lever between said members, adapted to force said seats together, a hook to engage a link of this chain for locking the lever to secure the members in operative position and an adjustable connection between the hook and the lever.

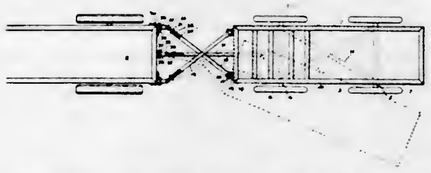
2. A chain tool comprising a pair of members having opposed seats therein to engage links of a chain, a lever, a pivotal connection between one of the members and the lever, and an adjustable pivotal connection between the other member and the lever comprising a slot through which the lever extends and which permits disengagement of the pivotal connection and the longitudinal shift of the lever through the slot.

1,429,732. BELT-CONVEYER TRIPPER. OSCAR B. HANSON, Tiffin, Ohio. Filed Apr. 19, 1919. Serial No. 291,251. 3 Claims. (Cl. 188—186.)



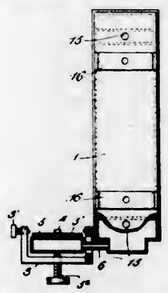
1. In a belt conveyer tripper, a carriage having side frames, shafts fastened in said side frames stationarily, pulleys mounted idle on said shafts and adapted to be driven in opposite directions, a friction clutch for each pulley also idling on the same shafts and adapted to be shifted to engage one or the other of the pulleys, wheels on which said carriage is mounted, a pinion connected with the clutch mechanism of each pulley, an intermediate gear wheel meshing with said pinions, and means to transmit motion from the gear wheel to the carriage wheels to cause the tripper to run back and forth as desired in accordance with which pulley is clutched for the time being.

1,429,733. TIRE-RIMMING APPARATUS. ARCHER H. HARRIS, Barberton, Ohio, assignor of one-half to Evan A. Armstrong, Akron, Ohio. Filed Jan. 18, 1921. Serial No. 438,082. 8 Claims. (Cl. 18—2.)



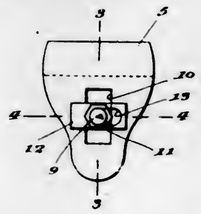
1. In a tire-rimming apparatus, the combination with a tire and bull-ring supporting element and means for

actuating the same, of a series of spaced-apart abutment members for the bull-ring, said members being supported for horizontal rotation on vertical axes outwardly of the



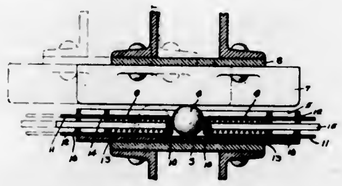
periphery of the tire on said element and being movable over or away from the path of the said element, as desired.

1,429,734. TRAILER. CHARLES S. HOFFMAN, San Francisco, Calif. Filed Oct. 16, 1920. Serial No. 417,331. 3 Claims. (Cl. 280—335.)



1. A trailer comprising a body, front and rear wheels supporting the body and mounted so as to be turned to right and left, means of connection between said wheels for turning the rear wheels in opposite direction from the front wheels, a member arranged to turn with the front wheels, cross coupling rods pivoted to said member, and means for connecting the last-named rods with the vehicle, and compression springs operatively associated with the last-named rods and arranged to compress under longitudinal strains transmitted in either direction to said last-named rods.

1,429,735. ELECTRIC WATER HEATER. MOSES W. HORNSBY, New York, N. Y., assignor to Southern Electrolyte Battery Company, Inc., New Orleans, La., a Corporation of Louisiana. Filed Feb. 19, 1921. Serial No. 446,353. 1 Claim. (Cl. 219—39.)

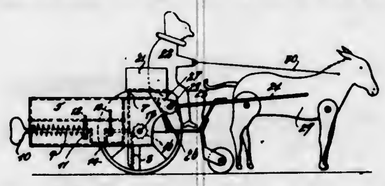


An electric water heater embodying an electrode included in a normally opened circuit, and comprising a plurality of carbon elements of elongated contour, and a plurality of insulating members arranged between the carbon element and spacing the latter, said carbon elements having alined openings adjacent the ends thereof, said insulating members having longitudinal slots defining channels between the carbon elements, said channels communicating through said openings alternately from the bottom and top of the electrode, a protective covering for said electrode, an elongated receptacle at one side thereof having a water inlet and water outlet, said water admitted to the electrode completing the circuit when bridging the space between the carbon elements.

1,429,736. DETACHABLE-RIM CLIP. WILLIAM C. HURST and PATRICK J. DWYER, New York, N. Y. Filed Mar. 5, 1921. Serial No. 449,616. 4 Claims. (Cl. 301—20.)

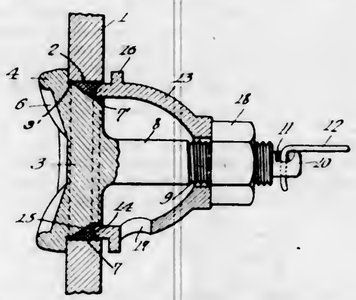
1. The combination of a demountable tire rim clamp and its securing bolt, said clamp having a slot, a plate seating against the outer face of the clamp and extending across the slot, through which slot and plate the bolt passes, the plate being rotatable on the bolt, and a nut screwed on the bolt for clamping the plate to the clamp face, said nut being separate from the plate and the latter being dimensioned to pass through the slot when turned into alinement therewith.

1,429,737. AUTOMATIC BALL-BEARING SIDE BEARING FOR RAILROAD TRUCKS. GEORGE M. HYNDES, Dallas, Tex. Filed Dec. 22, 1920. Serial No. 432,491. 2 Claims. (Cl. 64—63.)



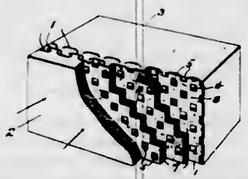
1. A side bearing for trucks, which comprises a shallow receptacle disposed on the car truck, a single ball disposed within said receptacle to receive the weight of the car, longitudinally movable abutment plates disposed across the receptacle on opposite sides of the ball, spring means engaging each of said plates to hold them in the normal forward position engaging the ball, the receptacle having a width considerably greater than the diameter of the ball to permit lateral movement thereof with respect to the receptacle, the ball being adapted when bearing the weight of the car to move substantially the entire length and width of the receptacle, if necessary, whereby rolling friction is produced between the car and the ball when the car moves with relation to the truck.

1,429,738. MECHANICAL TOY. JOSEPH V. IRENIUS, Newark, N. J., assignor to Ferdinand Strauss, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 18, 1919. Serial No. 345,686. Renewed June 8, 1922. Serial No. 566,898. 7 Claims. (Cl. 46—45.)



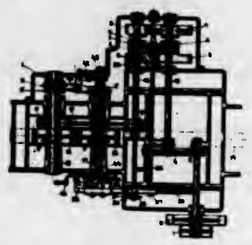
1. A toy comprising a body member, a seat pivotally connected thereto, wheels carried by the body member, a

motor mechanism, a disk operated by the motor mechanism, a portion of said disk being of greater radius than the remainder of the disk, teeth carried by that portion



of the disk having the greater radius, a shaft for said wheels, gears carried by said shaft to mesh with the teeth on said disk, said seat being arranged to rest by gravity upon the periphery of said disk.

1,429,739. HANDHOLE PLATE. WILLIAM CARL JACOBS, Clinton, Iowa. Filed July 22, 1918. Serial No. 246,153. 1 Claim. (Cl. 220—25.)



A hand-hole plate comprising in combination with a boiler plate, a disk having a circumferential shoulder and having beveled edges formed adjacent to the shoulder, the beveled edges terminating in relatively straight portions, both of said straight portions being spaced from the boiler plate, a stem having a threaded extremity formed integral with the disk, a cap having an integral circumferential flange associated with the disk, said cap having an inclined inner edge, packing material disposed at one end of the cap and adapted to be engaged by the inclined edge thereof, said packing material being positioned on the beveled edge of the disk, a nut operating on the threaded portion of the stem for forcing the inclined edge of the cap into engagement with the packing to force the packing into one of the relatively straight portions formed adjacent to the beveled edge of the disk, and said cap having a drain opening.

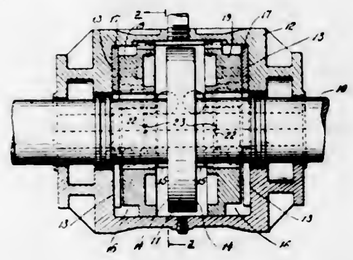
1,429,740. DAMPPROOFING CONCRETE BODY. FREDERICK G. JORDAN, Cement, Wash. Filed Feb. 28, 1921. Serial No. 448,518. 8 Claims. (Cl. 72—127.)

1. A damp-proof concrete body, comprising a plurality of perforated sheets embedded in such body, with a bonding strata of cementitous material therebetween, said sheets having alternate openings for said strata, and solid portions of greater area than said openings, said sheets having such relative arrangement as to locate the openings of one sheet centrally opposite the solid portions of the adjacent sheet.

1,429,741. METAL PLANER. KARL TORSTEN FREDRIK JUNG, Kalmar, Sweden. Filed Nov. 8, 1918. Serial No. 261,698. 11 Claims. (Cl. 90—35.)

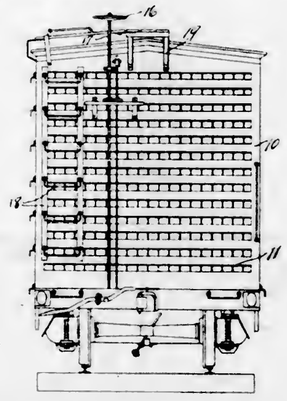
1. In a planer, the combination with a table and the planing tool, one of which is movable, of a constantly rotating driving shaft, another shaft, means for changing the constant rotation of said driving shaft to a variable rotation of said other shaft, and means to impart from said other shaft and to the movable member of the planer a substantially uniform motion during the greater part of the cutting stroke and a retarding motion during a relatively small part of the cutting stroke at the end thereof.

1,429,742. RADIATOR SUPPORT. AUGUST KEHM, Chicago, Ill. Filed Jan. 13, 1919. Serial No. 270,856. 2 Claims. (Cl. 211—30.)



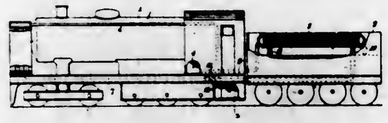
1. In a support for wall radiators comprising a plurality of parallel sections arranged in a common plane but at different levels, the combination with an upright bearing plate, of a saddle block projecting laterally from the bearing plate adjacent its lower end for supporting engagement with the underside of one radiator section, a bracket projecting laterally from the bearing plate intermediate its ends, means carried by the bracket constructed for guiding engagement with the upper edge of the last mentioned radiator section comprising a downwardly extending arm having a forked extremity, and means carried by the bracket for supporting engagement with the lower edge of the next higher radiator section and a hooked member carried by the bearing plate adjacent its upper end and engageable with the upper edge of the highest radiator section.

1,429,743. WOODEN CIGARETTE CASE. WILHELM KIMBEL, Berlin, Germany. Filed Oct. 12, 1920. Serial No. 416,592. 3 Claims. (Cl. 206—41.)



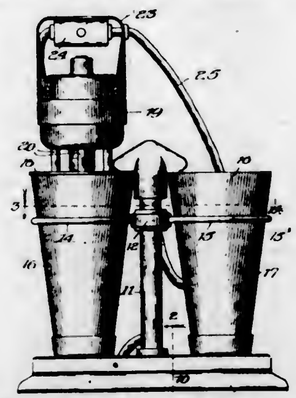
1. In a device of the kind described in combination, a hollow body, a lid and a hinge integral with said body and said lid, the portions of the said hinge connected with said body being limited by a curved surface of a radius differing from that of the curved surface delimiting the portions of said hinge which are integral with said lid.

1,429,744. BEARING. ALBERT KINGSBURY, Pittsburgh, Pa. Original application filed Mar. 25, 1916, Serial No. 86,535. Divided and this application filed Mar. 14, 1918. Serial No. 222,337. 40 Claims. (Cl. 64—25.)



1. A bearing comprising a pressure-distributing member tiltably-mounted on a single axis, said member being divisible to permit radial removal of parts thereof, and bearing segments mounted on said pressure-distributing member.

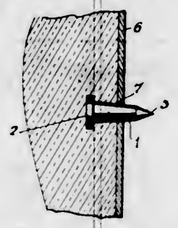
1,429,745. RAILWAY CAR. GEORGE E. KNEPPER, Altoona, Pa. Filed Feb. 3, 1921. Serial No. 442,320. 3 Claims. (Cl. 105—410.)



1. A stiffening member for the outside surface of car walls consisting of a metallic sheet having a plurality of reinforcing flanges punched out therefrom leaving openings in the sheet where the flanges have been displaced.

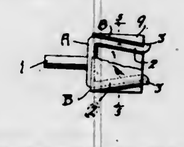
1,429,746. LOCOMOTIVE. FREDRIK LJUNGSTRÖM, Brevik, Lidingön, Sweden, assignor to Aktiebolaget Ljungstroms Angturbin, Stockholm, Sweden, a Corporation. Filed Mar. 27, 1919. Serial No. 285,615. 1 Claim. (Cl. 105—38.)

In a locomotive, the combination with a steam actuated driving turbine and a steam actuated braking device, of an air cooled condenser of such capacity that at least so much steam will be condensed in it as is requisite to enable the water of condensation to absorb the heat of the exhaust steam from the braking device, means for conducting the exhaust steam from the turbine to said condenser, a second condenser, means for conveying the water of condensation from the air cooled condenser to the second condenser, means for discharging said water from the second condenser, a pipe for conveying exhaust steam from the braking device to the second condenser, whereby the exhaust braking steam may be condensed by the water of condensation from the turbine, and means for discharging the water resulting from the condensation of the braking steam from the second condenser.



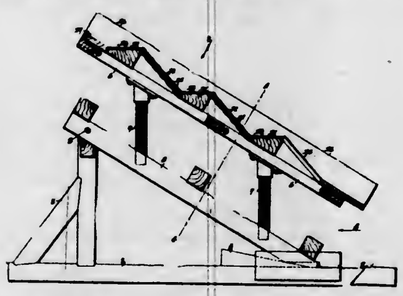
1,429,747. DRINK MIXER. WILLARD LYNGAR, Chicago, Ill., assignor to Lyngar Specialty Co., Chicago, Ill., a Corporation of Illinois. Filed Sept. 8, 1921. Serial No. 499,196. 2 Claims. (Cl. 259—135.)

1. A drink mixer comprising a base, a standard secured thereto, a plurality of holders carried by said standard, two similar containers removably held within the holders and resting upon the base, a cover adapted to be moved bodily and placed upon any one of said containers and closely fitting the tops of said containers, a motor supported by said cover, an agitator driven by the motor and extending into the container, and a flexible connection for said motor, so that the same parts of the cover are always enclosed within the container when placed thereon.



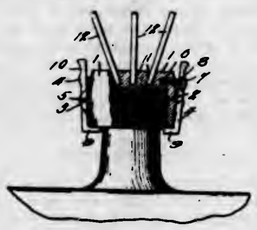
1,429,748. FACING PIN FOR ARTIFICIAL TEETH. FREDERICK MAECLEN, Rahway, and GEORGE L. VAN ALLEN, Newark, N. J., assignors to Baker & Company, Inc., a Corporation of New Jersey. Filed Nov. 30, 1920. Serial No. 427,343. 2 Claims. (Cl. 32—9.)

1. An artificial tooth including a facing, and a pin embedded in said facing and having one end projecting outwardly from the lingual face thereof, all sides of the said projecting portion of the pin converging from the point where the pin emerges from the facing toward its outer end, so as to constantly and automatically main-



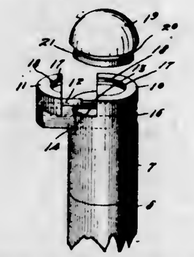
tain a tight engagement with the walls of an opening in a backing plate as the pin is forced therethrough to prevent flux or solder applied to the backing plate from leaking through said opening around said pin into engagement with the tooth facing.

1,429,749. LOCK FOR ORTHODONTIC APPLIANCES. FREDERICK MAEULEN, Rahway, and GEORGE L. VAN ALLEN, Newark, N. J., assignors to Baker & Company, Inc., a Corporation of New Jersey. Filed Oct. 8, 1921. Serial No. 506,284. 5 Claims. (Cl. 32—19.)



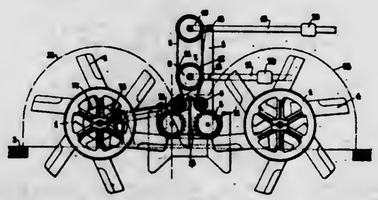
1. In an orthodontic appliance, the combination of an anchor-band having a socket member thereon arranged at substantially right angles to an axial plane of said anchorband, and an arch bow having a resilient hooked projection at the end thereof to be inserted into said socket member, said resilient projection engaging the walls of said socket member to lock said arch-bow to said socket member.

1,429,750. DEVICE FOR SAVING GOLD AND OTHER PRECIOUS METALS. SAMUEL J. MARSH, Queanel, British Columbia, Canada. Filed July 1, 1920. Serial No. 393,366. 5 Claims. (Cl. 83—67.)



1. Means for obtaining precious metals from ore pulp, said means comprising a launder having relatively deep blanket covered riffles across its width, the general grade of the riffled portions of the launder being not less than twenty degrees from the horisontal, and means for spreading the finely divided pulp with water across the width of the launder at the upper end.

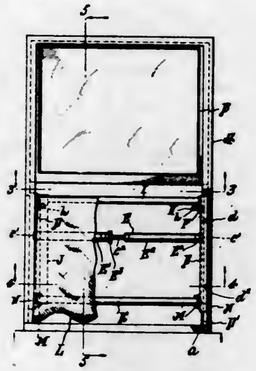
1,429,751. RADIATOR CAP. EDWARD E. MAZZULLO, Washington, D. C. Filed Dec. 27, 1920. Serial No. 433,503. 2 Claims. (Cl. 220—55.)



1. In a radiator cap, the combination of an aluminum metal cap having the annular sides thereof removably engageable over a radiator nozzle, releasable locking arms pivotally mounted on the metal cap and having inturned ends, resilient means normally holding the locking arms in locking position to engage a flange or ring on the radiator nozzle, the cap having a thick resilient disk seated within the cap and adapted to engage and seal the mouth of the radiator cap, said disk being of considerable thickness, for the purposes described.

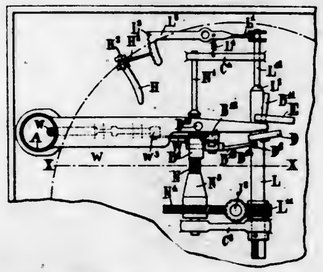
1,429,752. BILLIARD CUE, FERRULE, AND TIP. JOHN J. MEDVEC, Minneapolis, Minn. Filed May 27, 1921. Serial No. 473,204. 2 Claims. (Cl. 46—9.)

1. The combination with a billiard cue, of a ferrule applied thereto and having a fixed jaw and a co-operating movable jaw, said movable jaw having a guide bar forming a radial extension thereof and slidably mounted in a radial seat in the ferrule, a feed screw mounted in the ferrule and having screw threaded engagement with the guide bar for operating the movable jaw and holding the same closed, and a tip detachably held by said jaws.



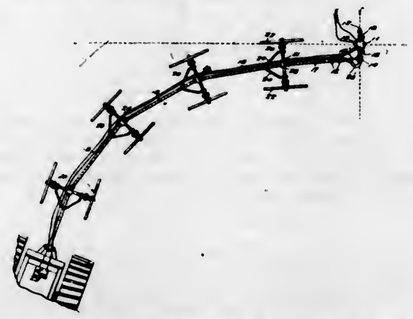
1,429,753. SCUTCHING MACHINE FOR FLAX AND OTHER FIBROUS MATERIALS. GEORGES MICHOT, Dromara, Ireland, assignor to The Fibre Corporation Limited, London, England. Filed July 6, 1921. Serial No. 482,821. 5 Claims. (Cl. 19—12.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In a scutching machine of the type in which the material is conveyed between a pair of superposed endless



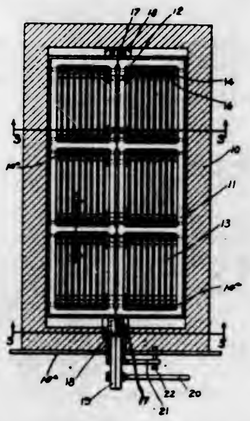
banda in a plane parallel to and close to the plane of motion of the beaters, and the beater shafts are arranged at a lower level than the places of feeding and withdrawing material, means for mounting and tensioning the conveying bands comprising a pair of carrier pulleys mounted at about the same level as the beater shafts, a pair of guide pulleys around which the conveying bands with the material pass, two jockey pulleys, one for each conveying band independently mounted, one vertically above the other, and means for exerting pressure between the jockey pulleys and their respective conveying bands.

1,429,754. AWNING BRACKET. FRANCIS MILLER, Cincinnati, Ohio. Filed Sept. 12, 1921. Serial No. 499,941. 7 Claims. (Cl. 156—42.)



7. Awning attachments for window frames provided with channels for the sashes, comprising a pair of end frames adapted to fit freely in opposite channels of the window frame, an adjustable spreader adapted to spread these end frames apart and hold same in said channels, or to release same when desired, swinging arms detachably connected to said frames near the lower end thereof and each provided with a notch on its lower end, notched plates detachably connected to said side frames near the upper end of said frames, a pair of rods adapted to engage in said notched plates and in said swinging arms, respectively, parallel straps connecting said rods, and an awning fabric secured to said straps and extending between said rods.

1,429,755. REPEATING AND STOPPING DEVICE FOR TALKING MACHINES AND THE LIKE. FRANK BOWLEY MITCHELL, Hove, England. Filed Dec. 12, 1921. Serial No. 521,880. 8 Claims. (Cl. 274—15.)

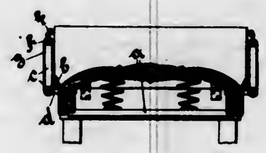


1. Automatic repeating apparatus for disc talking machines and the like applicable to any standard diameter of record disc and extent of phonic record thereon, comprising a reproducer, means for automatically returning the reproducer to the sound commencement position after a sound reproduction has been completed, a limiting device to limit the return travel of the reproducer and means associated with the reproducer and the limiting device for initially setting the limiting device upon the manual raising and initial setting of the reproducer.

1,429,756. IRRIGATING MACHINE. JOHN C. MITCHELL, Sterling, Kans. Filed Jan. 12, 1921. Serial No. 436,725. 2 Claims. (Cl. 299—47.)

1. In an irrigating apparatus, a plurality of similar flexibly connected sections each including a wheel carrying truck, an upstanding yoke carried by the axle of the truck, an upstanding bracket member mounted at the center of each yoke and formed as a ball socket, a pipe secured at one end within said ball socket and having its other end formed with a hollow ball head engaged within the socket of the next adjacent section whereby the successive sections will be pivotally connected, the pipe being perforated throughout its length, and an upwardly inclined brace bar secured upon the axle of the truck and having its upper end connected with the pipe.

1,429,757. FURNACE GRATE. SAMUEL B. MOTT, Noblesville, Ind. Filed Feb. 5, 1921. Serial No. 442,785. 2 Claims. (Cl. 126—178.)



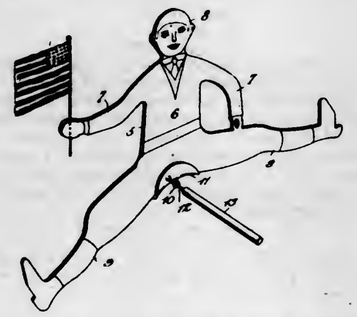
2. In a furnace, a fire grate comprising a supporting frame, said frame having a plurality of apertures therein, means on said frame for supporting it in the furnace, whereby it will be rotatable therein, a plurality of plates mounted in said apertures and supported by said frame for providing grate surfaces and each having a notch in each end thereof, and rods removably mounted in said frame seated in said notches for removably securing said plates therein, said plates having means for spacing them from each other.

1,429,758. ILLUMINATED NUMBER PLATE. GEORGE H. NEEDHAM, Newark, N. J., assignor of one-half to George Jacob Needham, Newark, N. J. Filed Aug. 22, 1919. Serial No. 319,241. 2 Claims. (Cl. 40—132.)

1. A license plate having light penetrating portions, a casing to detachably mount said plate, illuminating means in the casing for said plate, said illuminating means being substantially vertically adjustable relatively to the light-penetrating portion of different plates which may be mounted on said casing.

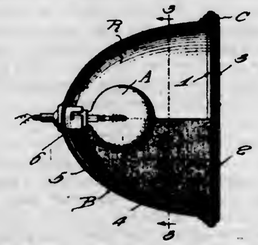
1,429,759. BED OR THE LIKE. ELIUS NIELSEN, Vejle, Denmark. Filed Apr. 12, 1922. Serial No. 551,852. 2 Claims. (Cl. 5—46.)

1. A bed or the like, comprising, in combination, a body or bottom provided with upholstering and with internal springs, said body having broad seams formed along both sides thereof; and a plurality of sides each composed of an elongated U-shaped frame, a single resilient element connecting the free ends of the arms of the U so as to close the open side of the frame, and a cover completely enclosing said frame and spring element and devoid of connection with the upholstering of the body, said cover adapted to yield when pressure is exerted against it but automatically returned to normal position by the spring element immediately such pressure is removed; the broad seams on the bed body overlapping and fitting tightly against the adjacent sides.



1,429,760. FACE-ILLUMINATING RAZOR. LESTER E. NORQUIST, Denver, Colo. Filed July 18, 1921. Serial No. 485,439. 3 Claims. (Cl. 240—2.)

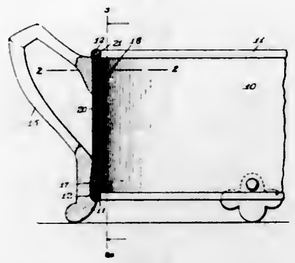
1. An illuminated razor for shaving, a razor blade and its holder and a handle secured to said razor, containing a lamp arranged to throw its light onto the face of the user and around the razor; it being provided with a light reflector arranged to direct the light from shining back of the handle; said lamp being an electric lamp having means for connecting the lamp to a source of current supply; and a glass cylinder in said handle surrounding said lamp, and means for detachably connecting said glass cylinder to said handle; said electric lamp being provided with a



socket and a plug and socket circuit wire, and cord arranged to be removably connected to said electric lamp socket.

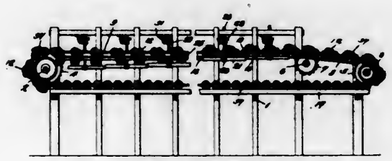
1,429,761. TOY. TEIJIN ODARKA, West Orange, N. J. Filed Dec. 11, 1920. Serial No. 429,987. 1 Claim. (Cl. 46—40.)

A toy comprising a handle having a fixed axis, an object supported from said axis and provided with means to permit it to be spun around said axis and to rock thereon, said means including an eye member extending from the base of the object and freely embracing said axis, the object including a portion normally rising above the axis and portions arranged to extend downward and straddle the axis.



1,429,762. HEADLIGHT DIMMER. NATHAN A. OLIVER, Mattapoisett, Mass. Filed Oct. 24, 1921. Serial No. 509,824. 1 Claim. (Cl. 240—48.4.)

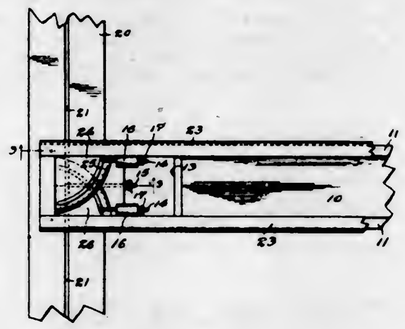
An automobile headlight lens comprising a glass disk having smooth faces, the lower half of said disk being



plain and the upper half thereof being ground for dimming the light rays projected therethrough above the horizontal axis of the illuminating element, and an integral substantially semi-parabolically shaped extension carried by the lower half of the disk and extending inwardly therefrom into the headlight to cover approximately the entire area of the lower half of the reflector, the inner surface of said extension being non-reflecting, whereby to decidedly effect and dull the light rays projected from the bulb toward the lower and central portion of the reflector.

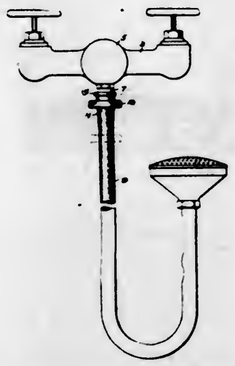
1,429,763. CASSEROLE FRAME. JOHN J. O'MARA, Brooklyn, N. Y. Filed Feb. 23, 1921. Serial No. 447,148. 5 Claims. (Cl. 65—61.)

1. A casserole frame comprising a split metallic band having a plurality of apertures adjacent its ends, a metallic plate disposed over the adjacent ends of the band on the inside of the same and provided with openings registering with the openings of the band, a plate arranged over the adjacent ends of the band on the outside of the same, and a handle provided with lugs passing through the apertures of the said band and plates and having their ends flattened on the inner plate.



1,429,764. SIZER AND GRADER. ARTHUR M. O'QUINN, Miami, Fla. Filed July 30, 1920. Serial No. 400,057. 6 Claims. (Cl. 130—32.)

1. In a sizer and grader, a conveyor comprising main rollers, and auxiliary rollers movable on the conveyor toward and away from the main rollers to define grading openings of adjusted sizes, the main and auxiliary rollers having circumferential grooves which coact to dispose that portion of the periphery of the fruit which approaches most closely to a true circle, in a plane substantially at right angles to the axes of the rollers.

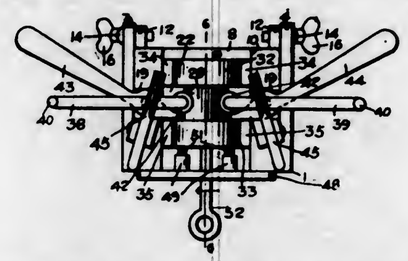


1,429,765. ADJUSTABLE SQUARE AND MITER. ROSCOE R. PAFFORD, Wichita Falls, Tex. Filed Jan. 9, 1920, Serial No. 350,397. Renewed Mar. 17, 1922. Serial No. 544,693. 2 Claims. (Cl. 33—93.)

1. An adjustable square and miter comprising a body portion having a slidable blade thereacross formed with a longitudinal channel, a plurality of miter arms pivoted on said body and having slotted sectors movable into said body, longitudinal guide sleeves within the body, a screw member slidable in each sleeve, a lateral bill on each screw member engaged respectively in the channel and slots of

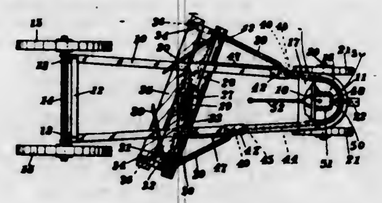
the blade and sector, and nuts within said body on the screw members engaging the sleeve by which the screw members may be drawn into clamping engagement with the respective members engaged thereby.

1,429,766. HOSE CONNECTION. JOHN W. PATTERSON, New Haven, Conn., assignor to The Seamless Rubber Company, Inc., New Haven, Conn., a Corporation of Massachusetts. Filed June 28, 1920. Serial No. 392,210. 3 Claims. (Cl. 285—82.)



3. An article of manufacture comprising a rubber hose for attachment to a faucet or the like and having its exterior wall of greater diameter adjacent the end to provide a flexible socket portion, said socket portion having a terminal bead, and a thick rubber ring of less internal diameter than the diameter of said bead and fitting loosely the body of the hose adapted to be strained about said socket to bind it to an inserted faucet or the like.

1,429,767. BABBITTING MACHINE. AUGUST ERIC PEARSON, Toronto, Ontario, Canada. Filed Nov. 26, 1921. Serial No. 517,938. 3 Claims. (Cl. 22—123.)

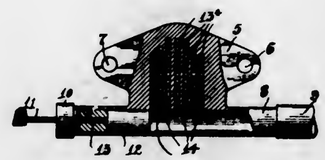


1. In a babbitting machine, a mandril supported upon a suitable structure, guideways located in each side of the mandril, a resiliently supported lower block engaging the lower end of the mandril and slidable within the guideways, an upper block also freely slidable within the

guideways and resting upon the upper end of the bearing cap, and a lever support for the cap adapted to eject

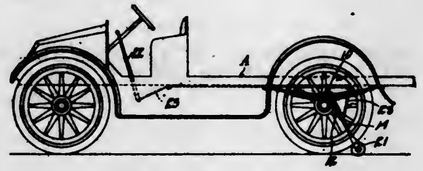
the cap and upper block from the guideways when the lower block is withdrawn against the pressure of the resilient supporting means.

1,429,768. ROAD MAINTAINER. DANIEL B. REARDON, Council Bluffs, Iowa. Filed Sept. 27, 1920. Serial No. 413,025. 14 Claims. (Cl. 37—7.)



1. In a road maintainer, a wheeled frame, a scraper arranged beneath the frame, slides mounted on opposite sides of the frame, a flexible device connecting the slides one to the other and engaging about the forward end of the frame to advance one slide upon the backward shifting of the other, braces pivotally connecting the slides to the opposite ends of the scraper for maintaining the latter in adjusted position when the slides are shifted, and means for elevating one end of the scraper whereby to permit the other end of the scraper to drag in the roadway and shift said slides for changing the angular relation of the scraper to the wheeled frame, and means for locking the slides in adjusted position.

1,429,769. WAGON-POLE EXTENSION. CHARLES C. PRIMUS, Ewing, Nebr. Filed June 29, 1921. Serial No. 481,357. 2 Claims. (Cl. 278—50.)

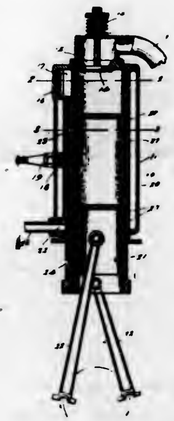


1. An extension for draft poles, the same comprising a stub pole having a neck yoke stop upon its under side, straps secured to the opposite sides of the stub pole and extending in approximately parallel relation, a clip at the rear ends of the straps, a bolt passing through registering openings formed in the overlapping ends of the clips and straps whereby to clamp the pole therebetween, a second clip engaging the outer sides of the lower edges of the straps near their forward ends, and a bolt connecting the overlapping portions of said second clip and the straps and adapted to clamp the forward end of the pole therebetween.

1,429,770. AUXILIARY AIR INTAKE FOR INTERNAL-COMBUSTION ENGINES. JOHN H. PROFFITT, Fresno, Calif., assignor of one-half to Reed Haas, Los Angeles, Calif. Filed Oct. 13, 1920. Serial No. 416,762. 5 Claims. (Cl. 48—180.)

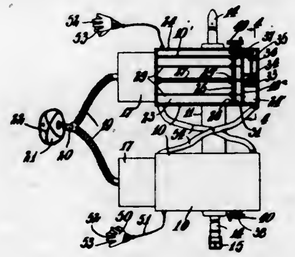
2. An auxiliary air intake for internal combustion engines, comprising a perforated plate adapted to be fitted to the intake of the engine to intercept the carburetted charge passing there-through, transverse ducts communicating with the perforations and an air supply, and means for controlling the effective port area of said ducts.

1,429,771. VEHICLE BRAKE. WILLIAM M. RAYMOND, Stamford, Conn. Filed July 16, 1920. Serial No. 396,723. 2 Claims. (Cl. 188—30.)



1. A vehicle brake comprising adjustable bars pivoted to the axle of the vehicle, a cross-bar carried to slide in ways in the lower ends of said pivoted bars, and extending substantially the width of the vehicle, springs for normally holding said cross-bar in its outward position, rollers with corrugated surfaces carried by means of said cross-bar in position to come beneath the wheel of the vehicle, and means for raising and lowering said device to bring it toward or away from the ground, substantially as set forth.

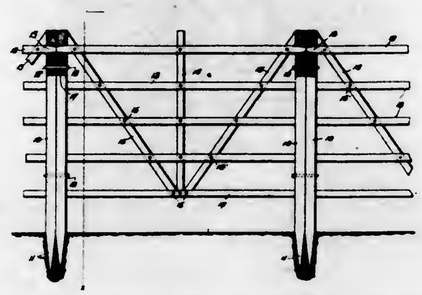
1,429,772. MOTOR. LOUIS REICHARD, Easton, Pa. Filed Oct. 23, 1920. Serial No. 418,977. 1 Claim. (Cl. 123—50.)



In an internal combustion engine, a cylinder having an intake opening at the top thereof and an exhaust opening adjacent the lower end thereof, an intake manifold communicating with the inlet opening, an inwardly opening valve operating through the intake manifold and normally closing the intake opening, said cylinder being extended adjacent the upper ends thereof to provide a laterally disposed pocket, relatively long and short pistons arranged within the cylinder and operating one within the other, with the small piston sliding within the long piston, said long piston having an inlet opening and an exhaust opening adapted to simultaneously communicate with said pocket

and the exhaust opening respectively of the cylinder when said pistons are moved to their limits away from each other, a water jacket surrounding the cylinder, said jacket and cylinder having an opening approximately

midway of its length, a spark plug arranged in said opening, and said inlet opening of the long piston being adapted to be brought into aline with the spark plug on the final position of the piston, when said pistons are moved toward each other for the purpose specified.

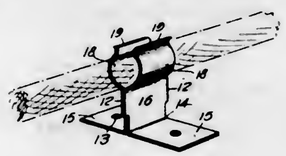


1,429,773. LIFE-SAVING AND SWIMMING APPARATUS. JOSEPH REITER, New York, N. Y. Filed Dec. 3, 1921. Serial No. 519,600. 4 Claims. (Cl. 9—14.)

1. In a device of the class described, a pair of cylinders, pistons in said cylinders, means for securing said cylinders on the body of a swimmer, and means for moving said pistons longitudinally in said cylinders said cylinders having ports at one end for the intake and discharge of water as the said pistons are moved in opposite directions.

1,429,774. PORTABLE FENCE. MAYHAM WILLIAM RHOADES, Highland, N. Y. Filed Mar. 9, 1921. Serial No. 451,059. 1 Claim. (Cl. 256—73.)

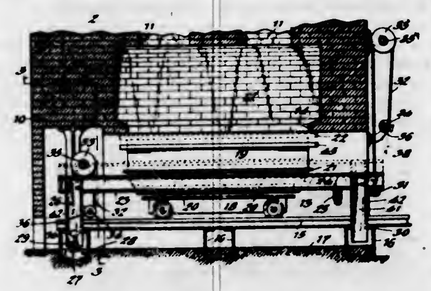
A fence panel comprising end supporting members, said members having their opposed vertical faces formed to provide a plurality of vertically spaced recesses, the recesses of one of the members being disposed in alinement with the recesses of the other thereof and tapered in opposite directions with respect thereto, horisontally disposed rails extending between said members and having their opposite ends wedged into engagement with the complemental of the recesses thereof, a brace disposed vertically of said rails and medially between said members and



separably connected to each rail, and diagonally extending braces connecting the top ends of said members and the bottommost of the rails at points directly to either side of the points of connection of the vertical brace therewith, said diagonal braces also connecting the other of said rails at the points of their crossing therewith.

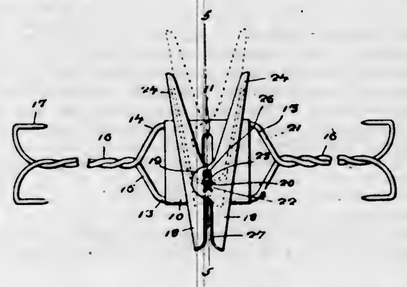
1,429,775. PROCESS OF BLEACHING AND DYEING VEGETABLE AND ANIMAL FIBERS. ARTHUR S. ROBERTS, Greenville, S. C., assignor, by mesne assignments, to Surpass Chemical Co., Inc., a Corporation of New York. Filed Mar. 30, 1921. Serial No. 457,087. 12 Claims. (Cl. 8—5.)

1. The process of dyeing and bleaching at the same time in a single bath which comprises subjecting the material to be dyed to a bath having added thereto the dye, an alkaline oxidising agent and a neutralizing agent.



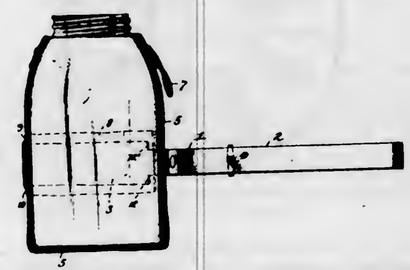
1,429,776. SUPPORT AND METHOD OF MAKING SAME. WILLIAM JOHN ROBINSON, Harrisburg, Pa. Filed Dec. 28, 1921. Serial No. 525,409. 1 Claim. (Cl. 248—31.)

A support comprising superposed plane members united upon both edges throughout its central portion, having lips extending laterally in opposite directions from one side of the centrally united portion to occupy substantially the same plane some of whose lines are substantially perpendicular to the united edges, and curviform lips upon the opposite side of the central united portion spaced apart to conform to and resiliently clasp the article to be engaged thereby.



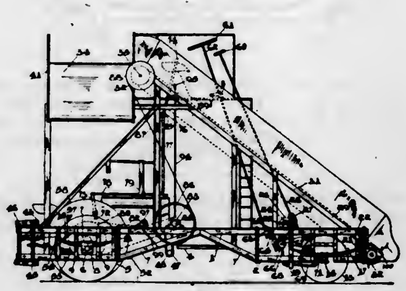
1,429,777. METALLURGICAL FURNACE. CONRAD C. ROLLER, Buffalo, N. Y. Filed Oct. 30, 1920. Serial No. 420,633. 10 Claims. (Cl. 263—45.)

1. The combination with a metallurgical furnace having a down-flue and a tunnel communicating therewith, of a car having a detachable body movable into and out of engagement with said flue to make a joint therewith, supporting rails arranged in said tunnel for engagement with



the body of said car, and means for raising and lowering said supporting rails.

1,429,778. SUPPORT. ORVILLE A. SAVAGE, Paso Robles, Calif. Filed Jan. 7, 1922. Serial No. 527,747. 4 Claims. (Cl. 47—31.)

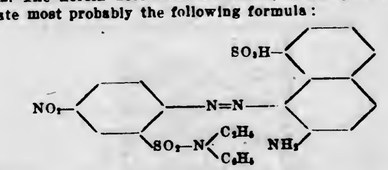


1. A device for supporting trees, plants and the like in an upright position when the same are arranged in an excavation during the planting thereof, comprising a plate, means for supporting the plate in a horizontal position to one side of the excavation, and a pair of spring influenced jaws.

1,429,779. CANNING DEVICE. LOUIS SCHERKMAN, Duluth, Minn., assignor of one-half to Louis Oreck, Duluth, Minn. Filed Nov. 8, 1920. Serial No. 422,721. 6 Claims. (Cl. 215—12.)

1. In a device of the character described, the combination of, a jar-receiving member formed of absorbent material; and a fruit-jar holder operatively associated therewith.

1,429,780. ELEVATING LOADER. HERMAN D. SCHNEIDER, Brunner, Ontario, Canada. Filed May 2, 1921. Serial No. 466,190. 19 Claims. (Cl. 56—27.)



1. In an elevating loader, the combination of a loader frame comprising members forming a tractor-receiving opening; ground wheels supporting the frame; a tractor adapted to propel the loader; and means connecting said tractor to the frame within said opening and in alinement with the frame while permitting it to float up-and-down relatively thereto.

1,429,781. BLUE WOOL DYESTUFF. HUGO SCHWEITZER, Leverkusen, near Cologne, Germany, assignor to Farbenfabriken Vorm. Friedr. Bayer and Co., Leverkusen, near Cologne-on-the-Rhine, Germany. Filed Aug. 8, 1921. Serial No. 490,701. 2 Claims. (Cl. 260—92.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

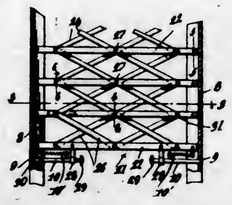
1. The herein described new azodyes, which in the form of their dried and pulverized salts with alkali metals are dark powders soluble in water generally with a bluish and in concentrated sulfuric acid with a red coloration; yielding upon reduction with tin and hydrochloric acid a substituted para-phenylenediaminsulfamid and a 1.2-diamino-8-naphtholsulfonic acid compound; and dyeing wool blue shades fast to light and fulling, substantially as described.

1,429,782. REDDISH-VIOLET MONOAZO DYE FOR WOOL. HUGO SCHWEITZER, Leverkusen, near Cologne, Germany, assignor to Farbenfabriken Vorm. Friedr. Bayer and Co., Leverkusen, near Cologne-on-the-Rhine, Germany. Filed Aug. 8, 1921. Serial No. 490,702. 2 Claims. (Cl. 260—90.)

2. The herein described new azo dye having in a free state most probably the following formula:

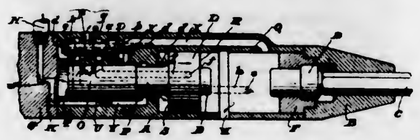
being in the form of its dried and pulverized sodium salt a dark powder soluble in concentrated sulfuric acid with an orange-red coloration; yielding upon reduction with tin and hydrochloric acid 1.4-diaminobenzene-2-ethylphenylsulfamid and 1.2-diaminonaphthalene-8-sulfonic acid, and dyeing wool from acid baths reddish-violet shades fast to light and fulling, substantially as described.

1,429,783. PLATE HEATER. JOHN LINDSAY SCOTT, London, England. Filed Feb. 2, 1922. Serial No. 533,640. 2 Claims. (Cl. 126—246.)



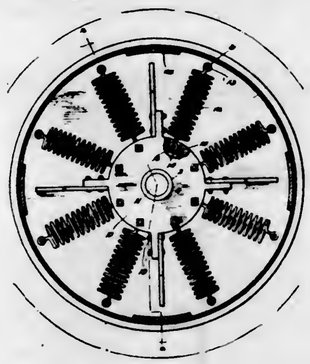
1. A plate heater consisting of a vessel having a flange running around its upper edge, a groove in the flange, a rubber ring in the groove, and means for securing a plate so that its under side is pressed against the india-rubber ring.

1,429,784. HARNESS HANGER. CHRIST SIEVERT, Calio, N. Dak. Filed Aug. 20, 1920. Serial No. 404,880. 4 Claims. (Cl. 248—3.)



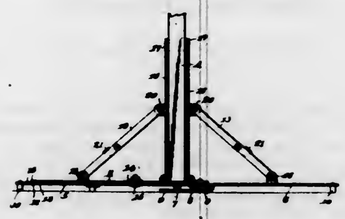
2. A harness hanger having in combination a vertically movable member comprising a harness hook, a pivoted means adjacent said member adapted to engage the same to hold said member in position, a pulley disposed above said member, a cable disposed over the pulley and adapted to be pulled to elevate said member, and a flexible means connected to said pivoted means through which the cable passes.

1,429,785. SELF-ADJUSTABLE LINE GAUGE. CLOYDE H. SMITH, North Adams, Mass., assignor of one-half to George M. Matzet, now by judicial change of name George Michael Malton, Brooklyn, N. Y. Filed Sept. 12, 1917. Serial No. 191,088. 5 Claims. (Cl. 235—61.)



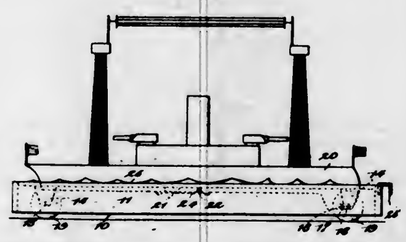
1. A gauge of the class described comprising a fixed and a movable member, one having columns of indicia thereon and elements located at predetermined points, and the other having means for cooperation with said indicia and other means to co-operate with said points to determine quickly and accurately the number of lines of a selected type necessary to fill a space of known dimensions.

1,429,786. ROCK DRILL. WILLIAM A. SMITH, Phillipsburg, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Aug. 13, 1920. Serial No. 403,357. 1 Claim. (Cl. 121—18.)



In a fluid operated rock drill of the hammer type, the combination of a cylinder and differential piston having two surfaces for driving it forwardly and one surface for driving it rearwardly, means for constantly supplying fluid pressure to one of the forwardly driving pressure surfaces, passages controlled by the piston for admitting and exhausting pressure in the cylinder to exert an intermittent pressure on the other of the forwardly driving pressure surfaces, means for exerting intermittent pressure on the rearwardly driving pressure surface including a forward supply passage opening into the rearward end of the cylinder through a forward admission port controlled by the piston, anti-compression ports for relieving compression in the intermittently supplied portions of the cylinder and a fluid actuated valve controlling a rearward admission port and the supply of fluid through said forward supply passage to the rearwardly driving pressure surface and also controlling communication between the said anti-compression ports and the atmosphere, said valve having operative surfaces exposed to the pressure on said intermittently supplied surfaces.

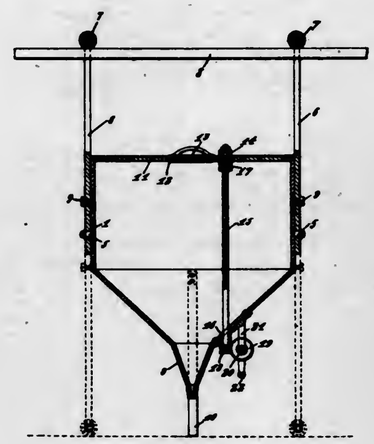
1,429,787. RESILIENT VEHICLE WHEEL. FRANK B. SNYDER, Altoona, Pa. Filed Apr. 7, 1922. Serial No. 550,399. 2 Claims. (Cl. 152—52.)



2. A resilient wheel comprising a body including sections each comprising a side plate and an inwardly projecting annular flange, the flange of one section fitting within the flange of the other section and the first mentioned flange having inwardly projecting ears, bolts secured through the side plates of the sections inwardly of the flanges and extending also through said ears, a hub, the hub having recesses in its periphery, bolts extending across the recesses, and springs for yieldably supporting the hub within the circumference of the body for floating movement, the springs being connected at their inner ends to the last-mentioned bolts and at their outer ends to the first-mentioned bolts.

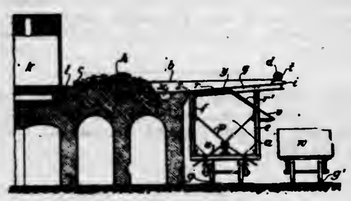
1,429,788. DOOR-SUPPORTING CLAMP. EDWARD M. SOLIAH, Hatton, N. Dak. Filed May 18, 1922. Serial No. 561,890. 2 Claims. (Cl. 144—296.)

1. A clamp of the character described comprising a pair of base members hinged to each other and having cushion feet, a bridge piece hinged to one of the members and adapted to underlie the hinge connection between said members and having cushion feet, an adjustable slide carried by one member, clamping jaws hinged to the slide and the other member, and break-jointed braces connected with the clamping jaws, the slide and said other member.



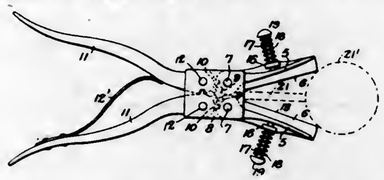
1,429,789. TOY. WILLIAM C. STANKE, Hoboken, N. J. Filed Oct. 4, 1920. Serial No. 414,466. 3 Claims. (Cl. 46—45.)

1. In a device of the class described, the combination of a box-like frame having an aperture therein, a pin extending crosswise of said aperture, a boat figure provided with a cutaway portion for co action with said pin, wave-simulating members mounted adjacent to said aperture, means for securing said pin and figure in co-operative relationship, wheels upon which said frame is supported, and a crank shaft operable by certain of said wheels and secured to said figure.



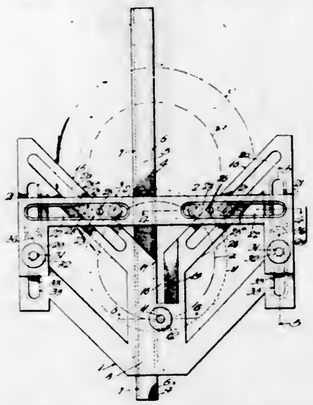
1,429,790. FEED MIXER. JOHN GALE STEELE, Amarillo, Tex. Filed Feb. 7, 1921. Serial No. 443,235. 1 Claim. (Cl. 105—150.)

Apparatus of the class described including a tank having an outlet, means for directing the contents of the tank through the outlet, hangers adjustable angularly upon opposed portions of the tank, support engaging wheels connected to the hangers, and means for securing



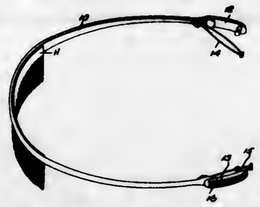
said hangers in either upwardly or downwardly extending positions upon the tank for engagement with an overhead or an underneath support.

1,429,791. APPARATUS FOR QUENCHING, LOADING, AND SCREENING COKE. CARL STILL, Recklinghausen, Germany, assignor to The Firm Carl Still, Recklinghausen, Germany. Filed Sept. 2, 1921. Serial No. 497,981. 9 Claims. (Cl. 214—38.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



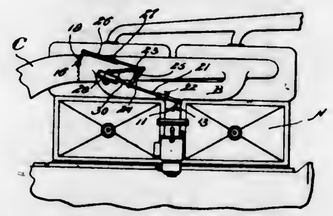
1. An apparatus for quenching, loading and screening coke comprising in combination a substantially horizontal stationary bench for quenching and storing coke discharged from coke ovens, a car adapted to travel along the outside of said bench, a screen arranged on top of the car in the continuation of the quenching bench plane, a chute attached to the screen and a mechanically driven scraper or sweeper operated from the car and adapted to move a mass of coke in a coherent pile across the bench, over the screen and toward the chute attached thereto.

1,429,792. ENVELOPE-CLOSURE TOOL. JACOB STEISS, New York, N. Y. Filed Aug. 26, 1921. Serial No. 495,610. 10 Claims. (Cl. 81—15.)



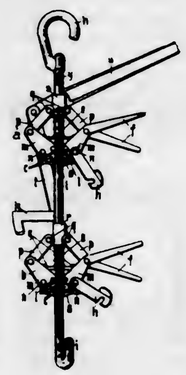
1. In an envelope clasp tool, the combination of a base plate blades independently pivoted to said base plate, handles separately pivoted to said base plate, and resilient mean connecting the handles and the blades to close the latter.

1,429,793. CENTER-FINDING INSTRUMENT. EDWIN THEODORE STRAUSS, La Crosse, Wis. Filed Mar. 8, 1920. Serial No. 364,032. 10 Claims. (Cl. 33—95.)



1. In a center-finding instrument, an indexing structure provided with an indexing edge and two guides, said guides being arranged at equal angles to the said indexing edge and converging toward one another, a pair of work-engaging abutments, and means engaged with and movable along said guides for simultaneously and equally adjusting said abutments toward and from said indexing edge.

1,429,794. HAIR COMB. CHARLES STRIER, Brooklyn, N. Y., assignor to Jennie Strier, Brooklyn, N. Y. Filed Aug. 17, 1921. Serial No. 493,051. 1 Claim. (Cl. 132—25.)

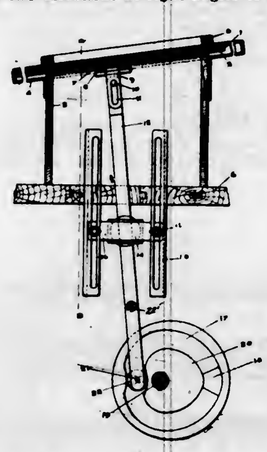


As a new article of manufacture, a hair comb of the class described, comprising a resilient band, a curved comb for engaging the hair to retain it in position carried by the band, and barrettes provided with means for positively gripping the hair attached to the resilient band.

1,429,795. MOTOR GOVERNOR. GUSTAV A. STROM, Minneapolis, Minn. Filed Apr. 26, 1921. Serial No. 464,645. 4 Claims. (Cl. 137—152.)

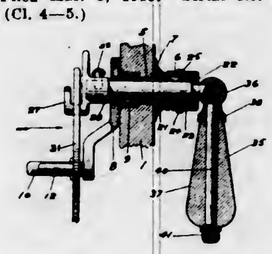
1. The combination with an internal combustion engine, of an automatic governor comprising an eccentrically pivoted disk within the exhaust manifold of the engine, a crank arm associated with said disk, a centrally pivoted disk within the intake manifold, a crank arm carried by said second named disk, and a series of links connecting said crank arms.

1,429,796. DEVICE FOR STRETCHING WIRE AND WIRE ROPES. OTTO STÜTTGEN, Futerbog, Germany. Filed Mar. 31, 1921. Serial No. 457,549. 1 Claim. (Cl. 254—70.)



A device for stretching wire and wire ropes comprising in combination, a guiding rod, a suspension hook at one end of said guiding rod, an automatically closing pulling claw on said guiding rod, a lever gearing for moving said pulling claw on said guiding rod, an automatically closing holding claw attached to said guiding rod and located between said suspension hook and said pulling claw and adapted to act as soon as said pulling claw is displaced for a further action, and a pair of parallel acting clamping jaws on said pulling claw as well as on said holding claw, substantially as and for the purpose set forth.

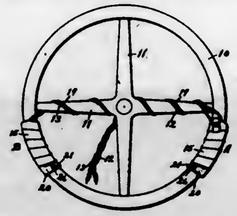
1,429,797. APPARATUS FOR THE REVISION OF BALLS. ROBERT WERNER SVENNING, Gottenborg, Sweden, assignor to Nordiska Kullager Aktiebolaget, Regulusgatan, Lundby, Gottenborg, Sweden. Filed Sept. 11, 1920. Serial No. 409,749. 5 Claims. (Cl. 83—92.)



1. An apparatus for the revision of balls for bearings including a movably mounted inclined member having a

plane surface, and means for imparting an oscillating motion in two directions at right angles to each other so

that the plane surface will rotate the said balls and thus enable every spot of their surfaces to be seen from one and the same direction.

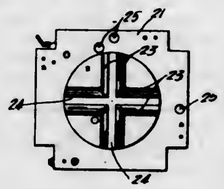


1,429,798. VALVE-OPERATING MECHANISM FOR FLUSH TANKS. WILLIAM W. TEMPLET, Oakland, Calif. Filed Mar. 5, 1919. Serial No. 280,874. 1 Claim. (Cl. 4—5.)

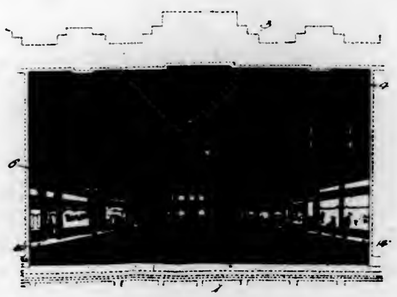
In a flush tank operating mechanism, a shaft rotatably mounted in the wall of the tank and extending therethrough; a handle secured to the shaft at the outer end thereof so that the handle is thereby adapted to oscillate and to remain normally in a pendent position; a bell crank lever having a curved short arm and being pivotally mounted in the tank and having its long arm connected with the flush valve in the tank for opening the flush valve, the short arm having a slot therein and inner edge of the short arm having a recess therein adjacent to the end of the arm; a yoke secured to the shaft at the inner end thereof and embracing the short arm of the lever, said yoke engaging the inner edge of the short arm for operating the lever by oscillation of the handle; a detent in the yoke adapted to engage the recess in the short arm for restricting the oscillative movement of the handle in one direction; and a pin connected with the wall of the tank and extending through the slot for restricting the oscillative movement of the handle in the other direction.

1,429,799. ELECTRIC HEATER FOR STEERING WHEELS. EDWARD S. TISDELL, Des Moines, Iowa. Filed Nov. 15, 1920. Serial No. 424,146. 10 Claims. (Cl. 219—19.)

2. In a heating device for steering wheels, a flexible strip arranged to form a casing, resistance units enclosed in said casing, an elastic member secured to the end of said strip, and interengaging fastening members at opposite ends of said elastic strip, the distance between said fastening members being less than the circumference of the rim on which the device is designed to be used, whereby said elastic strip is put under tension when said fastening members are engaged.

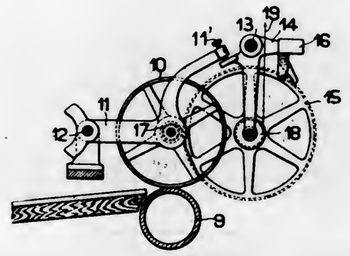


1,429,800. WAISTBAND FOR TROUSERS. CHARLIE THERO, New York, N. Y., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed July 10, 1920. Serial No. 395,196. 2 Claims. (Cl. 2—142.)



1. The combination of the body fabric of trousers, a stiffening strip at the waist band, a facing strip covering said stiffening strip, said facing strip being turned underneath the edge of the stiffening strip at the lower edge thereof and extending about the stiffening strip and the upper edge of the trousers on the front face of the body portion of the trousers, and parallel lines of stitching passing through the facing strip and the stiffening strip and the body of the trousers adjacent the edges of the facing strip.

1,429,801. IGNITION-POINT-GRINDING DEVICE. JAMES THOMAS, Los Angeles, Calif. Filed Aug. 3, 1921. Serial No. 489,549. 7 Claims. (Cl. 51—216.)

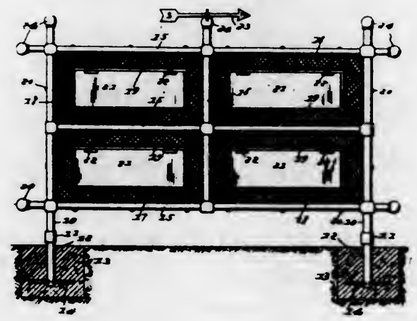


1. In a contact point grinding device, a base, a grinding member arranged for operation thereupon, an adjustable member arranged to move toward and away from said grinding member, the corners of which adjustable member are cut away, said adjustable member being provided with apertures that are adapted to receive fastening means for contact point carrying arms.

1,429,802. ADVERTISING CURTAIN FOR THEATERS. CHARLES F. THOMPSON, Los Angeles, Calif. Filed Mar. 4, 1922. Serial No. 541,106. 5 Claims. (Cl. 40—130.)

1. An advertising curtain for theaters and the like comprising a sheet having opaque and translucent portions, the translucent portions of said sheet being shaped and arranged over the area thereof in simulation of lighted parts of illuminating advertising signs and of a night scene; so that said sheet will present when viewed from the one side and illuminated from the other side a night scene in which rays of light will actually propagate from said translucent portions representing said lighted parts.

1,429,803. SURFACE-MEASURING DEVICE ESPECIALLY FOR LEATHER. HERMANN THUN, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Oct. 4, 1920. Serial No. 414,694. 3 Claims. (Cl. 33—124.)

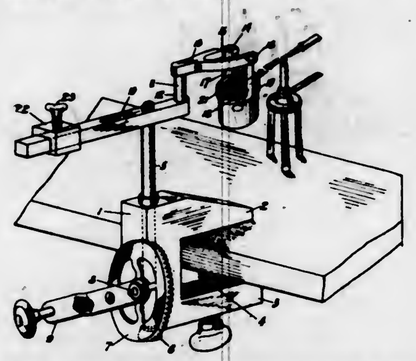


1. In a middle length measuring machine for strips with oblique ends, two strip contacting roller means having their rollers side by side for said strip, a work train for an instrument and a coupling between said first named means and said train normally held disengagingly and independently by either of said roller means.

1,429,804. SOFT-COLLAR CLASP. HARRY L. TOOKER, Taunton, Mass. Filed May 6, 1921. Serial No. 467,508. 1 Claim. (Cl. 24—83.)

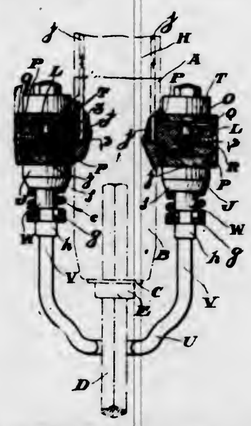
A clasp comprising clasp members operable independently of each other, said members each having an extension, one of the extensions having a socket and the other extension having a stud to separably enter said socket to rigidly connect the clasp members together, and one of said extensions constituting a plate disposed for engagement by the fingers simultaneously with the actuating means of the clasp members to coact therewith.

1,429,805. ROADSIDE SIGN. GEORGE TRAUB, WILLIAM TRAUB, and EDWARD TRAUB, Waco, Tex. Filed May 26, 1922. Serial No. 563,869. 1 Claim. (Cl. 40—128.)



A roadside sign structure having a skeleton frame subdivided to form panels containing fillers of screen material bounding inner open spaces, and freely swinging sign plates respectively suspended in said spaces and yieldable to air pressure, the filler members being provided with inner and outer marginal supplemental frames of which the latter are secured to the members of the skeleton frame and the former support the sign plate.

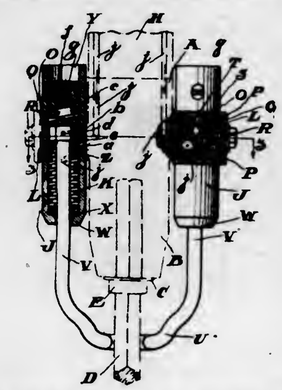
1,429,806. BUMPER FOR AUTOMOBILES. JAMES TURNER and PEARL P. CRABILL, Springfield, Ohio. Filed June 6, 1921. Serial No. 475,371. 6 Claims. (Cl. 293—55.)



4. In a bumper for automobiles, a bar having its ends bent to form resilient attaching arms, resilient braces for said bar, each brace being bent so that its forward end will lie parallel with the bar and its rear end parallel with its companion arm, means for connecting the braces to the bar and also for connecting the braces and arms to the vehicle, two reinforcing strips on the forward side of said bar having their respective ends connected therewith, the outer reinforcing strip being bowed forwardly, and the inner reinforcing strip being bent forwardly on a lesser length than the bowed portion of the outer strip so that its central portion will lie in proximity to the central portion of the bow of the outer strip.

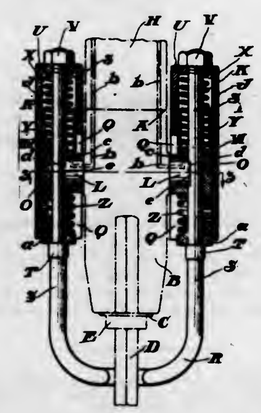
1,429,807. CENTRIFUGAL CASTING MACHINE. JOSEPH V. TURNER, Wilson, N. C. Filed Sept. 29, 1921. Serial No. 504,165. 8 Claims. (Cl. 22—65.)

1. A centrifugal casting machine comprising an arm mounted to rotate in a horizontal plane, means for rotating said arm and an investment flask in operative relation to said arm and limited in its movement to rotation about axes which are perpendicular each to each.



1,429,808. DRILL-STEEL RETAINER. GROVER G. TUTTLE, Phillipsburg, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed June 2, 1921. Serial No. 474,478. 4 Claims. (Cl. 121—32.)

1. A drill steel retainer for rock drills, comprising cushion holding guides pivoted at opposite sides of the front head of the machine, cushioning means on said guides, a yoke retainer for the drill steel having arms guided in said guides and cushioned by said cushioning means, and means for maintaining fluid pressure within said guides to supplement the expansive force of the cushioning means in one direction.

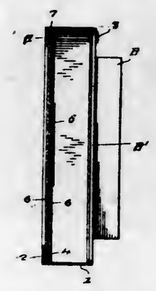


1,429,809. DRILL-STEEL RETAINER. GROVER G. TUTTLE, Phillipsburg, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed June 2, 1921. Serial No. 474,479. 4 Claims. (Cl. 121—32.)

1. A drill steel retainer for rock drills, comprising cushion holding guides pivoted at opposite sides of the front head of the machine, cushioning means wholly within said guides, a yoke retainer for the drill steel having arms guided in said guides and cushioned by said

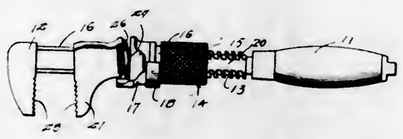
cushioning means, and means for maintaining fluid pressure within said guides to supplement the expansive force of the cushioning means in one direction.

1,429,810. DRILL-STEEL RETAINER. GROVER G. TUTTLE, Phillipsburg, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed June 2, 1921. Serial No. 474,480. 4 Claims. (Cl. 121—32.)



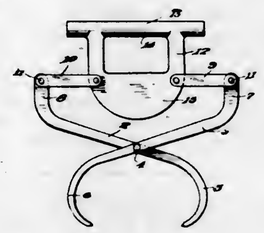
1. A drill steel retainer for rock drills, comprising swinging and longitudinal movable cushion holding guides at each side of the front head of the machine, cushioning means on said guides, a yoke retainer for the drill steel having arms guided in said guides and cushioned by said cushioning means and means for maintaining fluid pressure within said guides to supplement the expansive force of the cushioning means in one direction.

1,429,811. REGISTER ATTACHMENT. DANIEL F. TYNAN, deceased, late of Cincinnati, Ohio, by Frances M. Pabst, administratrix, South Norwood, Ohio. Filed July 22, 1921. Serial No. 486,750. 1 Claim. (Cl. 183—62.)



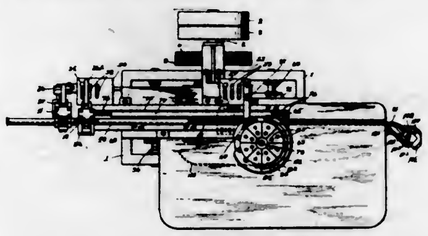
A register attachment comprising a rectangular shaped casing having closed side and end walls and open front

and rear faces, a flange formed integrally with the walls and adapted to extend inwardly over the front face, a plurality of ears secured to the walls and adapted to extend inwardly over the rear face, means secured to said ears whereby the rear face may be detachably secured over a register, said casing being provided with an elongated opening extending the entire length of the end wall, a



metallic frame adapted to be slid through said opening and engage the inwardly extending flange, said frame having its members formed of channel strips, a plurality of strips secured to the side walls and adapted to support said frame within the casing and a pair of screens arranged in super-imposed relation and having their edges secured in said channel, one screen having a larger mesh than the other as and for the purpose specified.

1,429,812. WRENCH. JOHN VAN HORN, San Francisco, Calif. Filed Dec. 15, 1921. Serial No. 522,613. 4 Claims. (Cl. 81—161.)



1. A wrench having jaws, a shank extending from one of said jaws, a nut operable on said shank, a follower slidable on said shank and movable with said nut, one of said jaws fulcrumed on said follower, and a spring interposed between said last mentioned jaw and said follower to normally urge the last mentioned jaw into an inclined position.

1,429,813. TONGS. ZENA WATTS, Chicago, Ill. Filed Oct. 2, 1920. Serial No. 414,163. 3 Claims. (Cl. 294—118.)

1. Tongs comprising a pair of jaws pivoted together and a weighted hand grip having flexible connection with the jaws.

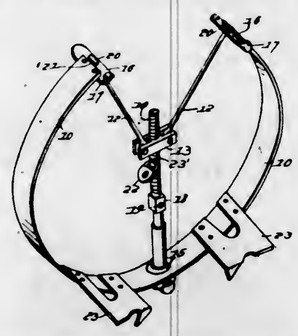
1,429,814. WIRE-BENDING MACHINE. ALBERT T. WEISS, Rochester, N. Y. Filed June 16, 1921. Serial No. 478,159. 16 Claims. (Cl. 140—71.)

1. In a wire bending and forming machine adapted to form oval shaped wire loops, the combination of a frame, a wire clamping mechanism provided at one end of said frame, a second wire clamping mechanism mounted to reciprocate on said frame, said second wire clamping mechanism being adapted to feed straight sections of wire from said first clamping mechanism, a wire cut off mechanism at the other end of said frame and a wire bending mechanism intermediate of said clamping and said cut off mechanism, said wire bending mechanism being adapted to bend a half circle on two consecutive sections of wire fed forward by said movable clamping mechanism, said half circles being bent to oppose each other to form an oval shaped loop, said cut off mechanism being adapted to cut off the formed loop from the end of the wire.

1,429,815. POWER-TRANSMISSION MECHANISM. FRANZ WELS, Vienna, Austria. Filed Dec. 2, 19.. Serial No. 519,539. 3 Claims. (Cl. 74—14.)

3. Mechanism of the character described including in combination, spaced paralleled guides, a head slidable therein, a resilient blade-like element mounted medially of its ends for oscillation in the head, a rotating crank mounted in said guides, and a connecting member pivoted to the crank and rigidly connected with the element for reciprocating the element so that it will describe alternating undulatory oscillations.

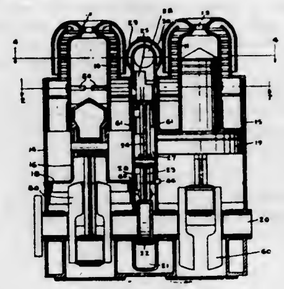
1,429,816. HAIRPIN. AARON WENGER, Bayonne, N. J. Filed Dec. 20, 1921. Serial No. 523,708. 2 Claims. (Cl. 132—52.)



1. As a new article of manufacture, a hair pin constructed of a single length of material bent to provide a pair of legs each having an outwardly bulged medial portion defining a hair receiving space with a restricted hair entering and removing mouth at its forward end, a connection

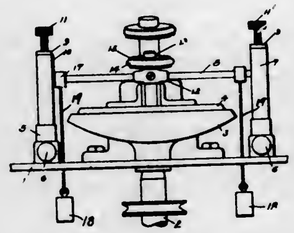
therebetween at one end, said connection bent to provide a pair of laterally and forwardly directed arms terminating adjacent the bulged portion of the legs to provide a

hair receiving and embracing space at the opposite sides thereof having restricted entering mouths at their forward ends.



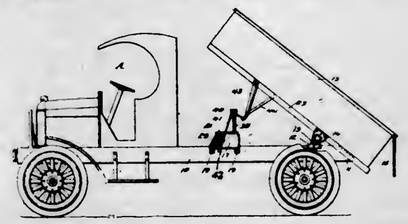
1,429,817. TIRE CHANGER AND CARRIER. ANDREW J. WEST, Andrews, S. C. Filed Apr. 8, 1921. Serial No. 459,520½. 2 Claims. (Cl. 224—29.)

1. A device for the purpose indicated comprising an expansible split band provided with means for attaching the same to a vehicle body, clips constituting ring seats mounted respectively at the extremities of the band and on the outer face of the latter opposite the split portion, radial elements having their extremities pivotally connected with the clips at the extremities of the band, and means for imparting both tensile and strut strains to said radial elements, the clips being formed with inturned lips to overlap the outer surface of the rim to provide contractile strain on the latter in the event that locking of the rim is to be secured by that means rather than by expansible force imparted to the band.



1,429,818. GAS ENGINE. ELLIS J. WOOLF and JAY F. WOOLF, Minneapolis, Minn., assignors to The Woolf Cycle Motor Company, Minneapolis, Minn., a Corporation of Arizona. Filed May 24, 1920. Serial No. 383,733. 13 Claims. (Cl. 123—59.)

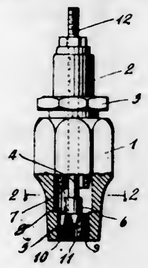
1. A two-cycle engine comprising a cylinder casing having a series of annular inlet ports, a casing surrounding said cylinder and providing chambered passageways in communication with said ports, a crank-case chamber in communication with said chambered passageways, a valve chamber, means for admitting fuel mixture into one part of said valve chamber and for admitting atmospheric air into another part of said valve chamber, means for admitting said fuel mixture from the valve chamber into said chambered passageways, means for admitting the air from said



valve chamber into the crank-case chamber, and a valve member movable as a unit in said chamber for controlling the admission of said fuel gas and air.

1,429,819. GRINDING MACHINE. EDMUND WALTER WORTH, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed May 10, 1920. Serial No. 380,093. 4 Claims. (Cl. 51—131.)

1. In a lens grinding machine, the combination with a base and a lower rotatable spindle carried thereby, of a pair of vertically sliding arms supported by the base, a cross member connecting said arms, a second spindle carried by the cross member for cooperation with the first, said second spindle being angularly adjustable with respect to its support, and means for indicating the amount of angular adjustment of said spindle.



1,429,820. DUMPING-TRUCK. FAUST ZARDINONI, Chicago, Ill., assignor of one-half to Vincenzo Lo Monaco, Chicago, Ill. Filed May 23, 1921. Serial No. 471,709. 2 Claims. (Cl. 798—19.)

1. In a wheeled vehicle having a chassis, of a rearwardly inclined rear end on the chassis, a dumping body

carried by the chassis and mounted for tilting movement from a horizontal loading position to a rear end dumping position against the inclined rear end of the chassis, a bracket extending transversely of the chassis, a vertically movable rack bar carried by said bracket, a cross head carried at the upper end of said rack bar and extending transversely beneath said body, sheaves carried at the opposite ends of said cross head, arms depending from said dumping body, cables extending between the chassis and said arms and trained over said sheaves, and means for operating said rack bar for the actuation of said cables for the tilting of said body to and from normal horizontal leading position on the chassis.

1,429,821. SPARK PLUG. DANIEL A. ABBOTT, Greater Capitol Heights, Md. Filed Sept. 24, 1920. Serial No. 412,502. 3 Claims. (Cl. 123—169.)

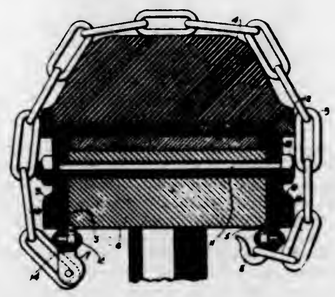
1. In a spark plug, the combination, with a shell, and an insulator extending into the shell, of a conductor extending through the insulator, the shell extending beyond the inner end of the insulator, and a piston-like electrode reciprocally and rotatably mounted on the conductor within the extended portion of the shell, the piston being formed with means for effecting rotary action when influenced by moving gases, and being free to move axially and rotate under the influence of gases subjected to a compression stroke.

1,429,822. FURNACE PIPE. HERBERT A. ACER, Medina, N. Y. Filed Jan. 25, 1922. Serial No. 531,669. 1 Claim. (Cl. 137—75.)

A heater pipe for hot-air furnaces formed in sections, each section having double walls, the outer wall at the top of a section being carried laterally inward to the inner wall and the inner wall at the top being carried laterally outward to the outer wall, said upper portions and lower portions of the respective walls having air holes therein in vertical alinement so that the holes at the upper portion of one section will register with the holes in the lower portion of a section above, there being indentations forming inwardly extending individual tongues in the lower portion of the section and a shoulder in the inwardly directed upper portion of the outer wall section adapted to interengage with said tongues for locking two adjacent sections together against longitudinal and transverse movement.

1,429,823. COMBINATION EYEBROW PENCIL. EVANGELINE K. ALLISON, Miami, Ariz. Filed June 16, 1921. Serial No. 478,043. 1 Claim. (Cl. 132—79.)

A device of the character specified comprising a barrel having an eye-brow smoothing brush projecting oppositely from one face thereof and a comb projecting from the opposite face, a grease-stick slidably contained within the

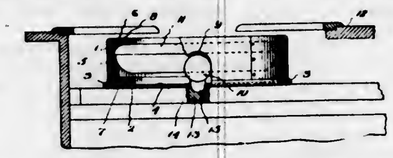


barrel, and closing cap at opposite ends of the barrel and having screw threaded engagement therewith.

1,429,824. PREPARATION FOR PREVENTING ACCUMULATION OF MOISTURE ON TRANSPARENT SURFACES. WILLIAM BULL ATWATER, Charleston, S. C., assignor to Crystal-on Chemical Company, a Corporation of South Carolina. Filed Oct. 27, 1919. Serial No. 333,717. 2 Claims. (Cl. 134—27.)

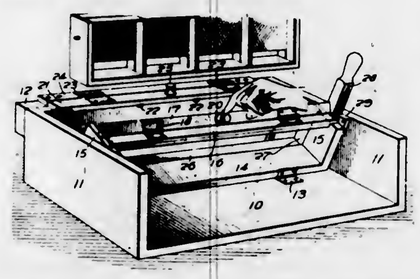
2. A preparation for preventing the formation of moisture on the exposed surfaces of transparent members comprising a mixture of the following substantial proportions—one gallon of water, one-quarter pound of tobacco substance, and twelve drops of formaldehyde.

1,429,825. NONSKID DEVICE FOR AUTOMOBILE TIRES. REUBEN H. BACHMAN and FRANKLIN HIRAM BACHMAN, Allentown, Pa. Filed June 10, 1919. Serial No. 303,228. 3 Claims. (Cl. 152—2.)



1. A non-skid device of the character described, comprising, in combination, a plurality of flexible non-skid elements transversely disposed across the tread of the tire, annular bands disposed one on each side of the wheel, said bands having recesses opening toward the center of the wheel, and secured to the felloe thereof, a pair of rings one on each side of the wheel, loosely mounted in the recesses of the bands between said bands and said felloe, each of said rings carrying means for securing thereto the opposite ends of said anti-skid elements.

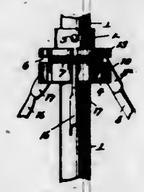
1,429,826. GAS-BURNER ATTACHMENT. INEZ W. BANCKER, Chicago, Ill. Filed Apr. 9, 1921. Serial No. 460,084. 1 Claim. (Cl. 126—214.)



As a new article of manufacture a gas burner attachment comprising a disc shaped base having its peripheral

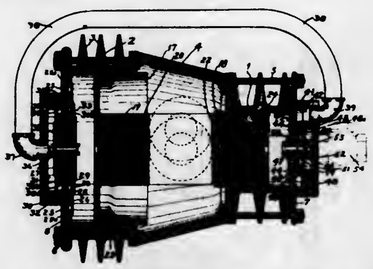
edge bent over its upper surface, and a cylindrical member having a diameter equal to the diameter of the upper

surface of the disc enclosed by said edge, said member adapted to rest upon the disc and be confined in position by abutting relation with said edge.



1,429,827. BEEKEEPER'S APPLIANCE. CHARLES F. BAILE, Sykesville, Md. Filed Dec. 15, 1921. Serial No. 522,579. 5 Claims. (Cl. 6—12.)

1. A machine for the purpose described comprising a honey section support and a pair of relatively movable jaws that engage the section on opposite sides of a split therein.

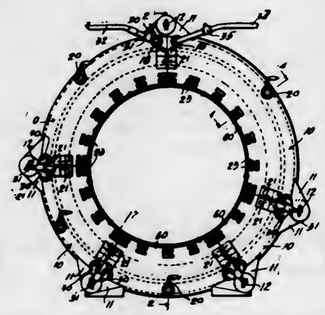


5. A machine for the purpose described comprising a stationarily-supported jaw, a second jaw, a movable support for the second jaw comprising a base and end pieces constructed and arranged to receive a holder for a series of sections, the jaws being situated to engage the tops of the sections on opposite sides of splits therein, and spring hinges for both jaws.

1,429,828. TOP NOTCH AND RUNNER. CHARLES L. BAKER, Lancaster, Pa. Filed Sept. 28, 1921. Serial No. 503,723. 6 Claims. (Cl. 135—28.)

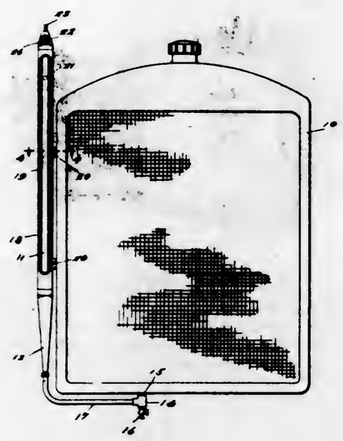
6. A rib-joint device comprising a notch-ring having a series of regularly-spaced vertical rib-receiving slots and an annular pivot-wire slot connecting said rib-receiving slots, whereby an upper and a lower series of radially projecting lugs are formed on said ring, the opposed faces of said lower series of lugs facing on said rib-receiving slots being provided with recesses forming rib-receiving sockets opening into said pivot-wire slot, and the opposed faces of said upper series of lugs facing on said rib-receiving slots being recessed to permit the insertion of ball-end ribs into said rib-receiving sockets.

1,429,829. COMPRESSOR. DEXTER C. BAKER, Oakland, Calif., assignor to Baker-Hansen Manufacturing Company, Oakland, Calif. Filed Oct. 26, 1920. Serial No. 419,714. 2 Claims. (Cl. 230—27.)



1. In an air compressor, a pair of co-axially arranged cylinders, a pair of rectilinear pistons in said cylinders, said pistons being made as a unitary structure with a connecting web eccentrically positioned relative to the axis of the pistons, and a drive for said pistons comprising an eccentrically mounted rolling crank presented between the parallel inner ends of the pistons transversely of the axis thereof and opposite the said connecting web, one of said pistons having a larger diameter than the other with the said cylinders made correspondingly, the smaller one of said pistons comprising a solid structure and the larger one being a hollow with an axial annular solid block-like structure within its hollow, the diameter of said block-like structure being equal to that of the diameter of the smaller solid piston and arranged co-axially thereof.

1,429,830. STORAGE-BATTERY ELECTROLYTE. RICHARD E. BANKS, Washington, D. C. Filed June 2, 1922. Serial No. 565,446. 4 Claims. (Cl. 204—29.)



3. A storage battery electrolyte containing approximately the following ingredients:—sulphuric acid of 1.835 specific gravity about 10 gallons; ferric sulfate, about 10 pounds; aluminum sulfate, about 1 pound; copper sulfate, about 1 pound; chlorin water, about 2 ounces; together with a sufficient amount of water to give a specific gravity of about 1.25.

1,429,831. TIRE MOLD. MICHAEL T. BARNEY, Los Angeles, Calif. Filed Jan. 26, 1921. Serial No. 440,014. 14 Claims. (Cl. 18—18.)

1. A tire mold comprising a plurality of sections operable independently or in combination and capable of being arranged in various combinations, means for detachably pivotally connecting adjacent sections, and means independent of said first mentioned means for releasably clamping adjacent sections together.

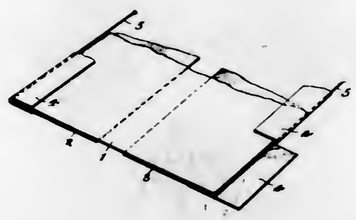
1,429,832. LIQUID-LEVEL GAUGE. JOHN H. BAUER and WILLIAM F. KENNELL, Stanberry, Mo. Filed June 4, 1921. Serial No. 475,000. 1 Claim. (Cl. 73—54.)

A water gauge for vehicle radiators of the character described comprising a water tube, a tubular casing provided with a pair of vertically disposed opposing elongated slots and being adapted to surround said tube, a plurality of clamps securing said tubular casing to the side of the radiator so that said slots may be viewed from both the rear and front thereof, a funnel shaped member secured at its large end to the lower end of the casing and designed to communicate with said tube, a flexible hose adapted to provide communication between the funnel shaped member and the radiator, a conical shaped member being provided with an opening in its top thereof and having its lower end threadedly secured to the upper end of said casing which is positioned above the upper end of the radiator, a pipe having one end projecting through said opening and being adapted to communicate with said tube at its opposite end thereof, said pipe being exteriorly threaded intermediate of its ends, a supporting member arranged interiorly of said conical shaped member, nuts arranged above and below said support and engaging the threads of the pipe to maintain said pipe in proper position, an extension provided on the projecting end of said pipe and adapted for admitting air to the tube and a float operating in said tube as and for the purpose specified.

1,429,833. BUILDING DOOR. WARREN H. BEALL, Washington, D. C. Filed Oct. 5, 1921. Serial No. 505,596. 15 Claims. (Cl. 20—19.)

12. In a door construction, a pair of doors, and a jamb strip carried by one of the doors and normally lying in the path of movement of the other door and adapted to be shifted to permit free movement of both doors.

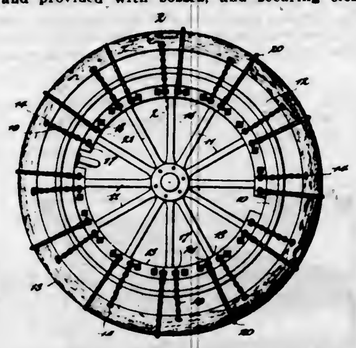
1,429,834. PROCESS OF MAKING JUICES, JELLIES, AND JAMS, FROM VEGETABLE SUBSTANCES SUCH AS FRUITS AND VEGETABLES. OTTO BIELMANN, Magdeburg, Germany. Filed July 19, 1920. Serial No. 397,535. 3 Claims. (Cl. 99—11.)



1. The herein described process for the simultaneous production of fruit juices, jellies and marmalade from fruits and similar vegetable constituents which comprises leaching the fruits while contained in different containers of a diffusion battery by causing a sugar solution to flow successively through the containers of the battery, removing volumes of the solution at different intervals from the last container of the battery to obtain jelly and fruit juice respectively, and subsequently removing and mixing the contents of the different containers of the battery to obtain marmalade.

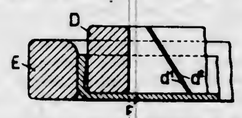
1,429,835. GARMENT HANGER. HERMAN L. BIENER, Brooklyn, N. Y. Filed Apr. 6, 1921. Serial No. 458,924. 1 Claim. (Cl. 211—13.)

As a new article of manufacture, a garment hanger including a supporting member constructed from a length of wire having a tubular non-metallic covering, the opposite ends of which are bent to provide a pair of parallel contiguously arranged shanks, the terminal of one of which extends beyond the other and is bent in hook form with the covering removed, a metallic clip embracing and securing said shanks together, and a tubular non-metallic covering element enclosing said shanks, the clip and the hook terminal.



1,429,836. COVER BOARD FOR SHINGLE BUNDLES AND THE LIKE. CHARLES S. BIRD, Walpole, Mass. Filed Sept. 7, 1921. Serial No. 499,037. 2 Claims. (Cl. 206—60.)

1. A binder board for shingle bundles and the like, formed of a sheet of fiber board with two of the opposite marginal sections of the board infolded upon the body of the board; a strand extending along each edge produced by the folds; and a folded strip embracing each of the strands and secured to the board.

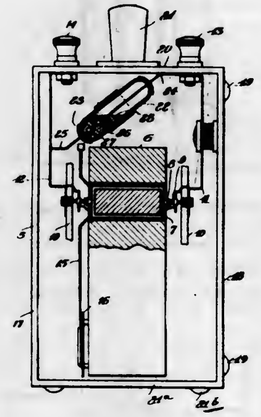


1,429,837. ANTISKID DEVICE FOR VEHICLE TIRES. CHARLES O. BODE, New York, N. Y. Filed Feb. 18, 1921. Serial No. 445,979. 1 Claim. (Cl. 152—16.)

In a device of the class described, the combination with an automobile wheel and tire, of a fabric facing for said tire, clamps adapted to be secured to the spokes of said wheel and provided with bosses, and securing elements

co-operative with said bosses for retaining said facing in place.

1,429,838. SWAGING PRESS. KARL BÖHLE, Essen-on-the-Ruhr, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Dec. 3, 1920. Serial No. 428,115. 3 Claims. (Cl. 113—49.)



1. A flanging press for the manufacture of sheet metal plates flanged on their outer rim comprising a die having an annular flanging portion and a stamp having a flanging portion adapted to enter said flanging portion of the die in axial direction, one of said flanging portions being rigid and the other being adapted to elastically yield transversely to said axial direction round its whole circumference in the sense of increasing the clearance left between it and the other flanging portion.

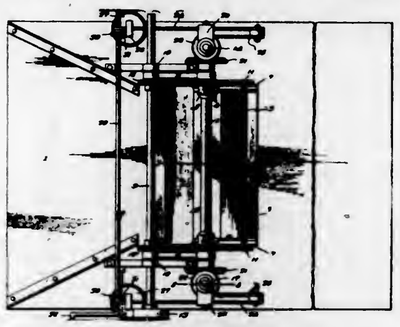
1,429,839. CABINET TALKING MACHINE. ROBERT A. BOSWELL, Washington, D. C. Filed Sept. 4, 1917. Serial No. 189,565. 69 Claims. (Cl. 274—2.)

1. In a talking machine, a cabinet, a hinged cover therefor, a tone-arm carried in said cover and pivoted concentrically with the hinge of the cover.

1,429,840. DAMPING DEVICE FOR ELECTRICAL INSTRUMENTS. HENRY B. BROWN, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed Nov. 16, 1921. Serial No. 515,735. 6 Claims. (Cl. 171—95.)

1. The combination with a portable electric instrument having actuating means comprising a relatively movable magnetic field and coil, said instrument being adapted for arrangement in one position during operation and in a different position during transportation, of a switch operated automatically by movement of the instrument from operating position to transporting position for short-circuiting said coil and damping the movement of said actuating means during transportation of the instrument.

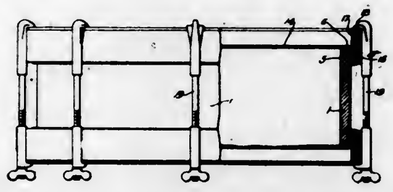
1,429,841. TITANIUM COMPLEX AND METHOD OF PRODUCING SAME. HENRY H. BUCKMAN, Jacksonville, Fla. Filed Dec. 20, 1920. Serial No. 432,044. 14 Claims. (Cl. 134—58.)



12. In the preparation of composite titanium pigments, those steps which comprise heating simultaneously with sulphuric acid and water under pressure substantially above normal atmosphere, previously finely ground and floated ilmenite and barium sulphate, adding water and further heating under pressure, and subsequently separating, drying and calcining the solid product.

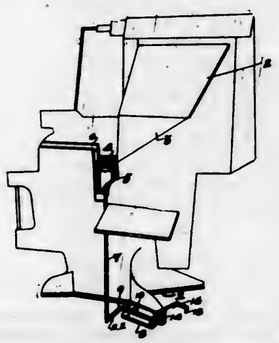
14. As a new article, the hereinbefore described composite titanium pigment, distinguished as being a smooth, fine, white and dense powder, and consisting essentially of hyper-normal-pressure- and hyper-normal-temperature-modified oxy-titanium products of a sulphuric acid treated titaniferous material associated with barium sulphate.

1,429,842. WATER MOTOR. DREWEY A. CARMICHAEL, Americus, Ga. Filed May 16, 1921. Serial No. 470,088. 3 Claims. (Cl. 170—107.)



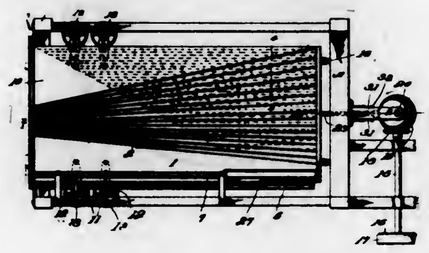
1. An apparatus of the class described comprising a supporting structure, a shaft rotatably mounted therein, a wheel, arms for swingingly connecting the water wheel with the shaft, gearing connecting the water wheel with the shaft, vertical screw shafts hingedly connected at

their lower ends to the supporting structure, nuts on said shafts, means for connecting the nuts with the wheel and



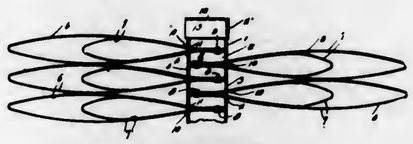
means for rotating the nut by the movement of the wheel when desired.

1,429,843. DRUM AND METHOD OF MAKING THE SAME. WILLIAM CHRISTIAN, Bridgeport, Conn. Filed Sept. 29, 1921. Serial No. 504,093. 4 Claims. (Cl. 84—411.)



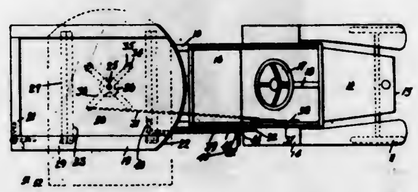
1. The method of making drums which consists in first fastening the marginal portion of drum head material between concentric rings leaving a surplusage of the material within the perimeter of the rings, and subsequently placing the rings upon a drum shell and sliding them down to remove slack from the material and to stretch the same over an end of the shell.

1,429,844. FOOTLIFT TO RAISE THE ASSEMBLING ELEVATOR OF TYPE-CASTING MACHINES. JOHN G. CLARK, Los Angeles, Calif. Filed June 11, 1920. Serial No. 388,177. 2 Claims. (Cl. 74—81.)



1. The combination with an assembling elevator for type casting machines, of a link extending down from the elevator to adjacent to the floor, a rocker shaft mounted on a support on the floor, a lever arm on the rocker shaft, extending forward therefrom and attached to the lower end of the link, and an upstanding arm on the rocker shaft provided with a toe rest for the foot of the operator.

1,429,845. CONCENTRATOR. GEORGE T. COOLEY, Joplin, Mo. Filed Nov. 19, 1918. Serial No. 263,185. 1 Claim. (Cl. 83—88.)

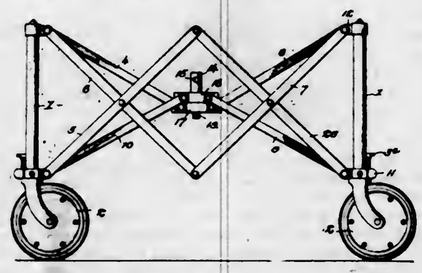


The combination with a frame, of two tables adjustably supported at one end thereon, one having a fan-shaped arrangement of riffles which taper and converge lengthwise of the table, and are of gradually decreasing height down the slope of the table, means at the discharge end for adjusting the tables while in operation, and a single head motion common to both tables comprising a shaft having a horizontally disposed eccentric thereon, with means extending therefrom to one table, and provided with a double cam with abrupt shoulders, and a spring-actuated sliding rod connected with the other table and adapted to be actuated thereby.

1,429,846. SHELVING. CORNELIUS M. COUTTS, Issaquah, Wash. Filed Sept. 29, 1921. Serial No. 504,042. 4 Claims. (Cl. 211—14.)

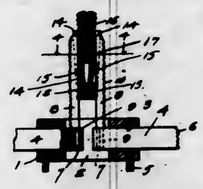
1. A shelving comprising a channel iron support having slots and elongated openings in its side walls and the slots of one wall disposed in alinement with the openings in the other wall, resilient racks projecting into the elongated openings and resting in the slots.

1,429,847. SIDE-DUMPING VEHICLE. CHARLES A. DAVIDA, New York, N. Y. Filed Aug. 25, 1920. Serial No. 406,000. 4 Claims. (Cl. 298—9.)



1. In a dumping vehicle, in combination with the chassis thereof, a cross frame rigidly carried by the chassis, a supplemental frame pivotally mounted at one end of the cross frame, a body supported by said cross frame and supplemental frame, means for moving the body on said supplemental frame and means for tilting the supplemental frame about its pivotal point to move the body to dumping position.

1,429,848. LEAD COMPASS. ROBERT COCHRAN DICKSON, Medan, Sumatra, Dutch East Indies. Filed Jan. 5, 1922. Serial No. 527,165. 7 Claims. (Cl. 33—152.)

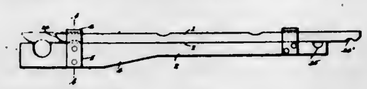


1. In a lead compass a leg forming a pencilholder, a second leg provided with a needle point, a pivotal connection between the legs so as to enable the needle point to be swung from the operation position in a position close against the holder and a ring slidable over the holder and adapted to receive the needle point in the latter position.

1,429,849. LOCK FOR CHURCH TRUCKS. ARTHUR H. DOLGE, Westport, Conn. Filed Sept. 29, 1921. Serial No. 504,067. 3 Claims. (Cl. 280—35.)

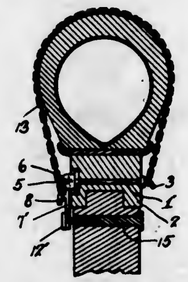
1. In a lock for church trucks, the combination of an upper element, a lower element upon which the upper element is adapted to bear at certain times, an opening arranged in the lower element, a standard secured in and adapted to turn independently with respect to the upper element, and brace rods secured to the upper and lower elements and also secured to the posts of the truck.

1,429,850. ADJUSTABLE TAP AND DIE. THOMAS J. DOWD, New York, N. Y. Filed Apr. 11, 1921. Serial No. 460,154. 9 Claims. (Cl. 10—142.)



9. An adjustable tap and die comprising a holder, die cutters adjustably mounted on said holder, tap cutters carried by the die cutters, an expander body having grooves to receive the tap cutters, bifurcated fingers formed on said body and receiving the tap cutters therebetween, an adjusting screw threaded to and between said fingers and engaging the tap cutters for forcing the latter outwardly, and set screws for expanding the bifurcated portions of the fingers against the tap cutters.

1,429,851. TANNING PROCESS. LORENZO DUFOUR and GUSTAVO DUFOUR, Genoa, Italy. Filed Mar. 28, 1921. Serial No. 456,198. 2 Claims. (Cl. 149—4.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

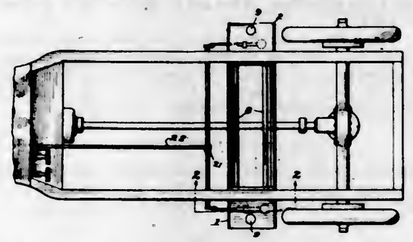


1. A process of tanning which comprises first cleaning the hides in a solution impregnated with gaseous sulphurous anhydride to remove any adhering lime and then transferring the hides to tanning vats and treating them with tanning liquor containing sulphurous anhydride.

1,429,852. TOOL. JOHN L. DYER, Balboa, and HENRY T. MACNEIL, Ancon, Canal Zone, Panama. Filed Mar. 23, 1921. Serial No. 454,717. 5 Claims. (Cl. 81—3.)

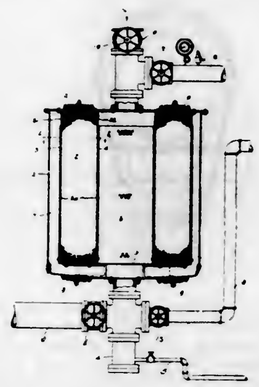
1. A tool of the character described, comprising a pair of superimposed elongated parallel members mounted for axial sliding movement relative to each other, and having coacting recesses in their meeting faces adapted to receive a fuse.

1,429,853. AUTOMOBILE CHAIN. JOHN CHARLES EDWARDS, Moundsville, W. Va. Filed Apr. 15, 1922. Serial No. 552,950. 3 Claims. (Cl. 152—14.)



3. Anti-skid means for a vehicle wheel comprising a plurality of cross chains, a plurality of rods passing through the rim of the wheel, a stationary hook on one end of the rod for receiving one end of the cross chain, a nut on the other end of each rod, a hook carrying member pivotally secured to the nut, the hook engaging the other end of a chain, a plurality of set screws carried by the wheel and means associated with each pivoted member for engaging the head of a set screw to hold the said member with its hook in holding position.

1,429,854. ATTACHMENT FOR SPECTACLES. RICHARD P. ELMORE, Sulphur, Okla. Filed Aug. 9, 1921. Serial No. 491,001. 2 Claims. (Cl. 88—41.)



1. An attachment for spectacles comprising a block, shaped to engage the temple joint of a spectacle, a clip for detachably holding the block in place, an auxiliary lens, and a link pivotally connecting the block to the lens.

1,429,855. SANDING DEVICE FOR AUTOMOBILES. LARS ENGSTROM, Seattle, Wash. Filed May 25, 1922. Serial No. 563,577. 5 Claims. (Cl. 291—28.)

3. A sanding device for automobiles and the like, including receptacles connected for similar movement, means for supporting the receptacles in slidable cooperation with the chassis, a valve for each receptacle, means for simultaneously operating the valves in the actuation of the brake pedal, and means on the receptacles for spreading the material delivered therefrom.
